(3) There is established within the Department of the Interior the position of Assistant Secretary for Inland Fisheries and Wildlife and Parks. Such Assistant Secretary shall be appointed by the President, by and with the advice and consent of the Senate, who shall receive compensation at the rate now or hereafter provided by law for Assistant Secretaries of executive departments, and who shall perform such functions, powers, and duties as the Secretary of the Interior shall prescribe from time to time. There is also established within the Department of the Interior two separate agencies for the administration of inland fisheries and wildlife resources, each of which shall have the status of a Federal bureau. One of the Bureaus shall be known as the Bureau of Inland Fisheries and the other bureau shall be known as the National Wildlife Service. There shall be a Director of each of said Bureaus appointed by the Secretary.

ADMINISTRATIVE PROVISIONS

SEC. 105. (a) The personnel employed in connection with, and the assets, liabilities, contracts, property, records, and unexpended balances of appropriations, authorizations, allocations, or other funds held, used, arising from, or available or to be made available or to be made available in connection with, the functions, powers, and duties transferred by section 103 of this Act are hereby transferred with such functions, powers, and duties respectively.

(b) The Secretary is authorized, subject to the civil service and classification laws, to select, appoint, employ, and fix the compensation of such officers and employees, including attorneys, as shall be necessary to carry out the provisions of this Act and to prescribe their authority and duties.

(c) The Secretary may delegate any of his functions, powers, and duties to such officers and employees of the Department as he may designate, may authorize such successive redelegations of such functions, powers, and duties as he may deem desirable, and may make such rules and regulations as may be necessary to carry out his functions, powers, and duties.

(d) The Secretary is authorized to employ experts and consultants or organizations therefor as authorized by section 15 of the Administrative Expenses Act of 1946 (5 U.S.C. 55a), compensate individuals so employed at rates not in excess of $100 per diem, including travel time, and allow them, while away from their homes or regular places of business, travel expenses (including per diem in lieu of subsistence) as authorized by section 5 of such Act (5 U.S.C. 73b–2) for persons in the Government service employed intermittently, while so employed: *Provided, however,* That contracts for such employment may be renewed annually.

(e) The Secretary is authorized to arrange with the Federal Bureau of Investigation for the conduct of such security or other personnel investigation of the Department's officers, employees, and consultants, as he deems appropriate, and if any such investigation develops any data reflecting that the individual who is the subject thereof is of questionable loyalty there shall be a full field of investigation of the matter, the results of which shall be furnished to the Secretary.

(f) The Secretary is authorized to request and the Atomic Energy Commission may authorize any of its employees, or employees of any contractor, prospective contractor, licensee, or prospective licensee of the Atomic Energy Commission under subsection 145(b) of the Atomic Energy Act of 1954 (42 U.S.C. 2165(b)), to permit any member, officer, or employee of the Department to have access to restricted data relating to oceanography and the marine sciences which is required in the performance of his duties and so certified by the Secretary but only if (1) the Secretary or designee thereof has determined, in accordance with the established personnel security procedures and standards of the Department, that permitting such individual to have access to such restricted data will not endanger the common defense and security, and (2) the Secretary or designee thereof finds that the established personnel and other security procedures and standards of the Department are adequate and in reasonable conformity to the standards established by the Atomic Energy Commission under section 145 of the Atomic Energy Act of 1954 (42 U.S.C. 2165). Any individual granted access to such restricted data pursuant to this subsection may exchange such data with any individual who (A) is an officer or employee of the Department of Defense, or any department or agency thereof, or a member of the Armed Forces, or a contractor or subcontractor of any such department, agency, or armed force, or an officer or employee of any such contractor or subcontractor and (B) has been authorized to have access to restricted data under the provisions of section 143 of the Atomic Energy Act of 1954 (42 U.S.C. 2163).

(g) The Secretary is authorized to establish a working capital fund, to be available without fiscal year limitation, for expenses necessary for the maintenance and operation of such common administrative services as he shall find to be desirable in the interest of economy and efficiency in the Department, including such services as a central supply service for stationery and other supplies and equipment for which adequate stocks may be maintained to meet in whole or in part the requirements of the Department and its agencies; central messenger, mail, telephone, and other communications services; procurement and management of office space; central service for document reproduction and for graphics and visual aids; and a central library service. In addition to amounts appropriated to provide capital for said fund, which appropriations are hereby authorized, the fund shall be capitalized by transfer to it of such stocks of supplies and equipment on hand or on order as the Secretary shall direct. Such fund shall be reimbursed from available funds of agencies and offices in the Department for which services are performed at rates which will return in full all expenses of operation, including reserves for accrued annual leave and for depreciation of equipment.

(h) The Secretary is authorized to—

(1) adopt, alter, and use a seal, which shall be judicially noticed;

(2) hold such hearings, sit and act at such times and places, and take such testimony, as he may deem advisable;

(3) request directly from any executive department, bureau, agency, board, commission, office, independent establishment, or instrumentality information, suggestions, estimates, and statistics needed to carry out the purposes of this Act; and each department, bureau, agency, board, commission, office, establishment, or instrumentality is authorized to furnish such information, suggestions, estimates, and statistics directly to the Secretary;

(4) acquire, in any lawful manner, including purchase, transfer, lease, donation, gift, or devise, any property (real, personal, or mixed, tangible or intangible), whenever deemed necessary or appropriate to the conduct of the activities authorized by this Act; and

(5) prescribe and issue such rules, regulations, or orders, pursuant to law, as he may deem necessary and commission employees of the Department for the enforcement of those laws, rules, and regulations vested within his authority and for the carrying of firearms in the execution of such duties.

(i) The Secretary is authorized to sue and be sued in any court of record of a State having general jurisdiction or in any United States district court, and jurisdiction is conferred upon such district court to determine such controversies without regard to the amount in controversy; but no attachment, injunction, garnishment, or other similar process, mesne or final, shall be issued against the Secretary or his property. Nothing herein shall be construed to except the activities under this Act from the application of sections 507(b) and 2679 of title 28, United States Code, and of section 367 of the Revised Statutes (5 U.S.C. 316).

SAVINGS PROVISIONS

SEC. 106. (a) No suit, action, or other proceeding lawfully commenced by or against the head of any agency or any other officer whose functions are transferred by the provisions of this Act, in his official capacity or in relation to the discharge of his official duties, or by or against any agency whose functions are transferred by this Act, shall abate by reason of the taking effect of the provisions of this Act, but the court may, on motion or supplemental petition filed at any time within twelve months after such taking effect, showing a necessity for the survival of such suit, action, or other proceeding to obtain a settlement of the questions involved, allow the same to be maintained by or against the Secretary or such other officer or office of the Department as may be appropriate.

(b) Except as may be otherwise expressly provided in this Act, all powers and authorities conferred by this Act shall be cumulative and additional to and not in derogation of any powers and authorities otherwise existing. All rules, regulations, orders, authorizations, delegations, or other actions duly issued, made, or taken by or pursuant to applicable law, prior to the effective date of this Act, by any agency, officer, or office pertaining to any functions powers and duties transferred by this Act shall continue in full force and effect after the effective date of this Act until modified or rescinded by the Secretary or such other officer or office of the Department as, in accordance with applicable law, may be appropriate.

SEPARABILITY

SEC. 107. Notwithstanding any other evidence of the intent of Congress, it is hereby declared to be the intent of Congress that if any provision of this Act, or the application

thereof to any persons or circumstances, shall be adjudged by any court of competent jurisdiction to be invalid, such judgment shall not affect, impair, or invalidate the remainder of this Act or its application to other persons and circumstances but shall be confined in its operation to the provision of this Act, or the application thereof to the persons and circumstances, directly involved in the controversy in which such judgment shall have been rendered.

EFFECTIVE DATE AND INTERIM APPOINTMENTS

SEC. 108. (a) The provisions of this Act shall take effect upon the expiration of the first period of sixty calendar days following the date on which this Act is approved by the President, or on such earlier date as the President shall specify by Executive order published in the Federal Register, except that the President may nominate, and by and with the advice and consent of the Senate may appoint, any of the officers provided for in sections 101(a), 102(a), 102(b), and 104(c)(3) of this Act at any time after the date this Act is approved by the President.

(b) In the event that one or more officers required by this Act to be appointed by and with the advice and consent of the Senate shall not have entered upon office on the effective date of this Act, the President may designate any person who was an officer of any agency or bureau transferred to the Department pursuant to section 103 of this Act immediately prior to said effective date to act in such office until the office is filled as provided in this Act or until the expiration of the first period of sixty days following said effective date, whichever shall first occur. While so acting such persons shall receive compensation at the rates provided by this Act for the respective offices in which they act.

APPLICATION OF ACT

SEC. 109. As used in this Act, the terms "State", "States", and "United States" include the several States, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, and American Samoa and the terms "marine affairs" or "marine sciences" shall be deemed to apply also to endeavors in and with relation to the Great Lakes.

ANNUAL REPORT

SEC. 110. The Secretary shall make a comprehensive and detailed annual report to the Congress of his operations under this Act and the related operations of all agencies and departments of the United States in the field of oceanography and marine affairs and science for each fiscal year beginning with the fiscal year ending June 30, 1970. Such report shall be printed and shall be transmitted to the Congress not later than January 3 of the year following the fiscal year with respect to which such report is made. Such report to contain an evaluation of such activities and accomplishments in terms of the attainment of, or the failure to attain, the objectives developed pursuant to this Act and further shall contain such recommendations for additional legislation as the Secretary may consider necessary or desirable for the attainment of the objectives developed pursuant to this Act. No information which has been classified for reasons of national security shall be included in any report made under this section, unless such information has been declassified by, or pursuant to authorization given by, the President.

PUBLIC INFORMATION

SEC. 111. Information obtained or developed by the Secretary in the performance of his functions under this Act shall be made available for public inspection except (a) information authorized or required by Federal statute to be withheld, and (b) information classified to protect the national security: *Provided*, That nothing in this Act shall authorize the withholding of information by the Secretary from the duly authorized committees of Congress.

APPROPRIATION

SEC. 112. There are hereby authorized to be appropriated such sums as may be necessary to carry out the provisions of this Act. Appropriations authorized under this Act shall remain available until expended unless otherwise provided by appropriations acts.

TITLE II—MARINE EXPLORATION FUND

SEC. 201. (a) There is hereby established on the books of the Treasury a marine exploration fund which shall be available to the Secretary for the acceleration and expansion of programs currently extant or hereafter promulgated for purposes of—

(1) the intensive exploration, survey, and delineation of the topography, physical, geological, geomorphological, chemical, and biological properties and resources of the Continental Shelf, Great Lakes, and superjacent waters; and

(2) the extensive exploration, survey, and delineation of the topography, physical, geological, geomorphological, chemical, and biological properties and resources of the world oceans.

(b) The fund shall consist of amounts appropriated thereto pursuant to section 203 together with amounts received as repayments of principal and payments of interest on such loans.

(c) The Secretary is authorized to expend appropriated marine exploration funds in support of direct Federal operating, construction and experimental programs, either within the Department or by transfer to other Federal agencies, or pursuant to cooperative or cost-sharing arrangements, leases, or contractual considerations with Federal or State agencies, public or private universities, institutions or foundations, business enterprises, corporations, or individuals concerned with same, similar or related programs, undertaken in furtherance of the purposes of this Act.

LOANS AND GRANTS

SEC. 202. (a) The Secretary shall make loans, grants, or cost-sharing arrangements from the marine exploration fund for purposes of (1) developing, improving, and testing the instrumentation, vessels, vehicles, equipment, or facilities required to execute the program purposes of the Government, its assigns, cooperators, and contractors, designated in section 201(a), 201(b), and 201(c), of this title, and (2) the conduct, administration, and execution of such programs.

(b) The Secretary is authorized to establish terms for loans, grants, or other cost-sharing arrangements from such fund providing he gives due weight to the benefits inuring to the Government from the activities carried out with the proceeds of such loans, grants, or cost-sharing arrangements, and providing further—

(1) That interest rates for loans so established shall not be in excess of 5 per centum per annum;

(2) That the borrower of loans so established shall pay such fees and charges as the Secretary may require;

(3) That the period for repayment of loans so established shall not exceed forty years;

(4) That security for loans so established shall be such that in the judgment of the Secretary the equity of the United States is prudently protected;

(5) That no single loan so established shall exceed $5,000,000;

(6) That grants so established shall not exceed 90 per centum of the cost of the project for which the grant is given; and

(7) That no single grant so established shall exceed $2,000,000.

FINANCING

SEC. 203. There are hereby authorized to be appropriated such sums as may be necessary annually for the purposes of this title.

TITLE III—MARINE RESEARCH AND DEVELOPMENT FUND

SEC. 301. (a) There is hereby established on the books of the Treasury a marine research and development fund which shall be available to the Secretary for the acceleration of basic research in and the development of programs currently extant or hereafter promulgated for purposes of—

(1) the advance of oceanographic engineering including the development and improvement of the capabilities, performance, and efficiency of vessels, vehicles, equipment, instruments, and facilities required for exploration and discovery, the recovery of resources, the transmission of energy and communication, and the enhancement of basic knowledge pertinent to marine environments, air-sea interaction, climatological influences, and weather modification;

(2) the advancement of knowledge pertinent to the geomorphology and geology of the Continental Shelf and deep ocean floors;

(3) the advancement of knowledge pertinent to biological life of the Continental Shelf and deep ocean environs;

(4) the advancement of knowledge pertinent to the hydrological and physical characteristics and movements of the waters of the Continental Shelf and oceans and the climatological and meteorological phenomena of oceanic and continental areas including the modification of such phenomena for the benefit of man;

(5) the advancement of knowledge pertinent to the chemical qualities and characteristics of the marine environment including the waters and submerged bottoms of the Continental Shelf and oceanic areas; and

(6) the advancement of knowledge pertinent to the transmission of electrical energy for the generation of power and the transmission and reception of communications within marine environs.

(b) The fund shall consist of amounts appropriated thereto pursuant to section 303.

(c) The Secretary is authorized to expend appropriated marine research and development funds in support of direct Federal operating construction and experimental programs either within the Department or by transfer to other Federal agencies or pursuant to grants, cooperative or cost-sharing arrangements or contractual considerations with qualified Federal or States agencies, public or private scientific institutions, universities, foundations, corporations, or individuals concerned with the advance of marine, oceanic, atmospheric or related science, technology, and understanding.

GRANTS

SEC. 302. Basic research and development grants or cost-sharing arrangements entered into by the Secretary pursuant to the criteria of section 301 shall be subject to such terms, conditions, and restrictions which the Secretary may determine to be in the national interest for the maximum benefit of the Government in seeking to achieve an optimum understanding of the phenomena of marine, oceanic, atmospheric, and related environs.

SEC. 303. There are hereby authorized to be appropriated such sums as may be necessary annually for the purposes of this title.

LAST HOME OF ABRAHAM LINCOLN SHOULD BE A NATIONAL HISTORIC SITE

(Mr. MICHEL asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. MICHEL. Mr. Speaker, it is a great privilege to join my distinguished colleague and neighbor, the gentleman from Illinois (Mr. FINDLEY), in sponsoring a

bill which, if it becomes law, will make the last home of Abraham Lincoln a national historic site.

Although the great emancipator was born in Kentucky and grew to manhood in Indiana, it was as a citizen of Illinois that he achieved national and worldwide fame. He was a resident of Springfield from 1844 until 1861, when he became President of the United States. He and Mrs. Lincoln had looked forward to a return to their home in Illinois' capital at the conclusion of his service as Chief Executive. Unfortunately, he was not able to enjoy a few years among his old friends and neighbors as an elder statesman, for an assassin's bullet decreed otherwise.

Mr. Speaker, even though Abraham Lincoln was not permitted to return to Springfield, his spirit has pervaded it in the century that has elapsed since he saved the Union, freed the bondsmen, and gave a new birth of freedom. While Lincoln belongs to Illinois, he also belongs to the Nation. While his home is a State memorial, let us pass this legislation and make it a national shrine.

HAWAII'S 10 YEARS OF STATEHOOD

(Mr. MICHEL asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. MICHEL. Mr. Speaker, 10 years ago, on March 12, 1959, when the House of Representatives voted overwhelmingly to make Hawaii one of the United States, I was one of the Members of this body who voted "aye." As the other body had, on the previous day, passed the act providing for admission, the measure needed only the signature of President Dwight D. Eisenhower to become effective.

On the following July 4, the 49 stars of the flag of the United States became 50, as the new State joined the galaxy. Although it did not achieve statehood until six decades after its annexation by the United States, Hawaii had long been one with our spirit.

Many of the inhabitants of Hawaii had come from the United States. Hawaii had borne the brunt of the Japanese attack that plunged our Nation into what was to become World War II. The sons of Hawaii fought courageously, not only against Japan, but against National Socialist Germany and Fascist Italy. When I voted for statehood for Hawaii, I was only confirming a fact, because, as far as I am concerned, it was already a part of our great country.

Mr. Speaker, the first 10 years of statehood have been years of progress and prosperity for our youngest State. May the people of the State of Hawaii write even brighter chapters in the decades that lie ahead.

STUDENT VIOLENCE AND THE LAW

(Mr. HUNT asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. HUNT. Mr. Speaker, I am most encouraged by the actions of Secretary Finch of the Department of Health, Education, and Welfare, and President Nixon, over the past week in announcing the intent of the administration to enforce the laws relating to denial of Federal funds to students who substantially disrupt the operations of our colleges and universities.

That it was necessary in the first instance to say the law will be enforced is evidence not only of the growing seriousness of unrestrained student violence, but of the failure of the past administration to faithfully execute the laws as Congress directed it to do. For those who have probed the depths of the appendix of "The Budget of the U.S. Government," fiscal year 1970, it is to be noted that on page 486, the former administration proposed to delete section 411 of the Departments of Labor, and Health, Education, and Welfare Appropriations Act, 1969. You will recall that that section prohibits the use of funds under the act to provide a loan, guarantee of a loan, or a grant to any applicant that, through his actions, prevents the officials or students at an institution of higher education from engaging in their duties or pursuing their studies.

Only last month, in my remarks to the House, I suggested that "every ounce of public support must be marshalled through the elected and appointed public officials of Government to enhance and encourage the exercise of the existing prerogatives of educational administrators to deal firmly with those whose conduct interferes with the lawful functioning of the institution in a manner that paralyzes its educational responsibilities." There should be no doubt, now, in the minds of our college and university administrations that the Government is reflecting the attitude of the public in its appeals to put down this student violence so that reason might once again prevail.

I trust, Mr. Speaker, that the administrators of our institutions of higher education will heed the words of our President and will forthrightly comply with the intent and purposes of the law.

GREEK INDEPENDENCE DAY

(Mr. WYMAN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. WYMAN. Mr. Speaker, today, March 25, is the 148th anniversary of Greek independence. It is, therefore, a fitting occasion to review the heritage of this noble nation whose people have given, and continue to give, much to human achievement.

I am sure that most Americans recognize and are deeply impressed with the fact that so much of the world's basic knowledge, in so many varied fields, is of Greek derivation. For example, Grecian art, philosophy, literature, and science have profoundly affected each of our daily lives.

Americans recognize the concept of freedom of the individual. Historically, this concept is Greek and our concern today for man's freedom was no less important to the ancient Greeks. Indeed, it was the genesis of much of their civilization. Herodotus, the Greek historian, quotes a Greek conversing with a Persian:

> You do not know what freedom is . . . if you did, you would fight for it with bare hands—if you had no weapons.

One cannot find a more appropriate comment on today's many problems particularly those confronting this Nation now in Southeast Asia.

But paramount among the reasons for Greek freedom was their willingness to obey the law, whether written or not. Their respect for law is also a cornerstone upon which our cherished freedoms rest. In addition, their ideals of self-control, moderation and devotion to reason served to substantiate their commitment to freedom.

While Grecian culture flourished under the city-states, the inability of Greece to unite politically led to the annexation of her territories. The death of Alexander the Great in 323 B.C., the shattering of his empire, and the lack of national unity laid the groundwork for defeat by Rome near the end of the Macedonian wars in 146 B.C. and Greece became a Roman province; but Athens remained a center of learning, and the Greek language and culture were widely influential in Rome as well as other places. In A.D. 395, the Roman Empire crumbled, and Greece became the center of the Byzantine Empire for more than a thousand years—a genuine recognition of Greek knowledge and influence.

The Ottoman Turks who conquered Constantinople in 1453 gave the Greeks a large measure of political autonomy. Greek merchants became engaged in worldwide trade, and the Greek Orthodox Church gained ascendency in communal affairs. But the age-old flame for individual freedom and liberty was still smoldering in the hearts of the Greek people and the spark was united unsuccessfully in the brief uprising of 1770. That revolt led to severe retaliation by the Turks, and in 1821, under the leadership of Archbishop Patras, the Greeks on March 25 launched their war of independence against Turkish suzerainty. Their cause was assisted by Britain, France, and Russia who recognized Greece's independence in the London Protocol of 1830.

Mr. Speaker, a strong sense of patriotism is characteristic of both modern and ancient Greeks—as an example, in 1912–13, an estimated 50,000 Greek immigrants returned home from the United States, at their own expense of passage, to help their motherland capture northern Greece during the Balkan wars. The magnitude of this undertaking becomes clear when it is realized that free Greece's population at that time was 3 million. The volunteers from America were decisive.

In summation, the Greeks of yesterday left such an imprint on their world that those of us in the modern world literally live in their shadow. One might reflect for a moment that the State of Virginia has been the site of so many battles during the Revolutionary and Civil Wars, and has been the birthplace of so many of our great men, that it can fairly be said every acre has a story to tell. In the

case of Greece, with its longer history of struggle and glory, virtually every rock has its own story.

The most esteemed modern Greek writer, Nikos Kazantzakis, has written:

> Greek soil has been so saturated with blood, sweat and tears, the Greek mountains have witnessed so much human struggle, that you shudder in contemplating the fact that here on these mountains and shores, the destiny . . . of all mankind was at stake.

Ancient Greece picked man up and set him on his feet as an individual with individual worth. After many centuries of decline and foreign occupation, the revolution of 1821 began the liberation of modern Greece. This land which has given us so much has much to give to the world once again and I am pleased to have this opportunity to salute Greece and its sons and daughters on this Greek Independence Day 1969.

RESOLUTION TO PROVIDE KIND OF FUNDING AUTHORITY ESSENTIAL TO SUCCESSFUL U.S. EFFORT WITHIN THE INTERNATIONAL BIOLOGICAL PROGRAM

(Mr. DADDARIO asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. DADDARIO. Mr. Speaker, I am today joining with Chairman MILLER of the Committee on Science and Astronautics in the introduction of a new resolution designed to provide the kind of funding authority which is essential to a successful U.S. effort within the international biological program—IBP.

The resolution provides no new authorization or specific appropriation. It simply assures that appropriate Federal agencies will be able to support the IBP as the Office of Science and Technology has requested without any question as to legality or congressional intent.

Hence the provision in the resolution which states:

> The Congress authorizes and requests all Federal departments and agencies having functions or objectives which coincide with or are related to those of the International Biological Program to obligate or make appropriate transfers of funds to the program from moneys available for such functions or objectives and provide such other support as may be appropriate.

This provision appears to be necessary in view of the uncertainty of some of the departments and agencies concerning their present authority to aid the IBP through the Interagency Coordinating Committee for the IBP even though the amounts involved are relatively nominal.

Mr. Speaker, the IBP is not just another Government venture and it is not some abstract international dream. It is a very real, planned, and coordinated effort to establish an ecological base for the management of our environment and for the prevention of the deterioration which is threatening our entire planet. It may be one of the most crucial programs, in spite of its mild-sounding title, to evolve in our time.

Let me provide a bit of background.

The international biological program is the scientific core of many of the problems with which the Committee on Science and Astronautics, and indeed the entire Congress, has been concerned over the past several years. As Mr. MILLER reminded a convention of American biologists at Ohio State University last September, this program is centrally ecological and as such it is indispensible to the development of the intellectual disciplines at stake in pollution abatement and in the appraisal and control of the quality of our environment. He emphasized then, as have witnesses before my subcommittee, that the needed increase in numbers of theoretical and field scientists competent to deal with environmental problems can come only from an action program like the IBP which involves fieldwork and at the same time strives for a more complete fundamental base.

Since last summer when the Subcommittee on Science, Research and Development completed its hearings and review on the status of the IBP a great deal has transpired to justify our original enthusiasm and to eliminate those reservations we had concerning the organization and management of such a complex program.

The U.S. IBP leadership has responded well to our several suggestions. The scope of the program has been focused on the most pressing problems, the national committee has evolved into a decision-making body, and agreements on points of responsibility have been worked out with the National Science Foundation as the lead agency. The program's grasslands ecosystem project, even on a minimum budget, appears to have become a model project in systems ecology; its 700-page progress report and proposal of January 1969 is a complete document which justifies past and planned expenditures for that biome. This program helps provide the confidence we need for funding and supporting recommendations to the Federal agencies for real efforts on other biomes such as the deciduous and coniferous forests, the arctic tundra, as well as those projects which deal with our "urban ecosystem."

Mr. Speaker, since World War II we have left ecology—the only scientific discipline which specializes in the total environment—to its own devices in a market in which it could not possibly compete. As a result, a science which might have matured to meet our problem solving needs in environmental matters has fallen behind the bold advances in many other areas of American science.

It is the problem solving—the utilitarian and practical aspects of conservation and its management—which is the motivation for the IBP, rather than the usual emphasis on sentiment and esthetics. This pragmatic approach has led ecological practitioners in the United States and in some 70 other nations to undertake the complex task of planning and designing a research program which will produce the manpower, skills and theory essential to the management of our environmental resources.

We have no responsible policy choice other than to respond favorably to the needs of the ecological sciences. Our immediate opportunity is the international biological program which we have requested American biologists to design and promulgate. Thus we intend and expect, by means of this resolution, that Federal agencies which conduct relevant scientific work will support the IBP to the extent that meets the needs of the U.S. projects under that program.

BLACKBURN INTRODUCES RETIRED OFFICERS PAY EQUALIZATION BILL

(Mr. BLACKBURN asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. BLACKBURN. Mr. Speaker, today it is my privilege to reintroduce a bill to equalize the retirement pay of members of the uniformed services of equal rank and years of service.

The purpose of this bill is to repeal that provision of the law which provides for the adjustment of retirement or retainer pay when the Consumer Price Index goes up 3 percent. Substitute for this provision would be my bill which would have the pay of personnel recomputed to reflect increases in the basic pay of persons on active duty. Thus, when the basic pay of active military personnel is increased, the retired or retainer pay of retired members would be recomputed on the basis of the new pay rate for the grade in which he was serving at the time of his retirement, rather than at the rate in effect at the time he retired, which is currently the case.

Under present law members of the armed services who retired with equal rank and equal length of service, but not at the same time, can be receiving greatly varying rates of retirement pay. The rate differential between some our our older retirees and the younger comrades has slipped to as much as 30 percent.

President Nixon issued a statement during his campaign which I am sure his administration will follow:

> Our retired military personnel have been unjustly treated because of the failure of the Congress to remedy the growing disparity between active and retired pay. This unfair discrimination is wholly contrary to the long established principles of equalizing retired pay with existing active duty pay for the same grade or rank.

I urge my colleagues to seriously consider this proposal in order to correct a glaring inequity.

NATIONAL HOUSING CONFERENCE CALLS FOR NEW HOUSING EFFORTS

(Mr. PATMAN asked and was given permission to extend his remarks at this point in the RECORD, and to include extraneous matter.)

Mr. PATMAN. Mr. Speaker, the National Housing Conference recently held its 38th annual convention in Washington. Along with other Members of Congress, it was my privilege to address the conference as I have done for many years during its conventions. I was pleased to note that Secretary Romney and his principal staff appeared on a panel at one of the sessions at the conference.

For many years, the National Housing Conference has been recognized as the

conscience of the public interest in programs for housing, urban renewal and community development. Its members include representatives of public interest organizations, local officials, labor officials, church, business and professional groups—all of whom share the goal of providing adequate housing for people of all incomes. NHC has functioned as a clearinghouse for information and support of these programs over the years. It has played a leading role in securing the enactment of many measures for Federal assistance to these programs which have passed the Congress over the past 3½ decades, including the Housing and Urban Development Act of 1968.

During the annual convention, the membership of the National Housing Conference adopted a comprehensive set of resolutions relating to all segments of the housing and urban development programs. These resolutions were the result of many meetings during the past year attended by representatives of public interest organizations from all parts of the country. There was a continuing legislative policy committee which functioned under the chairmanship of Mr. David L. Krooth. As president of the National Housing Conference, Mr. Nathaniel S. Keith then presented the recommendations of this committee to several meetings of the board of directors of NHC which adopted resolutions to be presented at the annual meeting. At the convention, Mr. William J. Guste, Jr., served as chairman of the resolutions committee which adopted the resolutions that were later approved by the full membership. I recite this process because it indicates the careful study and wide participation involved in the formulation and adoption of the resolutions.

I believe it would be helpful for Members of Congress and others to read these resolutions in order to have a better understanding of the critical problems in our cities and the solutions recommended by this group of outstanding professional and civic leaders. These resolutions are really an encyclopedia which we can use for reference purposes. On each program, they contain a statement of: first, its objectives and the actions taken in the Housing and Urban Development Act of 1968; second, the actions taken in appropriation acts; and third, the recommendations for necessary additional appropriations, legislation, and administrative actions. The resolutions not only cover the programs enacted into law, but they also recommend additional and supplemental programs. There is a table of contents at the beginning to help you locate the subjects in which you are interested.

In speaking to the National Housing Conference, I pointed out that the housing field is pockmarked by goals that have never been met. All of us here can recall the string of high-sounding goals that have come forward from the National Housing Conference, from Presidents of the United States, and from various committees of the Congress. Wonderful words, excellent goals, but little performance.

This is shameful in a great and powerful nation. We pride ourselves on our ability to produce. In the production of material goods, we look on ourselves as second to none in the world. We are able to build sophisticated space vehicles that reach to the moon. We are able to glut the market with millions of shiny high-powered automobiles, and we are able to devise and construct the most complex computer and communications systems. Yet somehow—and for some reason—we cannot put together the financing, the bricks, the lumber, and the glass to house our population in decent, reasonably priced homes.

This kind of failure demands attention from the highest levels of the Federal Government. This is an emergency which cannot be dealt with by another round of high-sounding Presidential messages and reports from the Secretary of Housing and Urban Development. The Nation must have action—real action—on housing and not another reshuffling of existing machinery. We need officials all down the line who really believe in these programs and who believe that the Nation's domestic priorities can and should be met.

In the 1968 Housing Act, Congress established a housing goal of 26 million units in the next 10 years and declared that "the highest priority and emphasis should be given to meeting the housing needs of those families for which the national goal has not become a reality." We do not accomplish anything by passing great authorizing laws like the 1968 Housing Act unless there is a proper followup with adequate appropriations and effective administration.

There is no doubt about America's capacity to meet this housing goal if we all work together toward achieving this goal and remove the obstacles that impede the housing program. We must find answers and take action in the critical areas of financing and credit, both as to its availability and its price. We must get full funding of the 1968 act by the Congress. We must get action by housing officials, labor, the building industry, and suppliers to meet our housing needs and goals and produce housing in the volume and at prices which the American people need and can afford.

The resolutions follow:

RESOLUTIONS RECOMMENDED BY THE LEGISLATIVE POLICY COMMITTEE AND APPROVED BY THE BOARD OF DIRECTORS OF THE NATIONAL HOUSING CONFERENCE

CHAPTER A. GENERAL STATEMENT OF PROBLEMS AND OBJECTIVES

1. America's cities are in a crisis resulting from the decay of decades and from failure to improve the quality of American life. Many of the people in the cities are ill-housed and live in despair and disillusionment. The need for decent housing is at the heart of the crisis. We must take vigorous and immediate action toward achieving our goal of providing good homes and good neighborhoods for all who are ill-housed. It is not enough to build new housing or rehabilitate existing housing. At the same time there must be an expansion of social programs and services for the people.

2. We must respond to the hopes and aspirations of the ill-housed and eliminate their human suffering and disillusionment which is contributing to demonstrations and violence in our cities. In these Resolutions, NHC presents measures which are essential to help solve these problems and alleviate the crisis in our cities. No single program can embrace the solutions to all of the cities' problems. These Resolutions recommend programs designed especially to:

(a) Provide good homes for people of all incomes in wholesome living environments which are in keeping with our Nation's standards and aspirations;

(b) To take action to revitalize our cities and save them from blight and obsolescence; and

(c) To expand social programs, services and job opportunities to improve the quality of American life.

3. The Housing and Urban Development Act of 1968 was enacted by an overwhelming bipartisan vote. It is a comprehensive and historic law to help meet these critical housing and urban problems. On behalf of NHC and other public interest organizations who cooperate with us, we express our appreciation for the acceptance in the 1968 Housing Act of many of the recommendations which NHC made last year. However, much more remains to be done. In these Resolutions, we are recommending additional measures which are needed to accomplish our goals—both (a) through new or amendatory legislation, and (b) through changes in policy and improvements in administration of existing legislation.

CHAPTER B. CONGRESSIONAL DECLARATION OF HIGHEST PRIORITY FOR HOUSING LOWER INCOME FAMILIES

1. The 1968 Housing Act reaffirms the national housing goal of "a decent home and a suitable living environment for every American family" which was first proclaimed in a housing law enacted 20 years ago. In the Declaration of Policy of the 1968 Housing Act, the Congress "finds that this goal has not been fully realized for many of the Nation's lower income families; that this is a matter of grave national concern; and that there exist in the public and private sectors of the economy the resources and capabilities necessary to the full realization of this goal." NHC applauds the action of the Congress in so clearly restating our national goal and affirming that it is a manner of grave national concern that this goal has not been realized for many of the lower income families.

2. In these times when there are so many competing demands for the use of federal funds and national resources, it is most significant that Congress further declared that these programs should have the highest priority. This Congressional determination is so important that we quote it in full as a necessary introduction to these Resolutions:

"The Congress declares that in the administration of those housing programs authorized by this Act which are designed to assist families with incomes so low that they could not otherwise decently house themselves, and of other Government programs designed to assist in the provision of housing for such families, *the highest priority and emphasis should be given to meeting the housing needs of those families for which the national goal has not become a reality;* and in the carrying out of such programs there should be the fullest practicable utilization of the resources and capabilities of private enterprise and of individual self-help techniques." (Emphasis added.)

3. This declaration by the Congress recognizes the need for a drastic realignment of past priorities in our federal budget and expenditures, since these housing programs were given a lower priority than other less urgent programs. Now the Congress had declared that these programs should be given the highest priority and there is a federal

commitment to take all action necessary to achieve the goal of providing decent housing for families with incomes so low that they could not otherwise decently house themselves. To translate this highest priority into reality takes firm and courageous action. We must assure that action is taken to carry out this mandate. Specifically this highest priority means that:

(a) All of the legislative authorizations in the 1968 Housing Act should be provided with full funds and full contract authority in Appropriation Acts.

(b) Such funds and contract authority should not be subject to recapture by the Budget Bureau; instead, these programs should be exempted from the further restraints and recaptures pursuant to across-the-board reductions in the national budget, such as the $6 billion cut in the current fiscal year.

(c) When funds or contract authority are made available, they should be promptly committed so that the planning and work in initiating projects can proceed promptly in order to step up the rate of production as contemplated by the Congressional goals.

(d) Adequate legislative authorizations should be included in future housing acts to provide sufficient funds and contract authority to achieve the Congressional goals.

(e) Adequate administrative staffs should be made available to carry out the new programs and achieve the Congressional goals.

(f) Administrative actions should be geared to accomplishment rather than caution and all necessary measures should be taken to simplify and expedite housing programs at all levels to speed them up.

(g) Adequate authorizations and appropriations of federal grants required for public facilities and services in housing and urban development programs, including those relating to health, education, and welfare and other purposes.

CHAPTER C. GOALS TO ACHIEVE HOUSING WE NEED

1. In the 1968 Housing Act there is a very important determination made by the Congress, which we quote:

"The Congress finds that the supply of the Nation's housing is not increasing rapidly enough to meet the national housing goal, established in the Housing Act of 1949, of the 'realization as soon as feasible of the goal of a decent home and a suitable living environment for every American family.' *The Congress reaffirms this national housing goal and determines that it can be substantially achieved within the next decade by the construction or rehabilitation of twenty-six million housing units, six million of these for low and moderate income families.*" (Sec. 1601) (Emphasis added.)

During the next decade Congress has fixed the goal to produce 26 million dwelling units, 6 million of which are to be for low and moderate income families. Moreover, it has determined that this goal can be substantially achieved. This includes both new housing units and rehabilitated housing.

2. (a) The Congress also required that the President make a report to it by January 15, 1969, setting forth a plan to be carried out during the next decade for the elimination of all substandard housing and the realization of the foregoing housing goals. A further report is to be made on January 15 of each succeeding year comparing the results achieved during the preceding fiscal year with the objectives for (a) the completion of new or rehabilitated housing units and (b) the reduction in occupied substandard housing. In this manner, Congress will be informed each year as to the deficit in housing production and the recommendations of the President concerning the measures necessary to eliminate this deficit and to meet the goal during the coming year. NHC recommends that the report should identify gaps or areas of unmet needs in our housing program.

(b) NHC further recommends that there be Congressional hearings each year on the Report received from the President concerning the progress toward meeting the goals and the additional legislation and other actions necessary to achieve the goals in the coming year.

3. In keeping with these Congressional goals there should be no gaps or areas of unmet needs in our housing programs. Effective means must be developed so that housing will be available to families of all incomes. Each family whose income is too low to obtain decent housing should receive the amount of assistance it needs to get such housing. We must reach the unserved income group below the level now served by public housing or rent supplements as more fully discussed below. Likewise, we must avoid a gap or area of unmet need in programs serving moderate and lower income families through private enterprise with federal aid consisting of (a) below market interest rates under Section 221(d)(3); and (b) assistance under Sections 235 and 236.

4. While the law approves an average national goal of 2,600,000 units annually during the next ten years, NHC urges that the average national goal should be 3,000,000 units a year. NHC agrees that 2,000,000 units should be built annually for those above the low and moderate income groups who do not need federal assistance. However, instead of 600,000 units annually for low and moderate income housing, NHC recommends a goal of at least 1,000,000 units annually for these income groups—of which half would be for the low income group. The recommendations contained in these Resolutions are intended to provide the measures necessary to achieve this goal and bring construction up to a level commensurate with it

CHAPTER D. OBSTACLES WHICH PREVENT NEW PROGRAMS FROM STARTING

1. We are facing a critical emergency which will prevent the building of housing to serve lower income families through the new interest assistance programs and the rent supplement program. Under these programs, the capital financing has been shifted to the private market where mortgage loans must be obtained at market interest rates which are currently 7½%.

2. Unfortunately, there is no assurance that it will be possible to sell these FHA-insured mortgages at par, and no federal funds have been made available to buy them. If sponsors of projects cannot obtain this financing at par in the private market they will have to pay a discount which is not covered by mortgage proceeds. Nonprofit organizations do not have this money to pay this discount. Cooperatives will not be able to increase the downpayments by the amount needed for the discount above the amount which is already required. Other sponsors will not increase their investment by this amount.

3. The current 7½% interest rate on FHA-insured mortgages was declared to be a "temporary" solution. On housing to serve those of moderate or lower incomes, we should find a way to achieve a more reasonable interest rate without charging the consumer for discounts. NHC strongly recommends an approach whereby GNMA purchases mortgages for such housing at par under its special assistance programs and then resells the mortgages to FNMA at the market price.

4. The Federal National Mortgage Association ("FNMA") is no longer regarded as a government agency or a part of the Budget as a result of action taken in the 1968 Housing Act to establish it as a private institution with a gradual retirement of the federal investment. As a private institution, FNMA will not provide subsidies. Accordingly, it will not purchase mortgages at a price or interest rate which results in a yield below the current market yield. FNMA recently took action to issue advance commitments to buy mortgages under the Section 236 and rent supplement programs at a price based upon the market as established through weekly auctions in the sale of single-family home mortgages. When the interest rate was 6¾%, FNMA was requiring a discount on a mortgage under the programs of interest assistance and rent supplements which ranged from 1½% to 5%, depending upon the auction prices on single-family mortgages and yield-related prices on multifamily mortgages. This discount on purchase commitments varied from week to week, based upon the auction prices on single-family mortgages and the special yield-related price for mortgages on rent supplement and interest subsidy (236) projects. Now with 7½% rate FNMA's current discount on these mortgages is 1½%.

5. On a program which Congress declared was entitled to the highest priority, we must find a way to achieve two objectives:

(a) to make mortgage financing available at reasonable interest rates for housing to serve those of moderate or lower incomes; and

(b) to obtain capital financing for such projects without requiring the sponsors to pay a discount which they are unable to do.

6. Fortunately, we have two institutions available to help in providing this mortgage financing—the Federal National Mortgage Association ("FNMA") which has now become a private operation and the Government National Mortgage Association ("GNMA") which is authorized to provide special assistance. These two institutions should work together in a "tandem" program. NHC urges that GNMA purchase these market-interest-rate mortgages at par under its special assistance program. It is imperative that this be done to enable the development of housing under the interest-assistance and rent supplement programs. In the Reports of the House and Senate Committees, there was a clear statement of intention by the Congress that they intended special assistance funds to be used to purchase these mortgages when necessary. In fact, Congress made an additional $500 million of special assistance funds available on July 1, 1969, to supplement the $525 million of such funds which became available on July 1, 1968, under the existing law. As to these funds, the committee reports stated the Congressional intention as follows: "It is understood, of course, that the President could use these funds as needed, along with the present special assistance funds to support the new sections 235, 236 and 237 programs of housing for lower income families."

7. Accordingly, we strongly recommend that the President authorize the use of special assistance funds for the GNMA purchase of mortgages *at par* under the interest assistance and rent supplement programs. After it has purchased the mortgages at par, GNMA would sell them at the current market price and reuse the sales proceeds to buy additional mortgages. There should be only one commitment and marketing fee charged—the one to be paid to FNMA which will provide a take-out commitment to buy the mortgages from GNMA. Unless this action is taken now, these housing programs will be stopped and lower income families will be denied the fulfillment of legislation to meet their housing needs. Obviously, with higher interest rates, there will be a lower volume of housing produced with the contract authority available under the 1968 Housing Act.

8. It is necessary that additional measures be taken to meet the needs for mortgage financing for the programs involving interest assistance and rent supplements. While the authorized amount of special assistance funds will help to start and continue these programs, it will not be sufficient to meet their increasing needs for capital funds as the programs accelerate. Under the 3-year programs authorized by the 1968 Housing Act for interest assistance and rent supplements, a total of $18 billion of mortgage

financing will be required or an average of $6 billion a year. We must assure the availability of a steady flow of mortgage financing without requiring sponsors either (a) to pay discounts on mortgages for which they lack funds; or (b) to pay unreasonable interest rates in order to avoid discounts. NHC recommends a new program to meet this problem. Since GNMA does not have special assistance funds to buy or hold the billions of dollars of mortgages which will be involved as the new programs accelerate, we recommend that GNMA sell the mortgages after it has purchase them. GNMA would sell them at the current market price. GNMA would then reuse the sales proceeds to buy additional mortgages through the operation of its revolving fund. Under such a program the amount that would appear in the federal budget would represent only the discount instead of 100% of any mortgage held by GNMA.

9. In the foregoing discussions, we have referred to sales to FNMA at a discount if the mortgage bears an interest rate below the special related yield for multifamily mortgages. However, there may be times when the interest fixed in the mortgage would justify a sale of the mortgage to FNMA at a premium. If such conditions arise, it should be recognized that FNMA would pay a premium to GNMA for the mortgage based upon its yield as compared with the prevailing yields in the market.

10. The proposed program would represent a proper use of GNMA as a governmental agency to provide the limited subsidy assistance required to meet the discounts which nonprofit, cooperative or other sponsors are unable to pay. At the same time, by reselling the mortgage in the private market, GNMA would accomplish the Congressional purpose of obtaining private financing for the projects. Such mortgages could be sold by GNMA to FNMA (as a private mortgagee), insurance companies and other investors. They should be prepared to buy the mortgages at the prices which reflect the current market prices.

The proposed program would enable GNMA to utilize its limited special assistance funds as a revolving fund to provide a steady flow of capital financing at reasonable interest rates for the interest assistance and rent supplement programs and other special assistance programs. This would help enable the fulfillment of the Congressional goals to provide housing which is urgently needed for moderate and lower income families.

11. Besides its use to provide capital financing for projects receiving interest assistance and rent supplements, the proposed program should also be used for the GNMA purchase at par and resale at market prices of other mortgages now covered by special assistance authorizations. This includes programs which Congress has previously determined had a sufficient public interest to merit such special assistance, such as market-rate mortgages under Sections 213, 221 (d)(3) and 220. Moreover, as to these and other multifamily mortgages, FNMA should buy them at the same special yield-related price as it now pays for mortgages aided by interest assistance and rent supplements, instead of charging higher discounts on these mortgages. These multifamily mortgages have the same lower servicing costs as multifamily mortgages aided by interest assistance on rent supplements.

12. There is an alternative solution to this problem of mortgage discounts. FHA could include the discount as part of the cost of the project, just as other financing costs and building costs are now included. If this were done, mortgage proceeds would be available to pay the discounts, so this would meet the problem of sponsors who are unable to pay discounts.

13. Besides assuring a market for mortgages on the completed projects, it is necessary to assure interim financing during the period when the projects are under construction. In past tight-money periods, there were times when it was not possible to obtain construction financing at a reasonable price. To avoid a recurrence of this problem in the present tight-money period, NHC recommends that FNMA issue a commitment which would cover *both* the construction financing and the permanent financing on a project. FNMA could take a 90% participation in the construction financing and another mortgage institution could take a 10% participation and handle the processing involved in construction advances. Under such a program, the construction financing should be provided for a total fee which is not more than the amount allowed in the mortgage.

14. NHC urges the repeal of the requirement that nonprofit sponsors make a 5% investment in rent supplement projects as a condition to the use of special assistance funds for the GNMA purchase of mortgages on a nonprofit project. Nonprofit sponsors cannot meet this requirement and should not be denied the use of special assistance funds for the purchase of their mortgages at par.

15. In addition to its present authority to make purchases on the open market, the Federal Reserve Board should be authorized to purchase directly from FNMA, GNMA and the Federal Home Loan Bank Board the obligations issued by these agencies. This would assure that the funds would be channeled directly into the mortgage market when needed during periods of monetary stringency and rising interest rates. These obligations would include participation certificates or other securities issued against a pool of mortgages or consolidated debentures or other obligations.

16. NHC recommends a 2-year extension of the legislation lifting the 6% interest ceiling on mortgages which are FHA-insured or VA-guaranteed.

CHAPTER DD. NEED FOR ASSURING AN ADEQUATE SUPPLY OF MORTGAGE FUNDS AT REASONABLE INTEREST RATES FOR LOW AND MODERATE INCOME FAMILIES

1. It is important to reduce interest rates and increase the supply of mortgage funds for low and moderate income housing. Low and moderate income housing is least able to compete for mortgage funds. In this statement we recommend that programs be developed to assure an adequate flow of capital into housing, particularly for low and moderate income families.

(a) There will not be an adequate supply of mortgage funds for the program and the achievement of the housing goals set forth in the Housing Act of 1968 unless Congress and the Administration take measures to assure the availability of adequate mortgage funds for housing. Housing cannot compete with others seeking money for financing and offering higher interest rates, such as those who are building industrial plants and commercial and office buildings. Without the action described below to implement the highest priority for housing prescribed in the 1968 Act, the private sector will not meet the housing goals in the 1968 Act.

(b) Unless additional steps are taken as described below, the mortgage money will not be available for housing at reasonable rates.

2. Need for fiscal restraint and monetary ease: NHC favors a combination of sufficient fiscal restraint and monetary ease to assure that the needed real and financial resources are available to support this volume of homebuilding while maintaining reasonable price stability. The Federal Reserve Board currently has the power to make additional resources available for mortgage financing of housing but has failed to do so.

As stated earlier in these resolutions, one of the measures we recommend is that in addition to its present authority to make purchases on the open market, the Federal Reserve Board should be authorized to purchase directly from FNMA, GNMA, and the Federal Home Loan Bank Board the obligations issued by these agencies. This would assure that the funds would be channeled directly into the mortgage market when needed during periods of monetary stringency and rising interest rates. These obligations would include participation certificates or other securities issued against a pool of mortgages or consolidated debentures or other obligations.

3. Suggestions for institutional reforms: (a) NHC suggests a change in the lending policies of the Federal Home Loan Banks so that savings and loan associations can borrow with greater certainty at lower costs and for a longer time than at present. In addition, we recommend that the Federal Home Loan Banks should earmark a substantial part of the funds it advances to savings and loan associations for exclusive use in purchasing mortgages to finance housing for low and moderate income groups. Other measures should be taken to assure that an appropriate percent of the loans of associations from other funds will also be for the low and moderate income housing market.

(b) NHC suggests that financial institutions be required to direct a certain percentage of their new loanable funds into mortgages. Other countries have been successful in requiring various financial institutions to use a certain percentage of their new loanable funds for mortgages to finance housing, particularly for those in the moderate and lower income group. The institutions listed below should be directed to invest a certain percentage of their funds in housing for moderate and lower income persons and families. The investments could be in bonds guaranteed by GNMA under the 1968 Housing Act which bonds would be secured by a pool of insured housing mortgages. This would relieve the investors of the burdens or costs of servicing the mortgages. It would also assure a full recovery of the funds invested.

(1) Social Security Trust Funds. An appropriate percentage of these funds should be earmarked for investment in mortgages to produce such housing. This requirement will not work a hardship on the Trust funds because the mortgages would provide a reasonable return.

(2) Pension Funds. An appropriate percentage of pension funds should be invested in housing for those of low and moderate incomes. Like the Social Security Trust Fund, this requirement would work no hardship on these funds.

(3) Insurance Companies. While the insurance companies pledged $1 billion for the purchase of housing mortgages to meet the needs of those of lower incomes in our cities, they should be urged by the Commission to make additional pledges for such mortgage purchase each year.

(4) Veterans Administration Funds. With respect to certain Veterans Administration funds which are available for investment, NHC supports the pending legislation authorizing the use of such funds for investments in VA-guaranteed mortgages.

NHC applauds the recent effort by the AFL–CIO to help the adverse effects of the unprecedented high interest rates and tight mortgage money. The AFL–CIO has recently embarked upon an expansion of its Mortgage Investment Trust. A national campaign has begun to attract general treasury and pension and welfare funds of AFL–CIO affiliates and qualified labor-management funds into a mortgage investment program designed to do three principal things: (1) to help provide adequate housing for America's families; (2) to provide a safe, reasonable yield on the investment of union funds; (3) and to create jobs. NHC joins with the AFL–CIO in urging

the participation of all AFL–CIO affiliates and the allocation of regular percentages of union investments in the AFL–CIO Mortgage Investment Trust.

(c) As stated earlier, NHC is in favor of requiring the Federal Reserve System to purchase securities guaranteed by the Federal Home Loan Bank, FNMA, or GNMA in times of tightness in the mortgage market thereby providing these institutions with funds to funnel to the mortgage market. NHC believes the Federal Reserve Board should be authorized to purchase directly from FNMA, GNMA, and the Federal Home Loan Bank Board the obligations issued by these agencies. This would assure that the funds would be channeled directly into the mortgage market when needed during periods of monetary stringency and rising interest rates. These obligations would include participation certificates or other securities issued against a pool of mortgages or consolidated debentures or other obligations. In the past, the Federal Reserve has objected to open market purchases because it stated that there was no guarantee that if Federal Reserve did make purchases the money would find its way back into the mortgage market. However, this objection would be met since purchases of securities from the Federal Home Loan Bank, FNMA or GNMA will automatically feed back into the mortgage market because the operation of these institutions are limited to the financing of housing.

(d) NHC recommends that savings and loan associations, mutual savings banks, and other mortgage lenders be permitted to issue long-term securities to raise funds for mortgages. This would be an additional means of channeling funds into mortgages in housing.

(e) NHC recommends legislation to permit thrift institutions to accept deposits of cities and other public agencies for investment in housing; such deposits should be fully guaranteed and exempt from the $15,000 limit on guaranties.

(f) As stated above, NHC strongly recommends bringing into early operation the new authority provided to the Government National Mortgage Association (GNMA) to insure mortgage-backed bonds issued by institutions seeking to raise new funds for mortgages. It will tap additional sources for investment in housing. Many institutions and investors would buy such bonds since they would be relieved of the burdens or costs of servicing the mortgages. They would also be assured of necessary protection on their investment through the GNMA guaranty.

4. Dealing with Discounts: (a) In the private financial markets when there are changes in the expected yields through interest, it is not feasible to forbid discounts or premiums on mortgages with fixed interest rates. Whenever there is a fixed interest rate on mortgages, the price paid for the mortgage will reflect the current market yield available on comparable investments. Accordingly, there will be a discount or a premium on a mortgage bearing a fixed interest rate, as this is the method by which there is an adjustment in the yield to reflect the market conditions.

(b) While there may be discounts on mortgages which bear a fixed interest rate, this does not necessarily mean that the consumer should pay the discounts. On housing for families of moderate or lower incomes, it is necessary to achieve reasonable interest rates without discounts in order to serve the families at monthly charges which they can afford. There are many families in the moderate income group who will not be eligible for interest assistance under the programs of Sections 235 and 236, because their incomes are above the lower income limits that have now been established for these programs. The recent increases in interest rates have excluded people from the housing market who need homes but can no longer afford them at the higher interest rates. Accordingly, as stated above, we have recommended a tandem program for the combined use of GNMA and FNMA which would make it possible to achieve reasonable interest rates for those of moderate incomes without charging the discount to the consumer. Instead, any discounts that are necessary—even with an increased flow of funds into the housing mortgage market—would be absorbed by GNMA as part of a sound public policy to assure the availability of housing financing at a reasonable price for those of moderate incomes who need housing.

CHAPTER E. RENTAL AND COOPERATIVE HOUSING UNDER SECTION 221(d)(3)

1. Objectives: Since 1961, there has been a program under Section 221(d)(3) to provide housing for moderate and lower income families who could not obtain decent housing in the private market without Federal assistance. This is accomplished through FHA-insured financing at a below-market-interest rate of 3%. This program has been a most successful one. There is a long accumulated backlog of unfilled applications for additional projects under Section 221(d)(3).

2. Authorizations in 1968 Housing Act: In the 1968 Housing Act, there was an increase of $500 million in the special assistance authority to become available on July 1, 1969. This was in addition to the present revolving authority which was increased by $525 million on July 1, 1968 under existing law. In their reports, the House and Senate Committees stated that they had approved these additional funds primarily for the use by GNMA in the purchase of Section 221(d)(3) below-market-interest rate mortgages. The Senate and House Committees recognized the necessity for continuing the 221(d)(3) program without a lapse of authority which could do damage to the Congressional goal for stepped-up activity in the field of new construction for housing for lower income families The Committee reports further stated:

"The committee is mindful of the practical difficulties of getting a new program rolling; that is, the long lead time it takes to prepare regulations, allocate the funds, educate the local sponsors and builders and finally produce specific projects to receive the benefits of the new subsidy program. The Section 221(d)(3) BMIR has hurdled all of these obstacles and it is now a going program. The committee wants to assure that it will continue to be a going and effective program until the new Section 236 program has reached some degree of efficiency. The additional special assistance funds of $500 million would be used to provide the backup support for the program necessary to carry out this objective."

3. Recommendations: (a) As explained elsewhere in these Resolutions, the 236 program has not become fully operational nor has it hurdled the obstacles in getting the new program started. One of the major obstacles is the lack of private financing without a discount of at least 1½ points in the current market. Nonprofit, cooperative and other sponsors are generally unable to provide funds to meet this discount which is not covered by mortgage proceeds. There was a clear Congressional intent and mandate to continue the 221(d)(3) program as indicated above. Yet the Bureau of the Budget is recapturing all funds not previously allocated under the 221(d)(3) program for the GNMA purchase of below-market-interest-rate mortgages. As a result of this action, no further allocations will be made under Section 221(d)(3). We strongly urge that this action by the Bureau of the Budget be rescinded that the balance of 221(d)(3) funds be allocated for housing projects which require financing.

(b) NHC opposes the request of former President Johnson to defer from July 1, 1969 to July 1, 1970 the $500 million increase in GNMA's special assistance funds which the 1968 Housing Act made available. These funds should be committed primarily for mortgages under Section 221(d)(3).

(c) While GNMA would make allocations and commitments to purchase mortgages with these special assistance funds, the actual expenditures and purchases of the mortgages would not occur until the housing is completed. This will not happen on any new construction during fiscal year 1969. Likewise, most of the housing construction will not be completed in fiscal 1970, so there will be a relatively small impact on the Budget through GNMA expenditures during fiscal 1970.

(d) The advance commitments by GNMA to purchase these mortgages is necessary now to enable the 221(d)(3) projects to proceed. Otherwise, it will not be possible to continue the 221(d)(3) program while action is being taken to get full and efficient operations under Section 236. Unless the 221(d)(3) projects receive the foregoing special assistance funds, there will be a serious interruption in the program to provide housing for lower income families, contrary to the goals and mandates of the 1968 Housing Act.

(e) The 221(d)(3) program was continued under the 1968 Housing Act, with $500 million of additional special assistance primarily for this program commencing July 1, 1969. However, it had been contemplated that this program would be phased out in later years after the new interest assistance program under Section 236 became equally efficient and acceptable in its operations. NHC recommends against phasing out the 221(d)(3) program of below-market-interest rates, because such action would create a new gap and area of unmet need in our housing program. The new interest assistance programs have lower income limits for eligibility than Section 221(d)(3). Moreover, due to the requirement that occupants spend certain percentages of their income for housing, these programs will result in little or no interest assistance for many moderate income families who had been eligible under 221(d)(3); such families will be excluded from interest assistance they need to achieve monthly payments which they can afford. Accordingly, it is necessary to continue the 221(d)(3) program as a permanent program to serve those of moderate income who will not be eligible under the interest assistance programs, but who need help to obtain decent housing. A similar situation occurred several years ago when the rent supplement program was proposed; it had then been contemplated that the 221(d)(3) program would be phased out. However, the rent supplement program was finally enacted to serve the low income group instead of the same group which had been served by 221(d)(3); consequently, Congress determined that the 221(d)(3) program should be continued. Similar action is required now on the 221(d)(3) program to avoid creating a new gap and area of unmet need.

CHAPTER F. HOMEOWNERSHIP UNDER SECTION 235

1. Objectives: The new program under Section 235 provides financial assistance to enable lower income families to acquire individual or cooperative homeownership. This law responds to the urgent desire for homeownership among such families. They want the pride of owning their own home and the greater sense of security and dignity which it affords. Individual and cooperative ownership provides benefits not only to the owner, but to the community as well. Such owners take responsibility for maintaining and improving their homes. They acquire a stake in the community and participate in its affairs. The result is a more stable and wholesome living environment in which to raise children.

2. Authorizations in the Housing Act of 1968: (a) HUD is authorized to enter into

contracts to make periodic payments to lenders who make FHA-insured home mortgage loans to lower income families. The payments will be in an amount necessary to make up the difference between 20 percent of the family's monthly income and the required monthly payment under the mortgage for principal, interest, taxes, insurance, and mortgage insurance premium. In no case, however, can payment under the mortgage exceed the difference between (i) the required payment under the mortgage for principal, interest, and mortgage insurance premium and (ii) the payment that would be required for principal and interest if the mortgage bore an interest rate of 1 percent. The amount of the payment on each mortgage will vary according to the income of the homeowner. The family's income is required to be recertified at least every 2 years and appropriate adjustments made in the assistance payment to reflect any change.

(b) The assistance payment is available for a purchaser having an income at the time of his initial occupancy not in excess of 135% of the maximum income limits that can be established in the area for initial occupancy in public housing. However, up to 20 percent of the funds authorized in appropriation acts for the program can be used to assist families with incomes above these limits but which are not in excess of 90 percent of the income limits for occupancy in a section 221(d)(3) below-market interest rate housing project.

(c) In calculating the income of the homeowner for the purpose of determining eligibility as well as the amount on which the 20 percent computation will be made, there will be deducted $300 for each minor child who is a member of the homeowner's immediate family and living with him. Also, income of minors will not be included in the homeowner's income for this computation. By administrative action pursuant to recommendations in the Senate Committee Report, there is a deduction of 5% of gross income to cover payroll deductions for social security taxes and compulsory pension funds.

(d) The amount of a home mortgage cannot exceed $15,000 ($17,500 in high cost areas). These limits are increased to $17,500 except that it may be $20,000 in high cost areas for families with five or more members. The same limits apply as an average to the blanket mortgage of a cooperative.

(e) On individual ownership of single family homes, the minimum downpayment is $200 for families with incomes up to 135 percent of the maximum income limits that can be established in the area for initial occupancy in public housing and 3 percent in other cases.

(f) HUD is authorized to provide budget, debt management, and related counseling services to homeowners who purchase homes under the program.

(g) The housing, with a few limited exceptions, must be new or substantially rehabilitated housing, except that up to 25 percent of the amount of contracts authorized to be made before July 1, 1969 can apply to existing housing, with this percentage decreasing to 15 percent the following year, and 10 percent the third year.

(h) The aggregate amount of contracts to make payments cannot exceed amount approved in appropriation Acts. The payments pursuant to the contracts cannot exceed $75 million per annum prior to July 1, 1969. This amount is increased by $100 million on July 1, 1969, and by $125 million on July 1, 1970.

(i) The 221(h) program—with a new limit of $50 million—is charged to allow the Secretary to reduce the interest rate on a home purchaser's mortgage under the program to as low as 1 percent where the purchaser's income justifies, with periodic adjustments between 1 and 3 percent to reflect changes in the homeowner's income. Under this program nonprofit mortgagors purchase and rehabilitate housing with FHA insured mortgages and resell it to low-income families.

3. Authorization in Appropriation Acts: Of the $75 million authorized under Section 235 for interest-assistance contracts prior to July 1, 1969, $25 million of the contract authority has been embodied in appropriation acts.

4. Recommendations: (a) *Additional Authorizations in Appropriation Acts.* NHC recommends that appropriation actions include the additional interest-assistance contract authority under Section 235 as follows:

(1) The $50 million in interest-assistance contract authority which has not been included in appropriation acts and is authorized by the 1968 Housing Act for use prior to July 1, 1969; and

(2) The $100 million in interest-assistance contract authority for fiscal year 1970 and $125 million in contract authority for fiscal year 1971.

In making these recommendations, we emphasize the need for advance authorizations for each succeeding fiscal year, besides the current one, to allow more lead time for the planning and initiation of homeownership programs for lower income families.

(b) Increase in Legislative Authorizations: NHC recommends increasing the legislative authorizations for interest assistance contracts under Section 235 to achieve an average annual rate of 300,000 units for a 5-year period. Initially, the annual rate should be 225,000 units, but it should be accelerated each year until it reaches 375,000 units in the fourth and fifth years.

(c) Other Legislative Amendments: NHC makes the following recommendations for other legislative amendments:

(1) NHC recommends the removal of the limitation that interest assistance payments shall be limited to the initial owner of a house or the initial and second member-occupant of a cooperative dwelling unit—and the person to whom the initial member transfers his membership. This present limitation will prevent the program from meeting the continuing need for housing low and moderate income families because it prevents the particular house or dwelling unit involved from being available to subsequent families with such incomes. We recommend that this provision be amended so that when the owner or cooperative member sells his dwelling to a purchaser meeting the income limits applicable to this program, and the purchaser will also be eligible to obtain an interest subsidy on the dwelling involved. This amendment should apply to all subsequent eligible purchasers.

(2) NHC recommends an amendment to the provision requiring families to spend 25% of their income for mortgage payments for total housing expenses. NHC recommends that including utilities and maintenance, a family should pay 20% instead of 25% under Section 235. The proposed interest subsidy would pay only the excess of the mortgage payment above the amount which represents 20% of the family income. Statistics show that a median of 15.5% of income was spent for such mortgage payments, as distinguished from total housing expense, under the FHA 203 program. NHC recommends a requirement that 1/6th of income be spent for mortgage payments under Section 235. This is necessary to assure that families will have enough income remaining to pay for food, clothing and other requirements for a decent standard of living. As to the present requirement that the owner spend 20% of his income for mortgage payments, it results in reducing or eliminating the amount of interest assistance available for many lower income families. This excludes them from assistance they need to achieve monthly payments which they can afford; thus it excludes them from the market for this housing and creates an unfilled gap in our housing program, as explained below in the discussion of Section 236.

(3) NHC recommends an amendment which will establish a realistic cost limit for high-cost areas comparable to other provisions in existing law. In high-cost areas, the Secretary should be authorized to increase by 45% the mortgage amounts of $15,000, or, in the case of families with five or more members, $17,500.

(4) With respect to the contract authority for interest assistance, NHC recommends that the same 25% thereof should be made available for use on existing dwellings in fiscal 1970 and 1971 as the Act now authorizes for fiscal 1969. This would represent an increase above the 15% and 10% of such contract authority now authorized for such use in fiscal 1970 and 1971. Besides enabling the homeownership program to have a greater immediate impact, this amendment would afford a greater opportunity for freedom of choice among lower income families in selecting the areas in which they desire to live.

(d) Administrative Actions: NHC makes the following recommendations for administrative actions:

(1) In computing family income under Section 235, FHA should allow deductions of the type which have been long recognized in public housing, particularly since the income limits in the interest assistance program are now computed as a percentage of the local public housing limits. Moreover, this action would respond to the Senate Committee's report that fair standards and rules should be followed within HUD for determining such income.

(2) FHA should repeal the asset limitations which penalize lower income families who have been thrifty. The 1968 Housing Act does not require that lower income families be declared ineligible if they have accumulated savings. NHC does not believe that such a limitation should be imposed administratively.

CHAPTER G. RENTAL AND COOPERATIVE PROGRAM UNDER SECTION 236

1. *Objectives.* The new program under Section 236 provides financial assistance to enable lower income families to acquire rental housing or cooperative homeownership. This program is urgently needed to provide housing for families with incomes too high to qualify for public housing but too low to afford decent housing that could be produced in the private market. A tremendous unmet need exists for housing to serve moderate income families who cannot afford standard private housing without federal assistance. There is a long accumulated backlog of unfilled requests and applications for additional projects to serve this income group. Unlike Section 221(d)(3), the capital financing under Section 236—as well as Section 235—is shifted to the private market where the mortgage loans must be obtained at market interest rates. Federal Assistance payments would make up the difference between the market rate of interest and 1%.

2. Authorizations in the Housing Act of 1968: (a) Section 236 authorizes a new program of Federal assistance to rental and cooperative housing for lower income families. The assistance is in the form of periodic payments to the mortgagee financing the housing to reduce the mortgagor's interest costs on a market rate FHA-insured project mortgage.

(b) The interest assistance payments will reduce payments on the project mortgage from that required for principal, interest, and mortgage insurance premium on a market rate mortgage to that required for principal and interest on a mortgage bearing an interest rate of 1 percent.

(c) The interest assistance payments will reduce rental or occupancy charges to a basic charge. A tenant or cooperative member will either pay (a) the basic charge or (b) such greater amount as represents 25 percent

of his income, but not in excess of the charges which would be necessary without any interest assistance payments. Incomes of tenants or cooperative members will be re-examined at least every 2 years for the purpose of adjusting charges. Rental or occupancy charges collected in excess of the basic charges are to be returned to HUD for deposit in a revolving fund for the purpose of making other interest assistance payments.

(d) Tenants or cooperative members of these projects who pay less than the fair market rental charge for their units will generally have to have incomes, at the time of their initial occupancy, not in excess of 135 percent of the maximum income limits that can be established in the area for initial occupancy in public housing dwellings. However, up to 20 percent of the contract funds authorized in appropriation acts may be made available for projects in which some or all of the units will be occupied, at the time of the initial occupancy, by tenants or cooperative members whose incomes exceed the above limit but do not exceed 90 percent of the income limits for occupancy of section 221(d)(3) below-market-interest-rate housing.

(e) In determining income for the purpose of eligibility as well as the amount of rent or occupancy charges to be paid a $300 deduction is permitted for each minor person in the family and any income of such minor is not counted. By administrative action pursuant to recommendations in the Senate Committee Report, there is a deduction of 5% of gross income to cover payroll deductions for social security taxes and compulsory pension funds.

(f) To qualify for mortgage insurance under the new program, a mortgagor must be a nonprofit organization, a cooperative, or a limited dividend entity of the types permitted under the section 221(d)(3) housing program. The mortgage limitations with respect to maximum mortgage amount are the same as for mortgages insured under the 221(d)(3) program. Interest assistance payments can also be made with respect to State-aided housing projects approved for receiving the benefits of the program prior to completion of construction or rehabilitation of the projects.

(g) Contracts for assistance payments are authorized, subject to approval in appropriation acts, in the amount of $75 million annually prior to July 1, 1969. This amount is increased by $100 million on July 1, 1969, and by $125 million on July 1, 1970.

(h) A project financed under the new program can include such nondwelling facilities as HUD deems adequate and appropriate to serve the occupants of the project and the surrounding neighborhood, as long as the project is predominantly residential and any nondwelling facilities contribute to the economic feasibility of the project. Where a project is designed primarily for occupancy by the elderly or handicapped it can include related facilities for their use, such as dining, work, recreation, and health facilities.

(i) A cooperative or private nonprofit corporation or association can purchase a project from a limited dividend mortgagor and finance the purchase with a mortgage insured under the program.

(j) Rent supplement payments may be provided for tenants in projects financed under Section 236, but no more than 20 percent of the units in any one project can receive rent supplement assistance.

3. Authorization in Appropriation Acts: Of the $75 million authorized under Section 236 for interest-assistance contracts prior to July 1, 1969, $25 million of the contract authority has been embodied in appropriation acts.

4. Recommendations: (a) Additional Authorizations in Appropriation Acts: NHC recommends that appropriation acts include the additional interest-assistance contract authority under Section 236 as follows:

(1) The $50 million in interest-assistance contract authority which has not been included in appropriation acts and is authorized by the 1968 Housing Act for use prior to July 1, 1969; and

(2) The $100 million in interest-assistance contract authority for fiscal year 1970 and $125 million in contract authority for fiscal year 1971.

In making these recommendations, we emphasize the need for advance authorizations for each succeeding fiscal year, besides the current one, to allow more lead time for the planning and initiation of housing programs for lower income families.

(b) Increase in Legislative Authorizations: NHC recommends increasing the legislative authorizations for interest assistance contracts under Section 236 to achieve an average annual rate of 300,000 units for a 5-year period. Initially the annual rate should be 225,000 units, but it should be accelerated each year until it reaches 375,000 units in the fourth and fifth years.

(c) Other Legislative Amendments: NHC makes the following recommendations for other legislative amendments:

(1) NHC recommends an amendment to the provision requiring that 25% of family income be paid for total housing expenses—including mortgage payments, real estate taxes, utilities, heat, and the estimated cost of maintenance and repair. The proposed interest assistance would pay only the excess of total housing expense above the amount which represents 25% of family income. Statistics show that a median of 19.6% of income was spent for total housing expense under the FHA 203 program. NHC recommends that 1/5th of the income be spent for total housing expense under Section 236 so that families will not be required to spend a disproportionate amount of their earnings for housing. This is necessary to assure that families will have enough income remaining to pay for food, clothing and other requirements for a decent standard of living. As to the present requirement that the owner spend 25% of his income for total housing expense, it results in reducing or eliminating the amount of interest assistance available for many lower income families. This excludes them from assistance they need to achieve monthly payments which they can afford; thus, it excludes them from the market for this housing and creates an unfilled gap in our housing program as shown by the following examples:

These examples relate to a $15,000 mortgage on a 2-bedroom unit where the fair market charge would be $167 per month:

(i) If the income of a family of four, after allowable deductions, were $8,000, it would be required to pay the $167 a month which would represent 25% of its income—so this family would receive no subsidy.

(ii) If the income of this family, after allowable deductions, were $7,000, it would pay $146 a month and receive a $21 subsidy. This would be about a third of the authorized subsidy on this unit, which would be $58 monthly at the 1% interest rate.

Families with incomes cited in the foregoing examples cannot afford to pay these monthly charges. Unless the 221(d)(3) program is continued to serve these families, the 236 program would create a new gap in meeting housing needs by excluding moderate income families who previously received adequate subsidies under Section 221(d)(3) and who will receive little or no subsidy under Section 236.

(2) NHC recommends that Section 236 and Section 221(d)(3) should be amended to remove the 10% limit on the number of units in a project which may be occupied by moderate-income individuals as distinguished from families. All moderate-income individuals would then be treated in the same manner as those who are elderly or handicapped.

(d) Administrative Actions: NHC makes the following recommendations for administrative actions:

(1) In computing family income under Section 236, FHA should allow additional deductions of the type which have been long recognized in public housing, particularly since the income limits in the interest assistance program are now computed as a percentage of the local public housing limits. Moreover, this action would respond to the Senate Committee's report that fair standards and rules should be followed within HUD for determining such income, after deductions.

(2) To help effectuate the Congressional purpose to encourage ownership, FHA should include cooperative ownership as one of the major criteria in selecting projects for the allocation of funds under Section 236.

(3) FHA should establish cost limits which will be realistic and workable in high cost areas, including both high and low rise buildings. This is necessary to assure that housing under 236 can be constructed within the cities where employment and public transportation are available.

(4) FHA should repeal its administrative limitation that no more than 20% of the units in any one project can receive assistance under the rent supplement or leasing programs. The statute merely establishes this 20% limitation as to those receiving rent supplements. NHC recommends against the extension of this limitation to include occupants who receive assistance under the leasing program. In appropriate cases, it will be desirable to have more than 20% of the units in a project occupied by low income families, in which case the additional families could receive assistance under the leasing program.

CHAPTER GG. SPECIAL MORTGAGE INSURANCE ASSISTANCE UNDER SECTION 237

1. Objectives: In the new section 237, the 1968 Housing Act provides help to assure adequate housing for families of low and moderate incomes who—because of poor credit records, irregular income or seasonal employment—are unable to meet the credit requirements of purchasing single-family homes financed by a mortgage insured under Sections 203, 220, 221, 234, or 235(j)(4). This help is to be extended to those who appear able to achieve homeownership through the counseling assistance.

2. Authorizations in the Housing Act of 1968. (a) HUD is authorized to insure mortgages under the above-mentioned programs in an amount not to exceed $15,000 with increases not to exceed $17,500 in high-cost areas.

(b) Monthly payments, in combination with local real estate taxes on the property, must total 25% of the applicant's monthly income during the year prior to his application or the average monthly income during the three years prior to his application, whichever is higher.

(c) The Secretary is authorized to provide, or contract with public or private organizations to provide such budget, debt management and related counseling services to those obtaining housing under Section 237.

(d) The aggregate principal balance of all mortgages insured under Section 237 and outstanding at one time may not exceed $200 million.

(e) Authorizations are made in such sums as necessary to carry out the provisions in Section 237.

3. Recommendations: (a) NHC recommends an amendment which would require families to spend 20% instead of 25% of their income for mortgages, including insurance and real estate taxes.

(b) NHC recommends an amendment which will establish a realistic cost limit for high-cost areas comparable to other provi-

sions in existing law. In high-cost areas, the Secretary should be authorized to increase by 45% the mortgage amounts of $15,000, or, in the case of families with five or more members, $17,500.

(c) NHC recommends necessary appropriation of funds to enable FHA to provide budget, debt management, and related counseling services to those obtaining housing under Section 237.

CHAPTER H. LOW-RENT PUBLIC HOUSING

1. Need: There is a tremendous unmet need for additional housing to serve the low-income group who cannot be decently housed without the aid of Federal subsidies. Many of the ill-housed in this income group are living in the slum and ghetto areas of our cities. Their unmet need for adequate housing has contributed to the crisis in our cities. Cities throughout the country have recognized the urgency of building additional public housing. Applications for additional public housing units are now being submitted to HUD at an annual rate of about 140,000 units.

2. Authorizations in 1968 Housing Act: (a) The Act provided an increase in the contract authorization for annual contributions of $100 million upon its passage and an additional $150 million on July 1, 1969 and July 1, 1970. These increased authorizations would provide about 375,000 low-rent dwelling units over the 3-year period for the public housing program.

(b) The Act authorizes HUD to make grants to local housing authorities to assist in financing tenant services for tenants of public housing. Appropriations for the grants are authorized up to $15 million for fiscal year 1969, and $30 million for fiscal 1970. The tenant services include: counseling on household management, housekeeping, budgeting, money management, child care, and similar matters; advice as to resources for job training and placement, education, welfare, health, and other community services; services which are directly related to meeting tenant needs and providing a wholesome living environment; and referral to appropriate agencies when necessary for the provision of such services.

(c) High-rise public housing projects for families with children are prohibited except where HUD determines that there is no practical alternative.

(d) HUD is prohibited from prescribing limitations on the types or categories of structures or dwelling units (other than those provided in the law) which can be leased under the public housing, section 23 leasing program.

(e) An additional annual subsidy of $120 is authorized for public housing units occupied by large families or families with very low incomes. In the past a like subsidy has been limited to the elderly and displaced families.

3. Authorizations in Appropriation Acts: No appropriation has been made of the $15 million authorized for fiscal 1969 to assist in financing tenant services in public housing. No further authorizations are required in appropriation acts on the authority for annual contribution contracts.

(4) Recommendations: (a) Necessary Appropriation: NHC recommends the appropriation for the fiscal year 1969 of the $15 million authorized for grants to local housing authorities to assist in financing tenant services in public housing. We also recommend the advance appropriation of the $30 million authorized for such grants for fiscal 1970, since such an advance appropriation will allow necessary lead time for the initiation and planning of programs to provide tenant services.

(b) Increases in Legislative Authorizations: There is a need to increase the authorizations for public housing to an average annual rate of 200,000 units for a 5-year period. Initially, the annual rate should be 150,000 units, but it should be accelerated each year until it reaches 250,000 units in the fourth and fifth years. This should include public housing of the conventional type, along with turnkey housing and leasing programs.

(c) Other Legislative Amendments: We should perfect the existing public housing programs in light of our experience. In the conventional public housing program, this requires the following new federal aids to meet conditions that have been too long neglected.

(1) Additional annual contributions should be provided to meet all costs except those which low income families can afford as rentals. This should include not only the debt service, but also adequate maintenance, conservation and operation of public housing, and additional services. It should also cover the cost of work required to comply with Federal anti-air-pollution legislation. The present needs and costs are higher than those which prevailed when the original annual contribution contracts were signed. If the annual contributions are not raised, local housing authorities will be forced to increase rents and income limits. This would jeopardize the continued achievement of the purpose of this program to serve low-income families. Also, it will cause the deferment of necessary maintenance and repairs, thereby jeopardizing the physical condition and long-term life of the property. The present annual contributions were computed to assure their adequacy to meet debt service, but without provision for the increased later costs of maintenance and operation; or the need for additional services. There has been criticism of conventional public housing because of its failure to provide necessary services and because of its lack of conservation through renovation. Correction of these conditions should remove the cause of this criticism and produce a better living environment in public housing.

(2) There should be an amendment authorizing the leasing of available private housing outside central cities for low-rent housing purposes. Parenthetically, state laws should likewise be amended to enable local authorities to lease such housing outside central cities.

(3) Authorization to HUD to make federal capital grants to cover the full amount of land and site development costs in excess of the reuse value of the improved land for new low-rent public housing projects which are not located in urban renewal areas. Also to make such federal grants for a write down on buildings acquired for rehabilitation.

(4) The annual subsidy formula should be revised to permit annual Contributions equal to full debt service on permanent financing (plus such additional amounts as may be necessary for the purposes described in paragraph (c) (1) hereof) with residual receipts being used either for project rehabilitation and improvement or accelerated amortization. At any time after completion of a public housing project, provision should be made for reopening development cost, if necessary (i) to make additional loans for needed rehabilitation or improvements, with annual contributions correspondingly increased; or (ii) to make grants for such other purposes as may be necessary.

(5) The present law provides for disposition of public housing to residents, when the housing is sufficiently separable for ownership by the residents. We recommend an amendment to authorize sale of an entire project to a cooperative with a membership limited to those who will reside in the project. In broadening the authorization for disposition of public housing, the amendment should require a finding that such disposition would not adversely affect the low-rent program of the public housing agency involved. The proposed NHC amendment would make it possible for residents of public housing to achieve cooperative home ownership and to produce better and more stable communities. Further, instead of requiring over-income families to move out, they should be allowed to acquire cooperative homeownership by paying a higher monthly charge which they can afford, based upon a percentage of their increased earnings. This amendment will give public housing tenants an incentive to better themselves. As to public housing tenants whose incomes have not increased, they can either be: (i) relocated in other public housing projects, with their moving expenses paid; or (ii) permitted to remain in the project as public housing tenants receiving the benefit of annual contributions so long as they qualify as low-income families. When vacancies occur, they would be filled with over-income tenants from other public housing projects who desire to become cooperative homeowners.

(6) Increase the present statutory limits on construction costs per rental room from $2,500 to $3,000 and increase the additional allowance for high-cost areas from $250 to $500; and provide that the only monetary limitation to be applied in project development shall be the statutory room cost. In other words, administrative limitations should not be imposed as is now the case. This would enable local authorities to meet the great need for large housing units to serve large families.

(7) Repeal the provision in the U.S. Housing Act of 1937, as amended, which requires a 20% gap between the lowest private and the upper public housing income limits for admission. Also, permit low-income individuals—in addition to low-income families—to be eligible for occupancy in low rent public housing.

(8) Make the necessary changes to permit construction in a municipality of low-rent public housing for those of low income who will later migrate to the municipality for employment in industries located there or in service activities. This would include new towns or municipalities outside of central cities. It would facilitate dispersal of population and reduction of the concentration of low-income families in central cities.

(9) In new and existing low-rent housing projects, there is a great opportunity to provide social impetus and vitality not only to those living in the development, but also the neighborhood. The need is both for physical community facilities on a large scale and for skilled and dedicated personnel to operate them imaginatively. A program was authorized by the 1965 Act for ⅔ federal grants to assist communities in developing neighborhood facilities of all types, with preference to those in neighborhoods involving the anti-poverty program. While this affords a new opportunity to obtain needed physical facilities, the law should be amended to provide for necessary social and counseling services in such neighborhood facilities. Where funds or services cannot otherwise be obtained, local authorities should be permitted to use project funds for this purpose. Adequate funds for social and counseling services should be included in the project budget.

(10) Neither the program to lease privately-owned housing for public housing purposes, nor the rent-supplement program for those of public-housing incomes, require a local financial contribution in the form of exemption from local real estate taxes. Conventional public housing projects are therefore at a disadvantage in gaining acceptance by local governments, since these projects require tax exemption and 10% of shelter rents in lieu of taxes. To eliminate this disadvantage, NHC recommends that local housing authorities be permitted to make payments in lieu of taxes equal to full taxes. Federal annual contributions should be increased to cover the payment of a full tax equivalent.

(11) The 1965 Act repealed as to future projects the requirement of Section 10(c) of the United States Housing Act of 1937 that annual contributions to a public housing agency be reduced by any amounts by which the receipts of the agency exceed its expenditures. As a matter of fairness and to meet the needs of public housing agencies, NHC recommends that this repeal should also apply to public housing projects existing at the time of the 1965 Act, as well as future projects.

(12) The Section 23 leasing program should be amended to permit longer term leases as this will encourage more private owners to participate in the program. The leasing program should be available for use in connection with any FHA-insured housing so as to help achieve economic integration. It should also be available for use in connection with FHA-insured nursing homes.

(13) NHC recommends the removal of the 10% limit on the number of units in a project which may be occupied by low income individuals as distinguished from low income families.

(d) Administrative Actions: NHC recommends and approves the following administrative actions by HUD:

(1) While we believe the proposal for private management of turnkey housing is of dubious merit, we favor trying this new approach to determine whether it will produce benefits or improve techniques in the management of public housing and the achievement of the program's social objectives. The proposal should be recognized as a pilot and experimental program to be determined by local housing authorities. Meanwhile, NHC reaffirms the wisdom of continuing the present tested management operations through local authorities. They have long experience in handling the operations and problems and social aspects of public housing management. Moreover, they are clearly motivated by the public interest in managing public housing to serve low-income families.

(2) NHC is impressed by the early evidence of widespread community acceptance of the provision in the 1965 Act authorizing the use of suitable private housing for low-income families through lease or other arrangements between local authorities and the owners and operators of private housing.

(3) We again commend HUD for its flexibility in using existing legislative tools to develop a program which will enable low-income families to live in the same projects as families of moderate incomes instead of isolating families of each income group. Under this program, the low-income family can continue in occupancy when its income increases, but would no longer receive public housing subsidies; instead, it would get the benefit of a below-market interest rate. When the family becomes self-supporting, it would pay the full market rate of interest.

(4) The special subsidy for housing elderly and displaced persons is now available only in the event of a deficit operation. NHC recommends that this subsidy be made available generally in an amount equal to the difference between the rent paid per month and the average cost of operation.

(5) NHC recommends that the documentation required to qualify initially for the leasing program eliminate the unnecessary requirement for development of detailed hypothetical data as to the extent of the potential supply of units.

(6) The 1958 Housing Act emphasizes the importance of good public housing design to the low-income family and to the local community. The Nation is concerned not only with the quantity of new public housing, but also with its quality. We urge HUD to take all actions necessary to achieve higher design standards for public housing developments.

(7) NHC recommends necessary adjustments in public housing income limits in those localities which have failed to keep pace with the increases in costs and incomes; also, there should be a recognition of the larger income which larger families require. Thus, there is no justification for a public housing limit for a larger family which would make a welfare recipient ineligible for occupancy.

(8) NHC recommends administrative action by HUD to pay the maximum amount of annual contributions allowed by statute in order to help toward meeting the costs and expenses on a public housing project which are not defrayed from rentals paid by low income families in amounts which they can afford. While this administrative action will alleviate the critical needs of local housing authorities it is not adequate; so, we have recommended an increase in the present statutory ceilings on annual contributions.

(9) NHC recommends a revision in the letters of intent used by the Housing Assistance Administration in its turnkey housing program which would make it mandatory for housing authorities to purchase the land and plans from the developer if—for any reason—the local housing authority and the developer fail to execute a contract to purchase.

CHAPTER I. THE RENT SUPPLEMENT PROGRAM

1. Objectives: The Rent Supplement Program is an innovative approach to low income housing. It utilizes the free enterprise system and has been strongly endorsed by the home-building, real estate, and insurance industries. It provides incentives for people to escape from poverty and for the building of modest but decent housing for those who need it most.

2. Authorization in the Housing Act of 1968: The Act makes all previous authorizations for rent supplement contracts aggregating $150 million available for contract prior to July 1, 1969, but only to the extent that these contract authorizations are contained in appropriation acts. The Act provides for an additional $40 million in contract authority for rent supplements in fiscal year 1970 and an additional $100 million in contract authority for fiscal year 1971. The 1968 Housing Act provides that state aided projects are eligible for rent supplements if the projects are approved for such assistance prior to completion of construction or rehabilitation.

3. Authorization in Appropriation Acts: Of the $150 million authorized for rent supplement contracts prior to July 1, 1969, only $72 million of the contract authority has been embodied in appropriation acts. As yet, there are no appropriation authorizations covering the increased rent supplement contracts authorized for fiscal years 1970 and 1971.

4. Recommendations: (a) Additional Authorization in Appropriation Acts: NHC recommends that appropriation acts include the additional rent-supplement contract authorizations in the 1968 Act as follows:

(1) The $78 million in rent-supplement contract authority which has not been included in appropriation acts and are authorized by the 1968 law for use prior to July 1, 1969.

(2) The $40 million in contract authority for fiscal year 1970, and the $100 million in contract authority for fiscal year 1971.

In making these recommendations we again urge the need for advance appropriations for each succeeding fiscal year, besides the current one, to allow more lead time for the planning and initiation of rent supplement programs. Accordingly, besides the authorization of rent-supplement contracts for fiscal year 1970, the next appropriation act should include rent-supplement contract authority for fiscal year 1971.

(b) Increase in Legislative Authorizations. NHC recommends increasing the legislative authorizations for rent-supplement contracts to achieve an average annual rate of 100,000 dwelling units for a five year period. Initially the annual rate should be 75,000 dwelling units but it should be accelerated each year until it reaches 125,000 units in the fourth and fifth years.

(c) Other Legislative Amendments. NHC makes the following recommendations for other legislative amendments:

(1) The rent supplement legislation imposes too great a burden on low income families by requiring them to pay rents equal to 25% of their annual incomes since rent supplements will pay only the difference between such a rental payment and the fair market rental. To eliminate this hardship, NHC recommends that this rent paying requirement be reduced to 20% of family income. A similar recommendation has been made elsewhere in these resolutions relating to the requirement that too high a percentage of family income be spent for housing under the interest supplement programs of Sections 235 and 236.

(2) Counseling and social services should be made available to residents of housing aided by rent supplements. Such services should be allowable housing costs in computing rent supplement payments.

(3) Instead of being allowed to use only 10% of rent supplement funds in the program involving a below-market-interest rate, NHC recommends that half of the rent supplement funds be authorized for use in such projects. This would make it possible to combine in one project (a) rent supplements for low income families and (b) below-market interest financing for moderate income families. In the interest supplement program under Section 236 where mortgages will bear a market rate of interest, it will be possible to combine occupancy by low income families receiving rent supplements with moderate income families receiving interest supplements. These programs should be encouraged and expanded to help achieve the objective of economic integration.

(4) The present law limits rent supplements to lower income families who are living in substandard housing. NHC recommends that the law be amended to include overcrowded conditions as a substandard housing condition; and to permit any low-income family to be eligible for housing aided by rent supplements so long as the family qualifies as to low income, even though the family does not live in physically substandard housing. This would meet the needs of newly-formed families and those who are spending too much of their low income for housing.

(5) There should be a repeal of the requirement for a workable program or local government approval before rent supplements can be used in a locality.

(6) Local housing authorities should be eligible as sponsors under the rent supplement program; also, we make the same recommendation concerning the Section 221(d)(3)-below-market-interest-rate program and the Section 236-interest-assistance program.

(7) NHC urges the establishment of an additional rent supplement program for nonprofit mortgagors who own buildings which are not financed under Section 221(d)(3). When the buildings meet code standards—or are rehabilitated to meet such standards—rent supplements should be available so that the housing can serve low-income families. Present rent supplement requirements for rehabilitation are often unworkable because they cost too much. Rehabilitation to meet code requirements should be acceptable. This will stimulate rehabilitation and provide standard housing quickly and reasonable for many low and moderate income families.

(8) The standards under the rent supplement program should be ungraded to produce better-designed housing which will more adequately meet the needs of families, with attention to their comfort and convenience. The limit of one-bathroom-per-dwelling unit should be removed, as this denies

adequate sanitary facilities for larger families.

5. Recommendations for Administrative Actions: (a) Construction cost limitations were initially established in the rent supplement program which were unworkable in many high cost cities that faced the greatest need for this program. Last year NHC recommended that there be sufficient increases in these cost limitations to make it possible to build rent supplement projects within these cities. FHA has approved some increases in these cost limits. If these increases prove insufficient, NHC recommends further increases in the cost limitations to keep pace with the increases in construction costs. Only through adequate construction cost allowances can the rent supplement program fulfill its purpose of serving low-income families in these cities, near the places of employment and public transportation.

(b) FHA has established lower limits as to the amount of rent supplements available for families in a project than the amount permitted by the statute. NHC recommends the repeal of these lower administrative limits. FHA should be prepared in appropriate cases to contract to pay the full amount of rent supplements on a project up to the statutory ceiling. Only in this way can the needs of many low income families be met, particularly in high cost areas.

CHAPTER J. HOUSING FOR FAMILIES RECEIVING PUBLIC ASSISTANCE AND OTHERS WITH VERY LOW INCOMES; ALSO, CODE ENFORCEMENT

1. Four million American families are receiving all or part of their income from public assistance programs. Many of these families are ill-housed, primarily because welfare grants in most cities are inadequate to pay the cost of standard housing. NHC urges the enactment of legislation which would establish and enforce minimum standards for housing occupied by recipients of public assistance. In addition, such legislation should require that public-assistance shelter allowances cover the full charge for decent housing and that the Federal Government bear the entire additional cost above the present inadequate allowances for shelter. Such shelter allowances should be made in a manner which will encourage rather than discourage home ownership and the security which it should afford.

2. NHC recommends Federal grants to housing authorities or other public agencies—as described elsewhere in these Resolutions—to bring housing up to minimum code standards and to make it available for families of low income, including those who are receiving public assistance.

3. NHC urges an acceleration of concentrated code enforcement in deteriorating areas, together with necessary public improvements to halt their decline. The costs of code enforcement programs—both for determining Federal grants and local grant-in-aid credits—should include all costs incurred for repair or installation of streets, sidewalks, streetlighting, trees, parks, open areas, recreational facilities, and other necessary improvements.

CHAPTER K. REHABILITATION OF HOUSING

1. Need: NHC again reaffirms the importance of saving existing neighborhoods through rehabilitation and other conservation measures. It is sound policy to improve our present housing supply and conserve neighborhoods, rather than allow them to deteriorate until they require greater costs in demolition and reconstruction.

2. Authorizations in 1968 Housing Act: (a) *Dwellings Eligible for Rehabilitation Grants and Loans.* The Act broadened the program of rehabilitation loans under Section 312 for repairs and improvements of dwellings. Instead of limiting the program to dwellings located in urban renewal and code enforcement areas, owners and tenants of dwellings are eligible for loans if the dwelling is located in an area certified by the local governing body as containing a substantial number of structures in need of rehabilitation and:

(1) If the locality has a workable program; and

(2) If the area is definitely planned for rehabilitation or code enforcement within a reasonable time, and the repairs to be assisted are consistent with the plan for rehabilitation or code enforcement.

The Act authorizes rehabilitation grants under Section 115 to low income homeowners whose properties are located in an area of the character described above, instead of limiting such grants to dwellings in urban renewal and code enforcement areas. The Act also authorizes the Secretary of HUD to make rehabilitation grants and loans to low income homeowners whose property has been determined to be uninsurable because of physical hazards. Such grants or loans may be made only to rehabilitate the property to the extent necessary to make it insurable under a statewide plan.

(b) Increase in Rehabilitation Loan Authorizations: The new Act increases the amount authorized to be appropriated for rehabilitation loans. The increase for each fiscal year is from $100 million to $150 million; also, the program is extended to June 30, 1973. The Act limits eligibility for residential rehabilitation loans to persons whose annual income meets the locally applicable income limits for the Section 221(d)(3) below-market-interest-rate program.

(c) Increase in Rehabilitation Grants: The Housing Act of 1968 increases the limit on the amount of rehabilitation grant to a low income homeowner from $1,500 to $3,000.

(d) Repeal of Urban Renewal Limit on Acquisition and Rehabilitation: The Act removes the previous limits on the acquisition and rehabilitation of residential properties by local renewal agencies. Under prior law, such agencies could acquire and rehabilitate for demonstration purposes no more than 100 units or 5% of the total residential units suitable for rehabilitation in an urban renewal area, whichever was the lesser. This limit has been repealed.

3. Recommendations: To provide additional tools that are needed to achieve substantial progress through rehabilitation, NHC recommends the following:

(a) Section 312 should be amended to increase to $500 million the annual appropriations in each fiscal year to carry out the program. Section 312 should broaden the category of eligible borrowers to include public bodies, cooperatives, nonprofit corporations and limited dividend companies in addition to owners or tenants who are now eligible.

(b) With respect to residential rehabilitation loans under Section 312, NHC recommends that the 221(d)(3) income limits should not be applicable to persons who will occupy the rehabilitated housing who have previously been residents of the neighborhood where the dwellings are located.

(c) While the 1968 Housing Act increased to $3,000 the federal rehabilitation grants to eligible occupants who own their own homes in the rehabilitation neighborhood, NHC recommends an increase to $5,000.

(d) Where state or local governments allow tax abatement to encourage rehabilitation, there should be an annual Federal grant to reimburse them for the tax losses.

(e) Relocation assistance and payments should be available to anyone displaced as a result of a rehabilitation program.

(f) More realistic financing should be made available under FHA programs, particularly to serve those people by low and moderate incomes. This requires more practical and workable financing terms and allowances as follows:

(1) The formulas for determining mortgage amounts must recognize the actual cost of acquiring and rehabilitating properties that are structurally sound.

(2) There should be a contingency allowance built into the mortgage financing, which has been recently done by FHA. In rehabilitation, the contractor is often not aware of potential problems until he opens the walls and ascertains actual conditions.

(3) The FHA requirements for rehabilitation should not require a specified percentage of mortgage proceeds to be used for rehabilitation, so long as property is brought up to code standards.

(4) In projects where the property is owned or controlled by the proposed mortgagor, cost savings may be achieved by stripping down the building and tearing out the interior walls before making estimates or getting bids, for the rehabilitation work. In such cases, FHA should recognize the cost of gutting the building since this increases the value of the property for rehabilitation because conditions are known and unforeseen contingencies are minimized.

(5) To reduce the monthly charges to the level which moderate-income families can afford, it is necessary to eliminate present requirements for short amortization periods on rehabilitation projects. Where the rehabilitation project property is in a central city, there is likely to be an increment in land value from which to repay the loan, even though demolition occurs well in advance of the remaining estimated life of the improvements. Thus, the property may later become part of a model city neighborhood or urban redevelopment area. At present, the statute limits the mortgages to a maturity not exceeding three-quarters of the remaining economic life of the building improvements. This limitation should be repealed. FHA should be authorized to permit up to 40-year maturities where appropriate.

(g) There should be Federal grants to a local agency for a total coordinated plan for rehabilitation of the neighborhood and for carrying out the rehabilitation program contemplated by the plan. The local agency should enlist the participation of cooperative and nonprofit organizations and local housing authorities. The local agency would also act on behalf of eligible homeowners in the area in obtaining:

(1) Rehabilitation grants, interest supplements or rent supplements for them;

(2) Below-market-interest-rate loans or market-interest-rate loans for their rehabilitation work; and

(3) Contracts to perform the rehabilitation work, subject to supervision by the local agency.

CHAPTER L. HOUSING FOR THE ELDERLY

1. Authorization in 1968 Housing Act: The 1968 Housing Act does not provide for any increase in the authorization in the 202 program of direct loans at 3% interest to provide housing for the elderly. Instead, the new 236 program of interest assistance is intended to make FHA-insured financing available for this program. There will be interest assistance to reduce monthly housing payments to the level achievable with an interest rate of 1% and without any FHA mortgage insurance premium. Under 236, projects can now be undertaken which will provide housing exclusively for the elderly. Such projects may include related facilities, such as dining, work, recreation and health facilities. The Act authorizes the refinancing of certain 202 projects in order to achieve the lower monthly charges resulting from refinancing with interest assistance.

2. Authorizations in Appropriation Acts: The contract authority in appropriation acts for 236 will now be utilized to finance housing for the elderly. For a description of the 236 authorizations in appropriation acts, see the section hereof which covers that program.

3. Recommendations: (a) NHC urges that an average of 30,000 housing units for the elderly be provided each year for the next 5 years. Our recommendations relating to the 236 program include the amounts needed for this program.

(b) NHC recommends against phasing out the 202 program because it has not been demonstrated that the 236 program will fully and adequately meet the housing needs of the elderly. We anticipate a continuing need for the 202 program to avoid creating another gap and area of unmet need due to the lower income limits in the 236 program and its other restrictions.

(c) NHC also recommends that the authorizations under 202 and 236 should be available to acquire existing housing for the elderly, including projects developed with FHA insurance under Section 231.

4. Other Legislative Amendments: There is a need for special programs to provide ferderal grants for the following purposes in housing for the elderly:

(a) to assist in training professional personnel to manage elderly housing projects; and

(b) to provide working capital and seed capital to states and localities and to national nonprofit organizations such as church groups, labor unions, fraternal and cooperative-servicing organizations.

5. Recommendations for Administrative Action: (a) The 202 and 236 cost limits should permit housing to be built within the cities where they are needed to serve the elderly. In view of high land costs, this should include high-rise buildings. The programs should include rehabilitation as well as new construction. Tax abatement should not be required since it is often unavailable because of restrictions in state and local laws. Moreover, many cities are facing problems of inadequate tax revenues and are reluctant to grant tax abatements. Section 202 and 236 housing for the elderly should be permitted to pay full taxes, as is permitted in leasing privately-owned housing for public housing purposes and in the rent supplement program. Nursing facilities should be eligible for financing in housing for the elderly.

(b) NHC urges that housing for the elderly be included in all planning under the model cities program.

(c) In accordance with the statutory authority for loans equal to the total development costs, HUD should not require in the 202 or 236 programs that an approved sponsor must make an investment to cover the cost of preliminary expenses, facilities, furnishings, equipment and working capital. Such costs should be included in the loan. It should not be necessary for a nonprofit sponsor to make a monetary contribution. Its contribution consists of its devotion of time, ingenuity, and energy in initiating, and developing projects—all without compensation and motivated by public service.

CHAPTER M. FINANCING NURSING HOMES AND FACILITIES FOR GROUP MEDICAL PRACTICE

1. Objectives: NHC again recognizes that a continuing desperate need exists for hundreds of thousands of nursing home beds, especially among the low-income elderly. This need has increased by demands generated through Medicare. Since local housing authorities have long experience in building low-rent housing for the elderly, they are well qualified to develop nursing homes for low-income persons. They should be authorized to coordinate programs of housing and nursing homes facilities for the low-income group. This can be done effectively by amending the U.S. Housing Act of 1937, to authorize annual contribution contracts with local housing authorities for nursing home facilities.

2. Authorization in 1968 Housing Act: The 1968 Housing Act amends Section 232 of the National Housing Act to permit the cost of major items of equipment used in the operating of a nursing home to be included in the FHA-insured mortgage; also, to permit supplementary loans for the installation of such equipment in nursing homes previously constructed.

3. Recommendations: (a) NHC recommends that Section 202 and the new Section 236 be amended to permit the inclusion of nursing facilities in housing projects for the elderly. In this way, elderly persons who need nursing facilities would not have to leave the community in which they are living. NHC further recommends that financing be available to nonprofit sponsors under Sections 202 and 236 which will cover the full cost of nursing homes; also that such projects should get the benefit of below market interest rates or subsidies which would reduce the interest rate to 1%.

(b) The 1966 Act included a program of FHA insurance for facilities used for group medical practice. NHC reaffirms its support of this program and urges its use to encourage the development of nonprofit cooperatives whose members will obtain the benefits of bonafide group medical practice at a reasonable cost. The program should operate in both urban and rural areas.

(c) NHC continues to recommend that mortgage amortization be permitted to commence after completion of construction of group practice facilities rather than at the time the mortgage is executed.

(d) NHC continues to support the basic concept of the prior Patman Bill, H.R. 10188, which would remove obstacles that impede the broader development of group health plans and which would make financing available for group health programs providing hospitalization, out-patient and preventive care.

CHAPTER N. COLLEGE HOUSING

1. Objective: Need for College Housing: Our Nation has increasingly recognized its dependence upon higher education for its security, welfare, and continued prosperity. To meet the demands made by the expanding number of students and by required increases in faculties, additional housing must be provided for students and faculty. Congress recognized the appropriateness of meeting these needs for college housing nearly twenty years ago. In the Housing Act of 1950, it initiated low-interest loans for housing and educational facilities for students and faculties. Since 1961 there have been authorizations for loan increases at the rate of $300 million each year. Such increases are wholly inadequate to meet current needs. The study conducted under the auspices of the American Council on Education has indicated that approximately $1.5 billion per year will be needed for college housing for the next ten years. Recognizing that a portion of this amount may be derived from non-federal sources, the Council recommended that Congress authorize a minimum of $1 billion a year for the next ten years in the form of long-term, low interest loans for the construction of housing facilities.

2. Authorizations in the 1968 Housing Act: Instead of expanding the direct loan program for college housing, the Act contemplates financing in the private market, but it authorizes financial assistance to colleges by means of annual debt service grants. The new grant program is to be used to reduce the borrower's annual debt service payments on private market loans to the average annual debt service that would have been required if the loan were based on the rate charged on loans under the direct loan program. Annual grants can be made over a fixed period up to 40 years. The total amount of annual grant contracts is subject to approval in the appropriation acts. The total amount cannot exceed $10 million, with this limit increased by $10 million on July 1, 1969. The new grant program is made available for loans involving the purchase of existing properties which are in need of little or no rehabilitation.

3. Authorizations in Appropriation Acts: There was an authorization of $3 million of annual grant contracts for college housing instead of the $10 million authorized in the 1968 Housing Act.

4. Recommendations: (a) Additional Authorizations in Appropriation Acts: NHC recommends that the authorized balance of $7 million of annual grant contracts be included in the next appropriation act, together with an advance authorization of $10 million in annual grant contracts for fiscal 1970 to give colleges more lead time for their planning and development of college housing programs.

(b) Increase in Legislative Authorizations: NHC recommends a 5-year authorization of contracts for annual debt service grants which would be sufficient for $1 billion of private financing annually for college housing.

CHAPTER O. COOPERATIVE HOUSING

1. In urban areas where multifamily housing predominates, cooperatives provide an important means of achieving howeownership. This produces better communities where the control and responsibility rests with the people who have a stake and pride in their own housing development.

2. NHC approves the use of the 221(d)(3) interest assistance and rent supplement programs in cooperatives. They will make it possible to reach lower income groups because of the economic savings and advantages of cooperatives. These are illustrated by the following savings:

(a) Lower closing costs with one closing on an entire project of many dwellings, rather than one for each dwelling.

(b) Lower transfer costs since it is unnecessary on a cooperative sale to incur the costs of title examinations and transfers, brokers' fees, refinancing and other charges.

(c) Lower construction costs which cooperatives have achieved through the economies of large scale building when many housing units are presold before construction starts.

The cooperative programs has been successful for low and moderate income families assisted under Section 221(d)(3) where financing is provided at a 3% interest rate. Even though these projects serve lower income families, there have been no failures or defaults among the consumer cooperatives in this program. NHC fully concurs in the Congressional mandates to encourage such cooperative ownership.

3. The need and demand for cooperative housing at a below-market interest rate greatly exceeds the amount of funds available. The below-market program of 221(d)(3) has demonstrated its success in meeting the housing needs of lower income families who cannot be served by private enterprise without Federal assistance. Cooperative housing represents over one-fourth of the accumulated backlog of projects awaiting funds under the 221(d)(3) program of below-market interest rates. This backlog of need should be met by the release of funds already available and increased authorizations recommended for the 221(d)(3), 235 and 236 programs.

4. We recommend that FHA recognize the presently uncompensated costs to Section 221(d)(3) Below Market Interest Rate cooperative projects resulting from the requirement of recertifying incomes. The cooperative should be reimbursed by retaining the costs of recertifications from "over-income" surcharges that are ultimately returned to HUD. In addition, FHA should allow portions of the "over-income" surcharges to be used by the cooperative for improvements that FHA may consider advisable and justifiable during the life of the project.

5. Eleven years ago Congress established a revolving fund of $225 million—which is now administered by GNMA—for the purchase of cooperative mortgages insured by FHA under Section 213. This financing has made it possible for middle-income consumers to join together to help themselves get good housing through their cooperatives.

While there have been extensive mortgage purchases from the cooperative revolving fund, much of the money has been returned, so it now has an uncommitted balance of about $100 million. The Administration has impounded this fund and no further GNMA commitments can now be issued. NHC strongly recommends that the balance in the cooperative revolving fund be made immediately available for the purchase of mortgages on cooperative projects. The 213 program meets an important need among those middle-income families and individuals who can only afford the lower monthly charges achievable through cooperative economies and financing.

6. NHC supports the proposition that FHA should carry out the Congressional intent that Section 213 cooperatives be allowed appropriate reduction in mortgage insurance premiums in recognition of the lower loss rates of these cooperatives.

7. As recommended elsewhere in these Resolutions and subject to the conditions stated therein, NHC urges the disposition of public housing and Federally-owned housing to cooperatives whose members will reside in such housing and enjoy the benefits of mutual ownership.

8. We urge HUD and its contituent agencies to use fully all available legislative tools under existing programs to achieve the values and objectives of cooperative homeownership by people with low or moderate incomes. This should include the following:

(a) Encouragement of cooperative housing projects in all parts of the country under all available programs. NHC commends FHA for the issuance of a circular to impress upon all Insuring Offices that it is the policy of HUD to encourage homeownership through the cooperative approach and to offer all possible assistance in the development of cooperative housing projects. However, there is a need for FHA to assure that its Insuring Offices observe this policy in recognition of the importance of cooperative homeownership.

(b) In the disposition of housing acquired by HUD and its constituent agencies, a priority should be afforded to the residents so they will have the opportunity to acquire the properties through their cooperative. An FHA circular advised Insuring Offices that many acquired multifamily housing projects are particularly suitable for cooperatives and that negotiated sales would be made. This was successfully done in a pilot case.

(c) In the disposition of property by urban renewal agencies, there should be a recognition in the disposition plan that it is important to achieve cooperative ownership of multifamily housing in urban renewal areas. Accordingly, part of these areas should be considered for the development of housing to be so owned by the people. In making a disposition for this purpose, there should be a disposition condition that those who acquire the property agree to develop it for housing that will involve cooperative ownership.

(d) The Special Assistant for Cooperative Housing at FHA should be provided with adequate staff and funds to undertake a broad program for the encouragement and development of cooperative housing including necessary training of cooperative leaders and managers.

CHAPTER P. RURAL HOUSING, RENEWAL AND PLANNING FOR MULTI-COUNTY AREAS

1. Objectives: There is increasing national concern to make rural America more attractive and livable for all. To achieve this goal, programs must be initiated to encourage the young and better educated to continue living in rural America. Programs which provide the same kinds of financial assistance as are provided for urban housing and urban renewal should be available to rural areas for rural housing and rural renewal. We endorse those provisions of the 1968 Housing Act which make certain housing assistance equally available to rural areas, but other legislation is required as described below.

2. Authorizations in the 1968 Housing Act: Under new Sections 235 and 236, the Secretary was authorized to transfer to the Secretary of Agriculture a reasonable portion of the total authority to contract to make periodic interest reduction payments for use in rural areas and small towns. By agreement, the Secretary of Agriculture was delegated $2 million in contract authority under Section 235(k). However, projects under Section 236 will be processed by FHA.

3. Authorizations in Appropriation Acts: Elsewhere we have described the authorizations of interest assistance contracts under Sections 235 and 236 which are now available for housing in rural areas. In addition, the rural housing program of the Department of Agriculture was authorized to maintain a $5 million program of 3%, 50-year loans.

4. Recommendations: (a) Legislative Amendments Relating to Rural Housing: NHC recommends the following legislation relating to rural housing programs:

(1) The 3%, 50-year loan program to supplement the new authority granted under the 1968 Housing Act should not only be continued but increased and the Secretary of Agriculture should be authorized to contract to maintain the interest rate throughout the duration of the loan. Also, the Secretary should be granted the power to reduce the interest rates to as low as 1% under this program.

(2) Repeal of the provision, in Section 515(b) and termination of the administrative practice under Section 515(a) of the Housing Act of 1949, limiting mortgage size to $300,000 on multifamily rental or cooperative projects; and enactment of provisions permitting the Secretary of Agriculture to contract at the outset to finance all stages of a multifamily housing project.

(3) An increase of the mortgage term to 50 years for rural housing loans under Section 515(b) of the Housing Act of 1949.

(4) Enactment of legislation creating the position of Special Assistant for Cooperative Housing in the Farmers Home Administration of the Department of Agriculture (a similar position to that created in the Housing Amendments of 1955 for urban cooperative housing) with similar powers, duties and adequate staff and budget; and the additional responsibility of mobilizing the support of rural area cooperatives of all types for the creation and continued successful operation of rural cooperative housing projects.

(5) Amendments to make applicable to all rural areas provisions similar to those of Title VI of the 1968 Housing Act which would: (i) authorize HUD to make planning grants to assist district planning agencies for rural and other non-metropolitan areas; (ii) authorize grants of $20 million for fiscal 1969; and (iii) give the Secretary of Agriculture certain functions as to planning grants for districts, including a requirement that he be consulted before any such grant is made.

(6) Give the Secretary of HUD authority to waive rules and regulations of HUD programs so small cities and towns can get an equitable share of HUD programs.

(7) An amendment to provide that only the new farm home and the immediate lot—not exceeding one acre—need be encumbered in home mortgages under the Farmers Home Administration ("FmHA").

(8) Expand the low-interest loan program under the Aiken-Poage Water and Sewer Act to include predominantly rural areas and to cover community facilities such as police and fire facilities, street lighting and community centers.

(9) Provide Farmers Home Administration the $25-million requested in the Budget for fiscal 1970 to employ an additional 2,000 employees so that it can carry out its greatly expanded responsibilities for housing, sewer and water, and economic development in rural areas.

(10) Eliminate ceiling of $100-million in Section 517(c) of Housing Act of 1949 on amount of loans Secretary of Agriculture can hold at any one time in Rural Housing Insurance Fund, which, at present, has the effect of limiting Farmers Home Administration insured housing loans to $500-million a year since the fund as a practical matter can only be revolved about five times a year. This provides for only about 50,000 new and rehabilitated housing units a year—far below the need in rural areas where there are more than four million substandard housing units.

(11) Delete the restriction in Section 517(h) of the Housing Act of 1949, which prohibits the Secretary of Agriculture from borrowing from the Secretary of the Treasury for additional capital for the Rural Housing Insurance Fund. This would enable Farmers Home Administration realistically to meet the tremendous needs of low and moderate income people for housing credit, which generally is not being met by any other source—government or private—in communities under 5,500 population.

(12) Add a provision to Title X of the Housing Act of 1968 to permit Farmers Home Administration to make loans to public and private non-profit community corporations for the acquisition and development of land as building sites to be subdivided and sold to low and moderate income families or cooperatives who are eligible under Section 235 or 236 of the National Housing Act or Title V, Sections 501 and 521 of the Housing Act of 1949. This provision would supply two important ingredients now missing in the FmHA housing program; namely, involvement of local leadership, and development of housing on a larger scale.

(b) Recommendations for Administrative Actions:

(1) Besides Congressional actions, there is a need for more effective executive actions and better coordination of Agriculture and HUD, and for consultation with industry and public interest groups. Such actions should be taken to assure that federal housing, community facility and planning aids for rural areas are equivalent to those available in cities and metropolitan areas.

(2) NHC recommends and urges the Secretary of Agriculture to stimulate and encourage programs under new and existing cooperative housing provisions to alleviate the housing ills in rural areas.

(3) NHC urges the Federal Housing Administration and the Farmers Home Administration to work out a plan for making housing credit available in small towns that are too large for FmHA to service (over 5,500), but not practical for FHA to service because of remoteness or other reasons. A serious credit shortage exists in many of these areas.

CHAPTER Q. NATIONAL HOMEOWNERSHIP FOUNDATION; NATIONAL ADVISORY COMMISSION ON LOW-INCOME HOUSING; NATIONAL HOUSING PARTNERSHIP; AND ASSISTANCE TO NON-PROFIT SPONSORS OF LOW AND MODERATE INCOME HOUSING

I. National Homeownership Foundation

1. Objectives: The 1968 Housing Act creates the National Homeownership Foundation to carry out a continuing program of encouraging private and public organizations to provide increased homeownership and housing opportunities in urban and rural areas for lower income families.

2. Authorizations in 1968 Housing Act: The Act authorizes the Foundation to make grants and loans (not otherwise available from Federal sources) to such organizations to help defray organizational and administrative expenses, necessary preconstruction costs, and the cost of counseling or similar services to lower income families for whom

housing is being provided. The Foundation can also provide technical assistance to the organizations. The Foundation is to be administered by an 18-member Board of Directors. Fifteen members are to be appointed by the President. The Secretary of HUD, the Secretary of Agriculture and the Director of OEO are the other three members. The board will appoint an executive director as its executive officer.

3. Authorizations in Appropriation Acts: Appropriations up to $10 million are authorized. The Foundation can also use donated funds. $250,000 was requested in Supplemental Appropriations for fiscal year 1969. Nothing was appropriated.

4. Recommendations: NHC urges that the Foundation be fully funded so that the Foundation can begin its vital assignment.

II. National Advisory Commission on Low-Income Housing

1. Objectives: The 1968 Housing Act establishes a National Advisory Commission on Low-Income Housing to undertake a comprehensive study and investigate the resources and capabilities in the public and private sectors of the economy which may be used to fulfill more completely the objectives of the national goal of "a decent home and a suitable living environment for every American family".

2. Assignments: The Act directs the Commission to submit to the President and the Congress an interim report with respect to its findings and recommedations not later than July 1, 1969, and a final report not later than July 1, 1970.

III. National housing partnerships

1. Objectives: The 1968 Housing Act creates a national housing partnership for the purpose of securing the participation of private investors in programs and projects to provide housing for low and moderate income families. Initially, a federally chartered, privately funded corporation will be organized under the District of Columbia Business Corporation Act. The corporation in turn will organize the National partnership under the D.C. Uniform Limited Partnership Act. The corporation in turn will organize the National partnership under the D.C. Uniform Limited Partnership Act. The corporation will serve as the general partner and managing agent of the National partnership and each of its stockholders can be a limited partner. It will provide the staff and expertise for the Partnership in organizing and planning project undertakings in which the partnership has an interest, and receive a fee for such services.

2. Authority: Both the corporation and the National partnership are authorized to engage in a broad range of activities appropriate to the provision of housing and related facilities primarily for low or moderate income families, with or without the use of Federal programs, and may enter into and participate in all forms of partnerships and associations. The National partnership is expected to form partnership ventures with local investors for the purpose of building low and moderate income housing projects throughout the nation. Normally, it will be a limited partner in such undertakings, with an interest of not more than 25% of the aggregate initial equity investment for the project. The President has appointed the incorporators of the corporation and will appoint 3 of the 15 members of the board of directors. The incorporators will serve as the initial board of directors and arrange for the initial offering of shares of stock in the corporation and interests in the National partnership. The President is authorized to create additional partnerships when he determines it to be in the national interest. National banks are authorized to invest in a corporation and other entities formed under this title.

3. Recommendations: NHC recommends that the following actions be taken:

(a) FHA should issue necessary directives and procedures to implement the provisions of Section 236(j)(3) of the 1968 Housing Act relating to the sale of housing projects by limited distribution mortgagors to cooperatives or other non-profit corporations. It is important that this be done promptly in order to encourage participation by private investors in the National Housing Partnership.

(b) Actions should be taken to encourage widespread participation and private investment in the National Housing Partnership. This includes appropriate measures to provide contemplated tax incentives for undertaking housing developments to serve low and moderate income persons.

IV. Assistance to nonprofit sponsors of low- and moderate-income housing

1. Objectives: The 1968 Housing Act has provisions to assist nonprofit sponsors of low and moderate income housing.

2. Authorization in the 1968 Housing Act: (a) The Secretary of HUD is authorized to provide technical assistance with respect to the construction, rehabilitation, and operation of low and moderate income housing to nonprofit organizations.

(b) The Secretary can also make 80-percent, interest-free loans to non-profit sponsors of such housing to cover certain preconstruction costs under Federally-assisted programs.

(c) The Low and Moderate Income Sponsor Fund is established for the purpose of making the loans with an authorization of appropriations of $7.5 million for fiscal year 1969 and $10 million for fiscal year 1970. The fund will be a revolving fund and repayments of loans will be deposited in the Fund.

3. Authorization in Appropriation Acts: $500,000 was appropriated in the Supplemental Appropriations for fiscal 1969.

4. Recommendations. NHC urges that the full authorization of $7.5 million be appropriated for fiscal 1969 and at the same time the full authorization of $10 million be appropriated for fiscal 1970.

CHAPTER R. MODEL CITIES

1. Objectives: NHC reaffirms its endorsement of the model cities program to launch local programs for the upgrading of entire neighborhoods. This is done through the concentrated and coordinated use of all available Federal aids and local private and governmental resources, including the supplementary Federal grants for such model cities. We urge acceleration in the disbursement and release of funds under the present program.

2. Authorizations in the 1968 Housing Act: The Housing Act of 1968 provides for (a) an increased authorization of $1 billion for the fiscal year 1970 for supplemental grants and (b) $12 million for fiscal year 1969 for grants to plan model cities programs. Any amounts authorized, but not appropriated, may be used for any succeeding fiscal year commencing prior to July 1, 1971.

3. Authorizations in Appropriations Acts: (a) Of the $400 million authorized for supplemental grants to model cities for fiscal year 1968, $200 million was appropriated. For fiscal year 1969, there was an authorization of $500 million for supplemental grants but the amount appropriated was $312.5 million. No appropriation has been made of the additional $1 billion for fiscal year 1970 for supplemental grants.

(b) Of the $12 million authorized for fiscal year 1967 for grants to plan model cities programs, there was an appropriation of $11 million. For fiscal year 1968, there was an appropriation of the $12 million which was authorized for such planning grants. No appropriation has been made of the $12 million of planning grants for fiscal year 1969.

4. Recommendations: (a) Additional Appropriations: NHC urges that the authorizations in the 1968 Housing Act be fully funded, including: (1) the $1 billion of additional funds for supplemental grants during fiscal year 1970, together with the $387.5 million authorized for previous fiscal years but not appropriated; and (2) the $12 million of model cities planning funds for fiscal year 1969, together with the $1 million previously authorized but not appropriated.

(b) Increase in Legislative Authorizations: NHC recommends a legislative increase in the appropriations for the model cities program for a 5-year period as follows: (1) additional supplemental grants at the rate of $1 billion a year; and (2) additional model cities planning funds at the rate of $50 million a year. We further recommend that there be advance appropriations for each fiscal year, besides the current one, to give cities more lead time for their planning and development of model city programs. While we are pleased to note the significant increase in cities now participating in the model cities program, we urge that the foregoing recommendation be adopted to enable participation by all qualified cites and counties which apply; also, to enable participating cities and counties to obtain the additional funds which they require.

(c) Other Legislative Amendments: The model cities program cannot achieve its goals and provide necessary housing unless there are increased authorizations and programs—as recommended elsewhere in these Resolutions—as follows:

(1) To expand urban renewal activities.

(2) To increase the supply of adequate low- and moderate income housing in the model cities. Such housing should not be limited to what will be developed in the model neighborhood area or the city itself. New housing and relating community facilities should be developed extensively on vacant land or other sites not involving substantial residential displacement.

(3) To increase Federal grant funds for water, sewer, and neighborhood facilities, and for open-space and urban beautification.

(4) To increase Federal grant funds for all other programs involved in model city areas, including those relating to health, education, training, welfare, mass transportation, training and other purposes relating to urban affairs; also, to specifically designate such categorical funds for these purposes which would be available for model cities.

(d) *Other Recommendations.* To achieve the objectives of this program, full coordination is required between HUD—and all of its participating constituents—and all of the other Departments of the Federal Government who participate in the model cities program; also between the Federal Government and local governments. Each must effectively use all of its powers and available funds in doing its share of the total job. NHC recommends Presidential action and direction to assure that all participating Departments of the Federal Government fulfill their responsibilities under the programs for model cities and urban affairs, including (i) effective coordination and cooperation between them and (ii) the priority handling of applications for assistance filed with the various Federal Departments by model cities.

NHC recommends the removal of the present limitation that a model cities program cannot cover more than 10% of the area of the city. NHC also recommends the appropriation of the additional funds required for this enlarged program.

CHAPTER S. URBAN RENEWAL PROGRAM

1. Objectives: Urban renewal is a major instrument of reform which deals primarily with the physical side of removing blight. Its objective is to eliminate slum, blighted or deteriorating areas and provide for the use and disposition of land in accordance

with comprehensive urban renewal plans that meet community needs. Nearly 900 cities are reclaiming such blighted areas for redevelopment or rehabilitation under urban renewal programs. The blacklog of urban-renewal-grant applications was in excess of $1.75 billion at the end of the last fiscal year, despite HUD actions to discourage applications by the imposition of more stringent requirements concerning program objectives and priority criteria. Each year about 60 additional communities are joining in the participation of the urban renewal program, after adopting workable programs for community improvement. There is a tremendous need for increased urban renewal authorizations to meet the requests of cities who are seeking to stop the insidious blight which is overwhelming their older neighborhoods.

2. Authorizations and Limitations in the 1968 Housing Act: (a) An additional $1.4 billion of urban renewal grants was authorized by the Act for fiscal year 1970. In addition, there was an authorization of $350 million for urban renewal grants for projects in model city areas, which supplements the previous authorization of $250 million for this purpose.

(b) The Act provides for a new approach to urban renewal which is intended to facilitate more rapid rehabilitation and redevelopment of blighted areas on an effective scale. Financial assistance would be provided for a neighborhood development program which consists of urban renewal undertakings and activities in one or more areas that are planned and carried out on the basis of annual increments. Financing is based on the amount of funds needed to carry out the activities planned during a 12-month period in each of the urban renewal areas in the community's program. As to subsequent annual increments of the program, the community would receive financial assistance to the extent that funds are then available and the community's program is acceptable to HUD. This will permit the undertaking of urban-renewal-execution activities, land acquisitions and public improvements simultaneously with planning.

(c) The Act requires that a majority of the total number of housing units in a community's residential urban renewal projects which receive Federal recognition after August 1, 1968, must be for low and moderate income families or individuals. As to housing units in urban renewal areas, at least 20% of the total must house low-income families or individuals, but HUD may waive this 20% requirement to the extent that these units are not needed in the community.

3. Authorization in Appropriation Acts: For fiscal 1969, $750 million was authorized and appropriated for urban renewal grants. In addition, an advance appropriation was made of $750 million of the $1.4 billion authorized for fiscal 1970 in order to give communities more lead time for planning their urban renewal program. For urban renewal projects in model city areas, $312.5 million was appropriated for fiscal 1969, as compared with the $350 million authorized. Of the $250 million authorized for grants on urban renewal projects in model city areas for the preceding fiscal year, $150 million was appropriated.

4. Recommendations: (a) Additional Authorization in Appropriation Acts: NHC recommends appropriations in the full amount previously authorized by law but not yet appropriated, including: (1) $650 million for urban renewal grants of the $1.4 billion authorized for fiscal 1970; and (2) $137.5 million for urban renewal grants in model city areas.

(b) When there are additional legislative authorizations as recommended below, there should be additional appropriations for each fiscal year and an advance appropriation for the succeeding fiscal year. This will follow the precedent established by the last Congress to give communities more lead time for planning their urban renewal programs.

(c) Increase in Legislative Authorizations: NHC recommends an increase in the authorizations for appropriations for a 5-year period at an annual rate of $3 billion for urban renewal grants. Such an appropriation will make realistic the national objective of overtaking the decay in our cities and making urban renewal more immediately responsive to urban needs.

(d) Other Legislative Amendments: NHC recommends the following amendments to urban renewal laws:

(1) On capital grants for urban renewal, code enforcement and other comparable programs, there should be an increase in the federal grant to ¾ from the present ⅔ which is paid to larger cities. The ¾ grants are now made only to smaller cities, but they are equally needed by larger cities. Further, where the community elects to finance survey and planning costs at its own expense, the project capital grants should be increased to ⅚ from ¾. Pooling all of such grants should be permitted for all urban renewal projects in the city. Where the urban renewal is located in a distressed area, existing law already provides for a larger urban renewal grant.

(2) Loan and grant contracts should be authorized for the purpose of assisting the rehabilitation of scattered properties in residential neighborhoods designated for conservation, rehabilitation, or intensive code enforcement by an approved community renewal program. The cost of any new public improvements serving the rehabilitation properties should be recognized for appropriate grant-in-aid credits.

(3) Local public agencies should be authorized to make sales of industrial and commercial land for later development by nonprofit industrial development corporations or properly constituted public bodies on the same basis as is now authorized under economic development laws.

(4) There should be a broadening of the existing statutory provisions for recognition of real property tax losses—on the land as improved before the demolition occurred—by the locality in an urban renewal area as a local grant-in-aid credit. Such losses should be computed from the date of acquisition of the property to the completion of the redevelopment in accordance with the urban renewal plan for the project.

(5) Where a project is in execution, tax abatement should count as a non-cash local grant-in-aid to the project when such tax abatement is granted to federally-assisted housing for the purpose of achieving lower rents and facilitating relocation unless there is a Federal grant to reimburse the state and local taxing authorities for their tax losses.

(6) NHC supports special urban renewal provisions for central business districts which would:

(i) permit a waiver of residential requirements in renewing such districts;

(ii) recognize that employment, commercial, industrial and cultural functions of central business districts are of vital importance to community growth and revitalization; and

(iii) require HUD to accept 100% of site improvements and supporting facilities as part of the gross project cost and as a local grant-in-aid.

(7) There should be an amendment to the urban renewal law allowing any public facility to be eligible for non-cash grant-in-aid credit covering the full cost of the facility; (i) if its development was occasioned by the urban renewal program as certified by the urban renewal agency; (ii) if it is located in a community having more than one urban renewal project; and (iii) if the community has a workable program and a community renewal program.

(8) There should be no limit in the amount of grants to a particular urban renewal demonstration project, under Section 314, so the Federal Government in special cases could pay up to 100% of the cost of the demonstration program.

(9) Non-cash grant-in-aid credits should be extended to cover air rights involved in the development costs for 221(d)(3) or 236 projects for low and moderate income families.

(10) Urban renewal grants of 75% should be available for the reclamation of otherwise unbuildable land which is located within metropolitan areas. Often there are large available areas of land which are not suitable for building because of problems which can be corrected by appropriate expenditures of public funds, and the use of appropriate reclamation and conservation techniques.

This will provide convenient sites for housing and other community facilities needed by those now living within the overcrowded areas of central cities.

(11) Where state or local law requires abutting property owners to pay a portion of the cost of street repairs, federal urban renewal grants should be made to cover the owner's share when there is a showing of need.

(12) Under the Neighborhood Development Program (N.D.P.), non-cash grants-in-aid—otherwise meeting time requirements—should become eligible as soon as an area is recognized by HUD for overall study purposes, to the full extent which said facilities serve the study area, without any prerequisite for an approved urban renewal plan covering such study area.

(e) Recommendations for Administrative Action: NHC recommends the following administrative actions in the Neighborhood Development Program:

(1) It should be flexibly administered, particularly as regards the requirements for actions on plans for areas larger than those proposed for the action year.

(2) HUD should make every effort to develop administrative guidelines which will permit the program to function smoothly under existing state renewal enabling legislation.

(3) Costs of development of the initial application should be an allowable project cost.

CHAPTER T. INTERIM ASSISTANCE AND INTERIM REHABILITATION PROGRAMS IN SLUM AND BLIGHTED AREAS

1. Interim Assistance for Blighted Areas as Provided for in the 1968 Housing Act: The 1968 Housing Act authorizes the Secretary of HUD to contract to make grants aggregating up to $15 million in any fiscal year to cities or countries to assist them in taking interim steps to alleviate harmful conditions in slum or blighted areas of communities. To qualify, these areas must be planned for substantial clearance, rehabilitation, or federally assisted code enforcement in the near future, and must need some immediate public action until permanent action can be taken. Grants may not exceed two-thirds of the cost of planning and carrying out an interim assistance program, except that three-fourths grants can be made to any community with a population of 50,000 or less. A community has to have an approved workable program to qualify for assistance.

2. Need for Interim Rehabilitation Program: In slum and blighted areas, there should be a fast program of interim rehabilitation to correct those housing conditions which directly affect health and safety. The people now living in substandard housing should not be expected to wait until permanent neighborhood improvement programs are developed. We need a program which will provide grants and loans which can be rapidly disbursed to eliminate health and safety hazards, without regard to the useful life of the buildings. The objective is to provide whatever assistance is needed to achieve

monthly charges, after interim rehabilitation, which will be within the financial reach of the low income and moderate income residents. The emergency upgrading of structures should not involve increases in rents beyond the reach of the present tenants.

3. Authorizations in Appropriation Acts for Interim Assistance: There have been no appropriation authorizations to implement the 1968 Act providing interim assistance to alleviate harmful conditions in slum or blighted areas.

4. Recommendations: (a) Authorizations in Appropriation Act: NHC recommends necessary appropriation authorizations to carry out the 1968 Act relating to the interim assistance program in slum areas. However, the Secretary should be authorized to enter into contracts for grants in such amounts as are commensurate with the need. This should include an advance appropriation for fiscal year 1971 to give cities and counties more lead time in planning interim steps to alleviate harmful conditions in slum or blighted areas. NHC further recommends that the amount of the appropriations—and legislative authorizations therefor—should be increased in response to the increasing needs evidenced by the applications which will be filed for interim assistance.

(b) Legislative Amendments on Interim Assistance: All cities should be eligible for a three-quarters grant for the cost of planning and carrying out the interim program. Instead of limiting the larger grants to the smaller cities, the large cities should get such a grant and not be limited to a two-thirds grant.

(c) Legislation for Interim Rehabilitation Program. NHC recommends legislation to provide for the above-described program of interim rehabilitation to correct housing conditions which directly affect health and safety, without regard to the useful life of the buildings. The legislation should include the following:

(1) Amendments to the interim assistance law, so that it is broadened to include such interim rehabilitation of housing as is necessary to protect the health and safety of residents. This would make grants available to cities and counties which are undertaking such a program.

(2) With respect to interim rehabilitation to correct conditions which directly affect health and safety in homes located in slum and blighted areas, the following financial assistance should be extended to owners of homes who have low and moderate incomes: (i) rehabilitation grants under Section 115 in an amount not to exceed $3,000; and (ii) rehabilitation loans under Section 312.

(3) Federal code enforcement grants for interim rehabilitation of housing.

(4) Federal grants to urban renewal agencies to acquire slum buildings which are in violation of housing codes, and for interim rehabilitation to eliminate hazards. Public acquisition of properties for interim rehabilitation may be an early acquisition of part of the property that would later be involved in a permanent renewal program for the neighborhood.

(5) Section 312 should be further amended to provide loans to public bodies or agencies which take possession or control of any property—through receivership or otherwise—which violates code requirements or local laws concerning health or safety. This would cover property where the owner has failed to correct such violations within a period prescribed by local law. The loan should be made on the condition that it will be repaid from the income derived from the rehabilitated property, with appropriate liens or other rights that will be enforceable against the property.

Pursuant to the foregoing legislation, the assistance should be sufficient to achieve monthly charges, after interim rehabilitation, which will be within the financial reach of the present occupants or of others of low or moderate incomes.

CHAPTER U. NEW TOWNS AND NEW COMMUNITIES

1. Need: Since 40,000,000 additional people will be living in cities during the next decade, we need new towns and new communities to help take care of this increased urban population; and to provide for an orderly dispersal of population and relieve further city congestion. These new towns would be carefully planned as balanced communities. They would be largely self-contained with homes, apartments, schools, jobs, hospitals, recreational facilities and open spaces. They should be planned to minimize transportation needs by assuring employment for residents within or near the new community. They should provide housing for all income groups, including those of low and moderate incomes. These new communities can provide a new kind of urban living which can offer an alternative to the sprawling growth that threatens to overwhelm our metropolitan regions with costly and inefficient development.

There is an urgent need for Federal guaranties to overcome major obstacles which have prevented greater efforts in this field, namely: (1) the large capital investments to acquire large land areas and install the basic facilities needed to prepare the land for development; and (2) the extended period for the planning and installation of site improvements, during which large expenditures must be made for debt service, taxes and overhead.

2. Authorizations in 1968 Housing Act: The Act authorizes HUD to guaranty obligations issued by new community developers to help finance approved new community developments. These guaranties should overcome the major obstacles which have prevented greater accomplishments in this field. With the security of Federal guaranties, investors should be willing to provide financing geared to the realities of internal cash flow in new community development projects. To encourage localities to use Federal aid programs in support of new communities, the Act includes a program of incentive grants. When Federally-assisted facilities are being constructed to serve a new community, the public agency will be eligible—in addition to the basic Federal grants—for a supplementary grant covering an additional 20% of construction costs. However, the total Federal contribution to the cost of community facilities cannot exceed 80% of the cost of the facility. This would include facilities such as water, sewer and the open-space land. Appropriations for supplemental grants were authorized in the amount of $5 million for fiscal year 1969 and $25 million for fiscal year 1970.

3. Authorizations in Appropriation Acts: The appropriation acts have not appropriated the funds authorized for supplement grants to public agencies which install Federally-assisted facilities to serve new communities.

4. Recommendations: (a) Appropriations: We recommend that the full amount of $5 million be appropriated for supplemental grants for fiscal year 1969. We also recommend an advance appropriation of the $25 million authorized for supplemental grants for fiscal year 1970 in order to give more lead time for initiating and planning new communities.

(b) Increase in Legislative Authorizations: We recommend that the aggregate limit on outstanding guaranties be increased by $1 billion above the present limit of $250 million. We further recommend an additional authorization of appropriations for supplemental grants of $30 million a year over a 5-year period.

(c) Other Legislative Amendments: (1) The 1968 Act should be amended to include public agencies or authorities instead of limiting the HUD guaranties to private developers. NHC believes that a public authority is an effective instrumentality to undertake necessary land acquisition and to carry out the development of a new town.

(2) The Bureau of Public Roads should be authorized to purchase excess land beyond the amount needed for the roads themselves This would include land suitable for residential development which the Bureau should make available to rehouse displaced families. At large road interchanges, the Bureau should be authorized to acquire additional land for the development of new communities which can meet the needs of our growing population, including displaced families. Such land can generally be acquired by the Bureau at low cost at the time that land is being acquired for new road systems.

(3) The 1968 Act requires low and moderate-income housing to be included in new towns as a prerequisite for supplemental grants. There should be a similar requirement as a condition to a HUD guaranty of obligations issued by a new community developer.

(d) NHC joins with the National Committee for Urban Growth Policy in recommending the additional measures which should be taken to facilitate New Communities and urban growth.

CHAPTER V. PUBLIC AND COMMUNITY FACILITIES INCLUDING WATER, SEWER, NEIGHBORHOOD FACILITIES AND OPEN-SPACE LAND PROGRAMS

1. Need: There is a great and continuing need for Federal public facilities grants to assist in overcoming serious backlogs in replacing substandard or obsolete facilities—especially in the central cities—and eliminating water pollution and meeting the unprecedented demands for additional facilities and services generated by population expansion. These needs cut across whole metropolitan areas and involve central cities, new suburbs and the new communities still to come. This essential expansion in Federal aid could be a potent influence in resolving the present chaotic conditions created by the multiplicity of local governmental jurisdictions in most metropolitan areas. This multiplicity has led to suburban sprawl, land misuse, land speculation, and frequent failure to metropolitan area and regional planning as an effective tool for the control of new developments. Such a program could provide important leverage to establish coordinated local governmental approaches to control programs of area and region-wide significance. At the same time, it could foster decentralization of local governmental functions of strictly local application.

2. Authorizations in 1968 Housing Act: The Act only authorized funds to be appropriated for water and sewer facilities and the open-space land program. For water and sewer facilities an additional $150 million was authorized for fiscal year 1969 and $115 million for fiscal 1970. For the open-space land program, the 1968 Act authorized to be appropriated for the purpose of making grants, an additional $150 million (for a total ceiling of $460 million) prior to July 1, 1970. The limit on the amount of funds the Secretary of HUD is authorized to use for grants for technical assistance on open space was raised by $75,000. The Act provided that any appropriations made for water and sewer facilities, neighborhood facilities, and advance acquisitions of land programs not already appropriated may be appropriated for fiscal 1970. The Act extends the interim planning requirements under the basic water and sewer facilities grant program to October 1, 1969.

3. Authorizations in Appropriation Acts: For fiscal year 1969 there was an appropriation of $165 million for water and sewer grants, an appropriation of $75 million for open-space land grants, and an appropriation of $35 million for neighborhood facilities grants.

4. Recommendations: (a) Additional Authorizations in Appropriation Acts: Based upon past Congressional legislative authorizations and actions, we anticipate that at least $165 million would be appropriated for each fiscal year for water and sewer grants.

However, there should be advance appropriations for each succeeding fiscal year, besides the current one, to give public agencies more lead time for their planning and development of these programs. When the additional legislative authorization recommended below is made, we recommend an increase in the rate of appropriations to $2 billion annually for water and sewer grants, and for other public and community facilities as described below.

(b) Increase in Legislative Authorization: NHC recommends a 5-year authorization of $2 billion annually for grants to local governments for basic water and sewer facilities and other types of public improvements and community facilities. Of the $2 billion, $250 million should be made available annually for the open space land program. The public improvements and community facilities should include those authorized by the 1965 Act such as neighborhood and public facilities, particularly in slum and ghetto areas. It should also include the acquisition of land to provide parks and recreational facilities in urban areas, so that they are closely accessible to the people who need them most.

(c) Other Legislative Amendments: (1) As recommended in these Resolutions on other comparable programs, Federal grants to larger cities for public and community facilities should be increased to ¾ from the present ⅔'s, since their need is as grave as that of small cities. For neighborhood centers, parks and recreational facilities in slum and ghetto areas, the Federal grant should be 100%. Moreover, there should be annual Federal grants to provide for the staff and operating expenses of such facilities. The neighborhood facilities centers in such areas should be permitted to include swimming pools—either indoor or outdoor—and gymnasiums.

(2) We believe that the foregoing grants should be generally restricted to communities that are simultaneously providing adequate housing for low and moderate income families, where the need for such housing exists.

CHAPTER W. URBAN PLANNING AND FACILITIES—COMPREHENSIVE PLANNING AND PLANNED AREA-WIDE DEVELOPMENT

1. *Need.* The increased concentration of population in and around metropolitan areas has created an urgent need for a coordinated development of resources and services for urban and rural areas and a need to facilitate comprehensive planning for these areas. Because of the problem of multiplicity of political jurisdictions and agencies involved with this planning, and because of the inadequacy of the operational and administrative arrangements available for cooperation among them, NHC believes that Federal programs are badly needed to achieve the additional participation and cooperation from the states and localities. The 1968 Housing Act contains the following provisions to meet this need:

(a) The Section 701 planning assistance grant program is extensively revised. The Secretary of HUD is now authorized to make comprehensive planning grants to State planning agencies for assistance to "district" planning agencies for rural and other nonmetropolitan areas. Consultation with the Secretary of Agriculture is required prior to approval of any district planning grants. The Secretary of Agriculture and, when appropriate, the Secretary of Commerce, may provide technical assistance in connection with the establishment of districts and the carrying out of planning by them.

(b) Other new provisions authorize direct planning grants to Indian tribal planning councils or other bodies for planning on Indian reservations; to regional and district councils of government as well as those organized on a metropolitan basis; to regional commissions and economic development districts established under the Public Works and Economic Development Act of 1965; to cities, without regard to population, within metropolitan areas for planning which is part of metropolitan planning; and to official Government planning agencies for areas where rapid urbanization is expected as a result of a new community development assisted under Title IV of the act. The Secretary is required to consult with the Secretary of Commerce before making any planning grant which includes any part of an economic development district.

(c) The definition of comprehensive planning is broadened to include planning for the provision of governmental services and for the development and utilization of human and natural resources. The inclusion of a housing element is required as part of the preparation of comprehensive land use plans. The use of private consultants, where their professional services are deemed appropriate by the assisted governments, is added to the stated purposes of the program.

2. Authorizations in the 1968 Housing Act: (a) Comprehensive Planning: The Act increased the amounts authorized to be appropriated for the purposes of comprehensive planning by $35 million making a total not to exceed $265 million prior to July 1, 1969 and authorized to be appropriated an additional $125 million for a total not to exceed $390 million prior to July 1, 1970. Of the amount available prior to July 1, 1969, $20 million may be used only for district planning grants and that amount shall be increased by $10 million on July 1, 1969. All amounts appropriated must remain available until expended except that any funds so appropriated, not to exceed an aggregate of $10 million plus 5 percentum of the funds so appropriated, may be used by the Secretary for studies and research in comprehensive planning.

(b) Planned Area-Wide Development: Supplementary grants (designed to encourage areawide planning) are authorized for Federally-assisted projects in all multijurisdictional areas (not just metropolitan areas as previously provided) such as the rural planning districts proposed to be assisted with comprehensive planning grants under the comprehensive planning provisions of the law. Unused authorizations for appropriations for supplementary grants for fiscal year 1967 and 1968 are made available through fiscal year 1970.

3. Authorizations in Appropriation Acts: For fiscal year 1969, $43,338,000 was appropriated for urban planning grants. Out of $10 million requested for area-wide development grants for fiscal year 1969, none was appropriated.

4. Recommendation—Additional Authorization in Appropriation Acts: NHC urges that $55 million be appropriated for fiscal 1969 as supplemental grants for the orderly growth of our urban areas. These are needed to achieve more effective coordinated metropolitan area planning and program development. In addition, NHC urges that the $10 million requested for a program of area-wide incentive grants in fiscal 1969 be appropriated.

CHAPTER X. URBAN MASS TRANSPORTATION

1. Objective: There is an urgent need to modernize, expand and reorganize the urban transportation systems. Adequate Federal grants are necessary to achieve this objective.

2. Authorizations in the 1968 Housing Act: The Act increased authorized appropriations for grants and other assistance to urban mass transportation by $190 million for fiscal year 1970. The amount of funds which can be used for research, development, and demonstration projects was increased by $6 million, commencing July 1, 1968; also the statutory limit on the funds available for this purpose is removed, commencing July 1, 1969. The definition of "mass transportation" was broadened to allow greater flexibility and opportunity for application of new concepts and systems.

3. Authorizations in Appropriation Acts: For the fiscal years 1969 and 1970 there were appropriations of $175 million each year. Of the total amount in legislative authorizations for mass transit grants, $70 million has not been appropriated.

4. Recommendations: (a) Additional Authorizations in Appropriation Acts: NHC recommends an appropriation of the $70 million authorized by law, but not yet appropriated. When the additional legislative authorization recommended below is made, we urge an increase in the rate of appropriations to $750 million annually for mass transportation grants.

(b) Increase in Legislative Amendments: NHC recommends that the authorization of appropriations for mass transit grants be increased to $750 million per year for the next 5 years. The expansion of the program is necessary to achieve the housing and urban development goals recommended in these Resolutions. We also urge an advance appropriation for each succeeding fiscal year, besides the current one, in order to give cities more lead time for planning their mass transit programs.

CHAPTER Y. RESEARCH, TECHNOLOGY, TRAINING AND TECHNICAL ASSISTANCE

1. Need for Basic Research and Training: (a) The housing industry has neither the organization nor the resources to support substantial research in the area of housing technology and research. Existing research is almost exclusively in the hands of material and large equipment suppliers and reflects the particular interests of these groups. It is necessary that Federal financial support be given towards the development of new systems and overall construction techniques. The technological advances necessary to reduce housing costs must be accompanied by more uniform building codes in all areas of the nation. This will make it more feasible for developers and manufacturers to produce housing and materials for a national market.

(b) There is a shortage of trained professional and sub-professional personnel in the broad field of community development. This presents a serious problem in achieving effective action programs.

2. Authorizations in 1968 Housing Act: The Act recognizes the need for urban technical assistance, research, and training and provides assistance in the following areas:

(a) Advances in Technology in Housing and Urban Development: The Act authorizes such sums as may be necessary to be appropriated, commencing with fiscal year 1969, for studies of new and improved techniques and methods of applying advances in technology to housing construction and rehabilitation, and to urban development. Four-year contracts are authorized for such studies rather than two-year contracts as heretofore authorized.

(b) Housing for Lower Income Families Through New Technologies: The Act directs the Secretary of HUD to institute a program under which qualified public and private organizations will submit plans for the development of housing for lower income families, using new and advanced technologies, on Federal land which has been made available for that purpose or on other suitable land. The Secretary is to approve five plans, each of which shall have a technology and organization with a potential to produce at least 1,000 dwelling units a year. The Secretary is to seek the construction of that number of dwelling units a year over a five-year period for each of the various types of technologies proposed in approved plans. Mortgages financing the projects are authorized to be insured under the FHA experimental housing program.

(c) Authorization for Urban Information and Technical Assistance Service Program: The Act increases the authorization for

grants to states to assist in the provision of urban information and technical assistance by $5 million for fiscal year 1969, and by $15 million for fiscal year 1970. Amounts authorized for these grants, but not appropriated, are authorized to be appropriated for any succeeding fiscal year commencing prior to July 1, 1970.

(d) Federal-State Training Programs: The Act broadens the Federal-State training program to permit grants to states for the training of subprofessional—in addition to professional—persons who will be employed in the field of housing or community development. The trainees may be trained for employment by private nonprofit organizations or public organizations which have responsibility for housing and community development programs.

3. Authorizations in Appropriation Acts: Instead of the $20 million which the President requested for urban research and technology, there was an appropriation of $11 million. Instead of about $4.5 million requested for the low income demonstrations program, there was an appropriation of $2 million for this purpose. There was an appropriation of $500,000 for urban fellowships. There was an appropriation for the urban information and technical assistance service programs.

4. Recommendations: Additional Authorizations in Appropriation Acts: NHC recommends necessary appropriation authorizations to carry out all of the authorizations in the 1968 Act. Where the appropriations were less than the amounts requested by the President, we recommend appropriations in the full amounts so required as necessary for each of these programs. In addition, NHC recommends that $1 million a year be appropriated for training under a 5-year program; and that the fellowships be increased to $2 million a year under a 5-year program.

CHAPTER Z. PROGRAMS AND POLICIES FOR GENERAL APPLICATION TO HOUSING

1. Equal Opportunity for Housing: (a) Throughout its entire life NHC has been committed to equal opportunity for all American families to secure good housing in good neighborhoods. It again reaffirms this position. While recognizing the slow but significant progress that has been achieved in recent years, it deplores the fact that this opportunity is still denied to millions of American families throughout every section of the land because of their race, color, creed or national origin, or because of the myth which exists as to their desire, or ability to pay for and maintain good homes. To overcome this denial of opportunity and to dissipate these myths, a great challenge is facing the nation.

(b) NHC has long supported the principle of a competitive housing market open to free bargaining by all American families without regard to racial or ethnic background. Many localities have been limited in achieving this objective, however, because of inadequate supplies of low and moderate cost living accommodations and by the congestion of many minority group families in limited sections of the community. To provide an adequate supply of housing, it is necessary to raise production to a minimum of 3,000,000 dwelling units per year.

(c) We urge the President and the Congress of the U.S. to take all steps toward providing an equal opportunity for housing. This includes full and adequate appropriations for the administration of the fair housing program under Title IV of the Civil Rights Act of 1968. Of the $8 million requested by the President, Congress only appropriated $2 million for such expenses of administration. We strongly urge the larger appropriations required for sufficient staff to effectuate fully the foregoing open-housing objectives of achieving equal opportunity for all American families to secure good housing in good neighborhoods. Finally, we urge the Admintsration to take all necessary additional actions to achieve this equal opportunity objective. Strong affirmative measures should be taken to enforce the fair housing rights in Title IV.

(d) We should provide an opportunity for freedom of choice in our housing program. The choice of individual or cooperative homeownership or rental housing and the choice of city, suburban, new town or country living must not be limited by race, color, or religion.

2. Relocation: (a) NHC has long recognized the need for coordinated relocation payments and practices within the various programs of the Federal Government. We therefore give strong support to S. 1, the Uniform Relocation Assistance and Land Acquisition Policies Bill of 1969 pending before Congress. However, this bill makes no provision for assistance to persons displaced by rehabilitation outside of urban renewal, code enforcement, and model city areas. NHC suggests that the bill be amended to provide for assistance to all families displaced by any governmental activities.

(b) When homeowners or tenants are being displaced for urban renewal or other governmental action, there should be a Federal grant to provide adequate payments as equitable compensation to pay not only their moving expenses, but also to help them obtain decent homes elsewhere. In the case of a displaced home owner the amount of the payment should be sufficient to enable him to obtain adequate housing, without limiting such payment to $5,000 as is now provided in the Housing Act of 1968.

(c) When a small business is being displaced through urban renewal or other governmental action, affirmative action should be taken to assist its relocation either within the urban renewal area or elsewhere. If it is to be relocated within the urban renewal area, there should be a policy to establish a rental for the small business which it can afford. In order to achieve this, an appropriate write-down should be made in the disposition of property under the urban renewal program. While it is recognized that there are allowances under the present legislation to cover the cost of relocation by a business which is displaced through urban renewal, we recommend this additional action to better assure the continuance of a small business that is being displaced. NBC also recommends the full implementation and use of the 1965 amendments to the Small Business Act for businesses which are being displaced by urban renewal or other governmental actions.

3. Uniform System for Computation of Incomes by HUD: (a) HUD should have a uniform system for computing incomes which could be used by all constituent agencies administering housing programs which involve income limits. To be equitable, income limits should allow appropriate deductions and exemptions like those long recognized and utilized in the public housing program. The Senate Committee on Banking and Currency recognized the appropriateness of such unuiformity in its Report on the 1968 Housing Act:

"Although the statute is silent on defining income, the committee is aware of the necessity for the Secretary to establish procedures to assure that fair standards and rules are followed within HUD for determining income (after allowable deductions) for eligibility of low or moderate income families or mortgagors under HUD's various programs. These procedures would apply to those who receive the benefit of subsidies or below-market interest rates to enable them to obtain occupancy, homeownership, or cooperative housing membership."

(b) At the present time, the methods of computing income differ in HUD, although the constituent agencies are administering comparable housing programs involving income limits. For years, public housing has allowed appropriate deductions or exemptions in computing the family income such as:

(1) Deduction of $600 from the income of a secondary wage earner thereby recognizing that there are at least this amount of additional expenses in earning such wages, so they do not represent a full increment to family income:

(2) Deductions for expenses for the care of children or sick or incapacitated family members when these expenses are necessary to permit the wage earner to be employed;

(3) Deductions for social security taxes and compulsory pension funds; and

(4) Deductions for minors or dependent adults.

(c) Although these deductions or exemptions are allowed in the public housing program, they are not recognized uniformly in the FHA program involving rent supplements or below-market interest rates under Section 221(d)(3). Thus, in interest supplement programs the 1968 Housing Act provides for the deduction from family income of $300 for each minor child and the elimination of the earnings of all minor children. Pursuant to the Congressional intent as evidenced by the foregoing quotation from the Senate Committee Report, FHA has allowed a further deduction of 5% of gross income to cover payroll deductions for social security and compulsory pension funds. However, FHA has not allowed other deductions of the type which have been long recognized in public housing, particularly since the income limits in the interest supplement program are now computed as a percentage of the local public housing limits.

4. Rehabilitation in Slum Areas not Intended as Containment Program: Rehabilitation programs for slum areas are not intended to be containment programs which would restrict present residents so that they must continue to live there. They should have an opportunity to move into other areas. The NHC goals contemplate development of new and rehabilitated housing in other areas which would be available for the low and moderate income families now living in slum and ghetto areas. To help assure achievement of this objective, we recommend enactment of legislation providing that no program of subsidy, aid, or assistance by any agency of HUD—including sewer and water facility grants, open space grants, community facilities grants, urban renewal programs, model cities programs, mass transit grants, and FHA insurance—may be carried on within any jurisdiction if a reasonable share of housing will not be available for low and moderate income families. Such legislation would help assure the development of balanced programs of housing in new areas into which the residents of slum and ghetto areas could move.

5. Adequacy of Housing to be Provided for Low and Moderate Income Families: Federally-assisted housing programs are intended to provide adequate space and facilities and otherwise meet proper standards for low and moderate income families. To meet the needs of larger families, more housing units must be built of larger size and with more bedrooms. In housing communities for low and moderate income families, provision should be made for recreational facilities—including swimming pools when appropriate—day care and pre-school centers, and other facilities for community activities. This will provide children and other residents with opportunities to engage in wholesome and constructive activities which will help create better communities. These measures to improve the quality of life in Federally-assisted projects will accomplish the objectives prescribed in the 1968 Housing Act, including the requirement for better design standards in such housing. These housing communities should be pleasant

places to live and respond to the needs of the residents, with attention to their comfort, convenience and recreation. As such, they will be attractive for residence by families of both moderate and low incomes.

6. Uniform System of Tax Exemption and Tax Abatement: (a) In some HUD programs there is no requirement for real estate tax exemption or tax abatement. This is true in the new leasing program for the use of privately-owned housing for public housing purposes. It is also true in the rent supplement program for those of public housing incomes. Yet, conventional public housing projects are required to have tax exemptions and they pay only 10% of shelter rent in lieu of taxes. We previously recommended that conventional public housing projects conform with those other publicly-assisted programs which serve low-income families. This would be accomplished by permitting the payment in lieu of taxes to be equivalent to full taxes.

(b) There should be a more practical and consistent policy concerning the requirement for tax abatement on privately-owned projects which are Federally-assisted either with (i) below-market-interest rates, (ii) interest assistance, (iii) rent supplements, or (iv) leasing programs under public housing. Tax abatement should not be required on these projects, even as a means of offsetting the higher costs that prevail in some cities. Such tax abatement is often unavailable because of restrictions in state and local laws; moreover, the cities often face serious problems of inadequate tax revenues and are unwilling to grant tax abatement. Cost limits should be made realistic so that these private housing programs can function in high cost areas without requiring tax abatement.

(c) Where state and local governments grant tax abatements on housing projects which are Federally-assisted in the manner described above, there should be an annual Federal grant to reimburse them for their tax losses.

7. Disposition of Federally-Owned Housing Projects: (a) FHA has acquired ownership of rental housing projects upon which defaults have occurred. When requested, FHA should either lease these projects to local housing authorities for public housing or make negotiated sales of these projects for cooperative ownership by low income or moderate income families. Also, sales may be made to public agencies or nonprofit or other properly motivated organizations which will use them to provide housing for low or moderate income groups. The housing should be sold at a price and with a mortgage term and interest rate—on the purchase money mortgage accepted by FHA—which would enable the property to serve these income groups at monthly charges which they can afford. When necessary, financing should be made available to rehabilitate these properties. Such properties should be eligible for rent supplements and interest subsidies. These recommendations also apply to other federally-owned housing.

(b) FHA has also acquired ownership of single-family homes on which defaults have occurred. In the disposition of this housing, FHA should meet the needs of those of low and moderate incomes. The housing should be sold to them at a price and with a mortgage term and interest rate—on the purchase-money mortgage accepted by FHA—which would be within the financial reach of the low and moderate income purchasers. Priorities should be established for sales which would accomplish this purpose, rather than granting priority to cash sales or sales involving conventional loans, as these generally involve purchasers with incomes above those at the low and moderate level. Legislation should be enacted if it is necessary to establish disposition policies in accordance with the foregoing principles.

8. Support for Increased Grants to Meet Cities' Needs. (a) NHC favors increased Federal grant authorizations to meet the needs of cities, many of which are facing financial crises. These Federal grants should include all of the following:

(1) Necessary increases in supplemental untied grants under the Model Cities Program which give cities an incentive to develop programs for the improvement of entire neighborhoods.

(2) Necessary funding of the authorization for supplemental untied grants under the New Communities Program of Title IV of the Housing Act of 1968 where a balance has been achieved economically and racially; such grants give public agencies an incentive to provide necessary facilities for such New Communities.

(3) Federal grants to reimburse state and local taxing authorities for their tax losses when they grant tax abatement on housing projects which are federally assisted.

(4) Necessary increases in the authorizations of Federal grants: (i) for urban renewal; (ii) for water, sewer and neighborhood facilities; (iii) for open-space and urban beautification; and (iv) to meet other vital needs including those relating to health, education, training, welfare, mass transportation and other purposes.

(b) We recommend development of a three-year demonstration program of untied Federal supplemental grants-in-aid to be used by cities, counties and other local public agencies. This will help relieve their financial plight. This should be done in a manner which would provide incentives to them to promote national policies relating to housing and urban development.

(c) All supplemental untied grants—including those under this new proposed demonstration program and those under the Model Cities and New Communities programs—should be made available for use by cities, counties and other local public agencies for purposes determined by them, without Federal accountability or program supervision.

9. Acceptance and Accumulation of Applications for Programs: HUD has discouraged the submission of new applications in programs where a backlog of unsatisfied applications exists. NHC is strongly opposed to this discouragement of applications for HUD assistance. Even when there is an unsatisfied backlog of applications, HUD should continue to accept applications. There is no better way by which HUD can learn the needs and demands for programs which it administers, so that it can document and support requests for necessary Congressional authorizations and appropriations.

10. Construction Work and Employment in Ghetto Areas: Increased construction volume will require substantial increases in the work force. The large pool of untrained unemployed or under-employed within the ghetto is a large source of additional manpower. There should, therefore, be an effective program to accelerate the training of unskilled groups and to broaden their opportunities for employment in the construction industry. NHC recommends an adequate expansion of the training program of the Manpower and Training Administration of the Department of Labor, together with the full amounts needed as appropriations. NHC endorses the provisions in the 1968 Housing Act which direct the Secretary of HUD to require:

(a) That opportunities for training and employment arising in connection with the planning, construction, rehabilitation, and operation of housing be given to lower income persons residing in the area of the housing; and

(b) That to the greatest extent feasible contracts for work pursuant to the housing programs shall, where appropriate, be awarded to business concerns located in or owned in substantial part by persons residing in the area of the housing. If bonding is not available to such contractors or subcontractors, HUD should take necessary actions to enable them to obtain adequate bonds.

In the foregoing programs, we recommend that bids be invited from local contractors which have the participation of minority groups either in an ownership, executive management or direction capacity.

11. Support for International Programs for Housing: (a) NHC is aware of the critical housing problems elsewhere in the world, particularly in the developing countries. We urge continuation and expansion of our Government's foreign aid programs for housing in the developing countries, particularly cooperative housing to provide ownership by moderate income families as contemplated by the Foreign Assistance Act.

(b) Further, we urge our Government to support efforts: (i) to elevate the importance of housing in the economic development process by supporting efforts to establish, within the framework of the United Nations, a specialized international agency dedicated to solving the housing problems of the developing countries; (ii) to increase U.S. financial support to U.S. universities and other institutions for research and training programs to help solve these housing problems and supply the trained personnel so badly needed.

(c) NHC applauds the leadership provided by the United States in the adoption of a resolution by the United Nations giving emphasis to a pilot demonstration program for the improvement of squatter areas; also for support of the United Nations resolution concerned with the campaign to focus world attention on housing including consideration of an International Housing Year.

(d) NHC recommends enlargement of the investment guaranty program for housing by increasing the available guaranty authority and by extending the 100% guaranties to other appropriate areas besides Latin America. We recommend legislation providing for the encouragement of cooperative and other homeownership by low and moderate income families in the cooperating countries and for the utilization of financing assistance of the types which have been proven effective in our domestic programs.

(e) NHC supports the proposal for the creation of an International Housing Finance Corporation, which would be associated with the World Bank or the United Nations Development Program, to facilitate the mobilization of capital and the development of housing programs, particularly in the newly developing countries.

12. Appropriation Authorization: (a) NHC strongly recommends Congressional appropriations of adequate amounts for the administration of all HUD programs, including the additional funds which are required for additional staff to administer the many new programs contained in the 1968 Housing Act. These funds are urgently needed to meet the critical problems of our urban areas and the shortage of adequate housing for persons of low and moderate incomes. We further recommend all of the additional appropriations described elsewhere in these Resolutions.

(b) Advance appropriations to provide lead time for initiating and planning programs in all authorizations in appropriation bills providing contract authority or funds. The authorizations should cover the succeeding fiscal year in addition to the fiscal year involved in the appropriation act. Appropriation acts have recently adopted this practice for the urban renewal and mass transit programs. It is equally necessary that this be done in all other programs involving private enterprise as well as public agencies. This will give more lead time for the planning and initiation of programs. Such a practice in the housing program will help avoid the past difficulties experienced as a result of uncertainties and delays in providing funds and

commitments. Through advance authorizations for two fiscal years, there will be an uninterrupted flow of funds and commitments at an early enough time to permit advance planning and work in the initiation of housing programs.

13. Workable Program: In order to remove impediments to construction of low and moderate income housing, NHC recommends repeal of the requirement for a workable program or local government approval of projects receiving Federal assistance. However, in localities without a workable program, the Secretary of HUD must first be satisfied that: (i) there is a need for the project; and (ii) its location will provide a satisfactory residential enviroment.

14. Preparation for Post-Viet Nam Period: In preparation for the termination of hostilities in Viet Nam, NHC recommends that we be ready to provide for the necessary expansion of peacetime development in order to assure steady employment for those formerly in jobs supporting our forces in Viet Nam. This should include the long-delayed construction of housing and urban development, together with the production of all materials and equipment required therein. It should also include plans for the use of abandoned defense housing or other installations. In the post Viet Nam period, we should fulfill the housing needs of those families for which the national goal has not become a reality. This would implement the highest priority and emphasis established for this program in the Housing Act of 1968.

15. Recommended Change in Budget Concepts Concerning Mortgage Purchases: (a) NHC does not believe in new concept of the Federal Budget which initially reflects expenditures for mortgage purchases in the same way as it reflects expenditures for grants, even though collections on mortgages are later credited as offsetting income. If several billion dollars of mortgages are purchased and retained by a government agency, all of this initially appears as an expenditure in the Budget during the fiscal year when the mortgages are purchased. This has an adverse effect on many public interest and social programs which are dependent upon the steady flow of mortgage financing at reasonable interest rates. The Budget should reflect only the actual cost to the Government of purchasing and holding these mortgages—this would be the differential in interest between the rate of the mortgages held by the Government and the rate on Government borrowings.

(b) *If* the present Budget concepts are retained which initially treat mortgage purchases as an expenditure in its entirety, NHC believes that there should be active encouragement of the sale to private investors of participations in mortgages held by GNMA or other Government agencies. Upon such sales, the funds realized can and should be offset against the expenditures for the purchase of the mortgages.

16. Availability of Land: NHC recommends such measures as are necessary to help assure the availability of enough land, at reasonable cost, to achieve our housing goals. These should include the establishment of appropriate reserves of land for future use to provide the housing, public facilities and recreational areas required to meet these goals.

17. Increases in Housing Costs: We deplore the inflationary rise in housing costs, particularly the spiralling increases in interest rates and prices of building materials such as lumber. It is urgent that action be taken to achieve a reasonable and stable level of interest rates and housing costs. When interest rates and housing costs increase, many people who need homes can no longer afford them—even though they could have afforded them previously when the interest rates and housing costs were at more reasonable levels. NHC strongly recommends that necessary measures be taken to stop these inflationary increases in interest rates and housing costs which adversely affect the consumer and jeopardize achievement of the housing goals established by Congress and the higher goals recommended in these Resolutions.

18. Insurance for Ghetto Areas: NHC recommends that when a home is purchased in a ghetto area and the mortgage is FHA-insured, necessary federal action should be taken to assure that the home owner obtains all hazard insurance required for his protection.

19. Private Investment in Lower Income Housing: NHC urges the participation of private investors in programs to provide housing for low and moderate income families. NHC recognizes that the tax savings which result from current rules of accelerated depreciation on improved rea. property are essential to insure the continued flow of such equity funds into investment in low and moderate income housing. NHC opposes any change in such rules which would reduce the already too-low return from investments in housing for families of low and moderate income.

20. Reduction of Monthly Mortgage Payments: With the recent increases in interest rates, people have been excluded from the housing market who need dwellings but can no longer afford them at the higher interest rates. Elsewhere in this report, NHC recommends measures to increase the flow of funds into the housing mortgage market and to make mortgage financing available at more reasonable interest rates. In addition, FHA should take administrative actions which would help to reduce the monthly debt service on mortgages by providing for level amortization payments instead of the higher amortization payments presently applicable to certain mortgage insurance programs—e.g. those under Sec. 220, 221(d)(4) & 207—which involve higher initial curtailments of principal. By reducing the debt service payments, the level amortization plan would reduce the monthly charges to the consumer and help offset the current high interest rates.

CHAPTER AA. NEED FOR EFFECTIVE INSTITUTIONS, ADMINISTRATION AND FEDERAL-LOCAL RELATIONS

1. In itself, the enactment of adequate legislation will not achieve the goals set forth in these Resolutions; nor will it meet the needs of the American people or the crises in our cities. Laws are *not* self-executing. It is necessary to assure the establishment of effective institutions, administration, and federal-local relations. NHC recommends that HUD take the following actions to assure the effective execution of laws relating to the programs under HUD's jurisdiction.

2. HUD should redefine its role to concentrate on major policies and on constructive leadership in executing federal laws and to grant greater local autonomy to local governments and agencies in undertaking and operating projects involving HUD aid. NHC believes this HUD role would constitute creative federalism. The expenditure of federal monies should be subject to broad federal guidelines. Through the years, there has been a continuing increase in the burden and detail of HUD controls over local operations in the conduct of HUD-aided programs. All HUD controls should be eliminated which are not required by federal law. We will never achieve the volume and expedition required in programs authorized by the Congress unless there is a decentralization of responsibility to the local agencies involved. The local agencies can properly be held to account for their responsibilities under programs. There is no reason to assume that there is any less integrity and competence in local officials than in federal officials.

3. HUD should accelerate processing, production and decision-making by federal and local officials and by participants in *all* HUD programs, including the establishment of time schedules for all actions required. There should be a time limit for submission of applications by local agencies and a time limit for HUD action in approving or rejecting applications. However, qualified applications should not be rejected because of technical or insubstantial reasons, lack of money or lack of a priority status according to a schedule established by HUD; likewise, applications should not be rejected in order to remove them from the pending work load.

4. After applications have been approved and allocations made, there shall be a time limit for contracting and execution. With respect to requirements for HUD approval after a contract or commitment is issued, there should be a recognition that HUD has a certain period within which to act; and, failing such action on matters requiring HUD's approval, the proposal to HUD shall thereby be accepted and considered approved.

5. HUD should act promptly in making allocations and commitments of all authorizations and funds made available by Congress. Such allocations and commitments should be based upon:

(a) The requests that are received within a designated time which meet the applicable statutory requirements; and

(b) The respective needs for the communities involved. There should be no impounding or holdback of funds. The money should be allocated and committed as quickly as possible. All monies should be made available based upon the qualified requests that are received within a prescribed time limit. The guideline should be the need for the program in the community involved.

6. HUD should simplify its regulations and conditions attached to HUD aid and eliminate the detailed controls over project development and operations. Such controls are overly burdensome, costly, and time-consuming. They discourage initiative and innovation. They are inconsistent with the achievement of the goals recommended in this report.

7. HUD should eliminate conflicting policies and requirements among its different units, as applied to comparable programs. For example, the methods of determining incomes under the public housing program are different from those under the rent supplement, interest supplement and below-market-interest-rate programs.

8. HUD should consult with representative groups of local public agencies and private participants in each of its programs to identify problems which impede their progress and to develop workable solutions. For this purpose HUD should establish:

(a) A federal-local committee on public housing and urban renewal; such a committee functioned effectively for years until it was discontinued.

(b) A federal-city committee on the model cities program.

(c) Like committees of representatives from the participants in each program; thus, there should be a restoration of the committee of representatives of cooperatives participating in FHA programs.

Each such committee would meet periodically to give HUD first-hand experience concerning the operations of the HUD-aided program involved. Such consultation should result in quick and realistic action in eliminating obstacles and solving problems. Otherwise, such obstacles and problems are long neglected, often because they are not known or because HUD does not get proposals for solutions from those directly engaged in the program.

9. (a) In Section 5, the 1968 Housing Act directs the Secretary of HUD to make a report to the Banking and Currency Committees early in calendar years 1969 and 1970

identifying specific areas of program administration and management which require improvement. The report will describe actions taken and proposed for the purpose of making such improvements, and recommended such legislation as may be necessary to accomplish such improvements.

(b) Many of our recommendations in these Resolutions cover areas of administration on which HUD is required to report to the Committees, pursuant to the following provision in the 1968 Housing Act:

"Each such report shall include, but not be limited to, the following areas of program administration and management: uniformity and standardization in program requirements, simplification of program procedures, ways and means of expediting consideration of proposed projects and applications for assistance, the provision of more useful and specific assistance to communities, organizations, and individuals seeking to utilize the Department's programs, and ways and means of combining or otherwise adapting the Department's programs to increase their usefulness in meeting the individual needs of applicants."

(c) We urge HUD to take the actions recommended in these Resolutions relating to areas of program administration and management which require improvement and to report thereon to the Banking and Currency Committees.

HIGH INTEREST RATES HIT THE LOW-INCOME GROUPS HARDEST

(Mr. PATMAN asked and was given permission to extend his remarks at this point in the RECORD, and to include extraneous matter.)

Mr. PATMAN. Mr. Speaker, when prime interest rates are raised as they were last week, it is not the big businesses that suffer, but it is the low-income and moderate-income families and the small business concerns that take it on the nose.

On the financial pages, we hear much of the "prime rate" which goes only to the triple A big corporations with perfect credit ratings. We hear very little about the rates that are paid by the average citizen and by the small businessman. Invariably these rates are substantially above the quoted prime rate and I regret that the Nation's news media says so little about the real rates which hit the great mass of the population.

For this reason, I was happy to see a column by Harold B. Dorsey in the Washington Post of Monday, March 24, outlining this very fact—that high interest rates hit the little man in this economy the hardest.

Mr. Speaker, I place in the RECORD a copy of this column, entitled "Impact of High Interest Rates Falls on Low-Income Group."

IMPACT OF HIGH INTEREST RATES FALLS ON LOW-INCOME GROUP

(By Harold B. Dorsey)

Last week's increase in the interest rate which commercial banks charge for loans of prime quality is more significant than suggested by the relatively strong behavior of the stock market.

The 7½ per cent rate is available only to commercial customers of the highest credit rating. Others must pay more. And since the borrower is normally permitted to draw out only about 80 per cent of his money—while the remaining 20 per cent is kept by the bank as a "compensating balance"—actual interest cost for the top quality borrowers is about 9⅜ per cent on the money which can be used.

The main impact of soaring interest rates falls on consumers, small businessmen, municipalities and home builders. Larger corporations are more likely than the others to obtain the available credit, because they have firm credit lines with the banks and a ready access to money in the capital markets. And they can charge off the interest cost as a tax-deductible expense at the 52.8 per cent marginal corporate income tax rate.

But, insofar as these corporations can attract the available credit supply that might otherwise go to consumers, home owners and small businesses, they ultimately hurt themselves. The other groups—and particularly the consumer whose spending accounts for 62 per cent of Gross National Product—cannot maintain their rate of buying if they are unable to get credit. As a result, the corporations find that they cannot meet their sales targets; inventories pile up; and they are then forced to cut back production and, ultimately, trim their capital spending programs.

None of these economic consequences are yet visible, although they are likely to become more apparent within the next two or three months. Meanwhile the catch-up payments for individual income taxes due April 15 may also have a negative effect on consumer spending; particularly for durable goods.

And with tax payments rising sharply, and with Federal spending recently—and belatedly—showing signs of flattening out, the budget swing from deficit to surplus in the period immediately ahead should have a slow-down effect on the economy, especially since the Federal Reserve is simultaneously restraining the growth of money supply.

Despite these signals of things to come, a great many people are not "buying" the disinflation idea. In this space last week, supporting evidence for this observation was presented in capital spending intentions, rising employment and relatively good retail sales.

I encountered an additional illustration last week at a meeting with about two dozen managers of very substantial investment capital. The majority view was the effect that continuing inflation was inevitable. The worst that could be seen was a brief period of modest hesitation and then we would be off on another inflationary boom.

It was argued that minority groups would continue to press for more government spending in the welfare area—especially so if there was even a modest increase in the unemployment rate. It was contended that policy-makers in Washington would not have the courage to continue with restraining pressures long enough to break the deeply imbedded inflation psychosis. As a result, it was the consensus of this group that their investment policies must continue to favor common stocks and that commitments in bonds should be avoided.

So what's wrong with inflation? In the first place, the low income groups are hurt the worst by inflation. Next in line for suffering are the millions of savers and pensioners who lose—via inflation—many billions of dollars of purchasing power of their incomes, savings and insurance. The Nation as a whole will suffer because continuing inflation will probably lead to another international currency crisis, which would have an adverse effect on the economies of the industrial world.

Nevertheless, there is plenty of evidence—up to this point at least—that many business executives, consumers and investment managers believe that inflation has gone on too long to stop. Even the highest interest rates in modern history have failed to reduce the pressures in that direction. So far!

GREEK INDEPENDENCE DAY

(Mr. McCORMACK (at the request of Mr. ALBERT) was given permission to extend his remarks at this point in the RECORD.)

Mr. McCORMACK. Mr. Speaker, the celebration of independence days has its particular significance; it rekindles and revives the spirit which once united a people for the glorious fight that culminated in their freedom. And the celebration of Greek Independence Day is of great significance for a number of reasons. In the first place, the ancient Greeks were the first citizens of the West and the free world. They showed the world that they preferred to fight for the attainment and preservation of their freedom rather than willingly submit to their conquering oppressors. In the second place, when eventually they were forced to submit to alien tyrants, they proudly maintained their spiritual independence throughout the many centuries. And finally, in 1821 when they saw a chance of regaining their freedom and national independence, they staged a revolt which in the course of many years of bloody warfare, led to the birth of modern Greece.

From the day the stouthearted Archbishop Germanos, of Patras, raised the standard of the cross over his monastic establishment in 1821 to this present day, the American people have followed the course of events in Greece with keen interest and heartfelt sympathy. There never was, and let me hope that there may never be, any doubt of our wholehearted and united sympathy for the Greek people whenever they have been pitted against foreign oppressors and totalitarian tyrants. We have always held them in exceptionally high esteem. Long before the beginning of their war of independence we were fully conscious of our debt to Greece, the real nursery of many human values associated with our civilization. When we attained our independence the Greek people were suffering under alien oppressors in their homeland. And when the news of their revolt against the Turks reached us, it was natural for us to hope and pray for Greek success. Many years later when they succeeded in attaining their goal we on this side of the Atlantic were as much overjoyed by their success as were those closer to them in Europe.

Nor have we wavered in our sympathy for the Greeks since then. During and after the last two World Wars we have done our very best to save Greece from the ravages of war and from the clutches of Communist totalitarianism, and have striven consistently to help them maintain their hard-won independence. In doing this we have gained a loyal ally in our struggle against Communist tyranny.

During the last war the Greeks fought bravely and brilliantly in their homeland and on their islands on the side of democracies, and suffered much at the hands of the Nazi oppressors. Toward the end of that war, when their liberation was in sight, the country was plagued by Communist partisans and Soviet agents, who came very close to dragging it into the Stalin totalitarian camp. But the

timely and resolute British aid, backed up and then effectively supplanted by our own assistance under the Truman doctrine, saved the Greeks from Communist totalitarianism and safeguarded their national independence. It is no exaggeration to state that, soon after the last war, when Greek independence was in peril, our material aid to Greece and our moral support were of decisive importance. Even though it cost us more than a billion dollars to do this, I am indeed glad to say that we were in position to render such aid for a great cause, and in return gain a valuable ally, a true bastion against communism in the Balkans.

The Greek people have shown their appreciation of our help in many ways, particularly by their participation in the Korean war, and by their very firm and unwavering stand against totalitarian tyrants. The courage, the tenacity and the willingness to sacrifice their all for the attainment of their independence, are Greek national characteristics and these characteristics serve them well in defending their national independence.

I am indeed glad to join all loyal and patriotic Greek-Americans on the observance fo Greek Independence Day.

SERMON DELIVERED BY REV. FATHER JOHN F. DONOGHUE AT ST. PATRICK'S CHURCH ON MARCH 17

(Mr. McCORMACK (at the request of Mr. ALBERT) was given permission to extend his remarks at this point in the RECORD.)

Mr. McCORMACK. Mr. Speaker, the following sermon, most appropriate and informative, which I am pleased to include in my remarks, was delivered by Rev. Father John F. Donoghue, secretary to His Eminence, Cardinal O'Boyle and vice chancellor of the archdiocese of Washington, at a concelebrated mass in St. Patrick's Church, Washington, D.C., on Ireland's patronal feast, March 17. The principal celebrant of the mass was His Eminence, Patrick Cardinal O'Boyle, archbishop of Washington.

SERMON DELIVERED BY REV. FATHER JOHN F. DONOGHUE AT ST. PATRICK'S CHURCH, MARCH 17

Every nation has endeavored to preserve and perpetuate the memory of its heroes, so that future generations might be inspired by their feats and accomplishments and encouraged by their example to emulate them. Monuments of stone and marble give evidence of a peoples' love for their heroes. Today, Irishmen, wherever they may be, celebrate the feastday of their greatest hero, a man who has been elevated by the Church and numbered among the ranks of the saints—a man who bears the proud title, "Apostle of Ireland." Neither monuments of stone nor marble can fittingly attest to the devotion and love of the Irish people for St. Patrick. Continents are his monuments because those who enjoy his faith, who have never swerved from his allegiance, are found everywhere. His memory, however, is preserved in a special way in the hearts of everyone of Irish ancestry.

It might be well for us to review briefly the highlights of Patrick's life, because it is from his life that Irishmen in every generation have drawn the inspiration and courage to resist the temptations that could destroy their faith.

Although the date and place of his birth are not known with certainty, historians generally believe he was a Briton, a citizen of a Roman province who was born about the year 385. He was a descendant of those Roman conquerors of the world who made the Roman Empire—an empire which ruled over all the civilized peoples of their time. He lived at a time when a large portion of the then known world had become Christian. He was likewise a contemporary of such men as St. Augustine, St. Jerome and St. Ambrose.

Very little is recorded of the early life of the saint, except that when he was sixteen years of age he was carried off by Irish raiders and taken to Ireland as a slave. During this period of captivity, which was a blessing in disguise, he underwent a religious conversion and, as he himself describes it, he spent his days and nights in prayer while tending the herds of his master in the forests and mountains of Ulster. He likewise acquired a knowledge of the language and customs of his captors, and came to admire deeply and to love the character of the Irish people. Separate from his family and friends he learned to put his trust in God and to learn from Him the lessons of wisdom and love, which he would one day preach to the Irish people.

After six years of captivity, Patrick managed to escape. From the time he obtained his freedom until his return to Ireland many years later, he devoted himself assiduously to his studies at the Seminary of Tours in preparation for his life's work. When at last he was ordained to the priesthood, he travelled to Rome as Apostles in all ages have done, as St. Paul went to Peter, as St. Augustine did before he set out for England, as St. Boniface and St. Francis Xavier did to receive the blessing and commission of Christ's Vicar. Pope Celestine, impressed by Patrick's zeal and desire for the missions, consecrated him a bishop and commissioned him to carry the gospel of Christ to the pagan people of Ireland.

When St. Patrick returned to Ireland he found there a very remarkable people, a people it is true who were sunk in superstition, and with a fixed pagan religion, with an established priesthood proud of its traditions and jealous of the power it exercised. These people were not only isolated from the rest of the continent, but despite the fact that they were pagans worshipping false gods they were, nevertheless, preserved from the coarseness and orgies often associated with paganism. They believed in a supreme being on whom they depended for their life, for their success in this world, and for the happiness that they craved in the world to come.

When St. Patrick began to preach the doctrine of christianity he found the soil very receptive. In other countries the apostles were received with open opposition, and in many cases—in fact it was almost always the rule—the apostle of a country paid the penalty with his life. In the conversion of Ireland, however, it is a very singular fact that not one drop of blood was shed. It was a peaceful conquest, but not only so, it was accomplished in the lifetime of the apostle himself—so that St. Patrick lived to see the length and breadth of the island devoted to christianity and devoted to it with an enthusiasm that was unparalleled. It looked, in fact, at one time as if the whole island was going to become one great monastery.

His *Confession*, which was written towards the end of his life, is singularly lacking in information about the details of his later career. He speaks in general terms of "the success of his preaching, of the many thousands he converted of the sons of the Scots and the daughters of the chieftains" who became monks and virgins of Christ, of the persecutions he endured and his continual travels "amid many perils to remote places where there was no one beyond and where no one else had ever penetrated to baptize or ordain clergy or to confirm the people." It is sufficient to say that success following him wherever he went. Kings as well as peasants embraced christianity as a result of his preaching. After thirty-three years as an apostle, he died, leaving Ireland almost entirely converted.

The work which St. Patrick began continued to flourish after his death. The seed of the gospel planted by St. Patrick bore abundant fruit, not only on the island, but throughout Europe. Not long after their conversion, converts who became priests went out as missionaries, spread the doctrine of Christianity and diffused the light of scholarship as well, all over the west of Europe. They realized, as must we, that one of the features of religious zeal is not merely personal sanctification, but it is the desire to share the blessings of religion with our less fortunate neighbors. Religion is a light, and it shines not merely to illuminate the faith of him who walks in it, but it is to give an example to those who are not blessed with the same knowledge, the same devotion. It is for this reason that Irish missionaries went to the ends of the earth, carrying with them the message that they received from St. Patrick, and that wherever they went they taught those same remarkable lessons that had made converts of the Irish nation. And there was supreme need of their work. The Romans were in utter decadence. The barbarous invaders of Roman territory from the north had come down to take first the vices and only afterwards the virtues of the civilization they threatened to destroy. This decivilizing effect was felt not only in Italy, but practically everywhere in Roman territory. But Ireland stood as the missionary of civilization, of learning, and of sanctity, lifting men up from the mire of barbarism, opposing the spirit of the world of war and bringing men together by the ties of human brotherhood, learning and religion.

When persecution came to Ireland, as it has many times, it was a persecution of their religion; it was not merely a war of conquest, nor a war of retribution; it was an endeavor to uproot the faith that had been planted in the hearts of their fathers and that had grown and developed in the hearts of their children. Exile was one of the penalties that they paid for their faith. That exile sent them not merely into England and the continent, but it sent them across the stormy Atlantic; it sent them to distant Australia; and it gave to this country an untold number of heroic men and devoted women, who brought with them, not merely the faith that they had received, but brought with them the sturdy devotion, the tireless energy and industry, the genial humor, that has done so much to make the Irish people honored and loved. Macaulay, the English Protestant historian has fittingly remarked: "We have used the sword for centuries against the Catholic Irish. We have tried famine, we have tried extermination, we have had recourse to all the severity of the law. What have we done? Have we succeeded? We have neither been able to exterminate nor enfeeble them. I confess my incapacity to solve the problem. If I could find myself beneath the dome of St. Peter's and read with the faith of a Catholic, the inscription around it, 'Thou art Peter, and upon this rock I will build my Church, and the gates of hell shall not prevail against it', then I could solve the problem of Ireland's story."

That same indomitable spirit which moved St. Patrick, St. Columkille, St. Columba and an army of missionaries after them to leave the shores of Ireland and to spend themselves for christianity in countries far from home, is still alive in Irishmen wherever they may have settled. When Irish emigrants, compelled by the condition of their own land

to seek a better life, left their country, Irish priests followed them. Today, there are literally millions of Irish in all parts of the world united by a common bond of faith and belief, who have preserved in tact the tenets of christianity which fifteen hundred years ago St. Patrick preached.

Perhaps the greatest glory possessed by the Irish race and a glory which any people can desire, is the solid permanent uncompromising christian character. A character of singular interest in the knowledge and desire of the supernatural, which made the conversion of Ireland to christianity so bloodless, so immediate and so universal; a character of a love of truth and deep religious instinct, and a character of christian zeal with which Ireland was inflamed to make known the truths she possessed. A character of exalted christian charity by which she mainfested the truths of God even in the midst of her suffering.

As Christ prayed for St. Peter, so St. Patrick prayed for Ireland. It is said that when about to die, St. Patrick went to the top of a neighboring mountain and asked for fidelity to the faith for the Irish people. It is nearly fifteen hundred years since St. Patrick passed from earth to heaven and Ireland's faith has not failed yet. Fifteen centuries of fidelity to Christ and His Church; fifteen hundred years of strong spiritual life, a life of vigorous faith and love, which neither prosperity nor persecution could interrupt. From the moment that Ireland had seen the sun of faith rise upon her, she had vowed herself to it with an ardor and tender devotion which became her very life.

This same determination and strong faith, this same filial love and devotion to the Holy See which nothing can shake, the same reverence and respect for bishops and priests are the strong characteristics of the faith of the Irish today.

We believe that the heritage of truth that Christ gave to His Apostles by the Sea of Galilee with the direction to teach all nations, and that Patrick received in direct line from Peter's successor, is ours today, and that mandate was not given to a class, but to all, and each of us is a treasure bearer of that faith and each of us should be a disseminator of its knowledge.

Those of us of Irish ancestry possess the heritage of the faith and the mission of St. Patrick. We continue his missionary effort and preach the religion of Christ by the example of our lives. It was the virtue of the Irish people that kept their faith strong. And may the memory of their heroic virtues, the memory of their long fidelities, of their honor and suffering sustain us and may St. Patrick pray for us as he did for his converts, that our own faith may not fail us, and we by our lives may continue his missionary activity.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted as follows to:

Mr. STAFFORD (at the request of Mr. GERALD R. FORD), for March 26 through the balance of the week, on account of official business.

Mr. CHARLES H. WILSON (at the request of Mr. BOGGS), for today and the balance of the week, on account of official business.

Mr. RUMSFELD, for March 26, 27, 28, and 29, 1969, on account of his attendance at an international conference in Ditchley, England.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. HANNA, for 1 hour, Thursday, March 27, to revise and extend his remarks and include extraneous matter.

Mr. FINDLEY, for 30 minutes, today; to revise and extend his remarks and include extraneous matter.

(The following Members (at the request of Mr. HANSEN of Idaho) to revise and extend their remarks and to include extraneous matter:)

Mr. TALCOTT, for 5 minutes, on March 25, 1969.

Mr. PELLY, for 20 minutes, on March 26, 1969.

Mr. HOSMER, for 20 minutes, on March 25, 1969.

Mr. GERALD R. FORD, for 3 minutes, on March 25, 1969.

Mr. REUSS (at the request of Mr. BURLISON of Missouri), for 15 minutes, today; to revise and extend his remarks and include extraneous matter.

Mr. DIGGS (at the request of Mr. BURLISON of Missouri), for 60 minutes, on March 26; to revise and extend his remarks and include extraneous matter.

EXTENSIONS OF REMARKS

By unanimous consent, permission to extend remarks was granted to:

Mr. FASCELL.

Mr. MICHEL and to include extraneous matter.

Mr. ZABLOCKI in two instances and to include extraneous matter.

(The following Members (at the request of Mr. HANSEN of Idaho) to revise and extend their remarks and to include extraneous matter:)

Mr. RUMSFELD in five instances.

Mr. FULTON of Pennsylvania in 10 instances.

Mr. SPRINGER.

Mr. BROWN of Michigan.

Mr. WYDLER in three instances.

Mr. ASHBROOK.

Mr. SCHADEBERG.

Mr. CLEVELAND in two instances.

Mr. STAFFORD.

Mr. HALPERN.

Mr. STEIGER of Wisconsin in two instances.

Mr. SANDMAN.

Mr. LANDGREBE in two instances.

Mr. MINSHALL.

Mr. HUNT.

Mr. WYMAN in three instances.

Mr. CEDERBERG.

Mr. MILLER of Ohio.

Mr. SCHNEEBELI.

Mr. SKUBITZ in five instances.

Mr. SCHERLE in two instances.

Mr. CHAMBERLAIN.

Mr. CUNNINGHAM in three instances.

Mr. BUTTON.

Mr. DERWINSKI in two instances.

Mr. MESKILL in two instances.

Mr. CONTE in three instances.

Mr. HOSMER.

Mr. TAFT.

Mr. GUDE in three instances.

(The following Members (at the request of Mr. BURLISON of Missouri) and to include extraneous matter:)

Mr. MATSUNAGA in two instances.

Mr. DADDARIO in two instances.

Mr. GONZALEZ in three instances.

Mr. BINGHAM in five instances.

Mr. FRIEDEL in two instances.

Mr. PATMAN.

Mr. PODELL in three instances.

Mr. MINISH.

Mr. TEAGUE of Texas in six instances.

Mr. DINGELL.

Mr. ANDERSON of California.

Mr. ST. ONGE in two instances.

Mr. PUCINSKI in 12 instances.

Mr. MURPHY of New York.

Mr. ROONEY of New York in two instances.

Mrs. SULLIVAN in three instances.

Mr. RARICK in three instances.

Mr. CONYERS in three instances.

Mr. HOWARD.

Mr. MIKVA in two instances.

Mr. WOLFF in three instances.

Mr. DANIELS of New Jersey.

Mr. FLOWERS in three instances.

Mr. ALEXANDER in three instances.

Mr. DULSKI in two instances.

Mr. JOHNSON of California.

Mr. RODINO.

Mr. PATTEN.

Mr. KYROS in two instances.

Mr. LEGGETT.

Mr. OTTINGER in two instances.

Mr. EILBERG.

Mr. GALIFIANAKIS.

Mr. MURPHY of Illinois.

Mr. CHAPPELL.

SENATE BILLS AND JOINT RESOLUTION REFERRED

Bills and a joint resolution of the Senate of the following titles were taken from the Speaker's table and, under the rule, referred as follows:

S. 301. An act for the relief of Sein Lin; to the Committee on the Judiciary.

S. 348. An act for the relief of Cheng-huai Li; to the Committee on the Judiciary.

S. 537. An act for the relief of Noriko Susan Duke (Nakano); to the Committee on the Judiciary.

S. 628. An act for the relief of Koon Chew Ho; to the Committee on the Judiciary.

S. 648. An act for the relief of Ernesto Alunday; to the Committee on the Judiciary.

S. 672. An act for the relief of Charles Richard Scott; to the Committee on the Judiciary.

S. 713. An act to designate the Desolution Wilderness, Eldorado National Forest, in the State of California; to the Committee on Interior and Insular Affairs.

S. 742. An act to amend the act of June 12, 1948 (62 Stat. 382), in order to provide for the construction, operation, and maintenance of the Kennewick division extension, Yakima project, Washington, and for other purposes; to the Committee on Interior and Insular Affairs.

S. 743. An act to authorize the Secretary of the Interior to construct, operate, and maintain the Touchet division, Walla Walla project, Oregon-Washington, and for other purposes; to the Committee on Interior and Insular Affairs.

S. 927. An act for the relief of Victor Abadi; to the Committee on the Judiciary.

S. 958. An act for the relief of John Anthony Bacsalmassy; to the Committee on the Judiciary.

S. 1011. An act to authorize appropriations for the saline water conversion program for fiscal year 1970, and for other puposes; to the Committee on Interior and Insular Affairs.

S. 1016. An act for the relief of Dr. Richard Francis Power; to the Committee on the Judiciary.

S. 1049. An act for the relief of Dr. Angel Solar; to the Committee on the Judiciary.

S. 1120. An act for the relief of Wong Wah Sin; to the Committee on the Judiciary.

S. 1123. An act for the relief of Ah Mee Locke; to the Committee on the Judiciary.

S.J. Res. 28. Joint Resolution providing for renaming the central Arizona project as the Carl Hayden project; to the Committee on Interior and Insular Affairs.

ENROLLED BILL SIGNED

Mr. FRIEDEL, from the Committee on House Administration, reported that that committee had examined and found truly an enrolled bill of the House of the following title, which was thereupon signed by the Speaker:

H.R. 8438. An act to extend the time for filing final reports under the Correctional Rehabilitation Study Act of 1965 until July 31, 1969.

ADJOURNMENT

Mr. BURLISON of Missouri. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 2 o'clock and 3 minutes p.m.), the House adjourned until tomorrow, Wednesday, March 26, 1969, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

618. A communication from the Acting Comptroller General of the United States, transmitting a report on the examination of financial statements of the Tennessee Valley Authority for fiscal year 1968 (H. Doc. No. 91); to the Committe on Government Operations and ordered to be printed.

619. A communication from the Secretary of the Treasury, transmitting a draft of proposed legislation to broaden the definition of bank holding companies, and for other purposes; to the Committee on Banking and Currency.

620. A communication from the Deputy Director, Administrative Office of the U.S. Courts, transmitting a draft of proposed legislation to amend the Bankruptcy Act and the civil service retirement law with respect to the tenure and retirement benefits of referees in bankruptcy; to the Committee on the Judiciary.

621. A communication from the Administrator of Veterans' Affairs, transmitting a draft of proposed legislation to amend title 38 of the United States Code in order to improve and make more effective the Veterans' Administration program of sharing specialized medical resources; to the Committee on Veterans' Affairs.

622. A communication from the Secretary of the Treasury, transmitting a draft of proposed legislation relating to the income tax treatment of certain distributions pursuant to the Bank Holding Company Act of 1969; to the Committee on Ways and Means.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. FALLON: Committee on Public Works. H.R. 4148. A bill to amend the Federal Water Pollution Control Act, as amended, and for other purposes; with an amendment (Rept. No. 91–127). Referred to the Committee of the Whole House on the State of the Union.

Mr. ANDERSON of Tennessee: Committee on Rules. House Resolution 336. Resolution providing for the consideration of H.R. 7757, a bill to authorize appropriations during the fiscal year 1969 for procurement of aircraft for the Armed Forces, and for other purposes (Rept. No. 91–128). Referred to the House Calendar.

Mr. PEPPER: Committee on Rules. House Resolution 337. Resolution providing for the consideration of H.R. 337, a bill to increase the maximum rate of per diem allowance for employees of the Government traveling on official business, and for other purposes (Rept. No. 91–129). Referred to the House Calendar.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. RODINO: Committee on the Judiciary. H.R. 1632. A bill for the relief of Romeo de la Torre Sanano and his sister, Julieta de la Torre Sanano; with amendment (Rept. No. 91–115). Referred to the Committee of the Whole House.

Mr. RODINO: Committee on the Judiciary. H.R. 2005. A bill for the relief of Lourdes M. Arrant; with amendment (Rept. No. 91–116). Referred to the Committee of the Whole House.

Mr. DOWDY: Committee on the Judiciary. H.R. 2218. A bill for the relief of William John Moher; with amendment (Rept. No. 91–117). Referred to the Committee of the Whole House.

Mr. CAHILL: Committee on the Judiciary. H.R. 2336. A bill for the relief of Adela Durda; with amendment (Rept. No. 91–118). Referred to the Committee of the Whole House.

Mr. MESKILL: Committee on the Judiciary. H.R. 2552. A bill for the relief of John Vincent Amirault; with amendment (Rept. No. 91–119). Referred to the Committee of the Whole House.

Mr. RODINO: Committee on the Judiciary. H.R. 3040. A bill for the relief of Lee, In Sook; with amendment (Rept. No. 91–120). Referred to the Committee of the Whole House.

Mr. FEIGHAN: Committee on the Judiciary. H.R. 5067. A bill for the relief of Yuka Awamura (Rept. No. 91–121). Referred to the Committee of the Whole House.

Mr. DENNIS: Committee on the Judiciary. H.R. 5133. A bill for the relief of Pagona Anomerianaki; with amendment (Rept. No. 91–122). Referred to the Committee of the Whole House.

Mr. CAHILL: Committee on the Judiciary. H.R. 5134. A bill for the relief of Miss Elizabeth Schofield (Rept. No. 91–123). Referred to the Committee of the Whole House.

Mr. FEIGHAN: Committee on the Judiciary. H.R. 5136. A bill for the relief of George Tilson Weed (Rept. No. 91–124). Referred to the Committee of the Whole House.

Mr. DOWDY: Committee on the Judiciary. H.R. 6607. A bill to confer U.S. citizenship posthumously upon Sp4c. Klaus Josef Strauss (Rept. No. 91–125). Referred to the Committee of the Whole House.

Mr. FEIGHAN: Committee on the Judiciary. H.R. 7160. A bill for the relief of Charles Richard Scott; with amendment (Rept. No. 91–126). Referred to the Committee of the Whole House.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ANNUNZIO:

H.R. 9404. A bill to incorporate the Italian American War Veterans of the United States, Inc.; to the Committee on the Judiciary.

91. Also, memorial of the Legislature of the State of Indiana, relative to locating a new national cemetery in Terre Haute, Ind.; to the Committee on Veterans' Affairs.

92. Also, memorial of the House of Representatives of the State of Indiana, relative to amending the Social Security Act to provide for Federal payment of the cost of welfare benefits paid to persons who do not meet State-imposed residency requirements; to the Committee on Ways and Means.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BLACKBURN:

H.R. 9488. A bill for the relief of Mrs. Ruth Brunner; to the Committee on the Judiciary.

By Mr. BURKE of Massachusetts:

H.R. 9489. A bill for the relief of Ann Marie Parada and Oscar Nelson Parada; to the Committee on the Judiciary.

By Mr. BURTON of California:

H.R. 9490. A bill for the relief of Dapen Liang, his wife, Alice Tsai-hunk Y. Liang, and their children, Gladstone C. K. Liang, Nancy C. C. Liang, Dora C. F. Liang, Mary C. M. Liang, and John C. P. Liang; to the Committee on the Judiciary.

H.R. 9491. A bill for the relief of Harold George Pereira, his wife, Winifred Caroline Pereira, and their children, Joseph Maurice, Anthony Francis, Bevery Ann Maria, Nathaniel Francis, Joachim Boniface, and Thomas James Pereira; to the Committee on the Judiciary.

By Mr. DULSKI (by request):

H.R. 9492. A bill for the relief of Dr. Helena V. Strandstrom; to the Committee on the Judiciary.

By Mr. FALLON:

H.R. 9493. A bill for the relief of Mrs. Olga Castro; to the Committee on the Judiciary.

By Mr. HALPERN:

H.R. 9494. A bill for the relief of Gloria Blackwood; to the Committee on the Judiciary.

H.R. 9495. A bill for the relief of Gwendolyn Bowman; to the Committee on the Judiciary.

H.R. 9496. A bill for the relief of Eugenio Martinez; to the Committee on the Judiciary.

By Mr. McCARTHY:

H.R. 9497. A bill for the relief of Mrs. Eleanor D. Morgan; to the Committee on the Judiciary.

By Mr. PEPPER:

H.R. 9498. A bill for the relief of Enrique G. Balart; to the Committee on the Judiciary.

By Mr. RYAN:

H.R. 9499. A bill for the relief of Juanita Cecile Sawyer; to the Committee on the Judiciary.

H.R. 9500. A bill for the relief of Michael Waithe; to the Committee on the Judiciary.

By Mr. STEIGER of Arizona:

H.R. 9501. A bill for the relief of Miguel Arrastio Esponda; to the Committee on the Judiciary.

By Mr. VAN DEERLIN:

H.R. 9502. A bill for the relief of Digna Espartero Angeles; to the Committee on the Judiciary.

H.R. 9503. A bill for the relief of Giovanni Susca; to the Committee on the Judiciary.

By Mr. WEICKER:

H.R. 9504. A bill for the relief of William J. Walsh; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII,

82. The SPEAKER presented a petition of the City Council, Los Angeles, Calif., relative to a Federal tax-sharing program, which was referred to the Committee on Ways and Means.

EXTENSIONS OF REMARKS

BYELORUSSIAN INDEPENDENCE DAY

HON. WILLIAM T. MURPHY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. MURPHY of Illinois. Mr. Speaker, Byelorussians are one of the little-known Slavic peoples whose homeland in the northwest of Russia and east of Poland has been part of the Russian empire for centuries. These sturdy people, never numerous or strong enough to cope with their more powerful foes, had been overwhelmed by the Russians. For many centuries they endured all sorts of hardships under the czarist regime, and when that regime was no more, in 1918 they attained their goal of freedom and independence.

On March 25 of that year, Byelorussian leaders proclaimed their national independence and founded the Byelorussian Republic. They formed their own democratic government, began rebuilding their war-torn country and were doing their best to reconstruct the shattered fabric of their social, economic, and political life. Unhappily, however, they were faced from the beginning by numerous insurmountable difficulties, and the defenses of the country were totally inadequate. Soon the country became an easy prey for the Red Army of Communist Russia. Late in 1918, the Byelorussion people were robbed of their richly deserved, but short-lived, freedom.

Since then, the Byelorussian people have been suffering under Communist totalitarian tyranny. But the idea of freedom and independence has never deserted them, and they still cling to the hope that someday they will once again—and this time permanently—attain their national goal. On the 51st anniversary of Byelorussian Independence Day we all pray that their just cause will prevail against the forces of tyranny, and that they will attain that freedom.

Correspondence recognizing Byelorussian Independence Day follows:

BYELORUSSIAN-AMERICAN ASSOCIATION, INC.,
Jamaica, N.Y., February 18, 1969.

Hon. W. T. MURPHY,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN MURPHY: On March 25, 1918, the Byelorussian people proclaimed their independence. On that date the Byelorussian Democratic Republic was born. In spite of all the sacrifices, the young state was unable to preserve its independence against the onslaught of overwhelming Bolshevik forces.

The Byelorussian Soviet Socialist Republic which was created in its place is nothing but an administrative arm of the Moscow government and does not represent the will of the Byelorussian people.

This is why March 25th is being celebrated by Byelorussians throughout the Free World as a symbol of their national aspirations. Americans of Byelorussian descent will also celebrate the twenty-fifth of March this year, which marks the fifty-first anniversary of the struggle of Byelorussian people for freedom and independence.

We deeply appreciate your moral support of the nations enslaved by Russian Communism, among them the Byelorussian nation. This is why we ask you, as a United States Congressman, to make this year a statement from the House floor in defense of the national and political rights of the Byelorussian people.

Speeches in the halls of Congress give strength and hope to the Byelorussian people behind the Iron Curtain and encourage them in their spiritual resistance against Communist slavery.

Respectfully yours,

VLAD KURYLLO,
National President.

UNITED BYELORUSSIAN-AMERICAN COMMEMORATIVE COMMITTEE,
Kew Gardens, N.Y., March 7, 1969.

Hon. WILLIAM T. MURPHY,
House of Representatives,
Washington, D.C.

DEAR SIR: The day of March 25, 1969 will mark the anniversary of great importance for American citizens of Byelorussian origin. On this day Byelorussians everywhere in the countries of the free world will celebrate the 51st anniversary of the proclamation of independence of the Byelorussian Democratic Republic.

In Byelorussia, however, this national celebration is not permitted. This year, instead, marks the 50th anniversary of the existence of the Byelorussian SSR.

The Byelorussian SSR is not a sovereign state. Soviet Russia turned Byelorussia into its own colony by military conquest. At the time of the First World War, the Tsarist Russian Empire was disintegrating. All the non-Russian nations liberated and restored themselves as free, independent and sovereign countries. The Byelorussian constituent body—the First All-Byelorussian Congress—assembled on December 17, 1917 in Miensk, the capital of Byelorussia. It was composed of 1,872 freely elected delegates from all areas

of Byelorussia. Their first task was to take the necessary steps for establishing an independent Byelorussian Republic. Since participating communist delegates were of a small minority, they were unable to change this trend. Therefore, an armed force, dispatched by the Bolshevik-Russian government, overran and dispersed the Congress. Immediately following this action, however, Congress met and chose the Executive Council which, on March 23, 1918, proclaimed the independence of the Byelorussian Democratic Republic. The elected Byelorussian government acted vigorously on the diplomatic arena and organized armed forces which fought for national independence.

The Soviet Russian government, in opposition to the Byelorussian Democratic Republic, decided to create fictitious statehood for Byelorussian people. In Moscow in November 1918 the Central Committee of the Russian Communist Party (Bolsheviks) passed a resolution establishing the Byelorussian Soviet Socialist Republic. The candidates for the government of BSSR were selected in Moscow and dispatched to Byelorussia. In Connection with the departure of those candidates from Moscow on December 29, 1918 Stalin sent a telegram to Myasnikoff, a Russian ruler in Byelorussia, which read as follows: "The Byelorussian are departing for Smalensk today. They are carrying a manifesto. The Central Committee of the Party and Lenin is asking to have them accepted as younger brothers, who as yet may be without experience, but who are ready to give their lives for the Party and Soviet work".

In the city of Smalensk on December 30, and 31, 1918, the sixth north-western provincial conference of the Russian Communist Party (Bolsheviks) took place. This conference, consisting of Russians and internationalists, named itself after the first meeting of the Communist Party (Bolsheviks) of Byelorussia. There were participating 162 delegates with voting rights and 25 delegates with consulting right. This meeting sent a greeting to the Central Committee of the Russian Communist Party (Bolsheviks) in Moscow, which also contained this statement: "By proclaiming the establishment of the Communist Party (Bolsheviks) of Byelorussia, the conference confirms its uninterrupted ideological, tactical and organizational connection with the Russian Communist Party, which was created during many years of common activity. The conference further confirms that in the future the communists of Byelorussia will follow the leadership of the Central Committee of the Russian Communist Party (Bolsheviks) and consider it as the higher authority of the Party".

On December 31, 1918 the conference approved "the provisional revolutionary workers' and peasants' government for Byelorussia", which had been previously appointed in Moscow and which consisted of communists only. As a matter of ethnic formality two Byelorussians: Zhylunovich and Charviakou, were added to this government. The leading part of this government, however, was composed of non-Byelorussians. On January 1, 1919 this government announced a manifesto which had been prepared earlier in Moscow. This date and this act are considered the foundation for the Byelorussian SSR.

On February 2, 1919 the first assembly of Soviets of BSSR convened in Miensk. It was composed of 230 delegates, of which number 213 were communists and 17 sympathizers. The representative of the Soviet Russian government, Sverdloff, had announced the decision of the All-Russian Central Executive Committee which recognized the Byelorussian SSR. Answering this recognition, the assembly decided to maintain close federal connection between the BSSR and RSFSR.

On February 3, 1919 this assembly accepted a constitution, a national emblem and a flag for BSSR, modeled after the Russian SFSR.

Created by Soviet Russian government in this way, the BSSR is camouflaging the actual colonial status of Byelorussia. For the entire 50 years of this Soviet Russian domination, Byelorussians, have been subjected to a systematic and ruthless persecution on a national level.

This rule has been marked by economic exploitation, social oppression, mass terror, political deportations, imprisonments and murders. Denial of religious freedom to all faiths openly continuous. A low standard of living, malnutrition and substandard housing are permanent features of the Soviet rule. The end result is that during this period Byelorussian nation has lost over six million of her population.

At this time Byelorussians in the BSSR do not have any possibility to defend their own national interests. Therefore, we take the liberty to ask you for support of the aims of the Byelorussian nation for liberation from the horrors experienced during these past 50 years of Soviet Russian occupation, and for restoration of an independent Byelorussian State.

Very respectfully yours,

MICHAEL BACHAR,
Chairman.

INCREASED "E" BOND RATE SEEN

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. MICHEL. Mr. Speaker, on February 18 of this year I introduced a bill, H.R. 7015, providing for an increase to 5 percent in the interest rate for U.S. savings bonds and now that we have 3 consecutive months in which there were more bonds cashed in than were purchased, I feel that something should be done immediately to increase the incentives for savers to purchase these bonds.

An article by Mr. Joseph R. Slevin appearing in the Washington Post edition of Sunday, March 23, 1969, discusses this matter and I include the article at this point in the RECORD:

INCREASED "E" BOND RATE SEEN: MEAGER YIELD ANGERS SAVERS

(By Joseph R. Slevin)

Savings bond buyers want a more generous interest rate return and the Administration intends to give it to them.

Dissatisfied investors are sending a stream of bitter complaints to the White House, Congress, and the Treasury Department. They are making it clear that they think the 4¼ per cent "E" bond return is stingy and should be increased.

"Being a good citizen, I put my life saving in Government 'E' bonds," an older woman recently wrote Secretary of the Treasury David Kennedy. "However, now that I am retired I feel that I have done myself a great injustice by doing so. I do think some consideration should be given to older folks, who invested their savings with the Government. We retired people cannot keep up with the purchasing power with inflation on the rampage."

A retired cripple advised Kennedy the other day that he had sold his savings bonds and put his money in savings and loan associations that pay 5 per cent. Another man complained that inflation has halved the value of his bonds and warned that he will cash them in unless the Treasury increases the rate. "I am at the edge of the cliff, ready to leap," he declared.

President Nixon will ask Congress to authorize a higher rate as soon as the lawmakers complete action on a controversial debt limit bill that passed the House on Wednesday. Administration plans call for urging Congress to repeal the statutory 4¼ per cent ceiling both on savings bonds and on marketable bonds.

The best reason for increasing the savings bond rate is that small savers are not being treated fairly by their Government. The 4¼ per cent rate not only is below the 5 per cent return that an investor can get from many thrift institutions but it is even further below the return of more than 6 per cent that the Treasury pays to sell billions of dollars of notes and other securities to professional investors. Most savings bond buyers are financially unsophisticated people. They trust the Government to give them a fair shake and their confidence is being abused.

The savings bond program will start to come apart at the seams if the interest rate is not increased. The Treasury will find it harder to sell new bonds and cash-ins of outstanding bonds will rise rapidly.

Millions of Americans now hold $52 billion of savings bonds. While sales and redemptions are slightly less satisfactory than they were, officials believe the erosion can be halted if the 4¼ per cent rate is increased soon.

The Government has boosted the rate five times since the savings bond program was started in 1941. An "E" bond originally paid 2.9 per cent. The most recent change came last year when the rate was lifted from 4.15 per cent to 4.25 per cent. All savings bond owners get the benefit of a rate increase for it applies to outstanding bonds as well as to new purchases.

Thrift institutions, such as savings and loan associations, look on savings bonds as competitors and can be expected to try to limit the size of the coming increase. Savings bond holders should get at least 5 per cent but that is a higher return than the heads of many thrift institutions would like to see the Government pay.

Nixon and Kennedy may find that they can give savings bond holders a fair return only at the price of a bitter row with the well organized thrift institutions.

INCREASING THE NATIONAL DEBT CEILING

HON. NICK GALIFIANAKIS

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. GALIFIANAKIS. Mr. Speaker, I wish to comment on H.R. 8508, the President's request for an increase in the permanent and temporary debt ceilings to $365 billion and $377 billion respectively.

This bill passed the House by an overwhelming majority—313–93, because the Congress really had no other choice. Not to have approved it would have been denying the Government the funds to pay its obligations. Obligations, incidentally, which had previously been approved by this very body.

I voted for this bill because it would have been irresponsible not to have done so. When this Congress approves programs and expenditures and appropriates funds therefor, if it then refuses to honor these commitments by not voting for the necessary increase in the debt limit, such action cannot be described as other than irresponsible.

Such a situation would be analogous to giving the Government a credit card and

then refusing to pay the bills resulting from the charge account.

I do not mean to imply that I approve of the debt ceiling device. Quite the contrary. I rather resent being forced into a position of voting for a procedure which I think is basically wrong in order to be voting responsibly. But when a nation incurs debts it is obligated to pay them. What we should do instead is to cut down on the debts.

Attempting to control expenditure of public funds by manipulating the debt ceiling is deceptive, fictional, and extremely misleading to the public. The only true and effective means of fiscal control is to control the congressional approval of programs, expenditures and, most importantly, of appropriations.

Mr. Speaker, I sincerely hope that this is the last time Congress will ever be asked to approve this inappropriate means of fiscal control.

ELECTRONIC GADGETRY A BARGAIN—EVEN AT $1,000 A POUND

HON. ROBERT L. LEGGETT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. LEGGETT. Mr. Speaker, on January 26, an article appeared in the Washington Post casting serious reflections on the capability, efficiency, and perhaps even the probity of the American areospace industry. This article was commented on in the January 29 issue of the authoritative Aerospace Daily which seriously questioned the validity of the Richard A. Stubbing study on which the Washington Post article was based. I inserted the Aerospace Daily article in the RECORD on February 18 noting at that time that I did not intend to become an apologist for the areospace industry, or indeed for any other segment of our industrial structure, but indicating that I felt that both accuracy and fairplay dictated that any illumination of the true facts with respect to our aerospace industry should be presented as a matter of open record.

In continuance of my original intentions in this respect, I wish to draw the attention of Members of the House and the public to another article on this subject, this one appearing in the March 18, 1969, issue of the Washington Star. It is written by Mr. Orr Kelly who, in referring to the Stubbing report, states that:

A new myth is in the process of being created.

The myth, in its simplest form, is that most of the newest, most complicated gadgetry being turned out by this country's laboratories and factories is a lot of junk.

Mr. Speaker, I would like to insert in the RECORD at this point Mr. Kelly's article which does much to dispel the myth referred to and, further, explains and describes some of the true achievements of the aerospace industry:

"JUNK" MYTH ON ELECTRONIC GADGETRY

(By Orr Kelly)

A new myth is in the process of being created.

The myth, in its simplest form, is that most of the newest, most complicated gadgetry being turned out by this country's laboratories and factories is a lot of junk.

The myth got its start with publication, earlier this year, of a report on a study done by Richard A. Stubbing, a budget analyst for the Bureau of the Budget—and, according to those who worked with him, one of the best.

While on leave from his government post last year for studies at Princeton University, Stubbing wrote a paper for a class in systems analysis in which he tried to determine how good some new electronic equipment was by comparing the time and work before breaking down—known as the mean time between failures—with the standards set in the original specifications.

He found that, in many cases, it measured up rather poorly to the original goal.

The conclusion drawn by some of those who read the report—or read about it—was that Stubbing had proved that the newer electronic equipment doesn't work very well and that it is getting worse and worse.

But Stubbing's study really proved no such thing because, for the limited purposes of his class report, he used only one measure of reliability and compared it with the original specifications.

Another, perhaps better, measure would be to check how well a piece of equipment compared to what it was designed to replace.

By this measure, there is no doubt that much of the newer electronic gadgetry does far more and operates more reliably than what it has replaced. The dramatic advance in capability and reliability from the early Gemini Space Craft to the Apollo Moon Craft is a clear indication of the kind of improvement that has been made.

(The main question raised by Stubbing is whether the government is getting its money's worth for some of the new equipment it is buying and there are many in the Pentagon who would agree with him that it isn't. But this is a different question from whether the equipment itself is junk.)

The myth has been greatly nourished in recent days by scientists opposed to the Sentinel missile defense system.

Dr. Herbert F. York, former director of defense research and engineering, for example, told a Senate hearing the other day that the system could prove to be a "catastrophic failure" and other scientists have testified that it can't be made to work.

But this neglects the fact that it is something close to a scientific miracle that antimissile technology has advanced to the point that it is worth a serious debate.

The basic problem is to hit a missile coming in at four miles a second with a defensive missile that can only get up to a speed of about 1 mile a second—hitting a fast bullet with a slow bullet. This seemingly impossible problem was solved nearly seven years ago.

Next was the problem of a radar set so fast and accurate it could sort out a real warhead from a cloud of decoys and debris. With the phased array radar, developed a few years later, that problem began to come under control.

The technology, which is pretty remarkable, does work.

But the debate is over whether this technology can be put together into a system that works, and that is a different problem.

A missile defense system, once deployed, may remain in place for years. And then, perhaps without warning, it must work both instantly and perfectly.

The difficulty is illustrated by comparison with a conventional air defense system. No one has ever developed such a system that even approached 20 percent effectiveness. If the North Vietnamese had come close to that figure for even a short time, they could quickly have broken the back of the American bombing effort. But a missile defense system that dropped as low as 90 percent effectiveness would indeed, in York's phrase, be a "catastrophic failure."

The myth that most of our modern gadgetry is junk may well be obscuring a much more important truth.

Man progressed over a period of many centuries from simple, highly reliable implements of limited usefulness like the chipping stones and the club to complex, highly useful devices of limited reliability like the vacuum tube radio. Now, he is beginning to come within sight of the day, when he can build complex, highly useful devices that will also be very close to being perfectly reliable.

The remaining degree of unreliability can be very frustrating, as anyone knows who has found his battery dead on a cold morning.

But it would be unfortunate if the myth that we are busy building junk were allowed to flourish and draw attention away from such real and pressing problems as how to build these new gadgets most economically and, even more important, what to build and how to use it most effectively for the benefit of mankind.

A MODEST PROPOSAL

HON. THOMAS J. MESKILL

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. MESKILL. Mr. Speaker, there has been much discussion over the question of whether or not we should proceed with the deployment of an anti-ballistic-missile system. The President has requested congressional approval of a "safeguard" system. I support him in this request. As our Commander in Chief, it is the President's constitutional function to insure the national security. He has decided that that security requires the "safeguard."

Mr. Speaker, I insert an editorial in the RECORD from the March 16, New Haven Register. This editorial was forwarded on to me by former Congressman Ellsworth B. Foote, of the Third Congressional District, 80th Congress. I commend it to your thoughtful consideration:

[From the New Haven (Conn.) Register, Mar. 16, 1969]

THE ABM DECISION: NIXON MAKES HIS MOVE WITH SKILL

So it is to be "safeguard" instead of "Sentinel." It is to protect the American deterrent to war and not America's centers of population. And it's to cost $6 billion or $7 billion and not $10 billion as the most conservative estimators guessed.

In announcing his awesomely difficult decision on the anti-ballistic missile program the other day, President Nixon cleared away a lot of underbrush. He revealed convincingly that the art of political compromise is finely developed in the new Administration, and that this art can be employed without violating national security—at least for now—and without limiting the avenues open for the future. We think he should have solid national support in this effort.

The President came neatly down the middle between those who advised him to approach Moscow naked with an olive branch in his hand, and those who urged him to arm to the teeth—without regard for the possibility that the Soviets then would do the same.

By his plan to equip the Minuteman missile sites with ABM systems that presumably will protect them from enemy missile assaults, the President warns both China and Russia that there can be no "first strike" against the United States without sure and devastating retaliation against the aggressor, America is not being left exposed.

Yet "peace" is the Nixon Administration's watchword. The President is taking pains not to provoke hostile response abroad with anything that appears to be an offensive buildup.

There is, of course, immense risk involved. At stake is the conclusion—or, more accurately, the conjecture—that the Kremlin, with a Chinese tiger glowering menacingly on the East and a domestic population yearning for a plumper consumer economy within, is anxious to minimize its expenses and frictions with respect to the West.

It is this combination of circumstances that has built up intense pressure on the White House to accept the view that history is offering a rare "opportunity" for international rapport that should not be lost, for it may not recur for a generation.

Nixon himself noted this possibility in his Inaugural. But he has huge responsibility to discharge as well as circumstances to act upon—circumstances and widely conflicting shreds of advice. Scientists offer political advice, politicians offer scientific advice. Even those who stick to their specialized fields aren't in agreement with each other.

We can't be sure that our ABM will work when its installed in 1973—or that the Russian missiles won't. Even if our Minutemen are protected successfully by our ABM's, will these Minutemen be able to penetrate Russia's defenses and serve as a convincing deterrent?

Again the President has been frank. There is no final answer to the deterrent problem at this time, and there is no sure way to protect America's cities—except by preventing war. All Nixon promises is an annual review of his "modified" ABM program, weighing up-to-date intelligence on the nature of the international threat, the status of arms-control talks if any, and new technological developments—all elements on which to base changes or new decisions as warranted.

Congress now must decide whether this is a reasonable solution, adequate at this time for national security and also for the prospects of securing a tapering-off of the cold war.

There are times, even in a democracy where the individual voter is sovereign, when the public has to let its President choose, and to place its confidence in his judgment. This is such a time—and Congress, we hope, will see it just that way.

A CONCURRENT RESOLUTION MEMORIALIZING THE CONGRESS OF THE UNITED STATES TO LOCATE A VETERANS HOSPITAL IN SOUTHERN NEW JERSEY

HON. DOMINICK V. DANIELS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. DANIELS of New Jersey. Mr. Speaker, I would like to insert at this point in the RECORD, a resolution adopted by the New Jersey State Legislature which was approved by the senate on March 10, 1969, and by the general assembly on March 17.

Mr. Speaker, I would like to associate myself with the resolution and again urge action on proposals to build a veterans hospital in the southern part of my State. While I represent a district which is along the Hudson River I am well aware that the need of veterans in our State justifies a third veterans hospital to supplement the two overcrowded facilities at East Orange and Lyons.

The resolution follows:

SENATE CONCURRENT RESOLUTION 45; STATE OF NEW JERSEY

A concurrent resolution memorializing the Congress of the United States to locate a veterans hospital in southern New Jersey

Whereas there is only one Federal Veterans Hospital located in New Jersey; and

Whereas the general population as well as the disabled veteran population of southern New Jersey has expanded greatly and continues to expand; now, therefore, be it

Resolved by the Senate of the State of New Jersey (the General Assembly concurring):

1. The Congress of the United States is memorialized to give appropriate consideration of the location of a new veterans hospital in southern New Jersey.

2. Copies of this resolution be forwarded to members of the United States Senate and House of Representatives elected from New Jersey and to the Administrator of Veterans Affairs.

D. D. DUGGAN: A DEDICATED PUBLIC SERVANT RETIRES

HON. WILLIAM J. SCHERLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. SCHERLE. Mr. Speaker, on February 28, 1969, Donald D. Duggan retired as Deputy Chief Postal Inspector after serving in the Post Office Department for nearly 45 years.

Mr. Duggan, a native of the Seventh District of Iowa, rose from the position of substitute mail clerk to the second highest post in the Postal Inspection Service.

During World War II he served as the U.S. Army's Chief Postal Inspector and was awarded the Legion of Merit citation for his meritorious service contributing to the "improvement of mail service for our troops abroad."

After the war he served as a member of Gen. Douglas MacArthur's staff and helped to supervise the rehabilitation of the Japanese postal service. For his outstanding contribution, he was awarded the second highest award Japan can bestow, the Second Order of the Sacred Treasure.

D. D. Duggan's record of dedication to his job is well known throughout the entire U.S. Government service. Upon his retirement he returned more than 2,916 hours of unused accumulated sick leave.

I wish to join the citizens of western Iowa in saying how proud we are of this native of Honey Creek, Iowa, who graduated from Missouri Valley High School, and rose to this important post in the service of our Government.

Donald Duggan's dedication and excellent performance will long be missed in the Post Office Department. At this point in the RECORD I insert the following article concerning this outstanding civil servant, "Missouri Valley High School Alumnus Retires as Deputy Chief Post Office Inspector":

MISSOURI VALLEY HIGH SCHOOL ALUMNUS RETIRES AS DEPUTY CHIEF POST OFFICE INSPECTOR

Donald D. Duggan, the Post Office Department's Deputy Chief Inspector, retires February 28, after nearly 45 years of continuous service in the nation's civilian and military postal systems.

Mr. Duggan was born and reared at Honey Creek, Ia. He is an alumnus of Missouri Valley High School.

Rising through the ranks to the second highest position in the Department's Inspection Service, Duggan began his post office career in 1924 as a substitute mail clerk in Chicago. He entered the department's inspection service in 1934 as an inspector for the Philadelphia post office. He also has served as an inspector in the Washington, D.C., and St. Louis post offices. He was appointed deputy chief inspector by the Postmaster General in 1961.

WAS CHIEF FOR ARMY

During World War II, Duggan served as the U.S. Army's chief postal inspector. He was awarded the Legion of Merit Citation for his recognized contributions to the "improvement of mail service for our troops abroad."

Later, as a member of General Douglas MacArthur's staff, Duggan helped to supervise the post-war rehabilitation of the Japanese postal service. His successful efforts, including the establishment of an inspection system patterned after our own, earned him Japan's second highest decoration, The Second Order of the Sacred Treasure.

As deputy chief postal inspector, Duggan has assisted the chief postal inspector in the implementation of policies designed to insure the safe and prompt delivery of the mails and to guard the public against the use of the postal service for illegal purposes.

HIGH PRAISE

Commenting on Duggan's retirement plans, Chief Inspector Henry Montague expressed his "deep gratitude and high praise for Don Duggan's record of accomplishment.

Duggan, who will return 2,916 hours of unused accumulated sick leave to the Post Office Department when he retires, said he has no special plans after he leaves his post. "First, I am going to catch up on some long overdue rest and relaxation," he said. "I do know one thing, however," Duggan added. "Whatever I do, whenever I send or receive a letter I will think of the Post Office Department and especially my good friends and associates in the Postal Inspection Service."

Duggan resides with his family in Arlington, Va.

BYELORUSSIAN INDEPENDENCE DAY

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. ZABLOCKI. Mr. Speaker, this day, March 25, marks the 51st anniversary of the declaration of independence of the Byelorussian Democratic Republic.

The importance of commemorating this event here in Congress should not be underestimated. I am certain that it will serve as an inspiration to the millions of Byelorussian people now subjugated by the Soviet Union.

Recent press accounts of new liberal reforms in Hungary demonstrate that

the invasion of Czechoslovakia by Soviet bloc troops has only temporarily slowed down the progress of democratic reforms within the Soviet bloc.

The rulers of Soviet Russia are finding out that oppression can never eradicate the yearnings for political and social freedoms that motivate mankind.

The reaction of the Czech people to the invasion is itself a demonstration that the love of freedom still flames within their hearts and cannot be put out by force.

Indeed, the courageous sacrifices for liberty that we can recognize in the Byelorussian people and elsewhere in Communist-dominated lands serve as an inspiration and example for all of us.

As we view renewed popular unrest and pressures against autocratic Communist rule, we must reaffirm our own sympathy and support for the Byelorussian people's search for freedom and justice.

Let us extend our prayerful wishes to the people of Byelorussia that they may soon be free of the yoke of Communist slavery within the Soviet Union.

May they once against exercise meaningful political and social determination.

JOINT RESOLUTION RELATING TO EXPRESSING SUPPORT FOR THE MACHIASPORT PROJECT

HON. ROBERT T. STAFFORD

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. STAFFORD. Mr. Speaker, I rise to place in the RECORD joint resolution 11 of the Vermont General Assembly, a resolution relating to expressing support of the Machiasport project in Maine.

The text of the resolution is as follows:

JOINT RESOLUTION RELATING TO EXPRESSING SUPPORT FOR THE MACHIASPORT PROJECT

Whereas, Vermonters and their fellow citizens of New England do not have ready access to low cost sources of energy now available to virtually every other area of the country, *and*

Whereas, our region is sorely dependent on fuel oil, particularly for home heating, *and*

Whereas, this commodity is generally more expensive in New England than anywhere else in the United States and, in recent winters, its supply has often been threatened by quotas and other factors over which we have no control, *and*

Whereas, the State of Maine has applied to the Free Trade Zone Board for permission to site an oil refinery in the town of Machiasport for the purpose of producing large quantities of this desperately needed commodity, *and*

Whereas, the presence of this refinery in our region will assure a lowered price for fuel oil and ready availability of this product, particularly in the winter months, *now therefore be it*

Resolved by the Senate and House of Representatives, That the members of the Vermont General Assembly express their support for our sister state's application for this refinery and urge our Congressional Delegation to continue its vigorous advocacy of Maine's request that the communities of Machiasport and Portland be declared free ports for the purpose of receiving crude oil and processing it for eventual distribution in our region, *and be it further*

Resolved, That the Secretary of State is hereby directed to forward a copy of this resolution to each member of the Vermont Congressional Delegation and to the Secretary of Commerce and the Secretary of Interior in Washington, D.C.

Approved: March 14, 1969.

DEANE C. DAVIS,
Governor.

THOMAS L. HAYES,
President of the Senate.

JOHN S. BURGESS,
Speaker of the House of Representatives.

Mr. Speaker, I personally very strongly support not only the statements of fact but the resolving portion of Joint Resolution 11 of the Vermont General Assembly.

EDUCATION OR CHAOS

HON. ROBERT TAFT, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. TAFT. Mr. Speaker, Mr. William O. Walker, outstanding publisher and Negro leader in Ohio, in an article of March 8, 1969, in the Call and Post, comments on disruption in our schools. As he aptly points out, while depriving many students of an education, the unrest in our schools hits hardest at the Negro, who, more than any one thing, suffers from the lack of a good education.

I associate myself with the views of Mr. Walker and commend them to the attention of my colleagues:

EDUCATION OR CHAOS

(By William Walker)

It seems that the gauntlet is down. Our school officials will either have to run it or stand up to the challenge.

The whole question revolves around who will run our public schools: the elected Boards of Education, or dissident students and their advisors—a renegade bunch of subsidized troublemakers.

This is the challenge facing schools in most of the big cities of Ohio, and to a large extent, the nation.

These public schools were created and exist for the sole purpose of furnishing an education, at the taxpayers' expense, for all students as provided by law.

The authority of elected and hired schools officials to provide this education is being challenged. School buildings are being invaded by outsiders. Classes are being interrupted. Teachers are threatened and, as in John Hay High School in Cleveland, every kind of harassment imaginable used to prevent those students who want to study from doing so. The result was utter chaos and the closing of the school.

Despite the fact that trouble has been brewing at John Hay for several months, school officials acted as if they were caught unawares. They were indecisive, vague as to what to do and reluctant to take a firm stand.

This weakness on the part of the school officials encouraged the troublemakers to become more bold and demanding. Some encouragement was given them by a board member who tried to act on his own without first knowing all the facts. This is inexcusable.

John Hay is the starting point. Either the school officials win the battle there, or else they will lose control of all the other schools. At some point, Supt. Paul Briggs must decide that thus far he will retreat and no further. It must be determined now who runs the schools—the teachers and the officials or a motley group of troublemaking students and their incitors.

In no case where trouble has erupted in a public school, has a majority of the enrolled students participated. This majority has its rights too. It is the lawful obligation of the school officials to protect them and keep the schools opened for them no matter what it cost.

At John Hay, the rebelling students were permitted to bypass the duly-elected and representative Student Council. This was certainly a big mistake. It weakened the whole democratic process of orderly procedure for presenting student grievances to the appropriate school officials. This in itself was an invitation to trouble.

If the Student Council isn't the proper agency for students action and redress, then the schools should set up such an agency and respect its jurisdiction.

All schools, colleges and public schools, should know by now that they face a revolt; a revolt that is organized, directed and financed. Demands are being made that students know cannot be granted. Demands that if granted, would wreck our whole system of education.

It seems that knowing this, our shcool officials would be better prepared and informed as to what to do.

Since a large number of Negro students are participants and or instigators in these troubles, the Negro community must therefore become involved. No matter what happens, the Negro student and the Negro community have the most to lose.

Black nationalism is all right in its proper place. But when a few self-appointed, selfish individuals arrogate unto themselves the right to dictate as to what majority of Negroes want, then it is time to call a halt.

The one thing the Negro is suffering most from today, is the lack of a good education. Anything that interferes with our improving our posture in this field, must be dealt with promptly and decisively.

We want the opportunity to get an education. The next generation of Negroes must have a good education or else their lot will be with those on relief or the outcast.

We therefore, must support education and fight chaos. With an education, we can have everything. With chaos, the gains we've made will be lost, as well as the future. We then have but one choice—education.

BLOOD AND TREASURE

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1969

Mr. RARICK. Mr. Speaker, with the income tax deadline on April 15, more Americans who still pay taxes are shuddering to learn that in addition to having had the highest taxes in the history of America, they are having to pay additional sums to finance a runaway bureaucracy. As our colleagues receive the taxpayers' embittered cries from home, I think they will find of interest the report on the World Bank from Barron's National Business and Financial Weekly on March 10.

The only logical conclusion could be that instead of making matters better, we are financing them worse.

The Barron's article follows:

BLOOD AND TREASURE: A NOTE ON THE NEW HEAD OF THE WORLD BANK

From the hundreds of press releases which daily cross our desk, two last week struck us

as out of the ordinary. According to one, which arrived on Wednesday from the International Bank for Reconstruction and Development: "The World Bank has announced the successful placement of a $192,650,000 issue of U.S. dollar bonds in markets outside the U.S. . . . The bonds were purchased by central banks and other governmental institutions for 57 different countries and by international organizations. The new World Bank bonds, known as 'Two Year Bonds of 1969, due March 15, 1971,' bear interest at 6¾, payable semi-annually." The other, from the International Development Association (a World Bank subsidiary), ran as follows: "Expansion of telecommunications services, one of the most urgent needs in Pakistan, will be assisted by a credit of $16 million from the International Development Association (I.D.A.). The credit to the Government of Pakistan is for a term of 50 years, including 10 years of grace. The credit will be free of interest but a service charge of ¾ of 1% will be made to cover I.D.A.'s administrative costs."

In issuing the two statements, World Bank flacks—to whose professional skill we will personally attest—doubtless meant only to inform the public of the institution's latest financial moves. Willy-nilly, however, they succeeded in disclosing a good deal more. For one thing, Pakistan, the government of which, in the wake of recent bloody riots, may change for the worse, hardly rates as a preferred credit risk. Again, "telecommunications services" (which, so the press release indicates, includes "direct dialing facilities between 13 towns in East and 21 towns in West Pakistan"—who said never the twain shall meet?—as well as "the construction of two ground stations to work via the Intelsat 3 satellite" should pay their own way or command a relatively low priority in an underdeveloped land. Finally, the terms of the transactions must strike even the most open-handed observer, to say nothing of a Scrooge, as a less-than-fruitful use of scarce and costly capital.

"If I wanted to be a banker," so Robert S. McNamara, who now guides the destinies of both lending institutions, reportedly once remarked, "I would have joined a mere bank." He's in the right place. Under his management—like that of his predecessor, George D. Woods—the International Bank for Reconstruction and Development has grown progressively less businesslike. Key personnel, such as the highly respected former treasurer who had been with the bank since it opened its doors, have resigned or otherwise yielded to officials of scant stature or expertise in money matters. Bank and I.D.A. loans have poured out not only to applicants of doubtful credit standing but also to nations—Yugoslavia and Tanzania, for example—that are hostile to capitalism and all its works. In transactions with more respectable and better-heeled customers, the World Bank, far from seeking to operate at a profit, as investors who hold its obligations have a right to expect, lately has been lending at interest rates which fail even to cover the cost of its own newly borrowed funds. To damage or destroy the usefulness of a giant institution, and to dissipate its resources of money and talent, is no easy task. However, the man who gave us both the Edsel and the TFX may yet bring it off.

If he fails, it won't be for lack of trying. "In the past 90 days," the new president proudly told the board of governors last September, "the World Bank has raised more funds by borrowing than in the whole of any single calendar year in its history." That apparently was just for openers. Mr. McNamara went on to say: "I believe that globally the Bank Group during the next five years should lend twice as much as during the past five." Special emphasis, he added, should go to Latin America and, notably, to Africa, "where the greatest expansion of our activities should take place. There, over the next five years, with effective collaboration from the African countries, we should increase our rate of investment three-fold." The man has been as good as his word. Since fall, the bank, frequently in combination with its I.D.A. affiliate, has lent sizable sums to Nigeria, Senegal, Tanzania, Tunisia and Zambia, on terms far and away the easiest in the world.

In consequence, neither the bank's income account—the latest quarterly statement, unlike that of most money-lenders these days, disclosed flat earnings—nor its balance sheet, which shows current liabilities exceeding current assets by one billion dollars, is much to brag about. Liquidity, indeed, is so low that despite a heavy flow of repayments, the bank must make repeated trips to the well. True, as the president noted, the funds to date have been forthcoming. (I.D.A., which draws all its giveaway wherewithal from governments, last week won a fresh vote of confidence from the Nixon Administration and the House Banking and Currency Committee, which cleared a long-delayed $480 million, authorization). What Mr. McNamara failed to stress, however, are signs of mounting lender resistance. Two bond issues publicly offered in Switzerland since 1967 have been hard to sell. Moreover, in recent financings the bank has appealed not to private sources of credit but to various government agencies—municipally owned German savings banks, for example—the resources of which are limited.

Whether the World Bank, during a global shortage of capital, will be able to pursue its course remains to be seen. It is painfully apparent that by any sensible view of the U.S. national interest—this country, after all, contributed the biggest chunk of capital and remains in effective control—such plans are not worth pursuing. Thus, by lending $16 million to Zambia, the World Bank supports an increasingly oppressive and racist regime, which, like the rest of East Africa, has robbed thousands of East Indian traders of their means of livelihood. By advancing Nigeria $6 million "to cover anticipated foreign-exchange requirements . . ." the World Bank doubtless has helped finance a war of extermination against Biafra. The $30 million earmarked for Tanzania, which has swung about as far left as anyone can go, will help to further Red Chinese designs on the Dark Continent.

Geopolitics aside, free-and-easy credit makes no economic sense. Projects which fail to offer an adequate return on investment at going interest rates probably shouldn't be launched. Borrowers who persist in such perverse ways—and lenders who provide the wherewithal—merely wind up wasting a nation's substance. In the best of times—to judge by the perennial plight of India, which has dissipated literally billions of dollars worth of World Bank, I.D.A. and other forms of foreign aid—grants and low-interest loans (which, in an age of inflation, come to virtually the same thing) are gifts of doubtful value. Today, when the free world stands on the brink of a new, and possibly fatal, financial crisis, they are a folly which no one can afford.

The last to grasp this simple truth will probably be Robert Strange McNamara, whose current views, in the light of those he recently espoused, seem curious indeed. As Secretary of Defense, Mr. McNamara—at the expense, to be sure, of the national security—placed computerized "cost effectiveness" and other shibboleths of the accountant's trade above all. Contrariwise, in his new post, where such yardsticks might apply, money evidently is no object. Blood and treasure come high. The head of the World Bank already has cost this country far too much.

BYELORUSSIAN INDEPENDENCE DAY

HON. CHARLES W. SANDMAN

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. SANDMAN. Mr. Speaker, March 25 marks the anniversary of the proclamation of independence by the people of Byelorussia.

After the Byelorussian people declared their independence, they were able, for a few brief months, to live according to their ideals and beliefs.

The Soviet Government which now rules the Byelorussian people certainly does not represent their wishes or hopes, but merely serves as an instrument of oppression. Thus, the Byelorussian people suffer in the same manner as the other captive peoples of communism under a cruel dictatorship.

As thousands of American citizens who are of Byelorussian ancestry know, their families and friends still in Byelorussia have no freedom to express their deeply felt aspirations for self-determination and individual liberty. Today all Americans join with our fellow citizens of Byelorussian ancestry in renewing our own devotion to the principles of freedom and in our deeply felt hope that the day is not far off when the people of Byelorussia as well as people everywhere, can join us in our enjoyment of the blessings of freedom.

LITHUANIAN INDEPENDENCE

HON. HENRY C. SCHADEBERG

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. SCHADEBERG. Mr. Speaker, the love of freedom is strong in all Americans but it is especially so in those who have experienced, or whose loved ones have experienced, tyranny. Many of my constituents were born in other lands; many more have parents, brothers, children, and friends still residing in these native lands.

I speak today of the oppressed of Lithuania, the small Baltic nation whose independence was restored 51 years ago and then tragically snuffed out almost 30 years ago when it was invaded by the Soviet Union. Now a satellite state behind the Iron Curtain, Lithuania's memory of freedom is distant but not dim.

The Lithuanian American Councils of my district in Wisconsin include some of the most outstanding citizens of our State. These fine groups keep us aware of the value of freedom and the tragedy of its loss.

With your permission, Mr. Speaker, I would like to include, at this point in the RECORD, the resolutions memorializing Lithuanian independence which were adopted recently by the Lithuanian American Councils of Racine and Kenosha, Wis.:

RESOLUTION ADOPTED BY THE LITHUANIAN RALLY, FEBRUARY 9, 1969

We, Lithuanian Americans of Kenosha, citizens of and permanent residents in the United States, gathered on February 9, 1969, at Kenosha, Wis. to commemorate the 51st anniversary of the restoration of the Independent State of Lithuania,

Voicing once more our indignation and our protest against the brutal suppression by Soviet Russia of Lithuania's independence, her forcible incorporation into the Soviet Union, and her transformation into a Soviet colonial possession;

Pointing out that the global surge toward national independence poses a particular challenge to the United States and other Western countries to press for the restoration of Lithuania to a free exercise of the right to self-determination and respect for human rights and fundamental freedoms; do hereby Resolve

(1) To appeal to the President, the Secretary of State, and the Congress of the United States to firmly restate and vigorously promote in all diplomatic dealings with the Soviet union, as well as in the United Nations and elsewhere, the restoration of the freedom and independence of Lithuania;

(2) To assure the Lithuanian people presently suffering under Soviet occupation of our unswerving determination to spare no efforts and sacrifices for the attainment of the sacred goal of the Lithuanian nation—total freedom and independence;

(3) To support the policy of *any* United States Government, aiming at the establishment in Europe and elsewhere of a just and enduring peace, based on the inalienable right of the respective peoples to government.

Dr. VITOLDAS BALCIUNAS, M.D.,
Chairman, Lithuanian American Council, Kenosha Branch.
VLADAS SKIRMUNTAS,
Secretary, Lithuanian American Council, Kenosha Branch.

RESOLUTION ADOPTED BY THE LITHUANIAN AMERICAN COUNCIL, RACINE, WIS., BRANCH, FEBRUARY 2, 1969

Whereas, on June 15th, 1940, Soviet Russia forcibly occupied the Republic of Lithuania; and

Whereas, the people of this country since then are living under severe oppression and colonial rule; and

Whereas, Communism in its relentless drive for world domination is keeping millions of people in bondage and the world in the stage of turmoil; therefore be it

Resolved, that this mass meeting condemn Soviet Russia for its aggression and colonial policies against an enslaved people, especially as it is now in progress in Czechoslovakia; and therefore be it further

Resolved, that this mass meeting urge Soviet Russia start gradual withdrawal of the occupational forces from the enslaved countries and stop discriminating against the minorities within their original territories; and be it further

Resolved, that this mass meeting humbly ask President Richard M. Nixon, members of the Senate and the House of Representatives that they exert necessary efforts to bring the case of Lithuania and all other enslaved countries before the United Nations; and be it further

Resolved, that this mass meeting will always support the efforts of any Administration which will seek an honorable and just peace to end the war in Southeast Asia where Communist aggression must be stopped to fulfill the American promise; and be it finally

Resolved, that this mass meeting express gratitude to the Government of the United States for the non-recognition of the incorporation of Lithuania into Soviet Russia.

MARTIN KASPARAITIS,
President.
STANLEY P. BUDRYS,
Secretary.

A BILL TO MODIFY AND ABOLISH REPORTING REQUIREMENTS FOR CERTAIN VETERANS

HON. RICHARD L. OTTINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. OTTINGER. Mr. Speaker, I am introducing today legislation to modify the reporting requirement and establish additional income exclusion relating to pensions for veterans and their widows. In addition, this legislation would liberalize the restrictions on benefits to remarried widows of veterans, and simplify procedures for hospitalization of veterans.

One of the most important provisions of this legislation concerns the abolition of the requirement that a veteran file an income questionnaire after the age of 72. This requirement particularly affects veterans of World War I. At this age, it becomes almost impossible for the veteran to, in any way, increase his income. His income at this point in time does in fact, decrease along with added expenditures for medicines for he and his wife.

This legislation is sorely needed to correct the substantial inequities which burden veterans and widows of veterans. Under the existing law, a widow permanently forfeits her right to pension benefits if she remarries. This legislation would provide for the reestablishment of such benefits if the second marriage is terminated by death or valid divorce.

APOLLO: HOW THE UNITED STATES DECIDED TO GO TO THE MOON

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. FULTON of Pennsylvania. Mr. Speaker, I want to call to the attention of the Congress and the American people Leonard Mandelbaum's excellent article on how the United States adopted the Apollo program, from a recent issue of Science magazine. The background of this historic decision is of interest to all of us.

Mr. Mandelbaum's suggestions with regard to integrating the many programs of science, research, and development funded by the Federal Government are also especially timely.

I am glad to include this article by an outstanding attorney in the CONGRESSIONAL RECORD:

APOLLO: HOW THE UNITED STATES DECIDED TO GO TO THE MOON

(By Leonard Mandelbaum)

The United States program to send a manned expedition to the moon and back has involved more scientists, engineers, and public attention than any other civilian research and development project. Certainly none has matched the $20- to $40-billion estimate of Apollo.[1] An examination of the history of the approval of the Apollo decision should contribute to a better understanding of our national decision-making processes in the field of research and development.

HISTORY OF THE APOLLO: DECISION 1958–61

Through July 1960. Sputnik's flight in 1957 was the spacemark of this generation.[2] With this act, the Russians undermined worldwide belief in the technical supremacy of the United States. Our confidence in the strength of our international diplomatic-military position was replaced by deep anxiety which made itself felt in our educational system and our national leadership. Pressure was on the Eisenhower Administration to produce in space. Priority was given to the Vanguard program, and the Army and Air Force were authorized to use military rockets for the launching of their satellite systems (2, p. 56). Shortly thereafter, the President appointed the chairman of his Science Advisory Committee (PSAC) as his Special Assistant for Science and Technology.

Probably the first considered statement of space policy was submitted by the PSAC in 1958. Accompanied by a Presidential statement declaring belief in the "peaceful use of space," this document outlined a rough timetable ("early," "later," "still later") for projects such as orbiting solar observatories and unmanned exploration of near planets. Manned lunar exploration was placed well down on the timescale. The aim was to place space exploration in the perspective of a total national scientific effort. The names of those who signed will reappear frequently in any history of science and government: James R. Killian, Lloyd V. Berkner, James H. Doolittle, George B. Kistiakowsky, Edwin H. Land, Jerome B. Wiesner, and Herbert F. York.[3]

A few months later, Congress passed the National Aeronautics and Space Act. A civilian space agency (NASA) was established with broad powers to pursue these objectives in cooperation with the Defense Department, industry, and the educational community. Majority Leader Lyndon Johnson, chairman of the Senate's Select Committee on Space, was very influential in the formulation and passage of the act.

A number of significant steps to exploration of the moon were taken even before NASA was organized. Mercury was the most popular program. As early as December 1957, an Army rocket technology team headed by Wernher von Braun submitted a "Proposal for a National Integrated Missile and Space Vehicle Development Program." It called for a booster of 1.5 million pounds thrust. This would provide a payload capability of 20,000 to 40,000 pounds for orbital missions.[4] In August 1958, the Army officially authorized work on the booster which was to become the Saturn project.

In October 1959, the "von Braun team" at Huntsville, Alabama was transferred from the jurisdiction of the Army and became the George C. Marshall Space Center under NASA. This ended 2 years of interservice rivalry between the Air Force and Army for control of this phase of space research. The transfer was made possible by a decision of the Department of Defense that the Saturn project did not offer sufficiently near-term military benefits to justify its cost.

In January 1960, the Eisenhower Administration submitted a $50 million supplemental request to Congress for a large liquid hydrogen engine for the Saturn program. Although no missions were assigned, it was clear to those who cared enough to follow these developments that the United States was beginning to provide the capability for manned flights beyond Mercury.

In unmanned flights, the United States began to deliver more immediate results, successfully launching meteorological navigational communication and sun exploration satellites. Meanwhile, the Russians continued to demonstrate their lead in booster

Footnotes at end of article.

thrust by taking pictures of the back of the moon with Lunik III (October 1959).

NASA disclosed a 10-year plan which envisaged a manned permanent space station, orbiting between 300 and 1000 miles from the earth, manned circumlunar flights in 1966–68, and manned lunar landing and return in the early '70's.

The House Committee on Science and Astronautics took a more aggressive position.[5] It adopted, with unnamed dissenters, a staff report which concluded that "NASA's 10-year program in space is a good program as far as it goes but it doesn't go far enough." Among other specific recommendations, the report called for a "manned expedition to the moon this decade." The major cause for concern was the Russian lead in booster propulsion.

THE 1960 PRESIDENTIAL CAMPAIGN

Candidate Kennedy attacked the Republicans for "letting us fall behind" in the space program and vowed that this was another field where he would "get this country moving again." Nixon conceded that we lagged in booster power but attributed the blame to the Truman Administration. He insisted that American achievement was impressive and promised to build upon it, and energetically pursue the NASA 10-year program, including the plan for manned lunar landing by 1971.[6]

The difference in the campaign promises occurred in matters regarding scheduling and the role of the military. While Kennedy urged a speedup, he nonetheless emphasized "elastic" target dates for goals such as the manned space platform, manned lunar landings, and nuclear power in space. But he called for these accomplishments as swiftly as possible. While standing for "preeminence" and "security," Kennedy did not call for military domination, and asserted that "freedom of space must be assured, preferably by mandate of the United Nations." Nixon was more explicit about giving the military the "mission" and the "necessary strength to defend freedom of space."

NASA, alert to the possibilities of change, added to the framework for future missions. Late in July, NASA representatives announced to an Industry Conference that the successor to Project Mercury would be "Apollo," a concept which then meant placing three men in sustained orbital flight and circumlunar flight.

On 17 October 1960, NASA's George Low, then program chief of Manned Space Flight Center, advised his superior, Abe Silverstein, that he had formed a study group to look into the question of manned lunar landing. No funds were needed and Silverstein approved. Later that year, NASA made a presentation on "NASA Long-Range Goals Using Saturn and Larger Vehicles" to the PSAC ad hoc Man-in-Space panel. In December 1960, the PSAC Man-in-Space panel reported an estimate of $20 to $40 billion for a manned lunar landing.[7]

EISENHOWER'S LAST BUDGET AND THE WIESNER REPORT

In preparing his final budget, President Eisenhower was apparently more impressed with the more cautious approach of his scientific adviser and the pressures of his Bureau of the Budget than with the arguments for an accelerated space program. The report of the President's Commission on National Goals warned against being "driven by nationalistic competition into extravagant programs which would divert funds and talents from programs of equal or greater importance."[8] It is also likely that Eisenhower's warning about the "military-industrial" complex was being prepared at this time.

The Budget Bureau called for a "bargain basement" figure for space. Only last minute protest from T. Keith Glennan (the first NASA administrator) and Hugh Dryden (deputy administrator) prevented a statement in the budget message barring manned space flight beyond Mercury.[9] The $1.1 billion dollar figure in the proposed fiscal year 1962 budget was accompanied by the following statement in Eisenhower's budget message: Further test and experimentation will be necessary to establish if there are any valid scientific reasons for extending manned space flight beyond the Mercury program.

Even before the Inauguration, the new Administration was presented with a fundamental critique of space leadership and priorities. After an admittedly hasty review of the national space program, the Wiesner ad hoc committee (including Donald F. Hornig, Land, and two members of the staff of the Senate Space Committee concluded that:

(1) The Nation's ballistic missile program was lagging.

(2) More effective management and coordination of the space effort was needed and particularly in the top echelons of NASA.

(3) A national booster program was encouraged "particularly for military projects." No distinction between civilian and military requirements was acknowledged.

(4) Mercury should be downgraded since it "exaggerates" one phase of space activity.

(5) Overall space program priorities should be reviewed.

(6) The Space Council should be used for managing the space program.[10]

Glennan prepared a briefing for the new Administration, but was not called upon. The inference of ineffectiveness in the Wiesner report contributed widespread doubt as to whether NASA would continue as an independent agency (9, p. 3). The downgrading of Mercury and military emphasis in the Wiesner report fueled this type of speculation.

Between the Inauguration and 30 January 1961, NASA did not have an administrator. The job of finding one was assigned to Vice President Johnson. James Webb, a former colleague of Senator Kerr, was appointed and confirmed by the Senate. Despite the negative comments about space management in the Wiesner report, the two top technical personnel, Dryden and Robert C. Seamans, remained.

THE FIRST KENNEDY REVIEW

President Kennedy called upon NASA to recommend significant changes in the Eisenhower space budget. Administrator Webb proposed an increase of $308 million, including $173 million for vehicles and propulsion, $48 million for Apollo (presumably spacecraft design) and $25 million for interplanetary exploration. The agenda for the meetings on this subject, prepared by the Bureau of the Budget, focused on the "rate" the Administration wished to pursue in closing in "on the USSR's lead in weight lifting ability; and advancing manned exploration of space beyond Mercury."[11]

There is broad agreement on what transpired at the key meetings of 22 and 23 March. The Bureau of the Budget was prepared to recommend an increase of only $50 million. At 5:15 p.m., 22 March, the President entered the meeting. Present were David Bell (Bureau of the Budget), Glenn T. Seaborg (Atomic Energy Commission), Johnson, Webb, Dryden, Seamans (associate administrator of NASA), and Edward C. Welsh, who had just been designated executive secretary of the Space Council.

Dryden addressed himself to the advantages of space exploration: science, military "insurance," avoidance of technological obsolescence, and the economic return. Seamans explained that an early version of the Saturn vehicle would make possible Apollo flights in 1964, circumlunar effort in 1967–68, and lunar landing in 1970. Seaborg spoke up for a nuclear role in any accelerated space program. The President expressed disappointment over our second place in big space programs.[11] Some idea of the President's attitude and of the pace of decisionmaking in this period was indicated when, half an hour after the meeting. The Bureau of the Budget called Seamans and asked whether the Saturn upper stage cost was estimated at $67 or $77 million (9, p. 6).

The final decision was to go ahead on the booster program. Important emphasis was given to the early Saturn stage and nuclear rocketry. This action was consistent with the Wiesner report. An additional $125 million was requested of Congress. Apollo was deferred for a more comprehensive review.

SPACE SCIENCE BOARD REPORT

One week later, the Space Science Board of the National Academy of Sciences presented the government with a report entitled "Man's Role in the National Space Program." Lloyd Berkner, chairman of the group, communicated his views personally to Webb on 27 February. The Academy was performing a traditional role in providing advice to the government (upon request) on scientific and technological matters. The board adopted its position on this topic at its 10 and 11 February meeting (submitted in writing to the government on 31 March), but the paper was not made public until 7 August 1961, 2 months after President Kennedy announced the Apollo decision and one month after congressional approval.

The report recommended that "scientific exploration of the Moon and planets should be clearly stated as the ultimate objective of the U.S. space program." The board found that it was not then possible to "decide whether man will be able to accompany early expeditions to the Moon and planets." Planning should include provision for manned flight on the basis that his participation "will be essential." This planning should be "consummated only as fast as possible consistent with the development of all relevant information." Crash programs were rejected.[12]

GAGARIN AND THE BAY OF PIGS

But history preempted planning. Gagarin's 108-minute ride (12 April 1961) set off another space crisis, and in responding to newsmen on the same day, the President reiterated his impatience about being "second to Russia in the space field." Two days later, the House Space Committee pressed Seamans on the subject of the schedule of the lunar program. They stressed that 1967 was the 50th anniversary of the Bolshevik revolution, a logical time for Russian astronauts to plant a red flag on the moon, and expressed impatience over the apparent lack of a sense of urgency in the Administration.[13]

One week later, the American-supported Bay of Pigs fiasco took place. In a footnote to his detailed account of the Apollo decision, the NASA historian states that the "Bay of Pigs does not emerge as relevant" (7, footnote 109). This might seem to be an overstatement, considering the fact that Cold War events of such significance as Gagarin's flight and Bay of Pigs are not dealt with in separate compartments. At the least, the Bay of Pigs entered into discussion of the prospective Shepard Mercury flight. According to one source, in a meeting attended by Welsh, McGeorge Bundy, and Wiesner, someone asked, "Could we stand another defeat?" Welsh's response was, "Could we stand a success?" (9, p. 9).

In a memorandum of 20 April, the President directed the Vice President to find out which activity would give the United States a real chance to get ahead, how much it would cost, the competitive possibilities of outer space programs, and whether we were making a maximum effort (2, p. 199). The President reported this activity to the press on the next day.

We have to consider whether there is any program now, regardless of its cost, which offers us hope of being pioneers in a space project. . . . If we can get to the moon before the Russians, we should.

Footnotes at end of article.

Meanwhile, the Vice President was consulting with key advisers. Early meetings included officers of BOB, DOD, NASA, AEC, and PSAC. The first significant recorded meeting was held 22 April. NASA advised the Vice President that the Russians would beat us to a manned circumlunar flight. A manned lunar landing and return required a new generation of boosters, so that chance of success was believed good.[11]

On 23 April, the Vice President and other government officials briefed Frank Stanton, president of CBS, George R. Brown, president of a large Texas construction firm, and Donald Cook, then executive vice president for the American Electric Power Service Corporation, as a test of "public reaction." Wiesner was reportedly meeting with scientific panels and coordinating with Welsh. Johnson also touched base with Senator Kerr, Congressman Brooks, and the ranking minority members Senator Bridges and Congressman Fulton (2, p. 199).

The businessmen were assertive in their call for a vigorous program. The military people agreed on the technical feasibility. By 3 May, the Vice President felt it was about time for NASA to come forth with a specific recommendation. Until that time, NASA was assuming the role of an adviser on the technical questions, ready to work within the framework of a policy decision.[11] Given the Vice Presidential directive, Seamans, Webb, and Secretary McNamara spent the weekend on 6–7 May working on a program. Just before the weekend started, the reaction to the successful completion of Alan Shepard's flight finally eliminated any doubts there might have been about the direction of America's space program.

The Shepard flight, unlike Gagarin's, was not one of the proximate causes of the Apollo decision. It is quite possible that had it been less successful or less tumultuously received, the decision may have been delayed for more comprehensive review and it may have been presented differently. Welsh felt that the event now served to convince the doubtful few.[14]

During the weekend, DOD and NASA representatives first agreed that "national security or national prestige" in a broad sense was involved, and that we had to do something that appeared to be significant on a worldwide basis. Secretary McNamara wondered if the lunar landing was a big enough jump. He suggested the possibility of manned planetary exploration. It was rejected as the central objective, but the overall supplemental $750 million appropriation which they recommended included support for a nuclear rocket and a communication satellite program (9, p. 10).

A major cost item stemmed from the parallel development of two large boosters. One, fueled by a solid propellant, was to be developed by the Air Force. The other, liquid-fueled, would be developed by NASA. The $750 million package also included substantial amounts for a nuclear rocket (Project Rover) and for weather and communication satellite programs. Of this total amount, $549 million was to be allocated to NASA, and the rest divided among DOD (solid fuel propulsion), AEC (nuclear rocket), and the Weather Bureau.

The report was completed at 2:00 a.m. on Monday and presented to the Vice President later that morning. It was the day of the hero welcome for Shepard in Washington. There are different recollections as to when the President approved the package for submission to Congress as a supplemental request for FY 62. One source reported the next day. In any event, there was no change of any significance (9, p. 10).

In his address to Congress, President Kennedy presented this decision that before the end of the decade, Americans would be landed on the moon and returned. He also covered a broad range of subjects including Communist activities in the uncommitted nations, defense alliances, civil defense, and disarmament. Later, Kennedy described the Apollo decision as his "most significant."

CONGRESSIONAL REVIEW

Before Kennedy announced the Apollo decision, the House Science and Astronautics Committee completed its review of the earlier request for the $1235.3 million supplemental budget allocation. The committee recommended an increase of $1417.8 million or $130 million more than the Administration request.[15] Most of the additional funds were earmarked for Apollo ($42.6 million).

Congressman George Miller (D-Calif.), now chairman, filed a separate report with Congressman Bass (R-N.H.). This minority of two "deplored the manner in which the increased funds were authorized by the Committee. . . ." They concluded that "none of the increases have been adequately or cogently explained in detail or justified by a sufficiently itemized explanation. . . ."[15] Review by the Space Council was suggested as an alternative.

Congressman Fulton (R-Pa.), however, summarized the prevailing view prior to the President's May decision:

My feeling is that you, NASA, are like the ballplayer who is hitting a lot of long flies and doing a pretty good job, but you aren't in the same ballpark with the Russians. You are not in competition—seems to us we are in a race. . . . I feel we are, and I feel it has a tremendous effect on the world (15, p. 828).

When President Kennedy accelerated the lunar program, he was essentially confirming the position of the committee. Accordingly, there was no problem in securing House committee approval of the supplemental appropriation.

Senate hearings were brief. Approximately the same witnesses were heard—NASA and DOD key officials. Both the Senate and House hearings were more noteworthy for who was not there and what was left unexamined. The Space Science Board report was not discussed. The record does not show any representatives of the PSAC or the scientific community, business, or labor communities. Until the Office of Science and Technology was created (in 1962), the Executive Branch was reluctant to allow the chariman of PSAC to testify on the grounds that his relationship to the President was confidential.

The Senate hearings were held 7, 8, and 12 June. No record of any testimony on 12 June is included. There were 10 Democrats and 5 Republicans on the committee at that time. Three Democrats and two Republicans were present the first day. Among the Senators who did not attend were: Russell (second ranking Democrat, and cited on the floor of the Senate as an authority and vigorous proponent), Magnuson, Dodd, and Holland. On the Republican side, the truants were: Bridges (ranking Republican), Wiley, Smith (now ranking Republican), and Case. The committee report indicates that the only pointed interrogation was on the relatively small request ($50 million) for communications satellites.

On the floor there was a fairly active debate between Senators Allott and Kerr. The former noted the "stress and strain on the President" and wondered if this "precluded serious consideration of the implications."[16] Predictably, his main concern was cost.

Senator Kerr would not risk selling the program short: "I contemplate this program as one which will enable the American people to meet their destiny . . . " He rejected the propaganda theme and stated that the basic motivations were in addition to the inspiration, the "practical aspects of space including—military spinoff." According to Kerr, the most exciting space spinoff was longevity:

I say to the 183 million Americans of today—that in my judgment, one of the benefits that will come from the program will be an increased average life span of at least 10 years for each one under 50 years of age today. CONGRESSIONAL RECORD, volume 107, part 9, page 11628.

CONCLUSIONS

Gagarin's flight, possibly accentuated by the Bay of Pigs, reversed the policy of two administrations. The Apollo decision of 1961 was ignited by an event interpreted as a loss of international prestige. It was a commitment to recapture national honor in space. It was made possible by the preparations of men and organizations whose growth was linked with this gigantic R&D program.

Eisenhower's Administration would not commit itself to an ambitious manned space flight program until Mercury, and possibly other projects, demonstrated feasibility. The Wiesner Committee report to President-elect Kennedy favored a less prominent role for manned space flight. As late as 23 March 1961, the Kennedy review of the Eisenhower space budget resulted in greater funding for boosters, but no commitment to an accelerated manned space flight program. This cautious approach drew support from the NSF report of March 1961, which warned against "crash" priorities and called for an orderly space program.

But all the consideration gave way under the impact of the Russian spectacular of 12 April. Soon after the Bay of Pigs, President Kennedy gave instructions, not for a review, but for a method to dramatically outperform the Russians in space as soon as possible.

Congress acted without hearing testimony of compelling military need.[17] The Apollo decision was made without reference to any comprehensive and integrated national policy designed to maximize the use of scientific and technological resources for social objectives. Indeed, the record does not indicate whether the available National Academy of Sciences report was introduced. It was a typical Cold War reaction.

If the views of informed and concerned citizens were solicited, the record does not provide evidence of it; if efforts by the scientific community and other groups to record opposition or reservation were made, they were not afforded much weight. Proposals of comparable magnitude, though of lesser cost, required volumes of committee testimony and days of floor debate and a flood of amendments (Peace Corps, Manpower Training, Appalachia, Reciprocal Trade). A subsequent Congress would give greater attention to rat control and rent supplement measures which did not nearly approach the $1 billion mark.

There were other grounds to justify the action. One of the more interesting reasons, outlined by Dryden, was the need to advance science and technology through a focus on specific goals. But why Apollo? Crisis usually results in a narrowing of options[18] and the cold war emergency created by the Gagarin flight preempted any opportunity for comprehensive review to choose an optimal program or programs for this purpose.

For example, the national and international need for cheap protein sources and the rich potential of underseas development might have indicated that accelerated oceanographic research would have been a wiser investment of technological resources.

With regard to the economic justification, it is important to recall that the United States was still suffering from an economic slump in 1961. But the unemployed and underemployed were mostly the coal workers and displaced farm workers of Appalachia and elsewhere, and the untrained minority groups of the ghettos—not the engineers and technicians that a research and development program demands. If public works were agreed upon as the primary approach to unemployment, most economists would have

Footnotes at end of article.

preferred activity that provided opportunity for the unskilled and semi-skilled.

This article has not delved very deeply into the scientific arguments for Apollo. To begin with, the advocates never raised it as a critical justification. If they had, then perhaps the report of the National Academy of Sciences, which gave priority to other pace projects and required a more orderly progression for manned space, would have been sufficient to deter the acceleration of Apollo.

A far more important question of principle is involved. Modern science is often inextricably linked with modern technological development. Both call for huge investments of men and money. This necessarily involves questions of priority: Which other proposals for R & D must be refused, and which other social objectives must be deferred? These are primarily political questions to be decided upon by political and administrative representatives with the full and knowledgeable participation of the entire concerned community—natural scientists, social scientists, and citizens' groups.

Too often, it is impossible for concerned citizens to appraise and comment upon an incipient program. This is sometimes attributed to the esoteric knowledge required to understand what is proposed. But tax and trade bills are complicated too. The more serious obstacles to mature consideration are the crisis atmosphere (often artificial), the fragmented machinery (discussed below), and the momentum of technological impulse.

The April 1961 response to the Russians was the spark that set off Apollo—but it probably would have been launched anyway. With the approval of the concept of Saturn, it was plain that the men, desire, and organization were welded together behind the idea of manned space exploration of the moon. These factors add up to a considerable social force that I have termed "technological impulse."

Only an alert and vigorous set of sociopolitical mechanisms, equipped with a well-designed policy, could confine this promotional force to its proper place in a democratic society. The American of the late 19th-century economy was substantially the manifestation of the planning and activity of the great industrial captains. This economy is now permeated by a network of social controls. It is no less vital; many argue that its growth is due in large part to the regulatory system.

Perhaps it was too much to expect both a rationalized science policy and a sophisticated system of R & D decision-making less than 4 years after Sputnik and before any experience with the Russians in limiting the technological terrors of the Cold War. But now it is 12 years since Sputnik. We know more about poverty, and other social problems both here and abroad. There is increased awareness of the potential of technological approaches to social questions of inadequate housing, food production, environmental pollution, and crime prevention and control.[19]

Nevertheless, recent decisions such as approval of the supersonic transport program, and the Air Force manned orbiting laboratory provide substantial evidence that without an integrated federal R & D policy and decision-making system, technological impulse, supported by vague claims of international prestige and increased security, will prevail.

Any well-integrated policy would recognize that scientific and engineering manpower, including systems analysis capability, are required for basic social objectives before surplus resources may be allocated to prestigious or otherwise marginal projects. The latter would be entitled to more serious consideration if the most were minimized by international cooperation, minimal duplication, and adequate research experience prior to heavy development outlays.

Such a policy is impossible within the fragmented framework of federal R & D decision-making which has not substantially changed since 1961. Executive and congressional committees and panels are certainly more informed than they were 7 years ago. But both systems are designed for specialization. The PSAC uses panels of experts to judge the validity of increasingly esoteric proposals. Nuclear, space, and military problems are assigned to separate and powerful congressional committees. It is a system ideally suited for the effective lobbyist, whether he represents industry, government agencies, or institutional education.

A generation has passed since the nuclear age was introduced and the space age heralded. Within this period, imposing numbers of articles and books by respected authorities have debunked reform ideas such as instituting a Department of Science. Now that the federal budget for research and development items is being given most critical review, it is time for well-informed people in the social and natural sciences to step forward with meaningful ideas on policy formation and machinery, so that these limited resources will be employed at maximum advantage.

FOOTNOTES

[1] At different stages different estimates were given. Originally, the Administration talked of the $20- to $40-billion range. More recently, NASA tried to establish that only a few billion will be used for items designed solely for Apollo. Other outlays, however (launch facilities, booster technology, Gemini, and others), are deemed necessary for an overall space program. Recently T. Wicker (New York *Times*, 29 Dec. 1968, p. 12E) cited a $24-billion estimate.

CUTTING CRIME

HON. EARL F. LANDGREBE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. LANDGREBE. Mr. Speaker, I would like to commend to my colleagues an editorial that appeared in the Indianapolis News on March 7, 1969 concerning reducing juvenile crime in White County, Ind. It shows that greater firmness and imaginativeness on the part of our courts and judges can significantly reduce criminal offenses, particularly among the young. If this approach has been successful in reducing crime in White County, Ind., why not initiate similar methods in other areas of the country?

The editorial follows:

[From the Indianapolis News, Mar. 7, 1969]

CUTTING CRIME

White County has a three-man team which has reduced juvenile crime by 80 per cent in a single year.

Youngsters who get in trouble there face Judge Maurice J. Zerface. Under his "get tough" policy, juvenile offenders often find themselves confronting a jail term as well. Zerface and Monticello City Court Judge Edwin W. Malmquist agree that "once a youngster has lived inside a jail cell, he never wants to go back." Neither judge has had a youth appear a second time since the policy was initiated in July 1967.

Judge Zerface says parents are responsible for the conduct of their offspring and orders them to appear in court when their youngsters get in trouble. He makes the parents assume the burden of disciplining their children by holding them in contempt if they do not. "When we place the onus on the parents," he says, "we find they're usually tickled to death to find they can control their children after all."

The third member of the team is Charles E. Smithburn county probation officer, who aligns himself with the general views of the two judges. Smithburn works with the schools and various civic organizations to head off potential youthful crime, but he also believes offenders should be adequately punished.

In the common-sense opinion of the two judges, a person capable of stealing a car is no longer a juvenile and should be tried in adult courts. This is in sharp contrast to the attitude of Marion County juvenile court which seldom waives jurisdiction on youthful cases, regardless of the severity of the offense. Judge Harold N. Fields says he used the waiver in 80 cases in 1968 out of a total of over 3,000 cases.

The soft approach hasn't worked. Juvenile crime in Indianapolis increased from 6,573 in 1967 to 7,080 in 1968—a 7.7 per cent hike. In 1967 youthful crime rose 17 percent over the previous year.

Judge Zerface takes the view that the first

job of any court is to protect the public from the offenders and that rehabilitation is an outgrowth of proper punishment. Zerface believes that the names of juvenile delinquents should be published because the public has a right to know who the lawbreakers are.

The difference in results in the two counties is graphic. While White Coutny has reduced its juvenile offenses, Marion County experiences a steady rise in youthful crime. It would seem that a dose of common sense also might work in juvenile crime prevention in Marion County.

GOOD PEOPLE ARE CONCERNED

HON. BILL CHAPPELL, JR.

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. CHAPPELL. Mr. Speaker, the good people of Florida I have the honor to represent are deeply concerned over the substantial trend of the Congress to delegate to the executive department more and more powers properly belonging to the Congress.

I share this deep concern and it was for that reason I voted in opposition to S. 1058.

This legislation, acted upon by this body on March 18, is yet another step in eroding the people's power constitutionally expected to be exercised by the branch of Government closest to the people, namely, the Congress. S. 1058 extends until April 1, 1971, the time within which the President might reorganize the executive branch of Government. While I keenly favor substantial revamping and reorganizing of our multitude of Federal agencies with the consequent economies, I do not perceive it proper for the executive branch to reorganize short of active congressional approval.

In simple terms, the reorganization authority allows the President to substantially redesign the U.S. Government and unless the Congress rejects the plan within 60 days after the President has submitted it to the Congress, it will take effect without legislative action.

Thus, it is possible that the President could juggle the Government of more than 200 million people to his own will, and, with the help of only a few, jam the legislative process so as to make impossible any public debate on the proposal until past the 60-day deadline.

In this approach, there is great danger to our representative form of government. Once such reorganization becomes law by inaction, it will be difficult to undo it with congressional action.

In summary, it is good and proper for the President to recommend, but the decisions of policy belong to the Congress.

I shall continue to fight for governmental reorganization. It is needed. But I shall fight with equal vigor for the public's right to have their representatives constitutionally charged to do so make the final determination.

Thus, I voted in opposition to the extension of Executive power.

For similar reasons, I voted in opposition to S. 2171, the bill which, if passed, would have placed in the hands of a commission the power to set national observances and holidays. To some, this bill was insignificant. To some, the matter of presidential proclamations declaring national holidays and observances is of no import.

But, to the people of the Fourth District of Florida, it is a matter of import. To my constituents, every item of business which commits this Nation to any course of action, be it governmental reorganization or national holidays, is a matter to be decided by the elected representatives of the people.

I am committed to a course of action which will halt this pattern of lawmaking.

I shall continue to press for government by the people and I will oppose government by commission and agency.

BYELORUSSIAN INDEPENDENCE

HON. JOHN E. HUNT

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. HUNT. Mr. Speaker, the drive for freedom and self-government is one which is instilled in the minds of people who have been oppressed, but who find hope in the examples of other free nations that human dignity will ultimately prevail over slavery. So it is with Byelorussia, first born as a concept manifested by distinctive cultural bonds.

The outbreak of World War I gave the Byelorussian people and other non-Russians the opportunity to exert their national independence, and under German occupation, Byelorussian national cultural revival was given impetus by the order of German Field Marshal von Hindenburg to establish the Byelorussian language as the official language in the nation's public life. In October 1917, subsequent to the Russian March revolution, 1917, the Great Byelorussian Rada, representing all Byelorussian organizations and parties, declared itself the national representative of the Byelorussian people. Then by resolution of the first All-Byelorussian Congress in December 1917, the right of nations to self-determination was enthusiastically endorsed and the groundwork was laid for the establishment of a democratic government to be designated as the Byelorussian National Republic.

Although the Bolshevik revolution had intervened in November 1917, causing the Byelorussians to become the first victims of Communist aggression, the Treaty of Brest-Litovsk on February 19, 1918, between the Germans and Bolsheviks once again placed Byelorussia under German occupation. With the suppressive interference in Byelorussia's national and political life thus abated, the initial declaration of independence came about on March 9, 1918, pursuant to the actions of the first All-Byelorussian Congress more than a year earlier, and on March 25, the official proclamation of all independence was declared:

> A year ago, the peoples of Belorussia, together with all the peoples of Russia, threw off the yoke of Russian tsarism which, taking no advice from the people, had plunged our land into the blaze of war that ruined most of our cities and towns. Today, we, the Rada of the Belorussian National Republic, cast off from our country the last chains of the political servitude that had been imposed by Russian tsarism upon our free and independent land. From now on, the Belorussian National Republic is to be a free and independent power. The people of Belorussia themselves, through their own Constituent Assembly, will decide upon the future relations of Belorussia with other states.

With the advent of the armistice in November 1918, the dissolution of the German armed forces was the beginning of the demise of Byelorussia as an independent nation. Submission at the hands of the Soviet power was swift, and still another nation, which tasted freedom but briefly, was snuffed out.

Mr. Speaker, today, March 25, marks the 51st anniversary of Byelorussia's independence. While the physical boundaries of this once-free nation were erased, the spirit and faith of her people still live, and in this fact alone lies the seeds of revival of national independence.

THE 51ST ANNIVERSARY OF BYELORUSSIAN INDEPENDENCE

HON. EDWARD J. PATTEN

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. PATTEN. Mr. Speaker, today marks the 51st anniversary of independence for the Byelorussian Democratic Republic, but it will not be celebrated in the streets of that republic as one would see the Fourth of July in this country. Behind this lack of festivity in Byelorussia lies 50 years of occupation by the Communist forces of the Soviet Union.

We in a free nation often take for granted the liberties that were an inheritance from our forefathers. Byelorussians had only 1 year to taste freedom. After a history of being carved up among other nations and ruled by outside forces, independence was a welcome treasure to the Byelorussian Democratic Republic. These people fought hard to maintain their long-sought freedom, but the overwhelming number of the enemy forced them once again into a state of conquered people.

In a recent letter to me, Michael Bachar, chairman of the United Byelorussian-American Commemorative Committee, described what conditions have been like for the Byelorussians under this latest occupation. He wrote:

> This rule has been marked by economic exploitation, social oppression, mass terror, political deportations, imprisonments and murders. Denial of religious freedom to all faiths (is) openly continuous. A low standard of living, malnutrition and substandard housing are permanent features of this Soviet rule. The end result is that during this period (the) Byelorussian nation has lost over six million of her population.

Such conditions should not be tolerated anywhere in this world by any free and independent nation. Therefore, I would like today to join those among our citizens who are of Byelorussian descent in calling for the liberation of their native land from the arm of the Soviet Union. Let us hope that once again we may see

the will of the Byelorussian people guiding the destiny of their nation. May I assure my Byelorussian friends that their efforts in this regard will continue to have my enthusiastic support.

THE COUNTERFEIT BALLOT

HON. HAROLD T. JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. JOHNSON of California. Mr. Speaker, in this age when it is so important that the people of the United States be well informed as to the workings of their Government, the news media has played a commendable role in education. I should like particularly to enter into the RECORD a series of nine well written and authoritative articles published by the McClatchy newspapers: the Sacramento Bee, the Modesto Bee, and the Fresno Bee, all of California. These nine articles explain and outline the problems of the electoral process which are facing the 91st Congress and the Nation. Martin Smith and Leo Rennert have written superb articles informing the people of the history and dangers of and the alternatives to the present electoral system.

Martin Smith is a gifted and powerful writer who has the talent of reporting the facts while editorializing at the same time. This combination provides an intellectual work which is an education as well as a pleasure to read. In the "Counterfeit Ballot," Mr. Smith has reported the advantages and inequities in the electoral college system along with proposed changes. With these articles, the people are able to formulate their own conclusions and take enlightened positions.

I have received numerous letters from my constituents which voice their opinions and views on this subject. I am not surprised at how well informed they are in this area after reading the works of Martin Smith. There is no doubt in my mind that the "Counterfeit Ballot" and Martin Smith are responsible for many of these reactions. We are owing to the McClatchy newspapers and Mr. Smith for their service to the American people. It seems right that we should now place the "Counterfeit Ballot" series into the RECORD as recognition and thanks for this well-done service.

The articles follow:

[From McClatchy newspaper, Jan. 20, 1969]

THE YEAR 1787 BROUGHT LONG, HOT SUMMER OF UNREST, STRIFE

(By Martin Smith)

Philadelphia and the rest of the United States had a long hot summer to endure in 1787.

There was grave social unrest and governmental instability throughout the new nation.

Still fresh in Americans' minds was Shay's Rebellion which, fed by discontent among small farmers and debtors, broke out the year before and required troops to restore law and order.

The government established under the Articles of Confederation could not bind together the 11-year-old nation.

From late May until mid-September, delegates to the Constitutional Convention in Philadelphia wrestled with the problem of establishing a new framework for American government.

WORKING AGAINST TIME

They were working against time. Anarchy threatened the new nation. What was giving them the most difficulty was the question of how the nation's presidents should be chosen.

Pennsylvania delegate James Wilson noted: "This subject has greatly divided the house and will also divide the people . . . It is in truth the most difficult on which we have to decide."

Wilson favored a direct popular vote for president. Among the delegates on his side were some of the most prominent individuals who participated in the convention, including Gouverneur Morris and James Madison.

Madison, whose role at the convention was so important that he became known as "the father of the Constitution," admitted that conducting a nationwide popular vote would not be easy. Even so, it seemed to him to be the best way of selecting a president.

"The president is to act for the people, not the states," he said.

A RADICAL IDEA

But this was radical thought in 1787.

As Neal R. Peirce, whose book "The People's President" describes the events, says: "Only a few delegates to the Constitutional Convention felt that American democracy had matured sufficiently for the choice of the president to be entrusted directly to the people. On the two occasions that the convention voted on direct vote, the proposal was resoundingly defeated."

Elbridge Gerry called the idea "radically vicious" and warned:

"The people are uninformed and would be misled by a few designing men."

The proposal for a direct popular vote was one of the major ideas advanced at the convention for a method of choosing presidents. Another was to have Congress choose the president.

The deadlock continued through the summer until a compromise finally was reached in September.

MADISON LOOKS BACK

Thirty-six years later, Madison looked back on the convention and indicated that the compromise had been thrown together in some haste by weary men:

"The difficulty of finding an unexceptionable process for appointing the executive organ of a government such as that of the United States was deeply felt by the convention; and as the final arrangement took place in the latter stages of the session, it was not exempt from a degree of the hurrying influence produced by fatigue and impatience in all such bodies."

The compromise left it to the individual states how presidential electors would be selected. In the nation's early elections, electors assigned to the states simply were named, in most cases by the state legislatures.

ONE BIG CATCH

The compromise of 1787 gave the final say in the choice of a president to the House of Representatives if no candidate won a majority of the presidential electors. But there was a catch—a big one.

As a sop to the small states, each state's delegation of congressmen in the House would be given only one vote so that the large states would have no more powerful voice in naming a president than the small ones.

The compromise permitted the Constitutional Convention to complete its job and sell its product to the individual states. The crisis of the summer of 1787 had been met, but the compromise reached on how presidents would be elected would mean great troubles in the future of the young republic.

The troubles arrived in just a few years.

[From the McClatchy newspapers, Jan. 19, 1969]

ACTING PRESIDENT WAS CHANCE UNDER ARCHAIC VOTING SYSTEM

(By Martin Smith)

It all sounded so strange that election night. The voting trend was indecisive, and the choice of the president might be left to the House of Representatives under the archaic constitutional procedures established nearly two centuries ago.

A deadlock in the House appeared to be a real possibility. The television pundits were talking of the chance an acting president might be necessary to take over the reins of government if the House could not reach a decision by Jan. 20.

An acting president? It sounded as if they were talking about a Central American banana republic, not about the United States.

But they were.

VOTERS DECIDED

It did not turn out that way, of course. Hubert H. Humphrey ran more strongly than expected, but George Wallace ran weaker and Richard M. Nixon won a majority of the Electoral College votes.

Once more, in the view of those who for decades have been warning that the nation's presidential election system is in need of basic revisions, the United States had teetered briefly on the brink of disastrous governmental instability, then veered back safely for another four years.

It is a drama occurring in one form or another every four years because—and this needs repeating—American voters do not elect their presidents. The voters only choose members of the Electoral College, who, in turn, choose the presidents and vice presidents.

TROUBLE ARISES

It is a system which only worked, more or less, the way it was supposed to in the first two elections in which it was employed. The third time around, in 1796, the system began to cause trouble.

Individual electors are expected to vote for the candidate on whose slate they ran, but they do not have to do so. Dr. Lloyd W. Bailey of North Carolina proved that again last month.

He was one of the 538 individuals—members of the Electoral College—who decided who should be the president of the United States for the term starting tomorrow. Bailey is a John Bircher, which is his privilege, and although he supposedly was elected by North Carolinians to vote for Richard M. Nixon for president, he instead cast his vote in the Electoral College for George Wallace. As events turned out, that was Bailey's privilege, too.

SECOND, THIRD CHOICE

The system, coupled with an undemocratic, boss-controlled method of selecting party candidates, makes possible the election of a president who actually may be the second—or third—choice of most American voters.

United States Sen. Birch Bayh, D-Indiana, called this year's election another "brush with catastrophe."

The potential horrors of the present system long have been known. Sometimes the horrors have come to pass.

Three times in the 19th century—in 1824, in 1876 and in 1888—a candidate has captured fewer popular votes than an opponent but still has gone on to become president.

CLOSE CALLS

So far this has not occurred in the present century, but there have been three close calls—in 1948, in 1960 and again last year.

If, regardless of how many popular votes a candidate might have, neither he nor any opponent has an Electoral College majority, the choice of a president is left up to the House of Representatives, where the politicking for support would be intense.

A deadlock in the House always would be a possibility. Congressmen, when called on to elect a president, do not vote as individuals. Instead, each state is accorded one vote—no matter what its population is.

ONE VERSUS 38

Nevada's single congressman would decide how his state's one vote for president would be cast, while California's 38 congressmen would decide whom their state's one vote would support.

In the opinion of many political scientists and also many hardheaded practical politicians, the worst possibility is that a cloud would hang over the head of some future president who won the office under what were regarded as dubious circumstances.

Stanford University political science Prof. Ray Wolfinger has warned that, under these circumstances, considerable numbers of the population "might feel freer to disobey the law."

OMINOUS TALK

It is ominous talk. But it is based upon real dangers.

An acting president? A president regarded by most Americans as a usurper?

It could happen because of the Electoral College.

U.S. ELECTORAL SYSTEM HAS ALWAYS CREATED PROBLEMS

(By Martin Smith)

After just two presidential elections the new nation's Electoral College system for selecting presidents broke down and required patchwork repairs.

George Washington managed to get elected president in 1788 and was re-elected in 1792, along with his vice president, John Adams, without trouble with the election machinery.

After that, however, the system failed to work the way it was intended.

Adams, a Federalist, won the presidency in 1796. But his running mate, Thomas Pinckney, failed to be elected vice president. Thomas Jefferson, the presidential candidate of the Republicans, later to be renamed the Democratic party, became the vice president because of the way in which Electoral College votes were counted.

MORE SERIOUS BREAKDOWN

The breakdown in the system became much more serious four years later. Jefferson ran again for president. His Republican party running mate was Aaron Burr, the candidate for vice president.

But under the confusing system of counting votes, Jefferson and Burr were tied in the Electoral College balloting for president.

It was just as if the Electoral College recently had been unable to choose between Richard M. Nixon or Spiro T. Agnew for president.

In 1801 the House of Representatives had to make the choice between Jefferson and Burr. It elected Jefferson as president and Burr as vice president, but not until after a week of turmoil and 36 ballots.

PATCHWORK REPAIR

The system obviously had to be changed, and Congress passed and the states ratified the 12th amendment to the Constitution. It was patchwork repair. The Electoral College was retained, but the tricky double ballot system by which a candidate for vice president could wind up as a contender for president, even opposing his own running mate, was eliminated.

The changes became law in 1804 and still govern today's presidential elections, although they have resulted in other constitutional crises in the ensuing 164 years and appear to be an increasing danger to the American political system.

In 1824 the election again was thrown into the House of Representatives after the four-way race ended without any single candidate capturing a majority of electoral votes. What happened then is what many observers fear might happen today. The man finally selected as president trailed one of the other candidates in the number of popular votes cast.

ADAMS TAKES OFFICE

As a result, John Quincy Adams took office under a cloud. Enough Americans thought political manipulators had cheated Andrew Jackson out of the presidency to render the Adams administration incapable of exercising effective leadership.

Candidates who trailed in the popular vote again were elected president in 1876 and 1888. Democrat Samuel Tilden won 4,287,670 popular votes in 1876, while Republican Rutherford B. Hayes had only 4,035,924 votes. But, aided by highly dubious election procedures, he won the presidency with a majority in the Electoral College.

Democratic President Grover Cleveland sought re-election in 1888 and received 5,540,365 popular votes. His Republican rival, Benjamin Harrison, trailed in the popular vote count with 5,445,269. Harrison, however, became president, winning 233 electoral votes to only 168 for Cleveland.

There have been three close calls during the 20th century.

TRUMAN VERSUS DEWEY

In 1948, Democrat Harry S. Truman won more than 24 million popular votes, while Republican Thomas Dewey was given fewer than 22 million. But if Dewey had won as little as 12,487 more votes in California, Illinois and Ohio, he would have won the presidency with an Electoral College majority.

In 1960 Democrat John F. Kennedy received 34,220,984 votes and Republican Richard M. Nixon 34,108,157. It would have required a shift of only 11,414 votes in Illinois, Missouri, New Mexico, Hawaii and Nevada to have made Nixon president eight years before his time although he would have trailed Kennedy in the popular vote.

Last year Nixon enjoyed a popular vote margin of 500,000 over Democrat Hubert H. Humphrey. But if a few thousand strategic votes had shifted in a few key states, Nixon would have failed to gain an Electoral College majority, and the election would have been thrown into the House of Representatives.

Such a result was the goal, of course, of George Wallace, the third party candidate for president. Election chaos would give the third party leaders their best chance to manipulate the selection of a president to their liking.

ELECTORAL COLLEGE SYSTEM FALTERED IN THIRD ELECTION

(By Martin Smith)

The founding fathers offered an attractive rationale for the Electoral College system of selecting presidents.

Although the system simply was the result of a political compromise, the framers of the Constitution argued it offered a positive good. The system, as they saw it, would permit the very best men in the nation to sit down every four years and calmly, without rancor and partisan considerations, decide who would make the best president.

This vision quickly proved to be a mirage.

The founding fathers themselves promoted the development of political partisanship. The presidential electors were regarded as faceless individuals. They were unnecessary and sometimes troublesome middlemen in the process by which presidents were selected.

UNEXPECTED VOTE

In 1796 one of the Pennsylvania electors voted for Thomas Jefferson for president when everyone thought he had been committed to vote for John Adams. An angry Federalist politician wrote:

"What, do I chuse Samuel Miles to determine for me whether John Adams or Thomas Jefferson shall be president? No! I chuse him to act, not to think."

Other individual electors occasionally have broken their faith by thinking.

The most recent was Dr. Lloyd W. Bailey of Rocky Mount, N.C., who, although he was elected as part of Richard M. Nixon's slate of electors, chose instead to cast his vote for George Wallace for president.

One elector broke loose from Harry S Truman's Tennessee slate of electors in 1948. Adlai Stevenson lost one of his Alabama electors in 1956.

AMBITIOUS SCHEME

The most ambitious renegade was an Oklahoman who had been elected in 1960 to cast his Electoral College ballot for Nixon. Instead, the elector promoted an unsuccessful project to persuade other electors to desert Nixon and John F. Kennedy and support instead, a strong conservative for the presidency.

His scheme simply was a variation of attempts by Southern conservatives since World War II to force the election into the House of Representatives where Alabama's voice would count every bit as much as New York's.

Strom Thurmond ran for president in 1948 in the hope the election would go to the house where a major party candidate then might have to bow to dictates from Dixie on race questions.

Thurmond failed, as did George Wallace who ran last year with more or less the same idea.

But Wallace's movement remains as a threat to the two-party system which most political scientists think has been a mainstay of political stability in an increasingly troubled nation.

Soon after Wallace announced his presidential candidacy last year, a Democratic congressman called for modifications of the Electoral College system to provide for a runoff election if no one candidate received a majority of the electors.

But it was a Republican, U.S. Rep. Clark MacGregor of Minnesota who called for abolishing the Electoral College and replacing it with a popular vote.

"The Wallace candidacy is a cynical attempt to capitalize upon the vagaries of our presidential election system to get a stranglehold on national policy," warned MacGregor.

"The American people would not wish us to stand by idly while a minority presidential candidate attempts to blackjack either major party candidate into such an unholy alliance."

WALLACE ASSESSMENT

Robert H. Finch, the incoming Secretary of Health, Education and Welfare, who was until recently California's lieutenant governor, assessed the Wallace candidacy in 1972 and observed that the former Alabama governor has "a pretty good piece of political machinery going for himself."

Finch acknowledges the process by which the United States Constitution is amended is an exceedingly slow-moving one, but he sees the Wallace threat as providing "a greater catalyst for change now than ever before."

CAMPAIGNING NIXON MOVED CLOSER TO POPULAR VOTE IDEA

(By Martin Smith)

U.S. Sen. James O. Eastland, the conservative Mississippi Democrat who, as chairman of the Senate Judiciary Committee, will have a lot to say about any changes in the system of electing presidents, has predicted the system will be revised—if the new president wants revision.

"If the next president pushes electoral reform, we'll get it," said Eastland. "If he doesn't, I don't assume so."

The new president is Richard M. Nixon who indicated during the campaign he favors changes in the system. He said once he was not proposing abolition of the Electoral College, but he also said he thinks the man with the most popular votes should become president.

NO DETAILS OFFERED

Nixon has not offered any detailed recommendations for revising the system but in his most extensive statement on the issue, he said on Sept. 3 in Cleveland, Ohio:

"I am not suggesting we go so far as the direct election of the president. But I do believe that in a particular state the fact that one man may win the state by a few thousand votes and then get all the electoral votes of that state—I think that, in effect, disfranchises a lot of other people who may have voted on the other side. I would rather have proportional representation in the Electoral College."

MOVES CLOSER

But later in the campaign, Nixon seemed to be moving closer to the idea of deciding the presidential election by popular vote.

On Oct. 15: "I think that if the man who wins the popular vote is denied the presidency, the man who gets the presidency would have very great difficulty in governing."

On Oct. 21: "Whoever wins the popular vote should be the next president of the United States."

On Oct. 30, while challenging Democratic rival Hubert Humphrey to accept the decision of the popular vote: "I say again, the candidate who gets the most votes should be the next president. I stand ready to accept the decision of the electorate."

FINCH PREDICTIONS

Former California Lt. Gov. Robert H. Finch, a close friend and adviser of Nixon's and chosen by the President to be Secretary of Health, Education, and Welfare, predicted in a Sacramento interview that Nixon will offer specific proposals for changing the presidential election system.

Finch said he does not know yet what forms these proposals will take. Speaking just for himself, however, Finch said he likes the idea of retaining the Electoral College but having most of the electors chosen by individual congressional districts. This would result in the electoral votes of most states being split among leading candidates.

Finch said this proposal "has great appeal to me because it would tend to develop a viable two-party system in the South. There would be an enormous incentive to try to develop strong congressional candidates in those Southern states."

FOUR PLANS

The congressional district plan is only one of four basic proposals expected to go before Congress at the 1969 session for changing the method by which American presidents are selected.

The other three basic plans:

Retaining the Electoral College but simply apportioning each state's electoral votes on a percentage basis to reflect the popular vote in the state. The present winner-take-all system would be eliminated.

Retaining the Electoral College system and also its winner-take-all provision so that a state's entire slate of electors still would go to the winner of the popular vote, but eliminating the office of elector. An automatic state unit electoral vote system would be substituted for the individual electors.

Simply abolishing the Electoral College and deciding the presidential elections by a nationwide popular vote.

This last proposal has been given new support as the result of a special study by an American Bar Association commission which strongly recommended that a popular vote decide presidential elections.

INDIANA SENATOR SEES ONLY ONE WAY: JUNK ELECTORAL COLLEGE

(By Martin Smith)

U.S. Sen. Birch Bayh, D-Indiana, has been calling for reforms in the Electoral College system since he first was elected to the Senate in 1962.

But for a long time he opposed any plan to eliminate the college entirely and substitute in its place a direct popular vote for president.

Bayh changed his mind in 1967.

He called for going all the way and eliminating the Electoral College entirely in favor of a popular vote.

NEW ENGINE NEEDED

"Mere procedural changes in the present system would be like shifting around the parts of a creaky and dangerous automobile engine, making it no less creaky and no less dangerous," he warned.

"What we may need is a new engine, because we are in a new age."

What caused Bayh to shift his view in a report issued by a special American Bar Association commission which after a detailed study concluded:

"The Electoral College method of electing a president of the United States is archaic, undemocratic, complex, ambiguous, indirect and dangerous. . . .

"While there may be no perfect method of electing a president, we believe that direct nationwide popular method is the best of all possible methods."

The commission, headed by Robert G. Storey, president of the Southwestern Legal Foundation and dean emeritus of the Southern Methodist University Law School in Dallas, offered detailed recommendations on how presidential elections might be decided by popular vote.

It recommended that a party's presidential and vice presidential candidates continue to run as a team. The presidential candidate and his running mate who captured the most popular votes would win—provided they had at least 40 per cent of the popular vote.

If no ticket won 40 per cent of the popular vote, then a runoff election would be held between the two tickets with the highest number of votes.

DATE SETTING PROCEDURE

Congress would have the power to set the dates for regular and runoff elections, but individual state legislatures would have the power to provide for places and manner of the elections. Congress, however, would retain reserve powers to overrule the state legislatures.

Persons qualified under state law to vote for members of Congress would vote in presidential elections except that a state would be empowered to make even fewer restrictive requirements for presidential voters.

Congress also would be given a reserve power to provide for uniform age and residence requirements.

Among those on the 15-member commission were leading legal scholars and attorneys, including Paul Freund, a constitutional law professor at Harvard Law School; four former ABA presidents; two state governors, and Herman Phleger, a San Francisco attorney and former adviser to the U.S. State Department.

They returned an eight-count indictment against the Electoral College system, charging it:

"Allows a person to become president with fewer popular votes than his major opponent.

"Grants all of a state's electoral votes to the winner of the most popular votes in the state, thereby cancelling all minority votes cast in the state.

"Makes it possible for presidential electors to vote against the national candidates of the party.

"Awards all of a state's electoral votes to the popular winner in the state, regardless of the turnout in the state.

"Assigns to each state at least three electoral votes regardless of its size.

"Fails to take into account population changes in a state between censuses.

"Employs an unrepresentative system of voting for president in the House of Representatives.

"Allows for the possibility of a president and vice president from differing political parties."

THE 12TH AMENDMENT CITED

The 12th amendment to the Constitution in 1804 was intended to eliminate this last possibility but the amendment did not shut the door completely on such a turn of events.

For example, if the 1968 presidential election had been thrown into the House of Representatives Republican Richard M. Nixon might well have been the ultimate choice. But the choice of the vice president would have been left to the United States Senate. Many observers think it likely that the Senators would have chosen one of their colleagues, U.S. Sen. Edmund Muskie, the Democratic vice presidential nominee, for vice president instead of Spiro T. Agnew, the Republican nominee.

The ABA report has been made at a possible turning point in history—when the defects in the present system for electing presidents are becoming increasingly apparent to the public.

[From the McClatchy newspapers, Jan. 25, 1969]

SENATOR SMITH PROPOSES END OF CONVENTIONS, ELECTORS

(By Martin Smith)

U.S. Sen. Margaret Chase Smith, the independent Republican from Maine who now is the only woman serving in the upper house, proposes the most far-reaching changes in the system by which the United States elects its presidents and vice presidents.

Not only would she eliminate the Electoral College, replacing it with a direct popular vote, but also she would eliminate the convention system of selecting nominees.

Her plan is simply to hold national direct primaries. They would be held in early August. If no one candidate in a party received a majority of the vote cast within his party's primary, a runoff primary would be held four weeks later.

FIVE PERCENT TO QUALIFY

For a party to qualify for the national ballot, it would have to have membership of more than 5 per cent of the total registered voters in the nation. A candidate would have his name placed on the primary ballot if he had nominating petitions signed by 1 per cent of the total vote in the preceding presidential general election. This would have amounted to about 700,000 signatures in 1968.

Mrs. Smith favors direct primaries in the selection of presidential nominees for the same reasons she favors direct elections in choosing presidents.

"What is good enough for electing presidents should be good enough for nominating party candidates for president," she has testified. "It is the only logical end of putting the power in the hands of the people—for they should be able to choose among all possible candidates and not just in the final round at the general election."

She has some support among her colleagues. U.S. Sen. William Proxmire, D.-Wis., has asked:

"Is it not a far better thing to choose our presidential nominees in a national primary,

where the candidates and their ideas are on display and are contending openly, than it is to choose them in the narrow, emotional, cynical, rumor-filled, bandwagon-rolling, shouting, no-one-listening climate of a party convention?"

Some who argue in favor of direct election of presidents argue, however, against direct national primaries. Aaron B. Wildavsky, chairman of the political science department at the Berkeley campus of the University of California, is one.

MAKE VOTES COUNT

He warns that experience with state primaries shows that when one party remains in office a long time, which is not unusual, interested voters tend to join the dominant party to make their votes count more in the primary elections.

Those who remain in the out-of-power party are the diehards who nominate candidates who please them "but who could not win the election because they are unrepresentative of the majority," says Wildavsky.

"A national primary is also likely to lead to the appearance of extremist candidates and demagogues, who, unrestrained by allegiance to any permanent party organization, have little to lose by stirring up mass hatreds or making absurd promises."

UNFAVORABLE LOOK

Neal R. Pierce, author of "The People's President," a book calling for direct presidential elections, is another who looks with disfavor on proposals to abandon the convention system and institute direct primaries.

He agrees with the contention that conventions provide the opportunity for various factions within a party to reach compromises on platforms and nominees and to have party leaders keep in mind the necessity of appealing to a broad base of independent voters.

Pierce adds:

"Also, there are years when none of the candidates who have advanced themselves and run in the various state primaries have been able to build a really broad base of national support. Under such circumstances, the convention can 'draft' a candidate like (Republican) Charles Evans Hughes in 1916 . . . or (Democratic) Gov. Adlai E. Stevenson . . . in 1952"

[From the McClatchy newspapers, Jan. 26, 1969]

POLITICAL PARTIES PRESS TO BRING ELECTORAL REFORMS

(By Leo Rennert)

WASHINGTON.—One of the first lessons a neophyte learns on Capitol Hill is that it takes support from a potent, well-organized constituency somewhere in the country to insure success for any legislative drive.

Medicare would have been impossible without the rising strength of the old folks' lobby. Farm subsidies will go on as long as King Cotton reigns in the south and the west. And the military-industrial complex can be relied on to keep defense spending at record levels.

So in any discussion about prospects of Electoral College reform, the crucial question becomes: Where is the equivalent special interest group to prod the 91st Congress to approve basic changes in the nation's method of electing its presidents?

The answer this year—and it is at the heart of the suddenly much brighter outlook for some kind of constitutional change—is simply that the Republican and Democratic parties have become the chief active lobbyists for reform.

Their motivation—despite a lot of rhetoric about an "aroused public"—springs largely from selfish considerations.

Republican and Democratic leaders are rushing action on a constitutional amendment because nothing less than the preservation of the two-party system is at stake.

They still bear the traumatic scars of the threat posed last fall by George Wallace. They know this specter easily can come back to haunt them in 1972 if the Constitution is not changed in the meantime.

If there is one thing worse than losing a presidential contest, it is ending up with a standoff and having to bargain with Wallace for the key to the White House.

There is no question that the present system is ideally suited for a third-party candidate intent on bringing the two major parties to heel.

Wallace knew he could not win. But he was counting on an inconclusive result in the Electoral College which would have permitted him to use his electors to make a deal with one or the other of the leading contenders.

CAME CLOSE

He came close. Had California gone to Hubert Humphrey, for example, Richard Nixon would have failed to get the required absolute majority of 270 electoral votes.

Wallace then could have instructed his electors to supply that necessary majority in return for assurances on U.S. Supreme Court appointments, a veto over certain cabinet selections, a pledge to go easy on desegregation or any other number of concessions.

So it is not surprising that after such a close call, Democrats and Republicans are falling all over themselves in Congress to throw all kinds of Electoral College reform measures into the hopper.

House Speaker John W. McCormack has called for prompt action. Minority Leader Gerald Ford similarly terms the problem urgent and wants committees on both sides of Capitol Hill to get on with the job.

REFORM VIRTUALLY ASSURED

In the Senate, Majority Leader Mike Mansfield, who is rarely given to haste, thinks the nation already has waited too long. And Minority Leader Everett M. Dirksen, a master at sniffing political winds, predicts Electoral College reform is virtually assured this year.

If further evidence of unprecedented congressional interest is needed, one has only to look at the quick start of committee hearings.

The Senate Constitutional Amendments Subcommittee, headed by Sen. Birch Bayh, D-Ind., has started taking testimony. In the House, Chairman Emanuel Celler, D-N.Y., of the Judiciary Committee has scheduled extensive hearings.

All this activity, however, tends to mask major problems which lie ahead.

If—as now appears quite likely—Congress acts to protect the two-party system against "poachers" in presidential contests, there are several ways of accomplishing this without necessarily switching to direct, popular elections.

Or put another way, the survival of the two-party system is not contingent on "one man, one vote."

To remove the Wallace threat in 1972, it would be sufficient to adopt a constitutional amendment which would eliminate presidential electors—but not the Electoral College system of counting votes. If no candidate obtained a respectable plurality, say 40 per cent of the electoral total, a runoff election could be provided to keep the contest from being thrown into the House of Representatives.

BOGGS PROPOSAL

House Majority Whip Hale Boggs of Louisiana has introduced just such a proposal. It will bear close watching because it has attracted considerable interest and support. It could well be the forerunner of a compromise solution.

As far as the reformers are concerned, the Boggs plan has the advantage of eliminating the problem of "faithless electors" who change their mind after election day in total disregard of popular will.

It also would bar any further serious bid by Wallace since electors no longer would be around to be traded for political concessions. A Republican or a Democrat would have to win—either by capturing at least 40 per cent of the electoral vote or by winning in a runoff.

By retaining the electoral vote count, however, the Boggs plan would perpetuate problems and inequities created by the present system of adding state-by-state totals.

First, each state still would have as many electoral votes as it has representatives and senators in Congress. And all electoral votes of a state would continue to go to the winner in that state.

This would mean a candidate—though ahead in popular votes nationwide—still might lose if his opponent led in electoral votes.

Bayh, who favors an all-out switch to direct popular elections, believes such a situation would be intolerable.

"Grave dangers could divide this nation at a critical hour if the president-elect lacked a popular mandate," he remarked. "In these perilous times, we simply cannot afford the luxury of an electoral system that fails to guarantee the election of the popular choice."

Bayh has 40 Senate cosponsors for his direct-election proposal. But it takes a two-thirds vote in both houses and ratification by the legislatures of three fourths of the states to accomplish any change.

SOUTHERN OPPOSITION

Under these rules, opposition by southern and small states to all-out reform could become a formidable factor.

Southerners want some semblance of the Electoral College retained to preserve the notions of "federalism" and "states' rights" as key elements in the political fabric of the nation.

Small states also have grown attached to the extra influence they derive from the two-vote bonus under the present system.

For example, Nevada has only one representative. But it gets three electoral votes in recognition of its two senators. The two extra votes have the net effect of tripling the state's impact in the Electoral College. For Nevada, they represent a 200 per cent increase above its entitlement on a strict population basis.

In California's case, the extra two votes represent a comparatively insignificant addition—from 38 to 40 electoral votes, or an increase of only about 5 per cent above its entitlement under a fair population apportionment.

Since it takes only 13 states—and they all can be small ones—to block a constitutional amendment, it is quite apparent that the drive to abolish the Electoral College and substitute direct elections remains an uphill fight.

Celler, who has served in the House longer than any other present member, significantly is pushing both types of reform.

"The direct-vote approach is theoretically the most sound," he said in an interview. "But that which is wisest is not always most acceptable.

"I think we will have to adopt something short of a direct vote."

Celler predicts small states would "rebel" if Congress attempted to gain ratification of an amendment to wipe out the Electoral College altogether.

"I can understand their point," he said. "After all, we are a federal union, a union of states."

MORE OPTIMISTIC

Bayh is more optimistic. He still thinks the direct-election plan has a chance.

Small states, he argues, labor under a "misconception" when they worry about losing their two-vote bonus in the Electoral College.

What they overlook, he points out, is that the big states also would give up an important advantage—their present make-or-break role in deciding presidential contests.

Because all electoral votes of a state now go to the winner in that state, he notes, presidential candidates increasingly are basing their strategy on capturing the big states—California, New York, Michigan, Illinois, Pennsylvania, Ohio, and Texas.

Under a direct-election system, Bayh believes candidates would look for votes where they have the best chance of getting them—in big as well as small states—since every person's vote would count in the final total.

Thus, he reasons, what the small states would lose by giving up their two-vote bonus in the Electoral College would be offset by reducing the big punch a handful of voters now can wield in swinging one or more big states behind a particular candidate.

The argument apparently is working with some small-state representatives. Among the co-sponsors of Bayh's measure for direct elections are Sens. Alan Bible, D-Nev., Mike Gravel, D-Alaska and Daniel Inouye, D-Hawaii.

The American Bar Association and several other prestigious groups throughout the country also are supporting it.

Still, there is wide agreement that the concept of "one man, one vote" as a controlling yardstick for presidential elections so far has not developed anything resembling the devoted and dedicated constituency feverishly working on the bipartisan—but less sweeping—objective of keeping third-party intruders away from the approaches to the White House.

[From the McClatchy newspapers, Jan. 27, 1969]

ELECTORAL COLLEGE DRAWS GOVERNORS' DISSATISFACTION

(By Martin Smith)

The Electoral College has existed for more than 180 years, although Americans have been dissatisfied with it for much of that time.

Few persons think it will be easy to replace it with a direct popular vote in the selection of presidents and vice presidents. But public unhappiness with the antiquated Electoral College is greater than ever, and many political leaders agree now is the time to eliminate it.

In 1948 and again in 1960 national polls indicated the public, by a 2–1 margin, wanted the Electoral College eliminated. The percentage of those opposed to it has climbed dramatically. Last November a Harris Survey showed that an overwhelming 79 per cent of those polled favored direct election of presidents and vice presidents. Only 11 per cent opposed elimination of the Electoral College.

Dissatisfaction with the system is widespread and increasing, but there is dissent, too.

While some Southern white conservatives are reluctant to eliminate the Electoral College completely, preferring instead to tinker with and retain the present system, an important minority group also shows a cautious, if different, attitude on the issue.

Clarence Mitchell, secretary of the National Association for the Advancement of Colored People, has told a U.S. Senate subcommittee his organization flatly opposes any move to divide a state's electors according to popular vote percentages within that state. This is one of the reform-but-retain proposals being heard in the debate over the Electoral College.

MINORITY FACTORS

Minority groups see an advantage for themselves in the winner-take-all system by which a candidate captures a state's entire slate of electors by winning that state's popular vote, no matter by how small a margin. Nominees now regard major groups of minority voters as possibly the deciding factors in swinging some states. Minorities justify this possible advantage as necessary to offset the bloc of Southern white segregationist states.

Mitchell, however, also has told U.S. Sen. Birch Bayh, D-Indiana, the American Bar Association proposal to eliminate the Electoral College completely in favor of a direct popular vote is an excellent one.

But Mitchell added the NAACP would support the recommendations for a direct popular vote "only if there are absolute and foolproof safeguards against discrimination in registering and voting."

If there can be guarantees that minority groups will not be prevented from participating in a direct popular vote for president, the NAACP will support the ABA recommendations. But if the present system is to be retained, the proposal to divide a state's electors will only make existing inequities even worse, in the NAACP view.

REWRITING IS SLOW

Rewriting the Constitution is a slow-moving process. The usual way is for an amendment to be approved by a two-thirds vote of each house of Congress, and then be ratified by three-fourths of the legislatures of the 50 states.

The McClatchy newspapers sent inquiries to governors of all 50 states, seeking their views on the present system of electing presidents and vice presidents. Not all replied. Some of those who did said they had not reached a decision yet on proposed changes. Some thought the Electoral College might be retained if basically overhauled.

But not one of the governors said he likes the system the way it is. There were significant voices from both major parties calling for its outright abolition in favor of direct popular votes.

One of the most outspoken was Pennsylvania Republican Gov. Raymond P. Shafer. He noted that one of his state's delegates to the 1787 Constitutional Convention, James Wilson, thought even then that American presidents should be chosen by direct election.

"It is time that we add our strength to the lone voice of that great Pennsylvania," said Shafer. "I will recommend that our General Assembly, when it next convenes, lead the nation in a call to Congress for a constitutional amendment to abolish the Electoral College."

REPLIES FROM OTHERS

Other governors who replied or otherwise expressed themselves in favor of outright abolition of the Electoral College included Democrats Warren E. Hearnes of Missouri and William L. Guy of North Dakota and Republicans Richard B. Ogilvie of Illinois, John A. Love of Colorado, Russell W. Peterson of Delaware and Tom McCall of Oregon.

One who replied when he still was a governor of Maryland but since has assumed another office is Vice President Spiro T. Agnew.

"There is no question in my mind that basic reform of this outdated process is necessary," said Agnew. "Maryland is one of the few states with a statute binding electors to cast their votes for the winner of the state's presidential election but even the constitutionality of this law is dubious."

UNRUH TAKES STAND

The strongest voice in California in favor of eliminating the Electoral College is Assemblyman Jess Unruh. He is asking the state legislature to urge Congress to begin the process by which the Constitution can be amended to provide for a direct popular vote for president and vice president.

"Today it is clear, as it has been for more than a century, that the Electoral College envisioned by the framers (of the Constitution) bears no relation to their intent, if indeed it ever did," Unruh has commented.

ELECTORATE IS COMPETENT

". . . No modern politician who values his profession dares to argue that the American electorate is incompetent to elect the president of the United Sates. If this is so, all rational argument against popular presidential elections disappears. The Electoral College is a useless and occasionally dangerous appendage to our body politic. It must be removed."

No matter how low the Electoral College ranks in the public esteem, the surgery proposed by Unruh and other prominent Democratic and Republican leaders will not be easy to accomplish.

Nearly everyone agrees that some surgery is necessary. So far, there is insufficient agreement as to its extent, and this could renew the Electoral College's lease on life.

DISASTER COULD OCCUR

Then, the disaster that most observes fear may occur: The Electoral College once again could award the presidency to a man who was the only runner-up in the popular vote.

The Counterfeit Ballot could result in the selection of a Brand X president.

BYELORUSSIAN INDEPENDENCE DAY

HON. THOMAS J. MESKILL

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. MESKILL. Mr. Speaker, today, March 25, is the 51st anniversary of declaration of Byelorussian national sovereignty.

During the 20th century, the Byelorussians have endured much. They have suffered the oppression of the Russians and the injustices of German occupation during World War I. And yet, in the face of these awesome adversities, the Byelorussian people have steadfastly clung to the hope that once again they might enjoy the freedom they briefly tasted.

The making of the Byelorussian State, culminating in the declaration of independence on March 25, 1918, was the consequence of a national reawakening that occurred during the 19th and early 20th centuries. It began as a cultural revival and gradually was transformed into a political movement.

This cultural revival found its origin in a growing interest in ethnology and the Byelorussian language. It was from this that a unique conception of Byelorussian nationality developed. The formation of a Byelorussian national political party spurred on the development of national political objectives.

With the outbreak of World War I, the Byelorussians took advantage of Russia's weakened condition by declaring their independence.

The German Army continued its march eastward and Byelorussia succumbed to the German occupation. While the Germans imposed certain restrictions on them, the Byelorussians were allowed to continue their political and cultural development.

Sensing that the Byelorussian national identity posed a threat to the new regime in Russia, the Bolsheviks determined to crush this new state. The Byelorussian national state fell as one of the first victims of brutal Communist aggression.

It is with a sense of great respect and

admiration that I rise today, Mr. Speaker, to pay tribute to a courageous people who struggled long and hard to protect their national identity and culture. Let these freedom fighters and their descendants be an inspiration to all mankind. On the observance of Byelorussian Independence Day, let us seek to restore the faith and hope of a brave people that one day they will again be free.

VA GUARANTEED HOME-LOAN FINANCING—INCREASING INCOME OF THE NATIONAL SERVICE LIFE INSURANCE FUND

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. TEAGUE of Texas. Mr. Speaker, I am introducing today a bill to increase the availability of guaranteed home-loan financing for veterans and to increase the income of the national service life insurance fund.

We have extended the home-loan program to veterans with service after January 31, 1955, and this has created eligibility for about 6 million veterans. In addition, there are substantial numbers of veterans from the Korean conflict still eligible for home loans.

Last year the Veterans' Administration concurred with action of the Secretary of the Housing and Urban Development Department in raising interest rates on Veterans' Administration guaranteed and direct loans to 7½ percent. At the time this action was taken, I had hoped that increased funds for veterans' home loans would become available, and that the excessive discounts being charged by lenders would disappear. The situation did improve briefly, but since the first of the year it has become progressively worse and now with the most recent action of the administration to raise the prime lending rate, discounts have risen sharply again and mortgage financing is not readily available even at the high interest rate of 7½ percent.

It is apparent that, if the home-loan benefit is to be of any value to veterans, additional sources of mortgage financing must be found. During the past few years, while veterans have been in service, building costs, including interest charges, have risen sharply. During the 2 or 3 years that a veteran may have served, housing costs have advanced as much as 25 percent. The young veterans returning from service cannot compete with wealthy corporations which enjoy a special investment tax credit, and as a result mortgage financing is not available; and if obtained, requires an unconscionable discount.

The national service life insurance trust fund is in excess of $8 billion. In my bill, I propose that $5 billion be made available to the Administrator of Veterans' Affairs for the purchase of guaranteed and direct loans made to veterans. Under this plan, the lender-mortgagee will continue to originate loans, but may sell these loans to the Veterans' Administration. One percent is charged by the Administrator of Veterans' Affairs to defray administrative costs. All principial and interest over and above this charge, or 6½ percent, will be returned to the national service life insurance trust fund. At present the fund is invested in the public debt and is yielding less than 4 percent return. Under this plan, funds will be made available for veterans' loans and the return to the national service life insurance trust fund will be increased.

The veterans' home-loan program has been one of the Nation's most successful housing programs for the past 20 years. More than $72 billion has been loaned to approximately 7 million veterans. Loss rates have been lower than in conventional lending programs. This plan of using the national service life insurance trust fund is preferable to direct loans, but if this plan does not provide equity of opportunity for the returning war veterans, we will be fully justified in resorting to direct loans to insure that the veteran will have a fair opportunity to compete for mortgage financing.

The text of the bill follows:

H.R. 9476

A bill to increase the availability of guaranteed home loan financing for veterans and to increase the income of the national service life insurance fund

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) subchapter III of chapter 37 of title 38, United States Code, is amended by adding at the end thereof the following new section:

"§ 1828. Investment of funds of the national service life insurance fund in first mortgage loans guaranteed under section 1810 of this chapter

"(a) When issuing a commitment to guarantee a proposed home mortgage loan under section 1810 of this chapter, the Administrator is authorized and is hereby directed to issue, if such is requested by the lender-mortgagee, a nonassignable commitment to purchase the completed loan from such lender-mortgagee. For each such commitment the lender-mortgagee shall pay a non-refundable fee of not in excess of one-half per centum of the amount of the commitment. Such commitment shall provide for the purchase of the loan from the lender-mortgagee for the price specified in the commitment (which price shall be specified as a percentage of par) if the lender-mortgagee certifies to the Administrator, not earlier than sixty days subsequent to the disbursement of the loan proceeds but not later than twelve months from the date of the Administrator's issuance of the loan guaranty evidence, that:

"(1) It has not been successful in effecting a sale of the loan to a private investor at a price equal to or in excess of that specified in the Administrator's commitment;

"(2) It has not charged or collected from and will not charge or collect from the seller or builder of the property, or from any third person or entity, directly or indirectly, any discount (points) in excess of the difference between the face amount of the loan and the price specified in the Administrator's purchase commitment plus the origination fee charged by the lender-mortgagee and the commitment fee specified in this subsection (a); and

"(3) The loan is not in default.

"The purchase price specified in any purchase commitment issued under this subsection shall not be less than the average price for which 180 day purchase commitments were auctioned by the Federal National Mortgage Association at the last Association auction preceding the issuance of the Administrator's purchase commitment, but in no instance shall the Administrator agree to pay more than par (unpaid principal balance plus accrued interest) nor less than 96 percentum of par for any loan purchased under this subsection. Insofar as practicable the Administrator shall utilize the purchase authorization in this subsection in those localities where the discount levels are determined by him to be substantially in excess of the discounts entailed in the Federal National Mortgage Association average auction prices for its 180 day purchase commitments.

"(b) There is hereby established in the Treasury of the United States a revolving fund to be known as the National Service Life Insurance Investment Fund (hereinafter called the Investment Fund). The Investment Fund shall be available to the Administrator for all operations under this section, including the payment of expenses and losses, except administrative expenses. From time to time, the Administrator shall notify the Secretary of the Treasury as to the amount of funds necessary to purchase loans as the consequence of commitments issued or to be issued, pursuant to subsection (a) of this section, and to purchase direct loans, pursuant to subsection (c) of this section, and the Secretary shall, as authorized by section 720(c) of this title, transfer such funds from the Insurance Fund to the Investment Fund, except that the aggregate of transfers pursuant to this subsection shall not, in the period between the enactment of this section and June 30, 1974, exceed $5,000,000,000.

"(c) The Administrator shall utilize the funds transferred to the Investment Fund as provided in subsection (b) of this section to purchase loans pursuant to commitments issued as provided by subsection (a) of this section. In addition, the Administrator may utilize available funds of such Investment Fund to purchase (at par plus accrued interest) direct loan assets of the Direct Loan Revolving Fund and the entire proceeds of any such sale of direct loan assets shall be deposited in the Direct Loan Revolving Fund and be available thereafter for the purposes of that Fund. The Insurance Fund shall be paid interest on all funds transferred to the Investment Fund at the same rate as the average interest rate on loans purchased by the Administrator less one percent but in no event less than the average return on the other invested portion of the National Service Life Insurance Fund. All monies received by the Administrator in the repayment of such loans shall be deposited in the Investment Fund and shall also be available, until June 30, 1975, for the purchase of loans pursuant to commitments issued as provided in subsection (a) of this section, and for the purchase of direct loans as provided for in the second sentence of this subsection, except that if the Administrator at any time determines that the balance in the Investment Fund is in excess of anticipated needs for the purchase of loans, he may so notify the Secretary of the Treasury, who shall then transfer such excess to the Insurance Fund. All collections of interest on loans purchased and all non-refundable commitment fees received pursuant to the authority in subsection (a) of this section shall be deposited in the Investment Fund by the Administrator, who shall, after determining the amount to be retained in the Investment Fund as a reserve for expenses and losses, periodically notify the Secretary as to the amount of such interest collections available for transfer to the Insurance Fund and the Secretary thereupon shall effect such transfers. Such transfers shall constitute the payment of interest to the Insurance Fund. After June 30, 1974, all monies received in the repayment of loans purchased pursuant to [subsection (a) of] this section and all interest collections on such loans, except for such sums which the Administrator determines to be necessary for retention in the

Investment Fund as a reserve for losses, shall be deposited in the Insurance Fund. Interest collections so deposited shall constitute the payment of interest to the Insurance Fund.

"(d) In the event of a deficiency in the Investment Fund reserves for expenses and losses, the Administrator is hereby authorized and directed to transfer to the Investment Fund from available funds of the Loan Guaranty Revolving Fund or the Direct Loan Revolving Fund such sum or sums as may be necessary to defray such deficiency. For the purposes of this subsection the Administrator shall accord priority to the utilization of available funds of the Direct Loan Revolving Fund to the elimination of such deficiency notwithstanding the obligations of that Fund in respect to advances theretofore made by the Secretary of the Treasury pursuant to section 1823 of this chapter.

"(e) The Administrator may sell, and shall offer for sale, any loan purchased under the authority of this section at a price determined by the Administrator, but not less than the price paid by the Administrator to purchase the loan (i.e., the percentage of the unpaid balance of the loan), plus accrued interest. The Administrator may, in respect to loans [originated under section 1810 and subsequently purchased by him, guarantee any loan] thus sold, guarantee any such loans subject to the same conditions, terms and limitations as would be applicable were the loans guaranteed under section 1810 of this chapter.

"(f) Notwithstanding any of the foregoing provisions of this section, the Administrator, when authorized by appropriation acts so to do, may set aside first mortgage loan assets of the Investment Fund as the basis for the sale of participation certificates pursuant to and in accordance with the provisions of the Participation Sales Act of 1966 (Public Law 89-429), and until June 30, 1974, the proceeds of any sale of such participation certificates shall be deposited in the Investment Fund and be available for the purposes of that Fund. After June 30, 1974, the proceeds of any sales of such participation certificates shall be deposited in the Insurance Fund.

"(g) In the administration and management of the Investment Fund the Administrator shall, to the extent feasible, invest the funds thereof in loans which will represent a broad spectrum of the veteran homebuying population in respect to age, income, and location of the properties which will constitute the loan securities. In order to facilitate a more adequate supply of mortgage financing for veterans in the lower and middle income brackets the Administrator shall purchase only loans not in excess of $30,000 which are secured by single family dwellings only. The Administrator is authorized to adopt such standards, policies, and procedures and to promulgate such regulations as he considers necessary or appropriate for carrying out his functions and responsibilities under this section. In carrying out such functions and responsibilities the Administrator may contract with private entities for the servicing of any loans purchased by him for the Investment Fund provided that the servicing fee payable pursuant to any such contract shall not exceed the Administrator's estimate of the cost of the direct servicing of such loans by agency employees."

(b) The analysis of chapter 37 of title 38, United States Code, is amended by adding at the end thereof the following:

"1828. Investment of funds of the National Service Life Insurance Fund in first mortgage loans guaranteed under section 1810 of this chapter."

SEC. 2. Paragraph (1) of section 1811(c) of title 38, United States Code, is amended to read as follows:

"(1) he is unable to obtain from a private lender in such housing credit shortage area, at a discount charge for the purchase of existing housing to the home sellers or builders not in excess of the discount involved in the latest average auction price of the Federal National Mortgage Association's 90-day purchase commitments, and for the purchase of a newly constructed or to be constructed home, at a discount charge to the home sellers or builders not in excess of the discount involved in the latest average auction price of the Federal National Mortgage Association's purchase commitments for the period of twelve to eighteen months."

SEC. 3. Section 720 of title 38, United States Code, is amended by adding at the end thereof the following new subsection (c):

"(c) The Secretary of the Treasury is authorized and directed to transfer from such fund to the Investment Fund established under section 1828 of this title such amounts as the Administrator may from time to time request pursuant to such section, and shall transfer from the Investment Fund to the National Service Life Insurance Fund, upon notification by the Administrator, such amounts as the Administrator determines are available for such transfer pursuant to the provisions of such section."

THE TROUBLED MIDDLE EAST

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. ANDERSON of California. Mr. Speaker, I would like to call to my colleagues' attention a very lucid and compelling article on the troubled Middle East. The article appeared in the Lawndale Press in Hawthorne, Calif., on February 27, 1969, and was written by Myron Roberts. Mr. Roberts is a professor of literature, an assistant editor of Los Angeles magazine, and the author of the column, "Observations," in the Lawndale Press.

The article follows:

OBSERVATIONS

(By Myron Roberts)

Coming as it does on the heels of our unhappy involvement in Viet Nam, the continuing crisis between the Arabs and Israel is being greeted by the great majority of Americans with studied indifference and by the American government with supercaution. America does not want and cannot afford involvement in another war at a time when domestic problems threaten the very fabric of our society. And yet it should be pointed out that significant differences exist between Israel and South Viet Nam and these differences must be kept in mind in determining this country's course.

First of all no one is asking us to send hundreds of thousands of troops to Israel to fight a war which the Israelis are unwilling or unable to fight themselves. On the contrary Israel has demonstrated its ability to defend itself; what they do seek from the United States is that we use our influence and if necessary our power to prevent Russia from attacking Israel on behalf of its Arab allies. And that we agree to sell to Israel, and I repeat sell, not give, to Israel the weapons she needs to match the weapons which Russia is providing free to the Arabs.

In short Israel is asking nothing that the U.S. would not do, as a matter of course, for any friendly government, from Mexico to Tito's Yugoslavia, which finds itself threatened. The strategy of the Arabs at this point seems clear, they hope through a series of guerrilla acts of terrorism to provoke a crisis which will seem to lead the world to the brink of a confrontation between America and Russia with all that this implies.

The Arabs apparently believe that in such a showdown the U.S. would in effect wash its hands of the affair, leaving the Israelis no choice but to submit.

But what is it that the Arabs demand of Israel? Only that this tiny nation commit suicide, since the Arabs have never budged an inch from their belief that Israel has no right to exist. In other words the Arab position is, Israel, kill yourself decently or we will do it for you—with the help of our gallant Russian and French friends. What is it that Israel asks of the Arabs? Only that she be accorded the right to exist that her ships and planes be permitted to travel through the sea and across the sky in the normal manner. That her ports remain free from blockade and her industries free of embargo. That she be permitted to buy and sell in the marketplaces of the world. The Arabs doubtless have their grievances, all of which are subject to negotiation and compromise agreement. But what is not negotiable is an insistence by one party that the other party cease to exist. That is genocide.

I have no doubt that Israel will find a suitable answer to the current wave of terrorist attacks. And when Israel hits back, I dare say she will do so, not by trying to murder innocent people, as the Arabs have done, but by damaging Arab property. Arab excesses whether they take the form of public hangings or shooting up aircraft in neutral countries may provoke worldwide consternation, but they will not be greeted with the cries of outrage and horror that would follow if the shoe were on the other foot. This is the familiar double standard by which all rational and democratic states are judged as compared to their totalitarian neighbors. For the North Koreans, for example, to have acted the part of barbarians and savages with respect to captured men of the U.S.S. Pueblo provokes no worldwide indignation. But if the U.S. had treated North Korean prisoners in a similar manner, the anti-U.S. demonstrations would have been instantaneous and global.

I have been one of those who have fervently believed in the cause and the ideals of the United Nations. But it must be admitted that with respect to the Arab-Israel conflict, the U.N. has never seemed more blind, more inept and more biased against the principles of its own charter. Remember the last war between Israel and the Arabs states was precipitated by the decision of U Thant to withdraw U.N. troops which were supposedly preventing Nasser's magnificent Arab legions from sweeping Israel into the sea. More recently the U.N. muttered a polite, "naughty, naughty" when Arab commandoes tried to kill passengers aboard an Israel airliner. But when Israel responded by destroying Lebanese property taking pains to see that no one was killed or even injured, the U.N. went into a fit of righteous indignation. The blatant unfairness of this has not been lost on the world.

In the long run, of course, Israel cannot survive indefinitely as an island of 20th century enlightenment in a sea of Arab darkness. Somehow the Arab peoples must be helped to a better life so that they will be less willing to feed their empty Stomachs with anti-Israel propaganda. The real irony of Israel and its miracle of the desert should be the hope and inspiration of the Arab world. For what Israel has managed to do the Arabs can do—provided only that they give up dreams of military glory and concentrate on building a decent life for themselves and their children. That is the real interest of the Arab peoples and to persuade the rulers of the Arab world of this fact should be the object of both U.N. and U.S. policy. It is also the interest of the Russian people and the American, none of which have anything to gain by continuing the power

struggle in the Middle East. Until the Russians and the French and the United Nations come to recognize this fact, the U.S. must persevere in its policy of insisting that Israel shall not be sacrificed on the altar of expediency.

FHA EMERGENCY LOAN PROGRAM NEEDS IMMEDIATE FUNDING

HON. BILL ALEXANDER

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. ALEXANDER. Mr. Speaker, I rise to bring to the attention of my colleagues a most distressing situation facing many of the farmers of my district. After three almost disastrous crop years, many of the farmers in my district now face virtually a "do-or-die" situation. But without even having an opportunity to take their chances on the natural elements this year, the futures of many of these farmers are about to be foreclosed because of a lack of emergency loan funds by the Department of Agriculture.

According to the latest information I have available to me, there are almost 500 farmers in my district alone who have made application for FHA emergency loan funds and who have been approved, but who have been turned down now because of a lack of funds. Let me emphasize that the rules have not been bent concerning these people. They applied for funds, they were fully qualified to receive the loans, and they were led to believe that the loans would be forthcoming.

On the basis that the loans would be forthcoming, most of these farmers have already begun preparing their land for the 1969 crops, they have begun to buy seed and other necessities—on credit, of course—and they have even carried a number of employees on their personal word that pay would be forthcoming to them. For these farmers, their total lives and investment are dependent on receiving the FHA emergency loan funds.

I would like to point out, Mr. Speaker, that these people are not asking for a gift or a grant. They are merely asking for loans that will be repaid to the Government. And I would contend that this is a fiscally sound investment to protect the livelihoods of these farmers. Most of them have devoted their entire lives to farming. They lack the training or the skills to move easily into other vocational fields. Therefore, if they lose their farms, their equipment and their homes through our inability to provide the necessary and needed FHA loans, these farmers face unemployment, underemployment or the prospect of becoming another anonymous face in our already overcrowded urban ghettos.

This is an emergency situation that deserves emergency action. I have already sent telegrams to the Secretary of Agriculture and to the Director of the Bureau of the Budget urging them to find the necessary funds to fulfill these commitments to our farmers. In the case of my district, this amounts to about $2 million.

At this point, I include the texts of telegrams that I have sent to the Secreary of Agriculture and to the Director of the Bureau of the Budget:

COPY OF TELEGRAM SENT TO THE HONORABLE CLIFFORD HARDIN, SECRETARY OF AGRICULTURE

Hon. CLIFFORD HARDIN,
Secretary of Agriculture,
Department of Agriculture,
Washington, D.C.:

I want to bring to your attention as forcefully as possible a situation in Eastern Arkansas, as well as my whole state, that borders on disaster for many of our citizens. According to the best estimates that I have been able to assemble, almost 500 farmers in my district, and more than 650 in Arkansas as a whole, are now being turned down for FHA Loans because of lack of funds. Just yesterday, another of our farmers said he would lose his land and his equipment if he cannot get FHA help. He had been informed that his application was being denied for lack of funds. "I know the Farmers are almost forgotten objects," he told me. "This would be a small thing in comparison to other things we are spending on."

As you know, the applications that are now being turned down do not involve persons who are not qualified for the loans. The Loan Applications have already been carefully screened. The people affected are farmers who have had applications in for several weeks and who have already begun preparing their 1969 crops, acting under the assumption that the loan would be forthcoming. Since we have allowed them to go into March beginning the preparation of their crops and getting further in debt, I sincerely and strongly believe that we have an obligation to help these people. These farmers are not asking for a gift. They just want a loan that will be repaid to the Federal Government. They need your help in order that they can help themselves.

Let me point out that the problem has far-reaching circumstances, closely tied to the critical problems we are facing in our cities. These farmers now facing extinction have devoted their whole lives to the farms. All of their investment is tied up in their farms, and they lack adequate training in any other areas. In other words, they face either unproductive and underemployed work, they face addition to the too-crowded welfare rolls, or they face becoming another anonymous face in our urban ghettos. None of these alternatives is nearly as efficient or effective as the relatively low cost of keeping them on the farms.

It is imperative that we get additional funds to cover the FHA Emergency Loan Applications that have been received and are qualified. It was with this in mind that I voted Wednesday to increase the national debt ceiling, in order that we could possibly find the necessary funds somewhere to help these farmers who face ruin.

According to the unofficial statistics I have been able to accumulate, there are 488 applicants in my district with requests totaling $2,047,048 who have been denied funds. This is one-third of those in my district who applied for the FHA emergency loans. In Arkansas as a whole, there are 657 applicants who requested $2,786,861, who were turned down for a lack of funds.

I would like to request an appointment to meet wtih you at the earliest possible date to discuss this emergency. I stand willing to help in any way possible in getting the necessary money to fund these most deserving applications. I look forward to hearing from you.

With kindest personal regards, I am
Sincerely yours,

BILL ALEXANDER,
Congressman from Arkansas, First District.

COPY OF TELEGRAM SENT TO THE HONORABLE ROBERT P. MAYO, DIRECTOR, BUREAU OF THE BUDGET

Hon. ROBERT P. MAYO,
Director, Bureau of the Budget,
Washington, D.C.

DEAR MR. MAYO: I would like to urge as strongly as possible that the Bureau of the Budget approve an additional two million dollars for Farmers Home Administration emergency loans. These funds are needed without delay. According to the latest information I have available, this would take care of about 500 farmers in my district who made application for FHA emergency loans and who were approved, but who have now been turned down for lack of funds. These farmers, who have just been through three tremendously bad crop years, had been led to believe that since their loans were approved, the funds would be forthcoming. Consequently, they have already invested in their 1969 crops, beginning to prepare the lands and purchasing seed and other necessary items—on credit, of course. Most of these farmers in my district stand to lose their land, their equipment, their homes—in short, their total investment—if FHA funds are not approved to cover their loan requests. The alternative for most of these farmers is unemployment, underemployment, or addition to the growing problems in our urban ghettos.

I realize that our financial condition is not good, but I would like to point out a few pertinent points. First, the FHA funds are a loan, not a gift. These funds will be repaid, so there is very little investment made by the Federal Government. Second, the investment we might have to make in these farmers could turn out to be much greater if FHA funds are not forthcoming and these people become part of our massive urban problems. Third, I voted to increase the debt ceiling just so we could have access to funds to meet pressing and necessary needs such as this.

Again, let me urge in the strongest possible terms that the Bureau of the Budget approve the funds requested by the Department of Agriculture to fund the FHA loan programs.

BILL ALEXANDER,
Member of Congress.

SAVE THE DUNES

HON. ABNER J. MIKVA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. MIKVA. Mr. Speaker, an editorial in the New York Times of March 16, 1969, brought to mind again the heroic fight waged by my neighbor and constituent, former Senator Paul Douglas, of Illinois, to preserve for all Americans one of nature's greatest wonders—the Indiana Dunes.

The editorial also reminds us, however, that although that battle was won, the war is not yet over. Those who wish to protect our Nation's natural wonders from gross commercial exploitation or from total destruction must maintain their vigilance. Luckily for those of us who wish to see the dunes preserved in their natural state, there exists a hardy group of conservationists known as the Save the Dunes Council. I want to take this opportunity, Mr. Speaker, to com-

mend that group and to encourage it to continue its valiant work to save the dunes.

The New York Times editorial reminds us, finally, that there are some intriguing questions about the status of the Indiana Dunes which at this point remain unanswered. In the first place, what is the nature and what are the terms of the agreement to be reached between the National Park Service and the Chicago, South Shore & South Bend Railroad? I have made attempts to get an answer to this question, and so far have had limited success. Second, why were no additional funds for land acquisition during fiscal 1970 requested by the Park Service? Those of us who wish to see the dunes park project move forward as quickly as possible have been sadly disappointed by the Service's refusal to ask Congress for funds, which have already been authorized, to acquire additional land in the dunes area.

This situation has brought to mind, Mr. Speaker, one of my favorite comments by that fount of political wisdom, Mr. Dooley:

Th' crusade is over an' vice is rampant again. . . . Th' good man, th' crusader, on'y wurruks at th' crusade wanst in five years, an' on'y whin he has time to spare fr'm his other jooties. 'Tis a pastime f'r him. But th' definse iv vice is a business with th' other la-ad an' he nails away at it, week days an' Sundays, holy days an' fish days, mornin', noon an' night.

Let us hope, Mr. Speaker, that the crusade for the dunes is not yet over; and let us remember that it is a full-time job.

The editorial referred to is attached:

[From the New York Times, Mar. 16, 1969]

OF MEN AND DUNES

Natural sand dunes, the unending masterwork of wind and water, are among nature's more fascinating and useful creations. To the human eye, their clean lines and fantastic and changing shapes are a delight. To shore birds and migratory birds, they nurture and protect life itself. Birds nest in the beachgrasses and depend for food on the salt ponds and fresh-water pools behind the dunes. To the sea and the lakes, dunes are nature's own barrier to the devastation effects of violent storms.

But something there is in many men that does not love a dune. The only wild, clear call that they hear at the edge of the sea is the screech of profit and the bulldozer's mournful crunch. The land speculator and the summer cottage builder, the highway contractor and the jetport planner, all these see only a beach to be leveled and subdivided into lots and paved with blacktop and sold for dollars.

In recent years, the struggle to save surviving sections of the nation's seashores and lakeshores has made progress. From Cape Cod and Fire Island to Texas's Padre Island and California's Point Reyes, some dunes have been saved by Federal law. But more remains to be done, and old battles have sometimes to be won a second and a third time.

The dunes created by Lake Michigan provided two such battlegrounds. The Indiana Dunes, just east of Chicago at the southern end of the lake, were rescued after a long fight between conservationists led by former Senator Paul H. Douglas and steel companies which wanted to build a deep water port. But the Chicago, South Shore and South Bend Railroad is now pressing the National Park Service for permission to construct a marshalling yard within the boundaries of the lakeshore.

Before this railroad issue is even settled, there is already talk in Indiana that a new jetport may be built immediately south of the national lakeshore. If the so-called Chesterton site is selected, jets would spew oil and fumes as well as roaring noise over the dunes.

Far to the north at the western edge of the State of Michigan, the lake has created the beautiful Sleeping Bear Dunes, so named because their profile from a distance resembles a great bear curled in sleep. Ten years ago the National Park Service identified these dunes as one of the dozen shoreline areas in the nation most worth saving. Michigan's Senators introduced a bill to protect them as a national lakeshore in 1959. The years have passed but the bill has not.

Intensive private development now menaces the viability of Sleeping Bear as a national lakeshore. Meanwhile, the cost to the Government of acquiring the land has risen by one-third. The bill has been reintroduced in both houses of Congress, but hearings have been delayed until the Nixon Administration makes its position known. It is imperative that legislative action be completed this year. Congress waits, but the grasping hands of the land speculators are busy. Soon the Sleeping Bear may not be sleeping but dead.

THE MEN WHO MET THE OIL SLICK CHALLENGE

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. HOSMER. Mr. Speaker, the March 1969, issue of Drilling magazine carried an editorial which contains a message I think should have wide distribution. The editorial follows:

THE WART ON OUR NOSE

There have been accusations and recriminations in the wake of the Santa Barbara blowout. Probably, there will be more during the weeks and months ahead. But few will come, we devoutly hope and believe, from within the petroleum industry. For who in the business can say with assurance, "It could never have happened to me"?

It happened off Santa Barbara as the whole world watched. The world saw the boiling waters in the shadow of Platform A, the inexorable spread of the oil slick, the contamination of white boat hulls, slime on the beaches and the agony of the birds.

Did it also see, we wonder, the magnificence of men in the face of disaster? Could it see the taut faces of those hundreds of men in the vicinity of Platform A, on the clean-up crews, at the bird care center? Could it identify the executives, the scientists, the field men and the clerks? Did it know that those fleeting figures on the TV screens were flesh and blood people—not corporations, not job classifications, but people pitting all they had against the awesome power of a blowout?

We doubt that the world at large has any conception of what it took in money, courage, intelligence and human endurance to contain the Santa Barbara blowout. From personal experience or close association, most of us in the industry have a pretty good idea of what it took. And we're proud of the people who, seeing what had to be done, simply did it.

Because they did it, the gray whale swims today through the Santa Barbara channel and seals cavort about Platform A as a thousand men complete the clean-up of the beaches and oil company marine biologists monitor the health of the creatures of the sea.

A solid 3500-foot column of cement now seals forever the well that goes into the record books as a wart on the industry's nose. It's a wart, that is, to the world at large. To those of us in the industry, it is also an unseen monument to the magnificence of our people.

Wells are planned and drilled by ordinary men who put on their pants one leg at a time and sometimes fail to zip the fly. They aren't automatons, they aren't perfect, they're people. Because they're people, they sometimes do things which—could they have a second chance—they'd do differently. When they make a mistake, they do all in their power to put it right.

We can't say, of personal knowledge, why there was a blowout in the Santa Barbara channel. We know only that there was a blowout and that some very fine men gave everything they had to minimize the havoc and bring the well under control.

We can't ask the world to forget the blowout, discount the damage, or hold the industry blameless. We ask only that the world also remember the little gray blobs that flickered briefly on its TV screens—the unknown and unsung men who faced a blowout and did their damndest to put it right. They're a credit to the human race.

NIXON ABM POLICY SOUND, REASONABLE

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. CHAMBERLAIN. Mr. Speaker, as the Congress debates the pros and cons of the proposed anti-ballistic-missile system, I wish to bring to the attention of my colleagues an editorial which appeared in the State Journal, Lansing, Mich., of March 16, 1969, and fluently expresses the reaction of that publication to the President's recommendations for the modification of the ABM system:

NIXON ABM POLICY SOUND, REASONABLE

President Nixon's decision to go ahead with a modified anti-ballistic missile (ABM) system is a sound and reasonable approach to a complex and emotional issue in which this nation's security is at stake.

The President's decision to deploy a limited ABM system designed to protect American mainland military bases serves notice on both the Chinese Communists and Russia that this nation will remain fully prepared for retaliatory action in event of any attack on the United States.

American leaders absolutely cannot permit a lapse into the pre-World War II isolation blindness which left this nation totally unprepared to defend itself while Nazi Germany and Japan forged giant war machines and ridiculed cur unwillingness to face up to that threat.

It would be joyous and comforting if we could be assured that Russia and China, both nuclear bomb powers, have only peaceful intentions toward the United States. There is virtually nothing at this point, however, to show that either nation is cutting back missile striking forces.

Nor has either Communist power shown any interest in reasonable bargaining on arms controls. The recent history of both nations demonstrates adequately that they rely on the steel fist as their major bargaining weapon.

History books record clearly that every country that has attempted to bargain with either of the Communist powers from a position of military weakness, has met with disaster.

We believe President Nixon has taken a logical course on the ABM issue which should neither set off a new round in an arms race nor discourage hopes for future negotiations on arms controls.

At the same time, the President has cut back on the more costly program proposed by former President Lyndon Johnson and eased some urban fears by moving the missile sites away from major cities.

In particular, President Nixon has served notice to the leaders of the Soviet Union that the ABM system will be a defensive one but that the American ability to fight back will not be weakened.

He has also indicated that the ABM system will be subject to review each year, depending upon what the Russians have done with their programs in the meantime. The President repeated that he is willing to talk with Kremlin leaders about arms controls. This could be extended to China if the leaders at Peking ever decide to come out from behind their curtain of secrecy and negotiate.

One thing is certain.

No nation in this age of turmoil can relax its defensive capabilities and simply rely on the good will of other powers to assure peace.

We would also hope that those who yell for massive cutbacks in defensive programs will consider that the year 1969 is not 1939.

When the storm of war broke on western Europe in 1939, the Nazis, who had been preparing for a decade, rolled easily over their neighbors who somehow had talked themselves into believing such a thing could never happen.

No more tragic examples in modern history need be cited than Holland, Belgium and France in 1940 and the sleeping posture of the United States on Dec. 7, 1941.

Thirty years ago, the United States was fortunate enough to get a breather during which time it recovered and built a military machine to win the war.

In an age of ballistic missiles which can span continents and oceans, there will be no time to start preparing after the first act of aggression.

IMPROPER STATEMENT BY THE NATIONAL LEAGUE OF CITIES

HON. HERMAN T. SCHNEEBELI

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. SCHNEEBELI. Mr. Speaker, the Attorney General of Pennsylvania, William C. Sennett, has given appropriate reply to an improper statement by the National League of Cities concerning the use of Federal funds by Pennsylvania under the Federal Streets Act. The attorney general's statement follows:

IMPROPER STATEMENT BY THE NATIONAL LEAGUE OF CITIES

Attorney General William C. Sennett took issue today with statements made in Washington Wednesday by the National League of Cities regarding the Federal Safe Streets Act.

"The League's statements indicate a lack of familiarity with the Federal Act," Sennett said.

The League had charged that millions of dollars in federal crime-fighting funds are being wasted on rural areas and the creation of a new level of bureaucracy.

The Attorney General said that the charges are without foundation, especially as far as Pennsylvania's participation is concerned. Sennett is chairman of the Pennsylvania Crime Commission which was designated by Governor Raymond P. Shafer to implement the Safe Streets Act in Pennsylvania.

Here is Sennett's statement in rebuttal to the allegations made by the National League of Cities:

"The record must be set straight immediately, especially concerning Pennsylvania's plan under the Federal Crime Control Act.

"The assertion that in Pennsylvania funds are being diverted away from cities and into criminal investigation and regional planning councils is totally without foundation.

"To date, of the $240,524 in Federal aid received and dispersed for riot prevention, 75 percent, or nearly $190,000, went to 30 cities, boroughs and townships throughout Pennsylvania. As for money for regional planning, the Federal Act, itself, absolutely requires planning money to be spent . . . *only for planning.*

"Approximately $360,000 has been earmarked by the Act and the Law Enforcement Assistance Administration for use in Pennsylvania for local government law enforcement. To date, no money has, in fact, been spent for regional planning.

"Second, not one dime of the Federal planning money under the Act is to be spent, or is being spent, in Pennsylvania for criminal investigations of any kind.

"The Federal Act mandates two phases of development: first, the planning phase; second, the action phase. Provisions in the Federal Act require a partnership in state and local planning to improve the criminal justice systems in the state. At the present time, we are just entering the planning phase.

"The assertion that mayors are not being represented is also untrue. Pennsylvania Crime Commission staff members have met several times with local government officials and will continue to meet with them in order to develop how many elected local government officials should be on each regional planning council. I absolutely guarantee that local government officials throughout Pennsylvania will have full proportionate representation, not only on the regional planning councils, but also on the Crime Commission Advisory Council.

"Governor Shafer, through the Pennsylvania Department of Justice and the Pennsylvania Crime Commission, is honestly and openly attempting to create an effective State-and-local partnership to prevent and control crime throughout Pennsylvania.

"Street crime, professional crime and organized crime will all be dealt with in a balanced State-and-local program. This program—a counterattack on all crime in Pennsylvania—will be the product of both State and local planning.

"I urge all responsible local government officials and all citizens throughout Pennsylvania to rally together to *separate fact from fiction* so that we can get these Federal programs moving. We can use these Federal programs to strengthen our criminal justice system."

SALUTE TO NAB'S MOST DISTINGUISHED MEMBER

HON. GARRY BROWN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. BROWN of Michigan. Mr. Speaker, this week the National Association of Broadcasters presented its 1969 Distinguished Service Award at the opening general assembly of its 47th annual convention here in Washington. There is probably no greater distinction than for a man to be honored by his peers who have deemed him an individual worthy of recognition.

This award is the broadcasting industry's highest honor. Previous recipients include: David Sarnoff, William S. Paley, Herbert Hoover, Dr. Frank Stanton, Edward R. Murrow, Bob Hope, Sol Taishoff, Chet Huntley and David Brinkley, and Lowell Thomas.

Yesterday, March 24, a new name was added—that of John E. Fetzer of Kalamazoo, Mich., a man highly qualified and deserving to take his place in this renowned company.

The broadcasting industry knows John Fetzer as one of the industry's great pioneers, innovators, and leaders.

The sports world knows John Fetzer as owner of the world champion Detroit Tigers. The residents of the Third District of Michigan, which I am privileged to represent, know John Fetzer as a man who has contributed, and continues to contribute in countless ways, to his community and his country. He is a man of many dimensions—a leader in the business world, the academic world, chairman and member of numerous civic committees, councils, and boards.

This recognition of his meritorious service as a broadcaster and outstanding citizen is the crowning achievement of over a half century of service in the development and growth of a dynamic industry.

As Members of that august body which makes a bit of history every day, it is with great pride and deep respect that we salute this man who contributes to the first draft of history every day.

COMMUNITY AFFAIRS ATTRACT ENGINEERS

HON. EMILIO Q. DADDARIO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. DADDARIO. Mr. Speaker, the professional engineer is often thought of as a man buried over his drawing board, blind to the problems of society all around him. Until recently, in too many instances, this has been true. Now, however, we can begin to see encouraging signs of a change in outlook, an awakening by engineers to their social responsibilities. The National Society of Professional Engineers is playing a key role in this most important development.

With the deliberate intent of stimulating engineers to greater community involvement, the NSPE has selected six of its 500 chapters to launch pilot projects focusing on problems of their own choice. The Hartford County Chapter of the Connecticut Society of Professional Engineers is, I am proud to say, one of the six.

Their activity, I think, is one of unusual interest that could well serve as a pattern for adoption in many other cities. In brief, they have undertaken, in cooperation with mechanical engineering students at the University of Hart-

ford, to provide the children of Hartford with a unique "teaching playground." Donating their skills and time, they are working toward a target date of June 1 for completion of this playground at a site selected by the Women's League Day-Care Center.

Not only will this playground meet a need which exists in so many of our cities for more places of wholesome recreation, it will serve the additional important purpose of allowing the playground directors to set up learning situations involving mechanical principles. Who knows, perhaps this playground will inspire some youngsters to enter the study of engineering, and help meet our Nation's needs in this field.

To provide more detail on this program, I insert in the RECORD a copy of an article which appeared in the Hartford Times:

PILOT PROJECT HERE: COMMUNITY AFFAIRS ATTRACT ENGINEERS

(By Robert W. Bounds, P.E., president, Hartford chapter, the Connecticut Society of Professional Engineers, Inc.)

The Hartford County Chapter of the Connecticut Society of Professional Engineers has been selected by the National Society of Professional Engineers as one of Six chapters throughout the country for their Community Involvement Pilot Project program.

The intent of the program is to involve professional engineers in community affairs. Other chapters selected are located in: Philadelphia; Miami; Madison, Wis.; Carson City, Nev., and Newark, N.J.

As envisioned, each of these chapters were to choose some local problem or situation on which they would focus their attention and talents. The knowledge of professional engineers must be utilized to aid in solving the problems that face society.

This attitude is being emphasized during Engineers Week, Feb. 16–22, with the national theme—"Engineering—Partner in Rebuilding Urban America."

The Hartford Chapter has set up a special committee to handle the Pilot Project which is headed by Professor Conrad Hemond Jr., P.E. of East Granby, Conn.

Last year the committee met regularly and studied a list of local situations which were selected due to their technical or pseudo-technical nature.

In October, 1968, the committee decided to concentrate the attention of the Chapter on a University of Hartford student design project called, "A Teaching Playground." The chapter efforts in the Pilot Project program will be to see through to completion, this spring, the construction of this unique instructional playground to be located in the north portion of Hartford.

The playground scheme is the result of several theses prepared by senior students of the University of Hartford, Mechanical Engineering Department.

The theses describe numerous playground contrivances which are designed to instruct children about physical principles and natural laws while they play. The theses were prepared by: Robert Gilbert of Middletown; Thomas Berg of Gales Ferry, Leo Frechette of West Hartford; Edward Markowski of Suffield; Theodore McCormack of East Hartford; Archi Roberts of Moosup; and Robert Cote of West Hartford.

The subject of the theses studies was the result of suggestions to the university concerning the need for play equipment which could illustrate fundamental physical principals. The suggestions were made by Mr. William Van der Does, director at the Women's League Day Care Center which is located in north Hartford.

Cooperation and support in connection with the playground project has been very encouraging. Representatives of various neighborhood groups have attended committee meetings. Mayor Uccello has been informed of the undertaking and indicated her approval.

The Park Department and the Department of Licenses and Inspections of the City of Hartford know of the plans and have made suggestions for their implementation. Various local engineering firms are cooperating on construction problems.

The local chapter of Associated General Contractors Inc., has indicated interest in discussing the construction phase of the project. The tentative completion date is May 15, 1969.

Other organizations have expressed interest in the playground installation. The Connecticut Valley Hospital has requested information for the construction of a playground for a group of 20 disturbed children.

The NSPE Community Involvement Pilot Project will not terminate when the six selected chapters have completed their particular projects. As planned, each chapter will prepare a report for NSPE consisting of a complete history, analysis and summary of the project.

These reports will be compiled into a handbook on Community Involvement which will be distributed to the over 400 NSPE chapters in the country.

These handbooks, it is hoped, will provide the chapters with a precise outline of six case histories which can be used as guides for the same types of programs in many other communities.

We in the Hartford Chapter realize that the engineering profession is guilty of remaining aloof to many of the ills of society. We hope the undertaking of this project, as limited as it is in scope, may be the turning point and the engineering profession will in fact become genuinely involved.

THE ABM DECISION

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. EILBERG. Mr. Speaker, based on the information which I have reviewed to date, I am inclined to oppose the appropriation of $7 billion for the construction of the Safeguard anti-ballistic-missile system that has been proposed by President Nixon. First, I believe these funds would be better spent in increasing assistance for elementary and secondary schools, for higher education loans and improved facilities, to fight crime, abate pollution, halt urban decay, and feed hungry Americans. Secondly, I do not believe this system is needed to protect us against any attack which the Communist Chinese could mount in the next 6 to 8 years. Third, I am not convinced that the Safeguard system will really improve the creditability of our deterrent vis-a-vis the Soviet Union. Lastly, I believe the decision to deploy this system will escalate the arms race at a time when it appears we can make some real progress toward curtailing this spiral.

As a Congressman, I know it is my duty to lead my constituents and not follow the opinion of a bare 51 percent. However, I do feel that each and every citizen has a substantial interest in whether the Safeguard system is deployed. This morning I read that some 63 percent of those surveyed recently support the President's action. While I personally am opposed to the system at this time, I feel that this issue is far too important to be decided on my own personal preferences. Therefore, I plan to survey my constituents in the Fourth Congressional District of Pennsylvania on this matter shortly before I make my final decision. I also plan to continue to seek out as many experts on both sides of my question as I can find. I urge all my colleagues to do the same. If our constituents overwhelmingly believe that the Safeguard system will improve the national security, certainly we cannot ignore their views when this matter is considered by the House.

THE 148TH ANNIVERSARY OF GREEK INDEPENDENCE

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. DERWINSKI. Mr. Speaker, 148 years ago, the brave people of Greece rose to wage a struggle for independence against the Ottoman Empire and their valiant efforts produced for them a Greece resurrected as an independent nation. The dedication of the people of Greece to their independence should properly be commemorated on the anniversary of their uprising against the Ottoman Turks.

The people of Greece today steadfastly maintain their independence and are being served by a government they overwhelmingly endorsed in a referendum last fall. In turn, the Greek Government is dedicated to improving the living standards to its own people and it continues to provide steadfast support to the NATO Alliance. It can be said without fear of contradiction that no nation surpasses Greece in its cooperation with NATO.

Historically, the people of the United States and Greece have maintained a truly great friendship. The Greeks remember the support that American citizens gave to them in their battles for independence. This historic association is augmented by the close association that Americans of Greek origin maintain with the land of their forebearers.

Therefore, cooperation between Greece and the United States is consistent with the close historic association of the two nations.

As we note the growing pressure being exerted in the Middle East by the Soviet Union and recognize that Communist belligerence on many fronts, we should remember that Greece is bordered by three Communist-ruled countries. Therefore, people of Greece stand in the forefront of the free world struggle against Red tyranny just as they have persevered against oppressors of their nationalism in other historic eras.

Mr. Speaker, we commemorate this occasion and take the opportunity to express friendship, respect, and continued interest in the historic alliance between the people of Greece and of the United States and their respective governments.

THE TAKEN-FOR-GRANTED AIR CONTROLLERS

HON. WILLIAM E. MINSHALL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. MINSHALL. Mr. Speaker, as ranking minority member of the Subcommittee on Department of Transportation Appropriations, I am always mindful of the millions of air travelers who rely on the alertness, skill, and fitness of the air controller who quite literally holds their lives in his hands.

As a private pilot, I am well aware of the magnificent job our air controllers are doing, often under the most adverse conditions. Yet it comes as a surprise to me that the general public, even those who make frequent use of commercial airlines, is so uninformed and unaware of the tremendous importance of the air controller, to their safe flights.

The following article from Business & Commercial Aviation magazine does not exaggerate the righteous discontent of our taken-for-granted air controllers and the conditions under which they currently are working:

THE ANGRY MEN OF ATC

(By James Holahan)

To most pilots, the air traffic controller is a detached voice, reassuring, authoritative, helpful, essential—the voice that makes our massive inertia-laden air traffic control system play as intended.

There are times we goof a bit and we can detect a tinge of sarcasm in the voice of air traffic control. Like when we stray a couple of miles off the center of the airway. There may be a time when we goof royally and we hope that beyond that voice is a forgiving heart and no violation will be filed. And there are times when we can detect a note of sincere friendliness—particularly at night when things aren't so busy and we are about the only plane up there in that great big sky. We exchange simple amenities as we are handed over to the next sector. We'd really like to say more but the rigid code of radio discipline forbids it. "Thanks a lot for the help." "How do you like your job?" "Married?" "Got any kids?". "How did you get into this crazy business anyway.

Though we seldom stop to realize it, at times there is a certain amount of humanism mixed in with the modulations that travel from the guys in the cockpit to the guys behind the scope and mikes. Hot cathodes or P-N junctions can't detect it, nor would it show up on an oscilloscope, but it's there.

But what do we know about the source of that voice on the other end of the radio wave? What type of guy is he? What's his background? What does he have to know to do his job?

Few of us, even if the questions had occurred, have ever bothered to find the answers. This guy is part of the system. A faceless entity. Despite the traces of humanism that the electronics couldn't filter out, we took him for granted. That is we used to, until one day last summer. He stood up tall and said "Damn, it I'm tired of glueing this creaky old system together with psyche, sweat and blood—now I'm going to play this game exactly according to the words written in the rule book.

He did. And traffic slowed down from Los Angeles to New York just as if someone had filled the Olympic pool with Karo syrup during the 200-meter butterfly. Suddenly this air traffic controller stepped into the spotlight. He had a face, and it was scowling.

He was telling us and the public at large that he had been neglected for too long. He felt he was overworked, underpaid, underappreciated and misunderstood. Besides, he told anyone who would listen, he had lousy equipment to work with. If air traffic kept burgeoning and he didn't get more help in the form of more men and women, reliable equipment, the summer of 1968 was going to last all year—every year.

The public and the pilots got to know the man of air traffic control—quickly. The public became aware that pilots did not fly airplanes all alone. Pilots knew this but they sometimes forgot, and this sudden self-identification jogged their memories.

Well then, who is the air traffic controller? Why is he angry?

To begin with there's 9341 of him—that is, non-supervisory-level men behind mikes and/or radar. He works in control towers, IFR rooms (which are at major airports) and air traffic control centers.

If he works in the center, his average age is 37. If he works in a control tower or IFR room, his average age is 34. Ninety percent of all controllers are between 28 and 40.

Very likely he came from the military, where he learned air traffic control or was a pilot, navigator or flying radar officer.

He's a civil service employee but doesn't like it because he's lumped in with a lot of job types requiring less skill, and the Byzantine civil service regs are forced to cover all with little differentiation. If he's a journeyman controller on the scopes, he's a GS–12 (civil service rating) and could make from $12,174 to $15,828 for a 40-hr. work-week year depending upon which one of the ten salary levels he is at within that grade. With extra pay for nightwork, Sundays and holidays, he might make about $1700 more per year. If he worked a six-day week or ten hours per day for five, his yearly salary could top $20,000.

Now if our journeyman radar controller is in one of those locations handling more than a million traffic movements annually, his grade jumps a step to GS–13 which encompasses a $14,409 to $18,729 per year spread. With night, etc., extras and overtime he could hit in the $25,000 neighborhood.

Not a bad neighborhood to be in, would say many a business pilot who has been mooging around in a twin-tailed Beech for a stipend much below twenty grand without the niceties of 26 paid vacation days and the retirement benefits afforded by Uncle Sam.

The controller starts between $5000 and $7000 per year. He attains journeyman status (GS–10 to 12 if in a control tower, GS–12, 13 if on radar in a center or IFR room—in about 3½ to 5 years. It takes him several years to go from the first pay step in a grade to the top (tenth).

While many controllers are content, particularly if they are in light-to-medium traffic locations, a good deal of them are not. Most of the dissatisfied ones are in the major terminals in the N.Y., Chicago, Washington golden triangle section of the country where the traffic is the heaviest. Their dissatisfaction seems to stem from their steady diet of long, unrelieved hours "at the boards," shift work, mounting workloads without a commensurate expansion of the work force, obsolete equipment, necessity to train men on the job, dissatisfaction with remuneration and, in some cases, difficulty with supervisors and lack of communications through the labyrinthian FAA chain of command. The voice of the air traffic controller which is listened to and obeyed over the airways and airports of the land is, they say, muffled and largely ignored on intra-FAA channels.

To strengthen and amplify that voice, many of them have joined the new Professional Air Traffic Controllers Association, PATCO, formed in the New York area in February, 1968. The organization was the idea of two GS–12 controllers in the New York Center, Mike Rock and John Maher, ages 31 and 35 respectively. Rock is the association's full-time chairman and Maher its national coordinator. They conceived the plan for the group in the fall of 1967. Both had been chapter presidents of the National Government Employees Association, NAGE, which is a union of all types of government employees. They were entirely dissatisfied with what NAGE was doing for air traffic controllers and decided another organization—composed only of active controllers—was needed.

Originally, the thought was to have such an organization for New York only. The two founders searched for a "name" lawyer to help them and ultimately contacted noted criminal lawyer F. Lee Bailey after reading about his flying activities. Bailey not only gave them valuable preliminary advice but he also went so far as to put his Learjet at their disposal, loaned them money and took, at no remuneration, the post of executive director. They decided to make it a national association.

With the drive supplied by Rock, Maher and a nucleus of some 200 controllers in the N.Y. Center and JFK, supplemented by the push of Lee Bailey, PATCO grew to its present strength of some 6250 non-supervisory active controllers who are dues-paying ($150 per year) members. "We're still getting in twenty to thirty new members a week," says Mike Rock who adds "We're the only association that speaks for the rank and file controller. Supervisors are permitted to join but only as associate members and these do not have a vote."

According to Rock, NAGE numbers only 2475 controllers and the only other controller group (The Air Traffic Controllers Association, ATCA) has 2350 members on its rolls. (A check with ATCA finds that the association claims over 4000 members, many of whom are supervisory people and a few hundred are military controllers. It says the 2350 figure cited by PATCO is the number of members who pay dues by the FAA dues checkoff plan.)

Rock and Maher told B/CA that air traffic control is decidedly a young man's game. "A controller in a busy center or terminal reaches his prime in his early thirties and starts going downhill fast when he passes 40. In his mid-fifties he's burned out as a controller in a high density location," says Maher. He claims that there are many "burned out" controllers now behind busy scopes and they may take 20 seconds to do what they used to do in five. He says that the shortcomings of these men are covered up by some of the younger controllers and that during critical periods supervisors relieve the over-the-hill types from the scopes and put them on less demanding positions. PATCO strongly favors early retirement for controllers and a six-month recheck (right now there are no rechecks unless a man is found deficient by a supervisor). PATCO, however, doesn't seek mandatory retirement; it feels that when a man starts losing his speed and confidence (another thing he loses in the forties, Rock and Maher maintain) he should be switched to a light-to-medium traffic location.

Rock relates that it is not unusual during peak periods in the New York area to have men at the boards continuously for eight to ten hours without a break. Lunch, he says,

even has to be eaten at the position. Some men will have only soup and coffee since chewing food will not be conducive to intelligible communications.

"Sure," admit a number of FAA supervisors who were formerly controllers, "we put in stretches as long as twelve hours in control positions (now the maximum is ten) too. But this was not a steady thing. We had plenty of days when the workload was light. It isn't a regular thing today, either."

"They're forgetting that airlines file IFR now regardless of the weather," the working controllers will counter. "The man behind the scope sees targets. They are the same in fair or foul weather and in New York, Chicago, Washington, Los Angeles, they're always crowded in peak hours."

However, with a little probing, you will find that bad weather days are the worst because everyone flying has to be on an IFR plan and the pipelines are saturated, so there are more airplanes that must be handled in a given period.

There was a freeze put on training new controllers in 1963. Only recently has FAA, thanks to the heat generated by controller groups that was felt by Congress, was there a thaw, Congress has now provided funds for the training of 2400 new controllers and the FAA has re-opened its controller school at its Oklahoma City Center.

During the freeze, air traffic just about doubled; controllers had to handle almost twice the traffic with the same work force.

"We did it by cutting lots of corners," says Rock, "and staying on this ragged edge of minimums." He seems to imply that controllers stuck out their necks to expedite traffic by such practices as using less than the mandatory three-mile separation demanded "by the book" [i.e. FAA ATC regs] when within 40 miles of a terminal, by clearing planes to land before a plane on the runway has actually turned off, by handling too many airplanes at one time.

Shortly after PATCO was formed came the now historic "safety program" which many claim, but cannot prove, was a euphemism for an intentional slowdown to put PATCO in the public eye and lend strength to its demands. As told by PATCO, "Our policy is simply this: Follow FAA regs to the letter; give every airplane the separation its pilot has the right to expect, and stop cutting corners."

Whether, as some say, minimum separations were stretched beyond that needed for safety and other delays were deliberately introduced into the system, or the controllers just stopped sticking their necks out and making up for the lack of manpower, equipment, airfield capacity, etc., no one but the men at the boards may ever know for sure, but during May to September, 1968, air traffic operated in low gear. Delays in New York were felt in Los Angeles. Some flights suffered delays of two and three hours. Others were diverted to fields a couple of hundred miles away. Passengers lost time, airlines lost millions of dollars.

FAA officially never admitted that it found any rule infractions during the "safety program," though it sent inspection teams to critical locations. In a few instances controllers were removed from their positions by supervisors for allowing too much separation, and in one case, one was reported for not maintaining sufficient separation. In no case was punitive action taken.

In November, 1968, the Acting Administrator sent a telegram to all regional directors in the field which was a masterpiece of indecision. It started out by referring to recent newspaper articles saying that PATCO was advocating a slowdown. After emphasizing FAA would not tolerate a slowdown or compromise of safety, it quoted PATCO's executive director Herman Meyer (Bailey relinquished this job and remained as legal counsel) as saying just what he would be expected to say, i.e., "We would not condone our members engaging in a deliberate slowdown," etc. Thomas concluded with how inquiries from the public should be answered.

If indeed there was a slowdown, the controllers had boxed FAA into a trap where it could never admit publicly that it knew (as many claim) corners were being cut and infractions to the letters of the rules had been going on for some time to make the system play. To do so would have opened it up to all sorts of libel suits and some heads in the executive suites of 800 Independence Avenue might have rolled. It would have taken a much stronger and better—politically—entrenched man to deal sternly with the situation. Dave Thomas, a career FAA man and only acting administrator didn't have the strength and, apparently wasn't inclined to take forceful action—assuming such was warranted. It was his Bay of Pigs and he suffered through until the normal traffic drop in winter.

During the rise of PATCO, ATCA began to become more vociferous. Formed in 1956 and long regarded as a very ethical and professional association more concerned with making better and more knowledgeable controllers than higher remunerated ones, ATCA lost members in droves to PATCO. The latter accused ATCA of being management dominated (many of its members are supervisors; how many, it claims it doesn't know) and of always having as its executive director a retired chief from FAA's air traffic service. It said this association was too much a part of management to fight for the journeymen controllers. While strongly denied by ATCA, many people in FAA headquarters confidentially agreed that this is true.

But ATCA is out to change this belief. A year ago it hired the public relations firm of Ruder & Finn (the same one recently hired by the State of Israel to bolster its image in the U.S.) to publicize that it is a viable spokesman for the controller. It recently has made battle with FAA on the matter of overtime pay. Top graded controllers only recently were awarded time-and-a-half for overtime. However, in many locations funds ran out and men could be paid only in compensatory time on a one-for-one basis—one hour off for each hour worked overtime. ATCA is out to insure that in all instances there will be sufficient funds to pay overtime and in no case substitute comp time.

B/CA talked to Jerry Biron, newly appointed head of the manpower section of FAA's air traffic service. Biron admits that during prolonged periods of bad weather controllers are overworked but, he says, "the only way to eliminate this is to staff for peak periods. This would result in overstaffing most of the time. With the present scarcity of controllers, we don't see how this would be feasible, or even possible."

Biron blames the situation on everyone's underestimation of the growth of aviation. "Admittedly we don't have as many controllers as we need, nor do we have enough airports," Biron told B/CA. He thinks flow control will help, although he points out we always have had flow control. "Now we're refining it, trying to predict delays so that those that occur, occur to people while on the ground."

The ATS manpower chief thinks one reason for frustration of some controllers is that there are not many management slots open to them. Also, he points out, top salaried GS–12 and –13 controllers would have to take a cut in pay to step into management and few want to do that.

Biron disagrees that controllers are burned out at 40. "Look at the lunar astronauts," he argues. "Borman is 41. These men are performing far more demanding tasks than any air traffic controller."

B/CA discussed the situation with a number of airline and corporate pilots. The general feeling is one of sympathy and empathy with the controllers. However, many feel that PATCO has instigated them, convinced them that they should be unhappy. Many think it ridiculous, even demeaning to include such entertainment-world figures as Arthur Godfrey, Arnie Palmer, Johnny Carson, and Susan Oliver among PATCO's trustees.

To this replies Mike Rock, "Who would come five miles to hear Mike Rock or Joe Schmo? Big names attract people. Controllers are individuals. They're not easily persuaded to go listen to other controllers."

Few outsiders, however, deny that F. Lee Bailey's liaison with PATCO is fortuitous for its growth. Says NBAA's ATC coordinator John Woods, "Bailey's so brilliant that he frightens everyone. He's spectacular. He keeps pushing and doing things."

Said one corporate pilot, "The guy has already moved mountains. He's done things that never could have been done without such a strong personality."

Others are suspicious. They wonder about the role of this man who saved the Boston Strangler from death row, who freed Sam Sheppard and who, because of pre-trial actions, was barred from representing another accused murderer in New Jersey. Some respect him, fear him and believe (even hope) he'll fall on his face.

However, there's no doubt that Bailey is strong, spectacular and gifted with almost relentless drive. Articulate and one of the most eloquent speakers in general aviation since Jeeb Halaby left for the Pan Am presidency, Bailey has Halaby's gift for impressing his listeners more for his form than substance. A short (about five-foot-six), well-built man with a modish touch of slightly long sideburns and a seeming preference for deep-colored shirts, ex-Marine pilot Bailey is slightly slow to smile and supposed to have an I.Q. of 170. The almost permanent furrows in his forehead and greying hair make him look older than his 35 years.

You don't have to talk to him long to realize that he is immersed in every phase of PATCO and, though a pilot and not a controller, he impresses with his understanding of air traffic control and controller problems. Frank and a realist, he will tell you that there are a lot of controllers who are content and apparently have no gripes, that the most angry spots are New York and Chicago, that some supervisors tend to push the controllers around, that the courts has established that a controller must exercise judgment in excess of the written regulations, that ATCA is not the type of organization that could represent controllers since "it just doesn't want to rock the boat," that his Learjet is great but "costs like Hell."

Bailey has his hopes set on a bill drawn up by Senators Hartke, McIntyre and others, that was introduced this month in Congress. The bill would take the controller out of civil service and form a separate career field established by federal law with certain requirements, training, progression, voluntary early retirement, and normal salaries between $17,000 and $25,000. Eventually, he would like to close the salary gap between airline pilot and controller.

Bailey also talks of unifying all the heterogeneous groups of civil aviation. Despite all the well-known obstacles and conflicting goals of many factions with the G.A. fold, Bailey, either out of naivete or Napoleonic confidence, thinks it can be done. Although he did not say it, it would be difficult to imagine him thinking of himself in a secondary role to say Tipton, Hartranft, Ruby or Ward in such a unification. He has already developed an excellent rapport with the Airline Pilots Association and currently is working out joint safe separation standards with that group. He is looking for similar rapport with AOPA and NBAA.

While he is fighting for recognition and betterment of the lot of his controllers and

probing into general aviation, one wonders how he is able to keep up with his practice of criminal law which evidently pays the bills for his activities, including a Learjet (and pilot), flight school outside of Boston and, recently, part interest in the Brantly helicopter redesign and remanufacturing. One might ask "What is he looking for in aviation?" He probably couldn't afford to take a government post, nor could the industry pay him for fulltime services.

The somewhat enigmatic Lee Bailey notwithstanding, the important thing is that the collective voice of thousands of air traffic controllers has spoken. It speaks harshly and carries a big stick. While we all might not agree with all that it is saying, none of us can help listening.

ANNUAL INCOME OF JOURNEYMEN AIR TRAFFIC CONTROLLERS IN CENTERS AND IFR ROOMS ON RADARSCOPES

	Civil service grade [1]			
	GS-12		GS-13	
	Bottom of grade	Top of grade	Bottom of grade	Top of grade
Normal 40 hr. week	$12,174	$15,828	$14,409	$18,729
With premiums for nights, Sundays and holidays [2]	13,502	17,557	15,981	20,774
6-day (48 hr.) week with premiums	17,150	22,304	20,303	25,711

[1] Journeymen controllers are GS-13's in 13 designated busiest locations.
[2] Air Traffic Service estimates that a man would reasonably work 40 Sundays and 8 holidays in a year and that 40 percent of his work would be at night. (Reason is that controller's workweek begins on different day each week and he rotates among 1st, 2d, and 3d shifts.)

CHARLES D. ROCHE

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. ROONEY of New York. Mr. Speaker, Charles D. Roche, adviser on congressional relations to both Presidents Kennedy and Johnson, has recently returned to the ranks of private enterprise. Chuck, a newsman and editor from Boston, joined the staff of the late President Kennedy in time for the 1960 campaign. Following the election that year he came to Washington as a vice president of the Democratic National Committee and soon after joined the White House staff. While serving as congressional relations adviser, Chuck played a vital part in some of the most important and progressive legislation this Nation has ever seen. His competence and guidance were always welcome just as his loyalty and integrity were always appreciated. Chuck Roche was a good friend to many of us and while we will miss him we wish him, his lovely wife and children the best of luck in the days to come.

I AM GIVEN TO USE AND BE USED FOR YOUR MINISTRY

HON. ELFORD A. CEDERBERG

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. CEDERBERG. Mr. Speaker, the 10th Congressional District of Michigan is proud to welcome a distinguished leader of the Catholic Church, Bishop Francis F. Reh, to govern the Diocese of Saginaw of which it is a part. Congressman JAMES HARVEY of Michigan's Eighth Congressional District, which also includes a substantial portion of the diocese, joins me in this welcome and in wishing the new bishop of Saginaw every success in his ministry.

At his installation, Bishop Reh witnessed to the dedication which he brings to the diocese and its people, and to the faith and hope which are so necessary in these difficult times. Congressman HARVEY and I commend Bishop Reh's remarks to the attention of our colleagues as worthy of their most serious consideration as they face the problems of our Nation here in the Congress:

I AM GIVEN TO USE AND BE USED FOR YOUR MINISTRY

(Text of Bishop Francis F. Reh's homily at his Mass of Installation as third Bishop of Saginaw)

Through the Liturgy of this Ember Wednesday in Lent, my esteemed and beloved fellow-bishops and priests, state and city officials, religious, fellow-ministers of religion, and laity, through the Liturgy of this Ember Wednesday, the Christian community throughout the world professes its faith and expresses its hope in a particular way.

In the Entrance Hymn we raise to the Lord a trusting prayer of hope, founded on faith, as the author of Psalm 24 (25) did raise his prayer when in danger.

"To you I lift up my soul, O Lord. My God, in you I trust; let me not be put to shame, let not my enemies exult over me." (Psalm 24 (25) : 1–2)

In our times of problems and tribulations, of perplexities and troubles, of uncertainties and distress, of insecurity and also danger, this liturgy begins in the same spirit of faith and hope of the psalmist,

"Look toward me and have pity on me, for I am alone and afflicted. Relieve the troubles of my heart, and bring me out of my distress." (Psalm 24 (25) : 16–17)

"Redeem Israel, O God, from all its distress." (Psalm 24 (25) :22)

Then in the readings the Church sets before us examples of these virtues of faith and hope and also of the providence of God.

The first reading (Exodus 24: 12–18) relates that after trials in Egypt and during the hazardous journey in the desert, Israel's faith and hope in Yahweh—a faith and a hope weak indeed, but bolstered by Moses—are rewarded.

The covenant is ratified on Sinai. The House of Jacob, the sons of Israel, are given the sublime destiny of becoming God's own people, a kingdom of priests, a consecrated nation. (Exodus, 19: 5–6)

The first Book of Kings (19:3–8) provides us with our second reading. It is an obvious example of God's providence as reason for faith and hope. At the point of despair for his life, Elijah is fed and strengthened by an angel of the Lord.

He escapes the hand of the wicked Jezabel, who sought to destroy him. And in the first portion of the Gospel reading, St. Matthew recounts Jesus' rebuff to those who looked for an on-the-spot miracle as proof of His authority.

He promised the one sign upon which hinge all Christian faith and hope, the sign of Jonah-His resurrection from the dead.

For, as St. Paul teaches, ... "If Christ has not been raised then our preaching is useless and your believing is useless; . . . ." (1 Cor. 15:14) "But," writes Paul, "Christ has in fact been raised from the dead, the first-fruits of all who have fallen asleep." (Ibid., 20) "just as all men die in Adam, so all men will be brought to life in Christ. . . ." (Ibid., 22).

The foundation stone of all Christian faith and hope, the ultimate proof of our own resurrection in Christ, the reason for our hope!

Last year my brother bishops of the United States issued a collective pastoral letter on the mystery of the Church, on her nature and function in the light of certain problems of the hour.

It was my edification, my benefit, to adopt as my own such words with which that pastoral was introduced to our Church in America:

"As the years of the Council progressed, we became more aware of the magnitude of the agony and the loftiness of the aspirations which identify this mighty century.

"We experienced anew our need to carry the cross of the human condition, to trust more deeply in the never-failing presence of the Spirit, to affirm hope even when many would counsel despair, and to wait, in all our distress, the fulfillment of Christ's Easter promise. . .

"We pray that God, our Father, who keeps alive in us a sense of inadequacy, may give us the courage to bring to fruition the work of the Council which begins and ends with confidence in one another and with faith in Him."

Do not such words echo, among the problems of our days, the humble faith and hope of today's liturgy and of the psalmist's prayer in time of danger?

In the community of the Church, St. Paul teaches us that not only are we members to form one body and even as parts of it to belong to each other, but also—marvel of mysteries—that we form one body in union with Christ (Romans, 12:5). We are more than ourselves. Together we are Christ's body. (1 Cor. 12:27)

The Church is Christ's body, and we are its living parts. (Eph., 5:30) That Christ in His members, the Church, suffer crucifixion—now from without, now from within—is ordained as the course of salvation. But it is never crucifixion without the certain faith and the firm hope of resurrection in Him.

It is in this faith and in this hope that I come to you, the community which is the Church, the Diocese of Saginaw. The local church, a diocese as is this of Saginaw, is fashioned after the model of the universal Church, as we are taught by Vatican Council II.

The universal Church comes from, and is in, the local churches. Without the local church, there is no universal, no catholic church. (Constitution on the Church, 23) Yet no local church can isolate itself from the world-wide mission of Christ and His Church, whose limits are none.

The college of bishops with the Holy Father are the gifts of the Spirit to the universal Church for her unity in faith, in hope and in love. By ordination in episcopal orders and by mission of His Holiness, I am now given to you, the people of God in Saginaw Diocese as your bishop.

I do not, of course, mean that, in a colloquial sense, I am God's gift to Saginaw. Rather am I given to you as yours to use and to be used for your ministry, for your service.

I am given to you as your shepherd and leader, but as shepherd who must be willing to give his life for his sheep, as leader who will not ask his followers to go where he will not go himself.

I am given to you, may I say, by the Spirit, so that in the Spirit I may be the sign and the assembly point of your unity in faith and hope and love in Christ.

Credam Firmius!—that I may believe more strongly! It is the motto of my coat of arms. This may seem to some to be outdated heraldry, more regal than sacerdotal for a bishop.

I would find it of little interest to argue the case, for or against. But for me those words have been more prayer than motto. They are part of a prayer of Pope Clement XI.

"Lord, I believe; may I believe more strongly!

"Lord, I hope; may I hope more confidently!

"Lord, I love; may I love more ardently!"

It is my prayer today as I come in joy to have you as my lot, my portion, my life in Christ! It is my prayer in the spirit of this Lenten Ember Liturgy, of the faith and hope of Moses and the children of Israel, of trust in the Providence who renewed the covenant and saved Elijah, of faith and hope in the sign of Jonah.

It is my prayer in the spirit of my brother bishops of the American Hierarchy, of their expressed faith and trust in the never-failing presence of the Spirit and in the fulfillment of Christ's Easter promise.

Will it not also be our prayer, your prayer and my prayer in Christ, and so the prayer of the Church of Saginaw?

Since that great Council Vatican II, the spirit of evil has been busy with his minions. He saw and feared and hated that Council's thrust to renewal of Christian witness to the world. And so he has sown his weeds of confusion to overshadow clarity, his cockle of division and suspicion to dwarf unity and understanding; his evil seed of anger to stunt true zeal; his thorns of doubt and skepticism to stifle faith and hope.

If there can be degrees of ease or of difficulty in believing, it seems more easy to believe in the devil today. One can almost see his tactics, sense his presence, detect his stench.

These are times of trial for our country and for the world of men. Fear, insecurity, distrust and violence are more bed-fellows than strangers to us.

It will be the strength of our faith and the solidity of our hope which, in such times, will give true service to God and to our Church, to our country and to all our fellow-children of God in Saginaw, in America and throughout the world.

This witness of strong faith and solid hope will be our service of love to mankind in its present time of trial.

A long time ago we were exhorted by St. Paul never to surrender our precious heritage of faith and hope. In drawing to a close his first letter to the Church he had established at Corinth, he wrote at length on the fact of Christ's Resurrection, witnessed by the apostles, as the foundation of our faith and the decisive proof of our future resurrection in Him.

Paul was writing, it is true, with the particular problems and troubles of his Corinthians in mind. But can we say that the inspired words of Holy Scripture were intended by the Holy Spirit for but one time or one people? And so, cannot the conclusion of the fifteenth chapter of Paul's letter serve us also today as both a beautiful and powerful exhortation to faith, hope and perseverance?

"Never give in, then, my dear brothers, never admit defeat; keep on working at the Lord's work always, knowing that, in the Lord, you cannot be laboring in vain." (1 Cor. 15:58)

THE LUMBER PRICE CRISIS: A LETTER TO THE PRESIDENT

HON. WENDELL WYATT

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. WYATT. Mr. Speaker, one of the successful and prominent lumbermen in my home State of Oregon is Mr. Grover B. Kelsay, of Jasper, Oreg.

Mr. Kelsay has had a truly remarkable Horatio Alger career. He knows why we have such high lumber and plywood prices, and he knows what the solution is and is not afraid to announce it. He recently wrote a letter to President Nixon, and has consented to having a copy of it placed in the CONGRESSIONAL RECORD. I am certain it will be of great interest to my friends in Congress who are concerned about the high price of lumber and plywood:

HILLS CREEK LUMBER CO.,
Jasper, Oreg., March 4, 1969.

Hon. RICHARD M. NIXON,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: For many years, I have had a dim view of politicians! One of my oft-repeated statements is "what this country needs are more statesmen . . . and less politicians!"

I have been a most ardent supporter of you for many years. I was appalled when you were defeated in the 1960 election, and have been dismayed by the two presidents' administrations in the interim period.

Despite the sniping and the carping of your critics, I have felt you have achieved your office with the best training and most qualifications for the presidency than any man of this century. So—you would have to say I'm an admirer of yours, and I feel our nation is in the most capable hands available at this very moment.

Your acceptance speech for the nomination to the presidency was outstanding in many respects, but particularly impressed me with your "dreams" for this nation, and brought home to me the realization we all are brothers under the skin; that we all have dreams and aspirations, and that we all can achieve most of those desires if we want them strongly enough.

During your years of public life, you have impressed me with your apparent sincerity of purpose; that you do so want to do the *right* things for this nation; and I do believe in you, so foolish as it may seem, I'm writing to you, personally, on the thought that you are the common denominator we seek in our nation; that you are a man of the people; that you will, indeed, read my letter, even though it has not come through "channels" . . .

You see, Mr. President, I have tried many times in the past few years to go through political channels with plans of importance for my industry and region . . . and great reams of gobbledygook and no results has been my reward. I can't reach someone with the power of decisions.

I'm a lumberman—a success story not dissimilar to your "dream". My old boss and later partner ran a kid baseball team on which I played when 15 years old, took a liking to me, steered me through college, and hired me when I was graduated. I came to work for him as his bookkeeper in May, 1938; and here I am almost 31 years later, same company, same office . . . except now I'm a partner and general manager of the firm! My old boss has long since retired, though he lives nearby and is one of my dearest friends, and I have his job . . . all worked out and my ownership paid for out of earnings at this company.

All I needed was the opportunity; and that was given me by a man who believed in me; as I *believe* in you.

So—to the crux of this letter—I'm a lumberman, and a pretty good one, at least by reputation and accomplishment.

I *know* what this government should do in our timbered region, and I know that it will be done eventually; but I'm afraid your administration will be too long in finding out to avoid many pit-falls and countless *billions* of dollars wasted needlessly. The timing of this necessary decision is NOW!

Grandiose statement, you say? Well no, sir, it's absolutely true. The government owns 70% of the timber and timber growing regions in our western states, and has managed them decently up to recent years.

Now, however, great advances have been made in forest genetics—better seeds, better, faster growing trees, fertilization techniques, and many other things that will improve and enhance the tree growing productivity of the region.

Our federal forests are managed—and properly—on a sustained yield basis, but improvements of the past decade dictate a sharply upward curve in the potential allowable annual cut or harvest of our forest resource, and our agencies are not yet with it. The timing is now!

You, sir, cannot be unaware of the sharp prices upward this past year in plywood and lumber. Homebuilders are being shot down in their plans, for prices have skyrocketed on materials they use. The National Ass'n of Home Builders are perturbed, and indeed incensed.

Your administration has within it the power to right this situation, without expense to our taxpayers, and those odds I like.

Ed Cliff is head of our national forest service. He made a major speech two months ago in which he clearly stated the allowable cut on the national forests could be increased by up to 66% annually, if he had the necessary money appropriations through Congress to do the work necessary in the field.

"Ah ha!", you say, "money it takes". No, Mr. President, for every dollar it will take to expand the cut, 2, 3, or 4 dollars will almost immediately return to the national treasury, and those odds I like!

Certainly, if we can budget 500 million more dollars a year, with positive assurance that it will return 1 billion or more each year, there is some way to do it quickly. I'd dearly love to be in Congress with such a voting opportunity. If you will put your influence behind such a concept, I'm sure success will follow.

Plywood prices are up 140% this past year; lumber prices are up 60% or so; and the home buyer and other users of our products are the ultimate victims. Many markets historic to wood will be lost forever to steel, concrete, plastics, etc.

It has been carefully estimated by home builders that, for every 10% increase in lumber and plywood prices, 1% is added to the price of a home. If this figure be accepted and I believe it to be accurate, then as of today as against prices prevailing one year ago, homes will cost 10% more because of lumber-plywood price increases just in this last year alone.

Projecting further, 1,600,000 homes @ $22,000.00 each today as against $20,000.00 each one year ago . . . represents $3,200,000,000.00 the home buyer must pungle up extra in one year to pay for double the price of plywood and lumber in his home.

Frankly, Mr. President, the price last year was too low—the price this year is too high—surely we can manage our economy to whatever extent be necessary to avoid 100% price increase in one year.

The *only* possible, practical, substantial step that can be taken now to reduce the chaos in our industry, I do most sincerely believe, is the one I have suggested. Please, Mr. President, will you give your most earnest supporting consideration to follow through on my suggestion? To outline at once some bill for the consideration of the Congress to appropriate the extra funds so necessary to implement the full potentially allowable cut of our National Forests per Ed Cliff's up to 66% overage of that cut now officially in existence today. That would be statesmanship of the highest order . . .

Thanking you for your patience to have read this letter to its conclusion; and hoping you are, indeed, a man of and for the people, as I believe you to be, I am

Sincerely yours,

GROVER B. KELSAY,
Partner, Hills Creek Lumber Co.

BYELORUSSIAN INDEPENDENCE DAY

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. DINGELL. Mr. Speaker, until World War II, Byelorussians were among the less known of the many peoples living under the yoke of Soviet communism. We had heard of the Ukrainians, of the Baltic peoples, of peoples in the Caucasus, and even of those in distant Asiatic areas, but one seldom heard of the Byelorussians, and this despite the fact that as an ethnic group they are more numerous than any of the groups named above. As a matter of fact, the 10 million Byelorussians constitute the third largest ethnic group in the Soviet Union. These people with their long history had lived in the area southeast of the Baltic countries, between Poland and Moscow, through the Middle Ages. Early in modern times their country was annexed to Russia and so it remained until, briefly, they regained their freedom in 1918.

Throughout their subjection to Russia's czars, Byelorussians managed to retain their national traits and traditions, and succeeded in keeping alive their national sentiments. After the czarist regime was overthrown late in 1917, it was a natural thing for the Byelorussians to proclaim their independence. They did so on March 25, 1918. They set up their own government and—for a tragically short time—were masters of their own destiny. Within less than a year, the Red Army overran the country, and independent Byelorussians ceased to exist.

Since then, for more than 50 years, these people have suffered under Communist domination. They have found it impossible to reconcile themselves to the Communist regime imposed upon them. Neither they in their hearts, nor in any sense, the Byelorussians living abroad, have recognized the Soviet rule over their homeland. On the 51st anniversary observance of Byelorussians Independence Day let us hope that they will attain their freedom once more and live in peace in their homeland.

A QUICK LOOK AT THE WORLD AS IF THROUGH IRISH EYES

HON. JONATHAN B. BINGHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. BINGHAM. Mr. Speaker, on March 17, our new colleague from Missouri, Mr. SYMINGTON, not only put on a green tie and made a St. Patrick's Day speech, as we all did, but took a quick look at the world as if through Irish eyes. Although he does not claim to have Irish blood, the former Ambassador and Chief of Protocol has a gift of wit that is very Irish indeed. His remarks provide a devastating commentary on some all too prevalent American attitudes.

It is with a sense of privilege that I insert herewith a St. Patrick's Day address delivered at St. Louis University by Congressman JAMES W. SYMINGTON:

ST. PATRICK'S DAY ADDRESS BY CONGRESSMAN JAMES W. SYMINGTON DELIVERED AT ST. LOUIS UNIVERSITY, MARCH 17, 1969

What does it mean to be Irish? Since we are all Irish today we have the right, even the duty, to ask. And we have a choice. To be Irish means to be passionate or thoughtful, fierce or gentle, sober or . . . refreshed. Yet, never anything but proud—with unbridled imaginations and undaunted dreams. The Irish believe, among other things, in life after birth.

Over the rest of the world "things are in the saddle and ride mankind." This was never so in Ireland. The Irish soul has slipped the halter of history for 2000 years. It is the leprechaun that can't be caught; the lilting laughter that moves with the mist and moonlight quietly over the land, soothing the hurt places and softening the soil for renewal.

Wear the green she tells us. The great thing about green is it goes with brown and black as well as white.

The great thing about Ireland is its emerald message to the world that all things can grow green again, if we would let them; that men's minds can sprout green thoughts, nations green hopes, and the world the green promise of peace.

It has been a bare two months since a new American administration took office, and a new President voiced in his inaugural address the determination to "open doors," and "keep no nation large or small in angry isolation." What large nation—in addition to our own—I thought, is "kept" in angry isolation. And what small one? If any of you read the words differently, tell me so. But important words they were—little green shoots putting forth from the frosty soil of a frozen foreign policy, testing the January winds of public opinion. Will they bud? Will the groundhog be affrighted by his shadow? Let's give him a tot of Irish whiskey and see, or maybe some cabbage.

We need the perspective to see beyond our shadow or through it.

Irish perspective is a wonderful thing. I had an Irish friend who had stayed up late carousing. "Your eyes are very red this morning," I told him. "You should see them from my side," he replied.

They sum up things.

"Marriage," said George Bernard Shaw, "is popular because it combines the maximum of temptation with the maximum of opportunity."

They are understanding.

"A fanatic," said Dooley, "is a man that does what he thinks the Lord would do if He knew the facts of the case."

What are the facts of the Irish case that distinguish it from ours?

"We have a certain freedom you haven't got," said Eamon de Valera to America five years ago. "A big power," he said, "is not free from suspicion like a small power." We do labor, do we not, under suspicions others have of us and we have of other? It's not a burden to dance under.

Yeats has told us—

"If there's no hatred in a mind
Assault and battery of the wind
Can never tear the linnet from the leaf."

Abroad, our linnet trust in the ultimate purposes of men rests on the leaves of their daily deeds; we forget their linnets rest on ours. The same is true, of course, at home. If Yeats could see our cities, he might think again—

"But I being poor have only my dreams;
I have spread my dreams under your feet;
Tread softly because you tread on my dreams."

However, being Irish for the day, in a world of nations, I thought I would confine my inquiries to my Irish foreign policy. I didn't want to bother the Irish Ambassador who would probably be gathering shamrocks to deliver to our President, if I remember correctly. So I called our State Department where I formerly worked. It's a big Department. Not everyone in it could be expected to know the Irish foreign policy. That is why we have the Irish Desk which thinks of little else but Ireland, Irish problems, and Irish viewpoints. I rang the number and a secretary answered.

"To whom do you wish to speak," she said. "To the Desk Officer," said I. "What is it you wish to know," she said. "Ireland's foreign policy," said I. "Oh," said she, "that gentleman has just stepped out." "Fine," said I, marveling at the specialties these men have, "but I'll speak with any one of his assistants." One came on. "Hello," he said. "Hello," I said, "does Ireland have diplomatic relations with either China, or with the USSR or the bloc countries, or Cuba?" "Gosh," he said, "I don't know . . . hey, Charlie, does Ireland recognize Russia, or China, or East Europe countries?" I'm holding the line. It's your money, by the way. Charlie gets on. "Let's see," he thinks, ". . . hey, Ernie . . ." By then the boss specialist had returned, and knew not, or at least not quite. They would call back. As the quarter hours ticked by, I knew their difficulty. Must they call the Irish Embassy and reveal a woeful lack of prior consultations on matters of "mutual interest?" The only other recourse, besides a call to the UN, hopeless on St. Patrick's Day, would be a call to Ireland. They called the Irish Embassy, and so did I. We learned, the Irish Desk and I, that the Irish recognize de jure the USSR, all East Europe countries, and Cuba. They trade with the Soviet bloc. They recognize one State of China, but two autonomous de facto governments, one on the mainland, the other on Formosa. Their sensitivity to their American cousins does not prohibit them from keeping the door open to what might be called a two-China policy, guaranteeing support for the continuance of a sovereign Formosa, but acknowledging Peking as the seat of the "State" of China.

The subtle Irish distinction between State and Nation leaves open the opportunity to consider that the Chinese people as a Nation may some day opt to come together in peace. The policy is like Irish lace—intricate but flexibly strong. Ours is as simple and durable as Kleenex.

What about the Irish policy? Is it born of fear? Who would say the land of Robert Emmet, and which gave us John Kennedy and his brothers, deals from fear? Was it courage then? If so, are we Americans less courageous than we Irish? Is it wise? That's the ques-

tion, but one we can only begin to answer if we know what the policy is we are asking about. We suffer at times, not so much from the arrogance of power as the vagueness of bigness. And it is over the vague land that the demagogue roams at will. G. B. Shaw once said, "A 100% American is 99% an idiot." As Irishmen today, we can laugh. As Americans tomorrow, we might ponder the point. We might wonder, too, whether Irish logic would permit her to appease any threatening power by foreswearing increased contacts with that power's enemies. Even Russia doesn't do that, as Taiwan will attest.

But here in the land of the free there are those who argue we should cudgel our friends to conform their trade and diplomatic policies to our own. Well, let's start with little ones. They "conform" more easily, don't they? Will my bullyboy friends tell Ireland it's all over between us until they view the world as we do, and act accordingly? Registration will be kept open all day. Passports will be produced in 24 hours; a primer on Gaelic and a slice of cold beefsteak for your eye after you make your demands.

For Ireland is the land not only of broken hearts, but of broken heads. No, I don't think the Irish can be persuaded by threats. There's a good glass of stout for every friendly stranger, and a shillelagh for the other kind.

It's up to you here in the coming months and years to decide whether we should be Irish for a day only or whether more of what we say, and think, and love, and pursue should not be Irish forever, and Ireland—our Shamrock of Gibraltar in the defense of sanity seen through the mist.

Thank you.

Mr. Speaker, I should like to add a footnote to Congressman SYMINGTON'S delightful and pungent St. Patrick's Day speech:

During my 3 years at the U.S. Mission to the United Nations, it was my profound pleasure to work frequently with members of the Irish delegation. Free from the rigid ideological attitudes of great powers and devoted to the goal of world peace through law and international organization, the Irish delegation consistently played one of the sanest and most useful roles of any delegation. In the person of the Honorable Frederick Boland, the Irish provided a President of the General Assembly who was wise, humorous, respected and beloved by all.

DALLAS MORNING NEWS SUPPORTS COLLINS BILL

HON. JAMES M. COLLINS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. COLLINS. Mr. Speaker, all Congressmen are extremely interested in providing the best legislation for our country and, of course, each Member takes particular interest in legislation he feels vital.

As a member of the House Education and Labor Committee, and as one dedicated to insuring quality education for every American, I am pleased that the Dallas Morning News supports H.R. 8371 and submit their editorial of March 20.

When we consider how very much our future depends on the educational breakthroughs we can enhance today, education is not merely expensive—it is priceless.

The Dallas Morning News story follows:

LEARNING DEDUCTIONS

Rep. Jim Collins proposes to let parents handle their children's college expenses, up to $1,000 a year, as a deduction on federal income tax returns. There are many other proposed deductions now before Congress with a lot less precedent going for them.

The rationale for this deduction would be much like that for job-related training. It is supposed to enhance, somebody's earning power so that, farther down the line, Internal Revenue will get the deduction back and more.

Government at the state and federal levels seems sold on the wisdom of investing in students' quests for higher learning. State and federal loans and grants have mushroomed.

The Collins proposal could make college a little less burdensome on family finances. The deduction would mean an actual difference in income taxes of only $100 or so for most families but for the family struggling to get Jane or Junior through the halls of ivy, $100 is an item.

While Congress is at it, special deductions for students working their way through school might also be fertile ground for exploration. There is no better indicator of need and dedication than a student's willingness to work for higher learning.

If Congress takes the administration's cue on tax credits for businesses that go in for employment-related training, deductions for college expenses will merit equal consideration.

The better the education, the more the earning power and the higher the tax contributions. Tax law recognizes this, so proposals like Collins' hinge on degree rather than principle, which already is on their side.

BYELORUSSIAN INDEPENDENCE DAY

HON. SEYMOUR HALPERN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. HALPERN. Mr. Speaker, Byelorussia is the vast land extending from the eastern borders of Poland to the western approaches of Moscow. It is a cold and frigid land, and its inhabitants are rugged rural workers. These people, numbering some 10 million in all, have been living in that land from time immemorial. There they led a simple life and were content with their lot, until several centuries ago their homeland was overrun by the Muscovites. They were then brought under the rule of autocratic Russian czars, much against their will. They were neither free nor happy. The czarist regime did its worst to obliterate all traits of nationalism and national feeling among them. But the Byelorussians persisted in their opposition. They struggled against that regime with all the means and might they possessed, and successfully maintained their national identity. And, in 1918, when the czarist government was gone, they had the chance to regain their freedom.

Byelorussian leaders seized upon this opportunity and on March 25 of that year proclaimed their independence, then establishing the Byelorussian Republic. For nearly a year they fought their foes for the preservation of their freedom. But their powerful foes proved formidable, and nothing could save the helpless Byelorussian Republic from the invading Red army. Soon the country was overrun and made part of the Soviet Union.

Today these hard-working Byelorussians are struggling against their totalitarian oppressors. They have not given up their hope for freedom and national independence. They feel that if, under present circumstances, they cannot count upon their friends and sympathizers abroad for direct and effective aid, they have at least some claim upon their sympathies. Today, on the observance of the 51st anniversary of Byelorussian Independence Day I offer my own, and the fervent hope that one day before long these people can attain the freedom and independence they deserve.

THE MANSFIELD WEATHER STATION

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. ASHBROOK. Mr. Speaker, it is a pleasure to note that the Department of Commerce and specifically the Environmental Science Services Administration has reviewed and reversed the decision to close the Mansfield weather station.

This facility was one of 13 which ESSA planned to close by June 30, 1969. It employs only three persons—certainly a small number—but it provides vital and greatly appreciated service to the Mansfield-Ashland, Ohio, area. Since the employees were to be transferred, the savings involved were relatively small, about $10,000. However, the people of the area, businessmen, farmers, private and commercial pilots, responded in unprecedented numbers to protest this false economy move. Working as a team, we were able to convince the Federal Government to reverse this decision.

Located at Mansfield-Lahm Municipal Airport, this office fills a monitoring and information gap in the heart of Ohio since it is between the major stations in Cleveland and Columbus. It is located at the highest altitude of any station in Ohio and provides local information to residents faced not infrequently with odd weather conditions which do not apply and are not as important to the major facilities.

In an attempt to reverse the decision to eliminate the facilities, and following an exchange of letters and phone calls, a meeting was arranged with administration officials responsible for the action. Although sound arguments for continuing the operation were presented, it did not appear, at first, that they made much impact. As a letter to me from ESSA had stated: "We realize the valuable service the office provides, but—" Much to the credit of the Department and especially ESSA, they did acknowl-

edge the merit of these arguments by reversing their decision and announcing that the Mansfield Weather Bureau Office would remain in operation.

The letters, phone calls, telegrams, and personal statements I received indicated that the people of the area were genuinely concerned about losing this facility. They realized the valuable service the unit provides to the area; they probably realize it better than the parent agency.

From this station information on local weather conditions is distributed not only in Ashland and Richland Counties, but in surrounding areas including Knox, Wayne, Morrow and Crawford Counties. Officials of local radio stations noted that no less than six radio stations regularly broadcast weather reports to more than 150,000 listeners.

As a growing industrial area which is relying more and more on air travel, these reports are becoming increasingly vital.

As a major agricultural area of the State the information's value to the farmer is obvious, as it is to builders and contractors.

Also obvious is the need for a local facility and the information developed by it for use by both private and commercial pilots, a need which is increasing as the municipal airport is upgraded.

The expansion of recreational facilities in the area—ranging from boating, fishing and other water sports in the summer to extensive skiing in the winter—are also aided by accurate local weather reports.

It was more than evident to those locally involved that the weather station was of substantial service to the Metropolitan Mansfield and Ashland communities, and that these people believed the facility's services more than justified its small cost.

Another interesting fact developed during attempts to save the station. We are all familiar with the jokes and humorous barbs directed at the weatherman and his percentage of accurate forecasts. No doubt these are not altogether funny to the meteorologist. They will be pleased to learn, however, that when the chips are down the people sincerely appreciate their work and are willing to fight to keep them on the job locally. Many of the letters I received expressed this appreciation and also commented on the highly accurate forecasts and the professional and dependable service rendered.

The impersonal nature of big government at times stresses the wrong things and fails to fully appreciate problems and alternatives available. I believe this was the case with the Mansfield Weather Bureau, but it is a credit to the Department of Commerce and the ESSA that they could and did reverse their decision before it was too late.

Without the expressions of concern by the people in this area your legislators certainly could not have presented as strong a case. I was very pleased to present the views of my constituents and work for the results we accomplished together.

HALEAKALA NATIONAL PARK IN DANGER OF LOSING ITS MEAGER FACILITIES

HON. SPARK M. MATSUNAGA

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. MATSUNAGA. Mr. Speaker, each year visitors in ever-increasing numbers are viewing the many scenic wonders of our 50th State. Because natural beauty is not confined to Oahu, the principal island of the 50th State, many visitors travel to the so-called "Neighbor Islands." It is on these neighbor islands that many visitors find the Hawaii of their dreams. Especially popular on the island of Maui, both with visitors and residents alike, is the extinct volcanic crater known in legend as "The House of the Sun," or "Haleakala."

Mr. Speaker, I am deeply concerned, along with State and county officials and citizens of Maui, because the facilities presently available to visitors to Haleakala National Park are not adequate. Specifically, the park has no visitor center for the display of educational materials, and improvements are required to make the roads and trails in the park safe. There is also no park water system, and no park communications system or restaurant facilities.

Even though Haleakala National Park today lacks the facilities which are considered necessities and not mere conveniences, an admission fee has recently been levied for the mere privilege of looking into the crater. I have written to National Park officials informing them of these desperately-needed improvements. I have also written to the Honorable Walter J. Hickel, Secretary of the Interior, this past week bringing to his attention a resolution adopted by the members of the Hawaii State Senate requesting the Department of the Interior to reconsider a decision to stop supplying firewood for stoves in the crater cabins at Haleakala National Park.

The National Park Service has announced that beginning April 1, 1969, it will no longer supply firewood for the cabins on the crater floor, and shortly thereafter it will remove all the stoves from the cabins. More than 1,796 campers, hikers, and other visitors utilized these meager facilities last year. Mr. Speaker, the decision of the National Park System will make Haleakala inaccessible to those who like to experience the thrill from a trip to the floor of the crater. It would leave much of this natural splendor, after the first of next month, to only the wealthy who could afford to rent pack animals to carry firewood and other camping gear into the crater.

Today, I am submitting for inclusion in the CONGRESSIONAL RECORD a copy of the resolution requesting the Department of the Interior to reconsider its decision to cease the supply of firewood and stoves for the basin crater cabins at Haleakala National Park, which was adopted by the Hawaii State Senate on March 19, 1969:

RESOLUTION REQUESTING THE DEPARTMENT OF THE INTERIOR, NATIONAL PARK SERVICE, TO RECONSIDER THE DECISION TO CEASE THE SUPPLYING OF FIREWOOD AND STOVES FOR THE CRATER CABINS AT HALEAKALA PARK

Whereas, the National Park Service announced that, beginning April 1, 1969, it will no longer supply firewood for the cabins on the creater floor of Haleakala National Park, and plans to remove, shortly thereafter, all stoves from the cabins; and

Whereas, the objective of the National Park Service by law is to ". . . promote and regulate the use of Federal areas known as national parks . . . to provide for the enjoyment of the same. . . ."; and

Whereas, 1769 campers, hikers, and other persons utilized these facilities of our national park last year; and

Whereas, many of these persons are members of youth groups, and can neither physically carry the firewood and stoves to the cabins on the crater floor, nor materially afford such necessities; and

Whereas, Haleakala's natural beauty is for all persons to enjoy, including this large number of people who utilize the firewood and stove facilities; and

Whereas, the present decision of the National Park Service will deprive those who can get the most out of a trip through the crater from its full enjoyment and will leave much of this only to the wealthy who can afford pack animals, etc.; now, therefore,

Be it resolved by the Senate of the Fifth Legislature of the State of Hawaii, Regular Session of 1969, that the National Park Service is respectfully urged and requested to reconsider the pending plan to stop the supplying of firewood and stoves for the crater cabins at Haleakala National Park and instead to maintain these facilities for the people of Hawaii and our visitors from overseas; and

Be it further resolved that duly certified copies of this Resolution be sent to the Secretary of the Interior, Director of the National Park Service, Senator Hiram L. Fong, Senator Daniel K. Inouye, Representative Spark M. Matsunaga, Representative Patsy T. Mink, Governor Burns and the Conservation Council.

We hereby certify that the foregoing Resolution was adopted by the Senate of the Fifth Legislature of the State of Hawaii, Regular Session of 1969.

DAVID C. MCCLUNG,
President of the Senate.
SECIHI HERAL,
Clerk of the Senate.

THE 51st ANNIVERSARY OF BYELORUSSIAN INDEPENDENCE

HON. DANIEL E. BUTTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. BUTTON. Mr. Speaker, today we pay tribute to the gallant Byelorussian people who in 1918 experienced briefly freedom as we know it in our own country. With a progressive constitution the Byelorussian National Republic declared its freedom and independence after centuries of czarist oppression. The freedom so greatly enjoyed by the Byelorussians was short-lived and soon the country was overrun by the Red army. With occupation came annexation by

Soviet Russia and for the past five decades the Byelorussians have lived under tyranny. Even living under oppression these freedom-loving people still hold alive the hope that someday they will once again know true independence.

On this day, Byelorussians in every part of the world wish to remind us all that freedom is priceless. In the United States we tend to take freedom for granted but it is one of the most cherished gifts that anyone can have. It does not come easily and involves much sacrifice. The people of Byelorussia who are not free make that sacrifice every day and continue to be a living example to us all.

It is the hope of all Byelorussians that the date of March 25, will again be a day of real celebration in their own land rather than a day of remembrance in other countries. Let us all who live in freedom hope that that day will be in the not too distant future.

A DEPLORABLE FAILURE OF PLANNING JUDGMENT

HON. GILBERT GUDE

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. GUDE. Mr. Speaker, citizens of the Metropolitan Washington area have suffered for years from a lack of implementation of our regional transportation plans. As my colleagues know, Congress felt so keenly about these failures that they provided legislative direction to complete the District of Columbia freeway system in the 1968 Federal Aid Highway Act.

However, the response of the local District of Columbia City Council and the National Capital Planning Commission to this was to adopt a highway plan which not only failed to meet the requirements of the legislation, but which failed to meet the requirements of established transportation planning procedures. There was no consultation on the adopted highway plan with the planners of adjacent Maryland and Virginia jurisdictions. This failure has now been noted by the Department of Housing and Urban Development in a letter to the Washington Area Council of Governments asking that this situation be corrected.

Mr. Speaker, I wish to call to my colleagues' attention the following editorial from the Washington Sunday Star of March 23, 1969:

NONREGIONAL PLANNING

One of a number of bad things about the District's severely curtailed freeway plan is the fact that it was pieced together and approved by the City Council and the National Capital Planning Commission without the slightest consultation with the transportation planners of suburban Maryland and Virginia.

This was, by any standard, a deplorable failure of planning judgment. For the District is not an island, nor can its transportation needs be viewed realistically apart from those of the metropolitan area as a whole.

Beyond that, moreover, as the Department of Housing and Urban Development has now made clear, it violates a concept of regional planning which has become a basic requisite for participation in a broad variety of federal aid programs in urban areas. And the agency has warned that the failure must be corrected.

The assertions by HUD, which had not previously entered the District's highway fight, came in response to complaints against the District plan from a unit of the area's Council of Governments, which is supposed to have a voice in establishing this region's transportation policy. As a first step, HUD has asked the Council of Governments' board for some positive suggestions for getting back on the regional track. The council, of course, should comply.

The trouble is, however, that there is really nothing at all that the Council of Governments can do to change the situation unless the city government agrees. And the dilemma in that respect remains just as it has been for months: There is no indication that the District government will budge unless it is required to do so by Congress and by the administration.

HUD has added one more compelling reason for resolving this absurd stalemate through the negotiation of a highway plan which truly relates to the needs of the entire region. We hope that its entrance to the controvery advances that result.

RAY LIVESAY: CRUSADER FOR THE DAYTIMER

HON. WILLIAM L. SPRINGER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. SPRINGER. Mr. Speaker, anything that I would add to the article written by Broadcasting magazine on February 10 about Ray Livesay would be redundant. I have known Ray Livesay for more years than I would like to admit and all of the good things written about him in this article I can testify to being no exaggeration. He has been one of the prime leaders in early broadcasting and has achieved success in the industry not just through hard work, but because of his sincere and dedicated interest in promoting good broadcasting. It is with pride in a friend and constituent that I call this article to the attention of my colleagues:

RAY LIVESAY: CRUSADER FOR THE DAYTIMER

(NOTE.—James Ray Livesay—president, 25% owner, WTWO(TV) Terre Haute, Ind.; chief owner, WLBH–AM–FM Mattoon, Ill., and sole owner, WHOW Clinton, Ill.; b. Oct. 1, 1916, Grand Tower, Ill., where he graduated from high school in 1934; owner, radio-set sales and service store, Villa Grove, Ill., 1935; salesman, WDZ Tuscola, Ill. (now in Decatur, Ill.), 1936–44; radio-electronics instructor, U.S. Navy, 1944–46; founded WLBH 1946, WLBH–FM 1949 and acquired WHOW 1950; headed merger resulting in WTWO 1965; director-at-large for small-market radio stations, National Association of Broadcasters; board chairman, Daytime Broadcasters Association; past president, Illinois Broadcasters Association; long active in Rotary, Elks, Masons and Central Community Church of Mattoon; m. Leffel Elmore of Hartsville, Tenn., Dec. 10, 1937; children—married daughter Shirley and son Jim, 21; hobbies—big-game hunting, golf and flying his own plane.)

There are many stories of poor boy makes good in broadcasting.

That of J. R. Livesay, however, is somewhat unusual. It is the story of the grassroots broadcaster who crusaded diligently for years for what long seemed a lost cause—uniform time for daytime AM radio stations—and who eventually won, at least as far as sign-on time is concerned, thereby benefiting three-fouths of the more than 2,000 daytime outlets in the U.S. but neither one of his own two daytimers.

Ray Livesay has won in other ways, however. For one, he is no longer poor.

For another, his station interests, ranging from part ownership of WTWO (TV) Terre Haute, Ind., to chief ownership of WLBH–AM–FM Mattoon, Ill., to full ownership of WHOW Clinton, Ill., are a source of pride of worthwhile public contribution, considering the social and economic achievements these stations have scored in their respective communities.

Not last nor least is the recognition and friendship of his fellow broadcasters, evident when Mr. Livesay flies his Beech Bonanza to some industry gathering and renewed each time he is elected to be director-at-large of the National Association of Broadcasters by the small-market radio-station operators throughout the 50 states. When he ends his present NAB term next year, Mr. Livesay will have served a total of eight years on the association's board.

Among the founders of the Daytime Broadcasters Association at a meeting in St. Louis in 1955, Mr. Livesay has been at the head of the group since that time and presently is board chairman. He has testified often on the issues of the DBA before congressional committees and worked for the cause constantly at the FCC. As an industry adviser to the FCC and the State Department, he helped support the official delegation in its recent negotiations with Mexico to win a new broadcast treaty that awaits the ratification of the senates of the U.S. and Mexico.

Although the full details of the treaty have not yet been disclosed, one gain will be the uniform 6 a.m. local sign-on time for about 270 U.S. daytime stations now on the seven Mexican clear channels. The treaty's chances of ratification are good, Mr. Livesay feels, especially since it is understood the Clear Channel Broadcasters Association "reluctantly" will not oppose the treaty because of national interest.

The Mexican treaty provision puts the cap on the earlier major gains won by the persistence of Mr. Livesay and the DBA before Congress and the FCC. These culminated last August when the commission on its own motion provided a uniform 6 a.m. local sign-on time for some 1,400 daytime stations. The case had been under consideration since 1961 and the ruling last summer was a refinement of the 1967 uniform time ruling after further negotiations with Canada on mutual interference standards and related issues.

"You cannot lace the public interest in an engineering straitjacket," was the theme Mr. Livesay repeated to all who would listen in his crusade. He argued the public will put up with some interference just to get its own local service and felt the FCC should serve people, not engineering curves.

Neither Mr. Livesay's WLBH or WHOW benefit from the changes because they are on U.S. class I–B clear channels. But he fought the DBA battle simply because he thought it was right.

"Principle to me has always meant more than dollars." Mr. Livesay says. However, he advises his son, also interested in broadcasting: "Don't become a crusader like your dad. You'll spin your wheels all your life and waste a lot of time."

Mr. Livesay also admits: "If I'd known it was going to be such a long fight back there

in 1955, I don't think I would have had the courage to start. It was one of those situations where you cross each bridge when you come to it and don't give up."

It is the way he doesn't give up on vital issues in his editorials on WLBH and WHOW, a policy begun in 1950 just months after the FCC rescinded its Mayflower decision banning editorials. WLBH is credited with sparkplugging a new junior college in the area, for example, and now is spearheading a drive for a new hospital.

WLBH has a heavy talk format plus middle-road music while WHOW has been country-and-western since its start. WLBH-FM, started in 1949, went to separate programing and sales in 1963 with an easy-music format. The Livesay team called half of all telephones in Mattoon homes as part of its market research in reaching the separation decision. They found wide FM awareness and acceptance.

"I very firmly believe in the future of FM radio," he says, predicting the small class A outlet will spread over the towns of the country and bring such wide use of the medium that in maybe another decade "our FM facilities will be worth more than our AM." He notes with automation "mom and pop" outlets will be feasible in towns of but 2,000 population.

Mr. Livesay skipped college because he could not find a good radio course at the time. "All they were teaching was warmed-over newspaper journalism," he recalls. During World War II he was a Navy radio instructor. He holds an FCC first class license.

Like others of his generation born on the farm and who grew up winding radio coils on Mother's Oats boxes, Mr. Livesay has broadcasting in his blood. He recalls selling main-street merchants on WDZ Tuscola, Ill. (now in Decatur, Ill.) in the late 1930's as his best education and the source of his enthusiasm for radio-TV in the free-enterprise tradition.

Typically Livesay: "Competition makes us all more healthy—if we are able to survive."

STATEMENT OF CONGRESSMAN CHARLES A. VANIK ON NAMING THE 200 BEV PARTICLE ACCELERATOR AT WESTON, ILL., THE "ENRICO FERMI NUCLEAR ACCELERATOR

HON. CHARLES A. VANIK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. VANIK. Mr. Speaker, I join my colleagues in honoring Dr. Enrico Fermi by adding my name in sponsorship to H.R. 391, a bill to name the 200 billion electron volt particle accelerator to be built at Weston, Ill., the "Enrico Fermi Nuclear Accelerator."

It is fitting that we honor this courageous and tireless pioneer in the field of particle physics, whose theory on the chain reaction of slow neutrons in uranium and whose now-famous experiment in the squash court of the University of Chicago propelled this country into the nuclear age.

In thus honoring Enrico Fermi, we should remember that he came to this country seeking freedom from the oppression of Mussolini's police state. We must remember also that on his genius, and the genius of other European men of science who chose America as their home, rests our national security and our whole way of life.

As we reap the benefits of Enrico Fermi's contributions to this country, let us always be reminded of this great man of physics, and of the image and atmosphere of freedom and opportunity which brought him to this country.

CONGRESSMAN EARL CABELL POINTS OUT NASA CONTRIBUTIONS TO EDUCATION

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. TEAGUE of Texas. Mr. Speaker, having received permission to extend my remarks in the RECORD, I would like to include the news release dated March 13, 1969, from the office of the Honorable EARL CABELL, Fifth District of Texas.

I believe Mr. CABELL'S remarks dramatically point out that all of the money which has been expended on our space program has not been "blown to the moon" as many disbelievers of the programs have stated.

The release follows:

PRESS RELEASE OF REPRESENTATIVE EARL CABELL

As we applaud those involved in the flight of Apollo 9 for another space mission successfully completed, it is a good time to pay tribute to the dramatic revolution achieved by our space program in this nation's educational system, and to the hope it brings for solutions to more down-to-earth problems.

In the decade between 1958 and 1967, the National Aeronautics and Space Administration allocated some $572 million to almost 1,400 projects in our universities and colleges. Some of the grants covered assistance to students or to faculty members, others helped build new space science laboratory facilities, and still more financed research projects of an independent nature.

The effects of this financial assistance extend far beyond the college level, resulting in broad improvements down to primary grades where youngsters stimulated by television are showing a new awareness of and a taste for all phases of science and technology.

It is also interesting to note that during this space decade, while our population has grown by only 16 per cent, we now have 30 per cent more pupils in our elementary and secondary schools, and 120 per cent more in college.

The inception of space age education found no specific course of study into which space knowledge might be assigned and, in the rush for learning, many older sciences were impelled into new studies, diverse sciences merged into a broader community of interest, and often physical sciences found themselves side-by-side with the social sciences in joint endeavors.

There is not enough space in this brief essay to explore all the changes that have been wrought since the flight of the first Russian Sputnik, but our educators and our students know that the schools of today are nothing like those we attended as children.

Now we can see an end to this NASA-induced research. Already economies have cut pre-doctoral grants for 1968 to 75 as compared with 3,132 just four years ago, and under the Sustaining University Program, (SUP), there is no money earmarked for construction of facilities for Fiscal 1969.

However, though our educators are disappointed, they value the climate which NASA research projects have fostered.

Deprived of new projects that could reach beyond the Moon, they visualize a new and more down-to-earth approach, an application of the same principles of mental exploration as applied to subjects closer home in the fields of pollution, of poverty, and of social science.

The end result may well be that those who complained man could reach the Moon but could not live with his neighbor on earth may find that the mind-stretching search for knowledge that space exploration required may be just what is needed to find the answers to the problems that plague us here on earth.

ORGANIZED CRIME FATTENS ON STOLEN SECURITIES

HON. JOHN M. MURPHY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. MURPHY of New York. Mr. Speaker, in Albany, N.Y., earlier this week, Manhattan Assistant District Attorney Murray Gross told the Joint Legislative Committee on Crime that underworld wolves have infiltrated among the bears and bulls of Wall Street. Wall Street officials also urged legislation to require fingerprinting of all personnel in securities markets to curb thefts pegged at $50 million a year. I have introduced such needed legislation in the face of growing evidence that organized crime has invaded the securities industry. The need for such legislation is urgent. Under leave to extend my remarks in the RECORD, I include the following article by Patrick Young, of the National Observer, a hard-digging reporter from a hard-hitting newspaper, as proof of that urgency:

THE UNDER-THE-COUNTER MARKET: ORGANIZED CRIME FATTENS ON STOLEN SECURITIES

(By Patrick Young)

NEW YORK CITY.—The word is out along Wall Street and down Broad, through the narrow confines of Exchange Place and on the crowded sidewalks of Trinity Place. The bookies and loan sharks have passed it on to the clerks and secretaries who labor in the back offices of the brokerage houses here in the nation's financial center.

The message: Organized crime wants securities for its under-the-counter market in stolen stocks and bonds.

Organized crime's interest in Wall Street isn't a new phenomenon. "We have found evidence of their involvement there for at least eight years," says Frank Rogers, an assistant to District Attorney Frank Hogan. What is recent is the sharp increase in thefts of negotiable securities from brokerage houses here and elsewhere.

A precise figure is impossible to obtain. But Robert W. Haack, president of the New York Stock Exchange, estimates the loss of "lost or stolen" certificates at more than $83,000,000 since 1966.

FOUR TIMES THE 1966 LOSS

In a letter to the House Commerce and Finance subcommittee Mr. Haack said lost or stolen securities reported by New York and American stock-exchange members totaled $37,000,000 in 1967, more than four times the $9,100,000 reported in 1966. Figures are not available yet for 1968, but Mr. Haack said indications are that they will total about $37,000,000 again.

The thefts, whether organized or not, have wrought problems and changes in the securities industry. Among them:

Insurance. Both the New York and American exchanges require their member firms be fully bonded. Thus a theft costs the investing public nothing. But now some brokerage houses are finding it difficult to obtain bonds. Industry spokesmen say a number of insurance companies are refusing to write bonds or are tightening their requirements and hiking the cost.

"This type of insurance is getting less attractive to insurance companies because losses are mounting," reports James Ording, secretary of the Association of Stock Exchange Firms, a trade group for members of the New York Stock Exchange. "The point hasn't been reached where anyone has been unable to get insurance, but conceivably it could happen."

Insurance industry officials were bothered by Mr. Haack's estimate of recent losses. "That scared us when we saw it," says a staff member of the Surety Association of America. "He has later information than we have."

Security. "The main brokerage houses are becoming acutely aware of the situation," says an investigator here. "They're tightening up considerably." Several firms have hired former police detectives and FBI men to direct their security efforts.

Francis I. du Pont & Co., for example, has installed closed-circuit television and added extra guards. Employees working in the securities area must sign in, receive special badges to wear, shed their outer jackets, and don a company blazer before starting work. Other companies have instituted similar precautions.

The stock exchanges organized an industry committee last January. The group is to determine how many securities are actually stolen and how. Then it will devise methods to counter the back-office thefts. "The only answer to the insurance problem is that the securities industry make its back offices a lot more secure," says Mr. Ording.

Legislation. The securities industry employs about 152,000 people in various capacities. Rep. John Murphy, New York Democrat, has introduced a bill that would allow the FBI to check the fingerprints of brokerage-house and stock-exchange employes. Insurance companies and national banks now are allowed this check against dishonest employes, but not the securities industry. A similar bill is pending in the New York Legislature to amend a state law that prohibits fingerprinting as a condition of employment, except for state, local-government, and hospital jobs.

THE PUBLIC-CONFIDENCE ISSUE

Securities industry spokesmen are leery of mentioning organized crime, a wariness that stems from concern that public confidence might suffer if a link between the mob and the industry is found. Said Mr. Haack of the thefts, "This could be viewed as evidence of organized crime, but cannot be presumed as conclusive."

Few investigators here, however, have doubts about organized crime's involvement in the thefts. "They've always been the only effective source of dispersement because of their far-flung contacts," says Mr. Rogers. "You'll find stocks stolen here on Monday being offered in Detroit, Miami, Chicago, or Philadelphia on Wednesday."

But serious as the problem is, the thefts represent a tiny fraction of the $145 billion in securities traded on the New York Stock Exchange last year. "I don't think any one should run a headline saying organized crime is taking over the stock market, or even threatening its normal operations," cautions Ralph Salerno, an organized-crime consultant for the National Council on Crime and Delinquency. "But they are behind the recent problem of thefts."

The root of the problem is the surge of securities trading that has engulfed the stock exchanges and over-the-counter market in the last several years. Paper work has piled up and many brokerage-house books are confused. Securities are stacked on desks, on chairs, on tables, and on floors. Many back offices, says a partner in a small firm, are "amazingly sloppy. Many of the big firms and some of the small ones can't keep track of their securities." In this sort of confusion, a theft may go unnoticed for weeks or even months.

To fight the blizzard of back-office paper, brokerage houses have hired additional employes, some 25,000 last year. Added to this is the rapid turnover in low-paying jobs. Firms simply don't know the background of their employes.

Take Richard Locicero, nephew of an important mob member. He worked for three Wall Street firms within one month. On his third job, as a messenger, he reported to police that he was robbed of $386,000 in securities. Locicero, two uncles, and three other men were later accused of the theft. On April 5, 1967, two days after Locicero appeared before a grand jury, he was murdered, stabbed more than 100 times.

Conversations with state and Federal investigators and crime authorities here and in Albany, Boston, and Washington, D.C., provide an outline of how securities are stolen and disposed of. Rule 1, says a Federal attorney: "They have got to have a man on the inside where these things are handled."

Organized criminals use two methods of obtaining stocks and bonds. First, their loan sharks and bookies encourage, some times with physical force, debtors who can't meet payments to lift securities. "They've got loan sharks hovering over Wall Street like vultures," says a state investigator. The word also is passed that a market exists. This appeals to light-fingered clerks who aren't above picking up some fast money.

CRIMINALS LIKE BLUE-CHIPS TOO

Sometimes, an inside man will be ordered to lift a particular stock or bond. Blue chips are favored by organized crime as they are by many investors. Sometimes the theft is a simple grab at anything. In 1962, someone stole more than $200,000 worth of securities from a file drawer at Loeb, Rhoades & Co. All the securities started with "F." Detectives recovered the stock and arrested a close associate of a suspected mob leader when the man tried to sell the securities to an undercover agent.

An inside man may hit again and again. One brokerage house has reported three securities thefts since Jan. 1, totaling about $300,000. "They're sure it's one employe, but they don't know absolutely who," says an official of the brokerage firm's insurance company.

A co-ordinated effort among New York, Massachusetts, and Canadian officials to gather information on organized crime has produced evidence that stolen securities are funneled back and forth between New York City and Boston, with many going to Toronto. "Intelligence reports are that organized crime is finding this an extremely lucrative field and they are becoming more involved," says Dennis Crowley, Jr., chief of Massachusetts Attorney General Robert H. Quinn's organized-crime section.

This two-nation investigation shows how little detail is really known about organized crime's stock disposal. The number of people involved and the exact methods used remain unknown at this time. But some insights are being gained.

WHAT THE ORIGINAL THEFT GETS

Most of the stolen stocks and bonds pass through three levels. The original thief receives about 3 per cent of the securities' value, though this may be considerably less in a large theft. The buyer or an associate moves the securities on to a third level, usually out of the state or country, and receives roughly 5 cents on the $1. The third level arranges for the securities use or disposal, receiving 10 per cent and up.

The disposal of stolen securities demonstrates the diverse contacts and methods of organized crime. First, the securities may be sold on the open market through legitimate brokerage houses. Fake identities and papers are arranged and an account is opened in a city far from the theft. A few legitimate trades may be made and then the stolen securities are offered for sale. Once the seller gets his cash, he disappears.

Sometimes a broker may be bribed. Organized mobsters got temporary control of several small over-the-counter trading firms in 1962. When the stock market took a mighty dip that year, they supplied loan-shark money to the firms to keep them solvent. Later, they called in the debts in cash and favors, using the firms to sell stolen securities.

Securities may also be sold or "rented" to businessmen. A Los Angeles man told Congressman Murphy last week that he was offered $1,000,000 in securities for $50,000. "He said they told him, 'We'll name the bank you can go to,'" Mr. Murphy says.

District Attorney Hogan's office arrested a Manhattan manufacturer named Bernard Kessel two weeks ago in a case that involved the use of $1,250,000 in stolen securities as collateral on a bank loan. The complaint said Kessel paid $70,000 to "rent" the stolen securities. Mr. Hogan's investigators say they haven't determined who got the rental fee.

Businessmen in debt to organized crime bookies or loan sharks may be forced to obtain loans and turn the money over to mob members. Sometimes this money goes out on the street for loan sharking, at rates of 20 per cent a week and more. The loan is paid off and renewed, giving the mob a source of funds for usury operations.

Stolen securities used as collateral are usually uncovered only when the loan payments are defaulted, as happened with Bernard Kessel. Few banks check securities put up as collateral to see if they are stolen. "A bank relies on the integrity of its borrower," explains an official of the American Bankers Association.

The theft of 5,000 shares of IBM stock from Hayden, Stone Inc., in New York City in 1966 illustrates how widely organized crime operates. Montreal police recovered 600 shares in October of that year with the arrest of two men who tried to sell the certificates to a bank. In November, Toronto police arrested a Boston man and his wife when they attempted to sell 100 shares of the stolen stock.

STOCK SHOWS UP IN PENNSYLVANIA

In February 1967, FBI agents, working on a tip from the Securities and Exchange Commission, recovered 2,600 shares of the IBM stock. The stock had been used as collateral to obtain a loan from a Pennsylvania insurance company. Two hundred more shares were recovered in Los Angeles last May, again after being used as collateral.

Fifteen hundred shares remain missing. Where are they? "Probably serving as collateral for some other loans," says one investigator.

Attempts to directly link high organized-crime leaders to stolen securities usually fail. The mob long ago established a system of "buffers," where orders come down from the top through a series of levels. Intelligence reports indicate that a high organized-crime leader in New England directs much of the traffic in stolen securities between Boston and New York and Toronto.

But law-enforcement people despair of ever proving this. "He uses other people," says one investigator. "He never talks about it on the telephone. He never touches the stuff. He just directs."

FIFTH ANNIVERSARY, MASSAPEQUA CHAPTER, THE ORDER OF THE SONS OF ITALY IN AMERICA

HON. JOHN W. WYDLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. WYDLER. Mr. Speaker, I would like to extend a special tribute and my personal congratulations to the Massapequa chapter of the Order of the Sons of Italy in America, celebrating its fifth anniversary in a noble and prestigious fraternal organization, and aspiring to bring to the American way of life the best of an ancient and honorable cultural heritage.

The Order of the Sons of Italy in America had its genesis in New York in 1905 and now, some 64 years later, has satisfactorily fulfilled the vision and ultimate ambition of its principal architects—the formation of what is today one on the biggest and most effective fraternal organizations in the Nation. It has proven that the forces of culture, knowledge, and brotherly love can, indeed, be organized so as to contribute materially to the building of a better people, a better nation, and a better world.

The Massapequa chapter, one of the newest affiliates of the highly respected order, is the largest in the United States. This in itself is a signal accomplishment, taking into consideration its 5 short years of existence. It has, by its deeds, not just words, clearly demonstrated the great good to society which can be derived from an organization working in unity and utilizing the best attributes of its heritage. The strongest testimonial to the success of this effort is the steady expansion of the chapter and its parent organization.

Its membership incorporates all segments of society. It is composed, in part, of those in government, as the Italian-American is fully aware of his civic and patriotic responsibility, a representative number currently serving in the U.S. Congress.

It is composed of individuals from the arts, an area in which the Italian-American is truly gifted, the great works of the talented Fresco artist, Constantino Brumidi, enhancing our beautiful and impressive Capitol Building in Washington.

It is composed of members of the clergy, outstanding citizens from the professional fields, and embraces individuals from every walk of life—men of wisdom and integrity, people who have worked, loved, fought, and died to build a tradition of liberty, justice, and freedom in our beloved country.

The judge or high official is brother to the laborer, because the relations of the members toward each other are governed by the three principles of the order—liberty, equality, and brotherly love.

The United States has been appropriately identified as "a nation of immigrants," and the Italian-American, always in the vanguard to improve and perfect our great American heritage will, in his pursuit of excellence, also preserve his Italian heritage.

The purposes of the Order of the Sons of Italy in America, as stated in the preamble of its constitution, merit commendation and support.

The preamble follows:

We, the members of the Order Sons of Italy in America, a fraternal organization, being a part of the United States of America, which we serve at all times with undivided devotion, and to whose progress we dedicate ourselves; united in the belief in God; conscious of being a representative element of an old civilization which has contributed to the enlightenment of the human spirit, and which through our activities, institutions and customs may enrich and broaden the pattern of the American way of life; realizing that through an intelligent and constant exercise of civic duties and rights, and obedience to the Constitution of the United States, we uphold and strengthen this Republic, in order to make known our objectives and insure their attainment through the harmonious functioning of all parts of our organization, the said Order Sons of Italy in America do hereby ordain and establish the following as our constitution:

ARTICLE I. PURPOSES

The Purposes of the Order are:

(a) To enroll in its membership all persons of Italian birth or descent, regardless of religious faith or political affiliation, who believe in the fundamental concept that society is based upon principles of law and order, and who adhere to a form of government founded upon the belief in God and based upon the Constitution of the United States of America which government rests upon the proposition that all men are created equal and functions through the consent of the government.

(b) To promote civic education among its members.

(c) To uphold the concept of Americanism.

(d) To encourage the dissemination of Italian culture in the United States.

(e) To keep alive the spiritual attachment to the traditions of the land of our ancestors.

(f) To promote the moral, intellectual and material well being of our membership.

(g) To defend and uphold the prestige of the people of Italian birth or descent in America.

(h) To encourage the active participation of our membership in the political, social and civic life of our communities.

(i) To organize and establish benevolent and social welfare institutions for the protection and assistance of our members, their dependents, and the needy in general, with such material aid as we are able to give.

(j) To initiate and organize movements for patriotic and humanitarian purposes, and to join in meritorious movements for such purposes which have been initiated by other organizations or groups.

I applaud the cause and determination of the Order of the Sons of Italy in America and offer my full support in its objectives.

THE COLLINS AMENDMENT

HON. JAMES M. COLLINS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. COLLINS. Mr. Speaker, after a thorough study of the Elementary and Secondary Education Act of 1965—ESEA—I have decided that we need to clarify the whole issue of schoolbussing. Accordingly, my view has been printed as a portion of the Report of the Committee on Education and Labor, House of Representatives, H.R. 514. I submit it to you now:

INDIVIDUAL VIEWS OF JAMES M. COLLINS

I believe that an amendment to this act is needed to clarify the whole issue of schoolbussing, which is completely confused by amendments adopted in prior years which have little, if any, meaning. I think it is time that we all face the fact that schoolbussing to achieve "desegregation," "integration," "racial balance," "enrichment," or whatever term is applied in differing circumstances, has become a bitter local issue in virtually all sections of the Nation. It is an issue that ought to be settled locally without reference to the Federal programs funded under the acts amended by H.R. 514. Those programs have other purposes.

Throughout our committee hearings—and I attended them for a majority of the 22 days of hearings—it was constantly emphasized that the funds for ESEA are inadequate to do the job, particularly those allocated for disadvantaged pupils. I agree with that assessment from what I know of educational needs in my own area. Disadvantaged students desperately need additional, better qualified teachers; they desperately need better classroom space, fewer pupils per classroom, and better equipment and materials for instruction. To the extent that any of these funds are used for transportation, the disadvantaged pupil is being deprived of the essentials of education for a seat on the bus.

Accordingly, we should not permit the diversion of Federal funds to peripheral items like transportation. If local school officials feel that they must transport pupils for the purposes of any of these programs, then they should do so with local and State funds. Since nobody has suggested that the Federal funds pay the total costs of education, or even more than a small fraction of the costs, they should be reserved for essential expenditures.

The other point to be made—and a sound reason for adopting such an amendment—is that such a course would remove the Federal programs from the risk of becoming embroiled in extremely bitter local controversies, and to that extent would strengthen the programs and improve their acceptability in every section of the country.

I therefore reserve the right to offer such an amendment at the appropriate time.

JAMES M. COLLINS.

BYELORUSSIAN PEOPLE OBSERVE 51ST ANNIVERSARY OF INDEPENDENCE

HON. GLENN CUNNINGHAM

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. CUNNINGHAM. Mr. Speaker, on March 25, 1918, the Byelorussian people proclaimed their independence. On this date 51 years ago, the Byelorussian Democratic Republic was born.

In spite of all of its sacrifices, the young state was unable to preserve its independence against the onslaught of overwhelming Bolshevik forces.

The Byelorussian Soviet Socialist Republic, which was created in its place, is nothing but an administrative arm of the Moscow government and does not

represent the will of the Byelorussian people.

This is the reason why March 25 is celebrated by Byelorussians throughout the free world as a symbol of their national aspirations.

Americans of Byelorussian descent join in this celebration with the fervent hope that freedom eventually will be restored for their homeland.

Mr. Speaker, the people of Byelorussia have been deprived of the right of self-determination by the Soviet Union, yet they have been extremely effective in maintaining their spirit and determination in the face of Communist oppression. We must not permit this spirit and determination to be in vain.

INTELLECTUAL FREEDOM

HON. WILLIAM A. STEIGER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. STEIGER of Wisconsin. Mr. Speaker, President Nixon has made clear the intent of his administration to preserve the integrity of our university system. His forthright stand opposing morally arrogant individuals who would destroy the university is coupled with an understanding of the basic principles of higher education: that universities and colleges are places in which men are judged by achievement and merit, and that violence or the threat of violence should never be permitted to influence actions, ideas, or judgments in the academic community.

The intent of the administration to enforce congressional prohibitions against grants and loans to students who would destroy a university is appropriate; but no more so than the calm and reasoned understanding of the need for change on our campuses and the responsibility of the universities to implement legitimate reforms.

There are hopeful signs on a number of campuses that faculty and students are reaffirming basic principles of academic freedom, defending the universities from dangers posed by advocates of violence. Fred Hechinger has written an excellent article describing these developments.

I include the Hechinger article from the New York Times of Sunday, March 23, and the statements of President Nixon and Secretary Finch at this point as part of a continuing effort to bring to the attention of my colleagues materials relating to campus disturbances:

[From the New York Times, Mar. 23, 1969]

EDUCATION

(By Fred M. Hechinger)

"Though I am but a freshman, I hope I have enough voice to make you listen; assuredly I have anger enough." So wrote a Columbia College student in a letter to The Spectator, the school's undergraduate daily.

The student's anger was not aimed at an autocratic, repressive university administration; rather, it was aimed at what he regarded as the university's failure to prevent or punish the disruptive actions of the Students for a Democratic Society. The student charged that "a climate of timorous inaction on the one side and such emboldened anarchy on the other" have made the campus "unfit for living, let alone study."

The letter is, of course, couched in the rhetoric of youthful exaggeration that matches the style of the New-Left radicals. But it is symptomatic of a new trend that seemed to be growing last week—a trend in which liberal and moderate students and faculty members are demanding an end to violence and disruption.

This trend is different from the backlash by right-wing groups, conservative alumni and reactionary legislators who stand ready to subdue campuses with punitive laws and fiscal sanctions. It is different, too, from such "get tough" court actions as the 15-day jail sentences meted out last week to 21 students at the State University at Stony Brook for an all-night sit-in in the library. Such conservative counteraction was to be expected.

Indeed, President Nixon's long-awaited message yesterday confirmed the growing feeling that, rather than unleash the punitive powers of the Federal Government, the politically wiser and certainly educationally preferable course is to put the major burden on the universities to put their house in order and deal with the rebellion in their own way. It is unlikely that, in view of much popular anger at student excesses, the White House would have been so conciliatory if there were not a growing sense that moderation within the campuses may be gaining the upper hand.

The Chronicle of Higher Education, a publication supported by the Carnegie Corporation, reports that since mid-February and the beginning of March protest actions of varying intensity took place on at least 54 campuses; it also noted the rising tide of opposition and cited growing liberal concern that the reaction to radical activisim is beginning to smother attempts at educational reforms.

Both at Harvard and at Columbia, influential senior faculty members have recently denounced disruptive protests. The Columbia manifesto was signed by more than 100 professors, among them the institution's most distinguished names. Warning that "attempts to disrupt or prevent the holding of classes are a matter of urgent concern," they demanded that the committee on discipline (a newly established body composed of faculty, students and administration) take effective action to protect the freedom to teach and learn.

At Brandeis University, after several incidents of arson, President Morris B. Abram warned that unless universities "find the way to protect the rights of the lawful against the lawless," they will become garrison communities and "cease to be places of freedom and learning." He added that any member of the campus found to have been involved in acts of sabotage will be expelled and prosecuted in criminal court.

At Cornell—where three students were violently assaulted in an apparent confrontation between blacks and whites and the university's president, Dr. James Perkins, was pushed off the podium by a student—the undergraduate newspaper is beginning to ask for effective enforcement of safety on campus.

Harris Wofford, Jr., the liberal president of the New York State University College at Old Westbury and former Peace Corps aide to President Kennedy, in commenting on the Cornell incident, said: "When necessary we must be prepared to enforce the rule of reason by university action, by court injunction, and even by criminal prosecution of those who turn to force. That is unfortunate but not frightening . . . We should know—as we hope the destructive minority will learn—that the old law of an eye-for-an-eye-for-an-eye leaves everybody blind."

At Michigan State University, more than 10,000 students signed petitions condemning "intimidation, violence, and disruption."

A growing opposition by liberals and moderates could create a totally new balance of power; for it is that liberal and moderate sector—undoubtedly the majority at most major institutions—that alone can render the radical left influential by joining it in the fight for specific, liberal issues, such as the opposition to the Vietnam war, equality for the races, and so on.

Ironically, it was David B. Truman, the former vice president of Columbia University, who expressed his fear—months before last year's student uprising there—that the radical students' tactics would eventually pit students against students. He considered such a confrontation a much more serious threat to the future of higher education than the skirmishes between students and administration.

That this danger persists at Columbia was underscored last week by an extraordinary, full-page editorial in the Daily Spectator, headlined "The University Politicized." (One editorial board member registered his dissent.)

The editorial took what appears to be the current hard line of student radicalism that Columbia is a hostile force exactly because it is a liberal institution.

"Liberalism, which once appeared to satisfy this nation's needs and desires, is now bankrupt," the editorial said. It concluded that since "the liberal politics of the university have cast it in the role of supporting a sick society, we must commit ourselves to transforming the politics of the university by resorting to whatever means prove necessary."

If this represents the radical view (as seems to be the case on many troubled campuses), then it appears virtually inevitable that the battle between students and students will soon enter a critical new phase, paralleled by a similar battle between the radical faculty (especially the younger, nontenured ranks) and the majority of liberals.

This introduces an entirely new factor in the universities' internal line-up. It had clearly been the intent of the New Left, by selecting issues on which the university administrations were vulnerable—such as war-related research and inadequate response to the needs of the racial minorities—to radicalize the liberals.

But it now appears that the radicals miscalculated the liberals' commitment to nonviolence, rational dialogue and legality. While to radicals these elements are expendable luxuries, they are indispensable to the liberal philosophy.

When it appeared that violent or disruptive tactics were not (as originally claimed) merely the reluctant, last-resort response to police busts but part of the movement's ideology itself, the liberals began to plan their own strategies to stop the radicals. In other words, the radicals may indeed have managed to radicalize the liberal campus majority, but as a force *against* rather than for violent revolution.

NIXON TEXT: INTELLECTUAL FREEDOM IS IN DANGER

This week the Secretary of Health, Education, and Welfare has sent a letter to the presidents of the institutions of higher education in the nation calling attention to the provisions enacted by law by the 90th Congress which provide for the withdrawal of various forms of federal support to students found guilty of violation of criminal statutes in connection with campus disorders.

He did this in the exercise of his responsibility as the Cabinet officer chiefly charged with the routine enforcement of federal laws pertaining to education, however, the state of our campuses have for some time been anything but routine.

I should like to take this occasion to make some more general comments which I hope may be of some assistance in moderating the present turmoil.

REGULATIONS MODERATE

First, a measure of perspective is in order with regard to the action of the previous Congress. The new regulations are moderate, and they are justified. It is one of the oldest of the practices of universities and colleges that privileges of various kinds are withdrawn from students judged to have violated the rules and regulations of their institution. Congress has done no more than to withdraw federal assistance from those students judged, not by university regulations, but by courts of law, to have violated criminal statutes.

Almost by definition, given the present tactics of disruption, anyone so convicted may fairly be assumed to have been assaulting the process of free inquiry which are the very life of learning. Any society that will not protect itself against such assault exhibits precious little respect for intellect, compared to which the issue of public order is very near to de minimis.

For there is a second issue, of far greater concern to me, and, as I believe, to the Congress, to the American people generally, and the faculties and students of American colleges and universities especially. That is the preservation of the integrity, the independence, and the creativity of our institutions of higher learning.

VIOLENCE NORMAL

Freedom—intellectual freedom—is in danger in America. The nature and content of that danger is as clear as any one thing could be. Violence—physical violence, physical intimidation—is seemingly on its way to becoming an accepted, or at all events a normal and not to be avoided element in the clash of opinion within university confines.

Increasingly it is clear that this violence is directed to a clearly perceived and altogether too conceivable objective: Not only to politicize the student bodies of our educational institutions, but to politicize the institutions as well. Anyone with the least understanding of the history of freedom will know that this has invariably meant not only political disaster to those nations that have submitted to such forces of obfuscation and repression, but cultural calamity as well. It is not too strong a statement to declare that this is the way civilizations begin to die.

The process is altogether too familiar to those who would survey the wreckage of history. Assault and counter assault, one extreme leading to the opposite extreme; the voices of reason and calm discredited. As Yeats foresaw: "Things fall apart; the center cannot hold . . ." none of us has the right to suppose it cannot happen here.

The first thing to do at such moments is to reassert first principles. The federal government cannot, should not—must not—enforce such principles. That is fundamentally the task and the responsibility of the university community. But any may state what these principles are, for they are as widely understood as they are cherished.

First, that universities and colleges are places of excellence in which men are judged by achievement and merit in defined areas. The independence and competence of the faculty, the commitment, and equally the competence of the student body, are matters not to be compromised.

The singular fact of American society—the fact which very likely distinguishes us most markedly from any other nation on earth, is that in the untroubled pursuit of an application of this principle we have created the largest, most democratic, most open system of higher learning in history. None need fear the continued application of those principles; but all must dread their erosion.

The second principle—and I would argue, the only other—is that violence or the threat of violence may never be permitted to influence the actions or judgements of the university community. Once it does the community, almost by definition, ceases to be a university.

PRIMARY INSTRUMENT

It is for this reason that from time immemorial expulsion has been the primary instrument of university discipline. Those who would not abide the rules of the community of learning have simply been required to leave it, for any other form of coercion would cause that community to change its fundamental nature.

The difficulty of this moment, as of most times when fundamental principles are challenged, is that many of those posing the challenges, and even more of those supporting them, are responding to very basic problems. To reassert, in the fact of student protest, the first principles of academic freedom, while ignoring the issues that are foremost in the minds of those students, is less than inglorious: it is slothful, and dishonest, an affront to those principles and in the end futile.

MANY WRONGS

Students today point to many wrongs which must be made right:

We have seen a depersonalization of the educational experience. Our institutions must reshape themselves lest this turns to total alienation.

Student unrest does not exist in a vacuum but reflects a deep and growing social unrest affecting much of our world today. Self-righteous indignation by society will solve none of this. We must resolve the internal contradictions of our communities.

There must be university reform including new experimentation in curricula such as ethnic studies, student involvement in the decision making process and a new emphasis in faculty teaching.

I have directed the Department of Health, Education and Welfare to launch new initiatives toward easing tensions in our educational community.

This administration will always be receptive to suggestions for constructive reform. But the forces of separation and non-reason must be replaced by vigorous, persuasive and lawful efforts for constructive change.

SECRETARY FINCH'S LETTER

Here is the text of the letter Secretary of Health, Education and Welfare Robert H. Finch sent to the presidents of universities, colleges, junior colleges and community colleges:

"It is my responsibility as the official chiefly charged with enforcement of federal laws pertaining to education, to bring to your attention the recently enacted federal laws relating to violations by students of criminal statutes.

"The provisions enacted are included under Section 504 of the Higher Education Amendments of 1968 (p.l. 90–575) and Section 411 of the Department of Health, Education, and Welfare Appropriations Act, 1969 (p.l. 90–557). For your information, I am enclosing copies of these provisions as enclosures to this letter.

"In view of the continued public debate over student unrest and the legitimate bounds of dissent, I ask that you bring to the attention of your students the applicable provisions of these laws and advise them of the procedures you intend to follow in complying with them.

"CONGRESS HAS SPOKEN

"It is important for all concerned to understand that Congress has spoken on this issue and that the law must be enforced. I hope at the same time that you will take the opportunity to review university policy and regulations with regard to student participation in campus affairs in order to guarantee that in maintaining order on the campus the right of legitimate and responsible dissent is fully protected.

"I would suggest that these provisions be fully discussed by all parties at your institution—trustees, administrators, faculty members, students, and where possible, parents.

"I hope that a thorough understanding of these provisions would enable you to better determine the ways and means by which your institution will deal with this legislation.

"I am well aware that the implementation of the enforcement procedures established by Congress will require a reasonable amount of time, and that we are involved in areas fraught with tension and emotion.

"Under the legislation, the burden of administration falls upon the institutions. We in HEW will do our best to work with you in this difficult area."

THE FOUNDATIONS BRING A BONANZA TO CANTON AREA

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. BOW. Mr. Speaker, the questionable operations of a few of the very large tax-free foundations has been the subject of considerable comment in Congress, press, and radio of late. I am indebted to the Canton, Ohio, Repository for an excellent article that helps to set the record straight by reporting the outstanding accomplishments of foundations in our locality.

This article may serve as a caution signal to those who wish to take restrictive action against all foundations because of the activities of a few.

The Timken Foundation, the Hoover Foundation, and the Stark County Foundation have contributed tremendously to the well-being of Stark County, Ohio, as the Repository article points out. I am certain this story can be repeated in other localities where public-spirited citizens have used the foundation system to improve their communities.

The article follows:

THE FOUNDATIONS BRING A BONANZA TO CANTON AREA

(NOTE.—Congress is taking a look at the activities of the nation's 20,000 charitable foundations. It has found what look like some "bad apples" in the barrel. Not so in the Canton community, reporter William V. Merriman finds in this study of the foundations which have contributed millions to Canton area community projects.)

(By William V. Merriman)

A west window in The Timken Foundation's offices, eight floors up in the Cleve-Tusc Building, frames the setting:

In the foreground, an American flag whipping in the wind over Timken Vocational High School in downtown Canton.

Behind it, a mile or so to the northwest, the sun reflecting from a 10-story wing under construction at Timken Mercy Hospital.

It's an appropriate view, looking through that window. Timken Foundation money put some of it there—the $2.2 million high school, a job-training showplace since 1939, and the 13-year-old hospital, built on Tim-

ken Estate land and much of it with foundation funds.

Then there's Central Plaza, for which the foundation gave $432,000. Malone College, to which Timken has given $1 million. The $10 million Cultural Center for the Arts now rising on the old Harter Estate between 9th and 12th sts. NW.

The contributions—$24 million since the late H. H. Timken Sr. and his sisters, Amelia C. Bridges and Cora Timken Burnett, established the foundation in 1934—also include:

Aultman Hospital ($3.7 million), Canton Art Institute ($223,000), Canton Public Library Association ($271,000), Canton Jewish Community Center ($100,000), Canton Park Department ($110,000).

Establishment of Canton Housing Commission ($100,000), Riverside Park in northeast Canton ($193,000), Jackson Park swimming pool ($127,000), Mount Union College ($846,000), National Professional Football Hall of Fame ($50,000), Stark Wilderness Center ($67,500), Joint Walsh-Malone College Campaign ($250,000).

Is this the type of charitable trust under attack on Capitol Hill for abusing its tax-free status?

Richard C. Baker, treasurer of Timken Foundation, doesn't believe so.

Nor do officials of Stark County's two other major foundations—the Hoover Foundation and Stark County Foundation.

They concede a few of the nation's 20,000 foundations might be "rotten apples"—those which contribute to a study of the "origin and significance of the decorative types of medieval tombstones in Bosnia and Herzegovina" or educational purposes like paying college tuition of the founder's children or to "gay living and partying of twin sisters" the founder befriended.

"There's no question a foundation in competition with other private business or one set up as a tax dodge should be taxed," says W. D. Hunter, executive secretary of Stark County Foundation.

Mr. Baker agrees, but warns: "Let's not use a shotgun to shoot down a few bad foundations."

He sees this approach developing in Washington, with proposals to tax foundations' income a straight 20 per cent, require them to disburse all income annually, disclose all activities and own no more than 3 per cent of a corporation.

Would Stark County's major foundations be affected by these rules, among tax reforms being considered by the U.S. House Ways and Means Committee?

Very much, if some of the limitations are adopted, say local foundation officials.

Disclosing activities would cause no problems for their foundations, they agree. This is done right now.

But they object to a tax on foundation income and a requirement that all income be given away each year.

A tax merely would dilute the ability of the foundations to continue helping the Stark County community, they are convinced.

Expenditure of all income each year, they predict, would lead to donating money just for the sake of donating money. It would prevent them from holding funds for major projects—like the cultural center.

Foundations are like individuals and corporations under the federal income tax laws. If they donate to charitable or nonprofit enterprises for community benefit, their donations are tax-deductible.

Since foundations presumably contribute all their income for such purposes, they pay no income taxes.

What is causing Congress to take a new look at foundations are such activities as providing a baked potato at every meal for Bryn Mawr College girls, or an annual "Christmas meal" of a bushel of oats for hungry Kansas City horses, or supporting a Negro voter registration drive in Cleveland that helped elect Carl Stokes as mayor.

Some Washington eyebrows went up when the Ford Foundation, one of the nation's most respected giants in the field, issued $131,000 worth of study-travel grants to eight former aides of the late Sen. Robert F. Kennedy.

The big ones in the Canton community, however, have been donating all their money to projects whose purposes seem to fall well within the guidelines set up by Congress in the first place—guidelines aimed at encouraging generosity for the good of a community.

"We know a few foundations are involved in questionable activities but ours and most others are following the letter of the law and are contributing to worthwhile, nonprofit organizations," said J. S. Hoover, secretary and assistant chairman of The Hoover Co.

Timken Foundation, with assets of $39 million, is Stark County's largest.

Hoover Foundation, established in 1945, has assets of $13.7 million.

Stark County Foundation, set up in 1963 with half of the initial $4.5 million provided from a trust created by Edward A. Langenbach, late Canton industrialist, and the other half from the Timken Foundation, has assets of $5 million.

Other charitable trusts topping $1 million here are Timken International Foundation ($4.2 million) and Timken Roller Bearing Co. Charitable Trust ($4 million).

In all, 38 Stark County charitable trusts are listed by the most recent U.S. Internal Revenue Service records.

Their assets: $69 million.

Average annual income, as reported to IRS since 1964: $6.8 million.

Tax paid on the income: Zero.

Donations made by the foundations in latest annual reports: $2 million.

Among Hoover Foundation donations in the past two years were $262,000 to educational activities and institutions, $220,000 to Aultman and Timken Mercy hospitals, $419,000 for the new North Canton Community Building YMCA, $75,000 to North Canton Library, $340,000 for land for a North Canton City Hall, $100,000 to the United Fund, $10,000 for a lake at Stark Wilderness Center and $12,000 for conservation programs.

Stark County Foundation gifts have included $250,000 to the Aultman-Timken Mercy hospitals' building fund, $50,000 to Malone College, $30,000 to Stark Wilderness Center, $25,000 to Walsh College, $24,000 to Stark County Department of Education for a hearing van, $10,000 each to the Massillon City Hospital building fund and Massillon Museum, $6,000 to Massillon Boys Club, $17,000 to Canton Park Commission, $17,400 to Planned Parenthood of Stark County and $6,000 to Stark County Historical Society.

It is contributing $200,000 to the joint Walsh-Malone fund drive.

BYELORUSSIAN INDEPENDENCE

HON. EMILIO Q. DADDARIO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. DADDARIO. Mr. Speaker, American citizens of Byelorussian origin will mark on March 25 the 51st anniversary of the proclamation of independence of that Republic, swallowed up all too soon by the Bolshevik-Russian Government. A Soviet Socialist Republic was created in its stead, to camouflage the efforts which the people had made to seek freedom and independence.

The history of these peoples in an area today occupied by about eight million people in some 81,000 square miles is proof of the steadfast desire for liberty which burns brightly despite the rigid controls both of czarist Russia and now the Communists.

The marking of the anniversary of short-lived democratic statehood serves to recall the growth of that country in the days prior to World War I, building and generating Byelorussian interest in their national culture, setting the clear aim which Americans must support, of government of the people, by the people, and for the people, free from the tyranny imposed upon them.

VICA'S "REPORT TO THE NATION"

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. PUCINSKI. Mr. Speaker, the Vocational Industrial Clubs of America are a fine example of how the energies of youth can be channeled for the betterment of our society. Consequently, it gives me great pleasure to insert into the RECORD VICA's "Report to the Nation" which was prepared by Mr. Ronald Wright, VICA Region II vice president. I would urge my colleagues to read this report to learn of the great work being performed by many of our youths. The report follows:

REPORT TO THE NATION

(By Ronald Wright)

VICA—the Vocational Industrial Clubs of America—is about to begin its fifth year as the National organization for youth in industrial education. Our founding date is less than three months away—it was in May 1965 that VICA was founded by youth eager to work together and build an organization of opportunity.

Today, we can look back over four exciting years—years of work and planning and, yes, fun. We can look back at the successful National Conferences and past Officers Conferences where so much dreaming and planning took place. We can look back and remember the high hopes of those youth who first proudly began VICA and we can say, without hesitation, I think, that they can still be proud—as VICA moves ahead.

VICA is about to begin its fifth year as the National Organization for youth in industrial education. We can look around us today and be glad for the warm friends who are here sharing today with us. You represent education . . . business and industry . . . labor . . . government. The past three years would not have been possible without you as friends, as supporters and . . . sometimes . . . as helpful critics.

It has become a tradition for us—the state and national officers of VICA—to invite our friends here in order that we can keep you informed and up-to-date on what we are doing. Because we know that you share our interest in the advancement of industrial youth and that you *do care* about the future of VICA.

The past year has been a busy one. Our membership has grown to over 75,000. Four new state associations—Delaware, Florida, Vermont and Utah—were presented with their charter at our last national meeting. Two other states—Alabama and Kentucky—have joined and will be officially chartered

this June. This brings us to a total of 37 state associations. We're happy to report that students from Massachusetts have taken advantage of the opportunity for direct affiliation with National VICA.

Perhaps most important is the fact that over 1,000 of our members this year are post-secondary students in area vocational schools, junior and community colleges. Their admission to what was originally an all-high school organization was approved earlier this year and the post-secondary division will be officially chartered in June at the Fifth National Leadership Conference. We expect it to really *take off* after that!

VICA has gathered support from many new organizations, through our Foundation this year. New to the growing ranks of contributors were Brodhead-Garrett Company; Clairol, Incorporated; the International Brotherhood of Electrical Workers and the National Restaurant Association. Others of our earlier supporters are here and we extend warm thanks to all of you.

A great deal of planning and dreaming and work has gone into our conception of a National Leadership Center for Industrial Youth Development, which VICA hopes to construct in the future in the Washington area. It is our hope to better serve industrial youth with facilities for leadership sessions, and to provide an educational center for research and development of leadership training materials, publications and techniques, and to provide housing for the National staff and services. The National Advisory Council on Trade and Industrial Education has endorsed the Center proposal and will offer support in its development.

We have made what we know to be a firm friend this year in the National Association of Manufacturers. The NAM has wholeheartedly endorsed VICA. NAM Education Committee Chairman Roland Bixler has stated that the committee would cooperate with VICA in attaining its goals and "every effort should be made by the business community to support education for those who wish to pursue industrial education."

Another project very close to our hearts is the desire to share the opportunity of VICA with the youth of the inner-city areas who need vocational direction and motivation . . . just as we do. Initial thought and planning began during this past year on establishing a demonstration project in the heart of one of our nation's large metropolitan areas. The possibilities of VICA are boundless in this area and we hope that those interested and involved will share the chance to make the possibilities realities.

Yes . . . VICA is about to begin its fifth year as the National organization for youth in industrial education. It is good to look back and to share pleasurable memories of what has gone before but, even more, VICA likes to look ahead. With hard work and dedication, it will be a good future. Will you share the future with us?

POST OFFICE DEPARTMENT'S TOP LAW ENFORCEMENT OFFICER RETIRES

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. CONTE. Mr. Speaker, I would like at this time to pay tribute to a most dedicated public servant. Chief Postal Inspector Henry B. Montague is retiring as the Post Office Department's top law enforcement officer. During his years with the Department, Mr. Montague diligently tackled the problems of postal law violations. We all know how the number of crimes committed has risen dramatically over the past decade. Postal crimes are no exception. The task of the Chief Postal Inspector has indeed been formidable. Mr. Montague has performed it exceedingly well.

I have had the pleasure of working with Mr. Montague at the House Appropriations Committee and in my continuous contacts with the Post Office Department. He has always been most helpful and cooperative.

I would like to include in the RECORD an article which appeared in the Evening Star on March 11, 1969. It is a fitting comment to a fine individual and a dedicated servant.

The article follows:

[From the Washington (D.C.) Evening Star, Mar. 11, 1969]

TOP BATTLER OF POSTAL CRIME RETIRING, LEAVES SKILLED CORPS

Chief Postal Inspector Henry B. Montague, who has fought record postal crime with record arrests and convictions of postal law violators, is retiring as the Post Office Department's top law enforcement officer.

Although his retirement actually became effective February 28, he is staying on the job to assist in the transition of the law enforcement responsibility to the new administration.

The 57-year-old chief took office at the start of the Kennedy administration. During his years in the top top spot, he has seen post office burglaries and holdups reach an all-time high, mail fraud drain a conservatively estimated $500 million a year from the public, organized crime got deeply involved in credit card frauds and merchandise swindles, and apartment letter boxes being rifled by the tens of thousands—usually to get at checks arriving on a predictable schedule.

To cope with a postal crime rise which clearly reflects the spiraling nationwide crime rate, Montague developed a corps of specialists and adapted automatic data processing to show him where his specialists were needed most.

QUICK TAB ON OPEN CASES

In mail fraud, for example, his data processing equipment gave him a print-out at month's end showing how many cases were open in each area of mail fraud—how many new medical frauds, chain referral schemes, land frauds, debt consolidation, home improvement rackets, and other schemes affecting young married couples and fixed-income older people. As each new scheme surfaced, Montague deployed the specialists to meet it.

He increased the number of men assigned to mail fraud because he was particularly aware of the social effects of gimmick selling and pie-in-the-sky schemes on ghetto residents. He represented the Post Office Department on the President's Consumer Commission.

To deal with steadily climbing armed robberies of post offices and postal trucks, Montague provided better firearms, more radio equipment and the first radio cars in the Postal Inspection Service. Currently, post office holdups are running at the highest rate in U.S. history.

Postal inspectors now have base radio stations in most big cities, which direct the radio cars not only in postal robberies and burglaries but also in dealing with one of the commonest of postal crimes—letter box thefts in big cities.

FAST ACTION REQUIRED

To get the thieves, inspectors have to move fast and they're on the street ready to move in response to radio calls. Postal inspectors' investigations of mail box thefts resulted in 6,104 arrests last year.

Montague has emphasized more training all along the lines—more firearms training, more training in specialized areas, even university-administered correspondence courses.

The training paid off with the arrest of 14,339 individuals on postal violations last year, an all-time high. The 11,474 convictions last year also were a record.

A veteran of 32 years with the Post Office Department, more than 26 of them as a postal inspector, Montague last December was awarded the highest career honor the Post Office Department can give—the Distinguished Service Award.

Postmaster General Winton M. Blount yesterday hailed Montague as representing the "finest product of the postal career service tradition of advancement of dedicated careerists through the ranks."

FRANK M. CRUGER, OF INDIANAPOLIS, WRITES "POINTERS ON PREPARING AN EMPLOYEE HANDBOOK" FOR SMALL BUSINESS ADMINISTRATION

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. BRAY. Mr. Speaker, one of the smartest moves ever made by Federal Government agencies and departments was to tap the vast reservoir of knowledge, skill, and experience found among private businessmen. This is especially so when the department or agency is charged with helping others set up, operate, and maintain their own businesses.

Mr. Frank M. Cruger, of Indianapolis, is chairman of the National Affairs Committee, National Industrial Distributors Association, of Philadelphia, and president of the Indiana Manufacturers Supply Co. He was asked by the Small Business Administration to use his own skills and talents to write, for SBA use and distribution, a document in their management aids series for small manufacturers.

Mr. Cruger's product, entitled "Pointers on Preparing an Employee Handbook," has now been published by SBA as Management Aid No. 197. To date, more than 50,000 copies have been requested, which certainly proves its worth and value to the small business community.

It is a pleasure to insert the text of the handbook in tribute to Mr. Cruger and all his fellow businessmen who so generously give of their time and talents, so they may be shared with others who are just beginning. This is in the finest American tradition and something the value of which cannot be calculated.

The above-mentioned follows:

POINTERS ON PREPARING AN EMPLOYEE HANDBOOK

(By Frank M. Cruger)

SUMMARY

Time was when employee handbooks were considered a frill which only large companies could afford. But no longer. Owner-managers of many small businesses now use handbooks to give employees information on policies, wages, and employee benefits.

This *Aid* points out that a successful handbook should include what employees need to know as well as what the owner-manager wants them to know. Suggestions are given on subjects to include, on presentation, and on format.

Nothing takes the place of face-to-face conversation with employees, both old and new. But the owner-manager often finds that he does less and less of it as a growing business increases the demands on his time.

Although an employee handbook will not replace personal contacts, it can help an owner-manager in getting vital information to employees. You should think about issuing one if you want your employees, old and new, to understand:

What you expect of them and what they can expect of you.

What your policies on wages, working conditions, and benefits are.

How much time, thought, and money go into making their jobs secure.

What your company's service to customers is.

What place your company has in the community and the industry.

What makes a job in your company good and permanent employment.

CONTENTS OF A HANDBOOK

An employee handbook can cover many subjects. See the sample table of contents of this *Aid*. A new employee's interest is apt to center around three sections of the handbook—sections number 5, 6, and 7. He wants to know what information he needs to get along on the job, what his benefits are, and what, if any, services the company offers him.

EMPLOYEE HANDBOOK: SAMPLE TABLE OF CONTENTS

1—Welcome Message.
2—History of the Company.
3—This Is Our Business.
4—You and Your Future.
5—What You Will Need To Know.
- Working Hours
- Reporting To Work
- "Time Clock"
- Rest Periods
- Absence From Work
- Reporting Absences
- Employment Record
- Pay Period
- Shift Premiums
- Safety and Accidents Prevention
- Use of Telephones
- How To Air Complaints

6—These Are Your Benefits.
- Vacations
- Holidays
- Group Insurance
- Hospitalization & Surgical Benefits
- Free Parking
- Training Program
- Christmas Bonus
- Savings Plan
- Profit-Sharing Plan
- Suggestion Awards
- Jury Duty
- Military Leave
- U.S. Old Age Benefits
- Unemployment Compensation
- Service Awards

7—These Special Services Are For You.
- Credit Union
- Education Plans
- Medical Dispensary
- Employee Purchases
- Company Cafeteria
- Monthly Magazine
- Annual Outing
- Bowling League
- Baseball Team

8—Index or Table of Contents.

Spelling out this information in a handbook gives the new employee a reference source. Even if your initial interview with him is long, few individuals can absorb many details about several subjects at one sitting. Moreover, when an owner-manager talks at great length, some new employees may write him off as "an old windbag."

WHAT EMPLOYEES NEED TO KNOW. To fit in with old employees, a new man needs to know the working hours, lunch and other breaks, time clock regulations, and reporting of absence.

He also needs to know about his wages and payday. In discussing wages and other figures that may change from time to time, it is a good idea to keep figures to a minimum. If your handbook makes a general statement, for example, about wages, you can issue a mimeographed sheet on the detailed figures. In this way, you can keep your handbook from becoming out-of-date when you grant the next wage increase.

Your employee handbook also should tell the new employee whom to see when he has questions or problems connected with his work.

BENEFITS AND SERVICES. The newcomer is interested in the benefits and services your company offers. This discussion in your handbook should be factual so that employees can refer to it when they have questions.

Even though many people don't care what a thing costs someone else, it does not hurt to remind employees of the cost of their benefits—such as vacations and health and life insurance. Making them aware that benefits and services are part of your overhead may help them to realize the need for their cooperation in your cost reduction campaigns.

One company ends its section on special services by saying: "These facts mean that we can afford to maintain these plans only as long as the company operates successfully. That depends on the cooperation and efforts of every one here. We hope you make possible this extra security for you and your family. That's the way things work at (name of company): The better the job each of us does, the brighter the future will be."

Examples of services which you will want to mention are the opportunity to buy company products at a discount, the first-aid station, the low-cost cafeteria lunch, and sports activities.

SKETCHING "THE BIG PICTURE"

A welcome message and sections on the history of the company, and "our business," and the employee's future provide an opportunity for the owner-manager to sketch "the big picture" for new employees. Sincerity and simplicity are the keys to presenting these sections. The temptation to editorialize or "preach a sermon" should be avoided because some employees are apt to regard "the big picture" as propaganda.

WELCOME MESSAGE. The welcome message should convey a feeling of friendly interest to the new employee. There are as many ways of expressing a welcome as there are presidents of small companies. Here are two examples.

"I am pleased that you have decided to join us at—(company name). I hope our association will be a long and beneficial one. Our company has a history of more than 20 years of service to our customers. It has grown because of the efforts of each employee. Our future looks bright. But it will present challenges. I am counting on your help in meeting those challenges.

"We know that in return for your support the company is obligated to make your employment as satisfying as possible. Our wage policies and benefit programs are designed to make the company a good place to work. We also emphasize intelligent human relations in our day-to-day contacts.

"You will find out that our company tries to be a good citizen in this community. I hope that you will, if you are not already doing so, participate in worthwhile civic projects.

"Please call on any of us to help you become established in your new job. And again, thank you for joining us."

The second example emphasizes the importance of the employee's job as follows:

"This company is in the service business. Efficient service depends on each employee doing his or her job correctly and promptly. Each job in this company is important. If it wasn't, it would be eliminated quickly.

"I urge you never to lose sight of the importance of your job to the overall effectiveness of our company. Whether customers continue to give us their business depends on the manner in which you and your fellow employees do your work."

It is a good idea to include the owner-manager's picture in the welcoming message. The message should end with a facsimile signature rather than his printed name.

HISTORY. Whether you include a section on the history of your company depends on its age and the significance of past events. When past events are impressive, information about them can help to instill pride in the company and its importance to the community, customers, and employees.

Emphasize the growth of the company through past service to customers and the role employees played in that progress. Tie the past to the present by pointing out that satisfied customers are the company's only assurance of continued sales and jobs.

This section should be brief. It should not be a biographical sketch of the founders and their successors. It can follow the "Welcome" section or it can be the last page of the book. There, it re-emphasizes the sense of participation for the new employee.

THIS IS "OUR BUSINESS". Some owner-managers assume that employees are familiar with the company's products, services, and sales. Often the fact is that employees are ignorant of, or misinformed about, such pertinent facts. This section provides the opportunity to correct this condition. It should be brief and give employees the facts they need to feel that it is "our" business rather "your" business. If the owner-manager does not convince employees that they play an important role in the company's success, who will?

YOU AND YOUR FUTURE. In this section, the owner-manager talks to the employee's pocketbook. His future pocketbook, you might say.

The discussion should cover policies and procedures on wage reviews and promotion. It should spell out who is responsible for making performance and wage reviews and when they are scheduled.

If you have a profit sharing plan for employees, explain it in this section. Emphasize the features that make it worthwhile to remain with your company.

Also if you have a payroll savings plan for buying U.S. Savings Bonds and/or a stock participation plan, tell employees about them. Urge them to use the plan to help make their future secure.

Information about service awards might also be included.

A FEW WORDS ABOUT PROFIT

After "the big picture" has been discussed, it is a good idea to remind employees of the basis of their security with the company. They should be aware that a business must make a profit in order to grow and provide jobs and employee benefits.

Your handbook might say, for example:

"And Just A Few Words About Profit.

"Your job and mine are dependent on the success of this company. It takes money to make jobs and it takes profits to keep the company growing. If we are to expand, a profitable history will enable us to obtain necessary funds. You wouldn't invest your money in a losing company.

"To afford the benefits you've just read about we must make a profit. Our future depends on doing our jobs to the best of our

ability. Our efficiency will produce the necessary profits to assure our continued expansion and our maintaining our position to the field.

"You and I have seen many businesses lose sight of the need for profit and go broke. Let's all work together for our successful future."

THE WRITING

An employee handbook should speak to the point. Employees are not interested in unnecessary details. Nor are they taken in by long phrases that say little or nothing.

The writing should also be consistent. Here, the approach determines the style. Will it be a formal approach? An informal one? A "folksy" one?

Not every owner-manager can write clearly or has assistants who can. Local writers—such as newspaper reporters—or high school teachers of English or journalism may be available on a fee basis. They might edit the owner-manager's draft to improve its readability. Or they might write the handbook, using facts which he supplies.

THE FORMAT

The booklet should be attractive. The objective is to invite the reader's attention and hold it throughout. Effective use of color and layout helps to make the booklet inviting and easy-to-read.

The type face plays an important part in the overall effectiveness, as well as design of the cover and layout of pages. Instead of small pen and ink cartoon drawings, the illustrations may be small photographs interspersed with the text. Graphs can be used to illustrate company growth.

The booklet should be small enough to be carried in a pocket but not so small as to be easily misplaced. Typical handbooks range from 5½" x 8½" to 6" x 9".

EXTRA MILEAGE

Although the primary purpose of a handbook is to inform and orient employees, the owner-manager can get extra mileage from it.

A foreman can, and should, use it as a tool for making a new employee "feel at home." For example, at the end of the new man's first week, his foreman can give him a chance to ask questions about the handbook. Sometimes this informal interview gives the foreman the opportunity to clear up information which the new man may have misinterpreted or misinformation which he may have picked up from old employees.

The handbook can also be used as a public relations tool. But keep in mind that image building begins at home. When employees have a good image of your company, they will spread the word. Such word-of-mouth advertising provides a solid basis for building good community relations.

Print enough copies so your employees can have extra to show to friends and relatives. Copies can also be given to leaders of civic and business organizations which work for community growth.

LIVING WITH YOUR HANDBOOK

Once an owner-manager issues a handbook, he has to live with it. Employees will expect to find conditions, benefits, and services as described in the handbook. This fact should present no problem.

However, there is a grey area which can cause trouble. It is connected with the owner-manager's attempt to convince employees that his company is a good place to work. A little care can prevent his leaving the handbook open to employee criticism.

For example, be sure that the booklet does not say anything you can't back up. Suppose, for instance, that your most efficient foreman is overbearing by nature. Then you had better not write in your handbook a statement such as "we strive for a friendly atmosphere in which problems can be settled amicably."

FOR FURTHER INFORMATION

Readers interested in exploring further the subject of employee handbooks may wish to consult the following references. The list is necessarily brief and selective. However, no slight is intended toward authors whose works are not mentioned.

BYELORUSSIANS FIGHT FOR THEIR FREEDOM

HON. JOEL T. BROYHILL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. BROYHILL of Virginia. Mr. Speaker, today Byelorussians throughout the free world will celebrate the 51st anniversary of the founding of the Byelorussian Democratic Republic in 1918.

In spite of the great sacrifices made by the Byelorussian people in gaining their independence, their young state was unable to preserve its independence against the onslaught of overwhelming Bolshevik forces. And the Russians, after crushing their nation, and bestowing one-third of their territory to the Russian Republic, created the Byelorussian Soviet Socialist Republic in its place, as a colony to Soviet Russia.

As a tribute to the continuing effort of the Byelorussian people who hope to see their nation again free of Communist domination, I am pleased to include at this point in the RECORD a statement issued by the Byelorussian-American Association for this occasion, and I commend it to my colleagues for sympathetic consideration:

Byelorussians fight for their freedom on the 51st Anniversary of the Proclamation of Independence of the Byelorussian Democratic Republic.

"We, the Rada of the Byelorussian National Republic, cast off the last fetters of political servitude which has been imposed by the Russian Czars on our free and independent land.

"From this day, the Byelorussian National Republic is declared a free and independent state. The peoples of Byelorussia, through their elected Constituent Assembly, will henceforth decide the future relations of Byelorussia with other states"—March 25th, 1918, Minsk, "The Rada of the Byelorussian Democratic Republic."

This document climaxed almost 130 years of continuous struggle by the Byelorussian people against Russian imperialism when, for the first time since 1795, the Byelorussian nation was once again able to re-emerge as an independent state and renounce its enforced incorporation into the Russian empire.

The principles and objectives laid down by the new state—The Byelorussian Democratic Republic (BNR)—were enunciated to be:

The inclusion into a Byelorussian state of all former areas where the Byelorussian population constitutes a majority;

The creation by direct and closed ballot of a Byelorussian Legislative Assembly based on the proportional vote of all citizens who are to be enfranchised regardless of origin or religion;

The extended guarantee of all freedoms of speech, press, assemblage and association as well as the protected legal right to strike;

The insurance of full national and cultural autonomy for all peoples of the Republic;

The institution of an eight-hour working day, and the acknowledgment of public ownership of the woods, lakes, and natural resources.

The independence of the Byelorussian National Republic was recognized *de jure* by Ukraine, Czechoslovakia, Austria, Finland, Poland, Turkey, Lithuania, Latvia, Estonia, Armenia, and Georgia. It was recognized *de facto* by most other countries of the world.

Unfortunately, the young Byelorussian state was unable, for very long, to enjoy the freedom and sovereignty to which it aspired. In a few short years, the entire territory was turned into a battlefield when the Republic was crushed by the invading forces of the Red Army and the people found themselves once again in captivity.

To subvert the aspirations of the Byelorussian people, the Russian Bolsheviks created the Byelorussian Soviet Socialist Republic while simultaneously bestowing one-third of the original Byelorussian ethnic territory to the Russian Republic. The creation of the BSSR was to serve as naught else but a camouflage for the colonial exploitation of Byelorussia.

The Byelorussian SSR is not a sovereign state and her political, economic, and social position today is as a colony to Soviet Russia.

Russians occupy almost all key positions in the Byelorussian Republic and as a consequence drain the Byelorussian economy of its wealth and resources. The industrial development of the BSSR serves primarily to foster the goals of Russian imperial expansion and is accompanied by the steady channeling of Byelorussian man-power for the express purpose of building a Russian empire in Siberia and Soviet Central Asia. Coupled with the additional practices of genocide and deportation by the Soviet Russian regime in Byelorussia, the staggering loss of nine million Byelorussian lives has resulted. Moreover, the Soviet regime has been conducting an intensive and systematic "russification" of its captives. The net result has been that the Byelorussian language has been almost completely eliminated, not only from official use in administrative circles, but also in the higher educational institutions, in the secondary schools, and in a large number of elementary schools. By implementing policies of religious suppression, the Soviet Government has almost completely eradicated all public religious worship in Byelorussia.

One of the first victims of Russian Communist aggression, Byelorussia has continuously maintained its struggle against the imperial forces. There were armed uprisings in the Slucak region in 1920 and similar uprisings during 1922–26 in Vializ, Homiel, Cervien, and the Barysau districts. Despite the purges of 1929–30, 1933, and 1937 and the

mass deportations during 1939 and the 1950's, and despite the mass murders and the starvation programs of 1946–48, the Communists have failed to suppress, let alone exterminate, the spiritual and moral resolve for establishing freedom in Byelorussia; on the contrary, the will of all Byelorussians has been strengthened in their desire for achieving independence.

Byelorussian Independence Day, March 25th, 1918, is commemorated by all Byelorussians wherever they live—by the Byelorussian-American community, by the emigrants throughout the free world, and by the members of the Byelorussian underground in the BSSR. To these and to all other freedom-loving people, March 25th, 1918 symbolizes the unquenched spirit of the Byelorussian people. Thus, the fight for Byelorussian independence is also the fight for the emergence of all other captive national states everywhere and is a necessary step toward the ultimate establishment of world freedom and world peace.

DR. V. D. MATTIA—CORPORATE HEAD WITH A CONSCIENCE

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. RODINO. A welcome breath of candor and conscience in the drug industry is being provided today by Dr. V. D. Mattia, president of Hoffmann-La Roche of Nutley, N.J. Testimony of the unique position which Dr. Mattia occupies within the industry is given in two recent articles in Life magazine and the American Druggist, which eloquently express his deep-seated sense of social responsibility and action.

Having known Dr. Mattia for many years, I hold him in the very highest esteem, and find it especially gratifying that so truly genuine a humanitarian is given such well-deserved recognition. I am pleased to bring these articles to the attention of my colleagues, for they represent the convictions of a man whom we would all do well to emulate.

The articles follow:

[From Life magazine, Mar. 7, 1967]

A PILL-GIVING MAVERICK

Except that it is affluent to the point of embarrassment, nothing seems to be quite right for the drug industry these days. What with congressional investigation, charges of profiteering and tacit admissions of price-fixing (five major manufacturers recently agreed to refund $120 million to municipalities and other purchasers who felt they had been overcharged), the industry could certainly use a bit of good publicity, and Dr. V. D. Mattia may be just the man to provide it.

Ironically, however, the 45-year-old president of Hoffman-La Roche is distinctly at odds with the normally clubby members of the Pharmaceutical Manufacturers Association. He has refused to help pay for a huge advertising campaign aimed at improving the industry's image. Instead, his company—the nation's fourth-largest producer of pharmaceuticals—each year simply gives away some 37 million pills worth about $1.4 million. The drugs are distributed by doctors to needy cases, lists of which have been solicited from the doctors.

"Barney" Mattia is himself an M.D., a churchgoer and the possessor of a strong social conscience. While he now pulls down a salary ($150,000 a year) that permits him to indulge his love of pre-Columbian art, he had to depend on the GI Bill for his medical education, and work as a researcher for years before taking over Hoffmann-La Roche. "I can't honestly say that drug prices are cheap," he admits. "I think they're reasonable only for those who can afford to pay the price." In helping those who cannot afford them, he feels, his giveaway program is also sound business. It is fully tax-deductible, and although other manufacturers may call it grandstanding, at least two of them may follow suit.

In an interview with Life Reporter Judy Gurovitz, Barney Mattia spoke about the drug industry and his own position in it:

"If there are generic drugs alike in activity and safety with trademark drugs, then I think it's folly to force physicians, patients or government agencies to pay more. Ultimately I think we're going to find that generic producers are going to be able to duplicate the therapeutic value of many drugs, though it may cost them a bit more. But it's not as simple as it may seem. Even with products that we're manufacturing we have problems such as sterility and quality control.

"I think everyone is entitled to purchase drugs at the lowest cost possible.

"I have violently objected to the advertising program of the Pharmaceutical Manufacturers Association. We should not be investing in such a program, but should be investing in research in drug metabolism to learn how to better control side effects.

"The most satisfying aspect of the job of president is the ability to exert leverage for good—to take the massive resources of this company and assign them to projects which offer promise and hope therapeutically, to mobilize its talent and resources to help in the community.

"You live in the fear that you may make a decision or not recognize when a decision should be made and that someone may be penalized for this. One could market a drug after it had been thoroughly tested and had been approved by the government. Then after several months, untoward effects may develop which place the health of patients in jeopardy. Nobody did anything wrong, but somehow or other people were hurt. You just hope it never happens to you.

"I came to the conclusion a long time ago that a man can reap the benefits of this great society for only so long before he's in debt to it. And I've been a very fortunate man. So many good things have happened to me that at some point I must dedicate myself and whatever talents and energies I possess toward helping others on a full-time basis. At some point in my life I'm going to do just that. I don't know where or how.

"One of the things we're doing now, in collaboration with one of the local rehabilitation centers, is to train our people who are about to be retired, to permit them to go to work in one of these centers. This I think will achieve two goals: to help staff these activities properly, enabling them to raise substantial sums of money and institute more efficient business methods and public relations, and to permit the individual who feels he's being put out to pasture an opportunity to maintain his place in the sun.

"If American industry were doing enough we wouldn't have need for such programs as the Job Corps. This is an excellent program, but American industry could solve the job problem quickly. After all, the government would be a partner in such ventures because of the tax benefits. When you allocate part of your profits for such programs, you're in effect making Uncle Sam a half-partner.

"Two days after I took over as executive vice president of the company, when the then chairman of the board and the president were abroad, representatives of CORE visited the plant. They called to my attention the low percentage of non-whites in our employ, and then picketed my home since I was the highest-ranking officer present. I decided that we had to do more. I felt then that the only way you could remain conscious of this responsibility day after day, week after week and month after month was if you got reports and you did an accounting just as you do in your fiscal programs. So each month personnel sends me a social balance sheet which tells exactly the number of people who were interviewed for jobs and the reasons why individuals were not hired. This has helped us hire far more socially and economically disadvantaged people and also the physically handicapped."

[From American Druggist, Mar. 10, 1969]

EDITOR'S NOTEBOOK

(By Stanley Siegelman, editor-in-chief American Druggist)

Like the medicinals he deals with, Dr. V. D. Mattia, president of Hoffman-La Roche, is a complex compound:

To some in the drug industry, the 45-year old executive is a visionary whose concepts of social obligation often seem incompatible with the harsh demands of the profit-oriented business world.

To his staff and associates, he is a tough minded perfectionist—and, by his own admission, a "restless and impatient man."

To intimates, he is an accomplished storyteller, who never forgets a joke or anecdote.

To researchers, he is generosity incarnate—a man who unfailingly opens both purse and mind to new ideas.

To members of the press, he is an enigma—a corporate chieftain who shuns personal publicity with the same assiduousness with which most other executives seek it.

To fellow board members of the Pharmaceutical Manufacturers Association, he is a non-conformist—more apt than not to vote against the majority.

I interviewed Dr. Mattia at his firm's Nutley, N.J. headquarters. He aired his views on a variety of subjects in the carefully enunciated, soft-spoken style which is his hallmark. He held me transfixed with the ardor of his convictions. The subject perhaps closest to his heart is that of the civic and social responsibility of business in general, and the drug industry in particular.

In today's climate, there is certainly nothing original about the topic. Indeed, it is practically mandatory for every speech-making executive to pay verbal homage to that abstraction. But this is precisely the point: Dr. Mattia was among the first to put theory into practice.

FREE DRUGS

He initiated, for example, the "Indigent Patient Plan." It supplies free Roche drugs to any patient who cannot afford them—without limit as to quantity or duration. The drugs are furnished directly to the physician, who is simply asked to confirm the patient's indigency, and his therapeutic need. Only patients of MDs in private practice are eligible.

When Dr. Mattia first proposed the plan a number of years ago, many viewed it as a quixotic idea which would inevitably result in red ink. Skeptics predicted it would be abused by doctors and opposed by pharmacists.

Initially, there were indeed some complaints by drug store owners who felt they were being unfairly bypassed—but they have now ceased.

NO ABUSES

As far as physicians are concerned: "I know of no single instance of abuse by any doctor in the nation," Dr. Mattia said. "In fact, physicians are not making use of the plan to the extent they should." The firm has a computer feed-back system which enables it to pinpoint abuses if they should occur.

At its outset, a few doctors regarded the plan as a manifestation of "socialized medi-

cine"—but their remonstrances, like those of the druggists, have now stopped, Dr. Mattia indicated.

Another reflection of his social orientation is Roche's medicare reimbursement plan. The firm refunds to hospitals 25 per cent of the cost of Roche drugs dispensed to patients under medicare.

AID-TO-NEEDY

Dr. Mattia, who came up the hard way (he earned his MD degree at New York Medical College while studying under the G.I.. Bill and supporting a growing family) displays extraordinary sensitivity to the needs of the under-privileged. For over three years now, Roche has supplied free classroom instruction in basic office skills to ghetto residents of Newark, N.J. The firm has also been training Negroes to be pharmaceutical lab technicians.

"I am far from satisfied with what we have been doing," he asserted. "Yes, we have trained hard-core unemployed. Many of them now have jobs here at Roche. But we hope to do more.

"We are appointing an executive whose sole function will be to expand aid to the disadvantaged.

"I have the strong conviction that no area of our company is beyond the realistic aspirations of these people, if we provide them with the proper training.

"But even this is not enough. We hope to achieve total involvement on the part of the entire Roche family. Everyone is sympathetic, in a general sort of way. But each person needs a more definite role."

"ATTRITION"

Dr. Mattia, who just became regional chairman of the National Alliance of Businessmen's Division in Newark, the city of his birth, noted that well-intentioned managements often make sincere pledges about giving jobs to the hard core unemployed—but attrition occurs.

"It is not sufficiently understood that these persons are not qualified to hold any job, and that a total commitment to training is required.

"But I will say that most corporate leaders seem to recognize the changing role of business in society. The isolation in which we once functioned is no longer feasible.

"Economics are no longer the sole province business. Business must have a sense of social responsibility. Without it, corporations are doomed."

Nor is Dr. Mattia among those who believe the primary difficulty is lack of communication:

"All you have to do is state your goals clearly and simply. The problem of communication has been exaggerated."

He acknowledged, however, that the drug industry has failed, on occasion, to articulate its position well. He cited PMA's continuing ad campaign in the Reader's Digest:

"I voted against the campaign. I have nothing against the Reader's Digest. I just think there are other ways to demonstrate our sense of responsibility. PMA has a Foundation which supports research in such areas as metabolism and toxicology. Why not expand its scope and enlarge its scale? This would be a vivid demonstration to the public of the industry's concern for its welfare.

"It is sheer folly to resort to expensive advertising campaigns to convince people drugs are cheap. Drugs are reasonable, but not cheap.

"When legislative proposals involving the general area of health care come up, the industry is nowhere to be seen—either in support or opposition. At Roche, we have determined to take public positions on all such proposals."

A FEDERAL COMPENDIUM?

Dr. Mattia disagrees with PMA about another important matter: the proposed federal drug compendium, which would list all available drugs and their side effects. PMA fears such a compendium might tend to stress generics unduly—and has proposed, an an alternative, that the privately published Physicians Desk Reference (PDR) be improved.

"To oppose the compendium idea is virtually indefensible," Dr. Mattia asserted. "There is need for such a publication to keep physicians and pharmacists fully informed—especially as more potent therapeutic agents are introduced.

"The problem is how the compendium should be structured, who should exercise control over it, the calibre of people who would operate it." He was careful to point out he was talking about a compendium—which would list drugs in terms of their pharmacological properties, with no reference to prices—and not a formulary.

THE PRICE PROBLEM

And what about the perennially troublesome question of drug prices? Should a conscientious physician weigh the cost of the drug he is prescribing—or is this factor irrelevant?

"We cannot duck this question. The doctor must consider cost. He must treat the total patient—and this includes his economic status, as well as his heart, lungs, and kidneys. The doctor's first obligation is to select the best therapeutic agent available. But there is no point in prescribing a drug which the patient can't afford. He will end up not taking the drug—and the whole object of therapy will be defeated."

But isn't this an argument in favor of generics?

His reply: "If a generic product is equally effective and equally safe, there is little or no argument to justify spending more money for the brand name product."

Looking into the future, he envisions the pharmacist as playing an increasingly important role in complementing the function of the physician. He sees nothing unrealistic about the concept of the pharmacist as a drug consultant to the clinician. Moreover, he believes the pharmacist can make a real contribution in transmitting drug-taking instructions to the patient in greater detail when the doctor has been cursory.

CURRENT RESEARCH

What, I asked, are the most promising areas of Roche's current drug research?

"We have several compounds in the works. We hope, within the next year or two, to market a new, safe hypnotic. Also on the horizon is a topical preparation for malignancies of the skin. NDA's on both these products have been submitted to the Food & Drug Administration.

"In addition, encouraging tests of a new broad spectrum antibiotic have been underway.

"By April, we should be producing meaningful quantities of L-Dopa, the experimental drug for Parkinson's disease."

"Experimental" is a key word at Roche, dedicated as it is to basic research. By 1970, a $10 million structure—the Roche Institute of Molecular Biology—will rise on the firm's Nutley, N.J. grounds. Using its highly automated, computer controlled facilities, some 200 scientists from all over the world will probe the shadowy frontiers of knowledge about the life process itself.

The Institute will embody, in concrete form, Dr. Mattia's conviction that drug manufacturers have a duty to conduct basic research, and not merely develop new pharmaceuticals. He regards the pursuit of knowledge for its own sake as an obligation to society.

All the major posts in the Institute have already been filled, and requests for fellowships have been received from 20 countries. In addition, post-doctoral graduates of two local universities will conduct research at the Institute.

ARTIFICIAL HEART?

Roche's medical electronics division—recently acquired from RCA—has already looked into the feasibility of developing an artificial heart. This is an area of considerable interest to Dr. Mattia, who concentrated on the cardiovascular field as a practicing physician.

He believes the flurry of activity in heart transplantation has had a salutary effect.

"Heart transplants have presented a host of interesting problems to the various disciplines. To dismiss this approach summarily is to negate the very basis on which science makes its advances."

ART COLLECTOR

In his spacious, deep-carpeted executive office, Dr. Mattia is surrounded by choice specimens of pre-Colombian sculpture. They project timeless emanations—a certain quality of brooding-in-perpetuity.

"I started collecting these pieces back in the days when they were all I could afford. Their value has increased considerably since then. I own something like 700 or 800 items. But my family still thinks they are pretty spooky."

BYELORUSSIAN INDEPENDENCE

HON. JOHN W. WYDLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. WYDLER. Mr. Speaker, freedom of thought, expression of ideas and the ability to live in peace as an independent nation has been the cherished dream and determined aspiration of the Byelorussian people, an objective they energetically pursued during the decade before World War I.

One year following the Russian revolution and the overthrow of the hated czar, after centuries of foreign domination, the Byelorussians proclaimed their freedom on March 25, 1918, throwing off the yoke of Russian tsarism and forming their own democratic government in the capital city of Minsk. The constitution which they adopted embodied the basic fundamentals of self-government which free men cherish, and the small country of approximately 8 million people made significant advances in the fields of education, culture, and social welfare.

However, following 3 years of tyranny and terrorism, fighting on several fronts in the defense of their country, they were robbed of their independent status by the Bolshevik forces of the Soviet Union.

Despite the devastation of two world wars, some of the most savage fighting taking place on its soil, and systematic and ruthless persecution on a national level, the Byelorussians never lost faith.

These indomitable people have not given up their national ideals, their right to feedom and national independence. Nearly 50 years of continuous subservience to foreign tyrants has not subdued their free spirit, and they still pray for their deliverance from Communist totalitarian tyranny.

The sympathy and compassion of the entire free world embraces the good people of Byelorussia on the observance of the anniversary of their independence day, March 25, 1918. We fondly hope that they will attain their national goal, their freedom.

BYELORUSSIAN INDEPENDENCE DAY

HON. HENRY HELSTOSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. HELSTOSKI. Mr. Speaker, a day of commemoration of some outstanding occasion is usually one of rejoicing and celebration. But this March 25, the 51st anniversary of the proclamation of the independence of Byelorussia is not one which the Byelorussian people can celebrate as a fulfillment of their dreams, the independence of a nation and freedom from an alien government.

On March 25, 1918, the Byelorussian people proclaimed their independence. On that date the Byelorussian National Republic was born.

Unfortunately, the young Byelorussian National Republic was unable, for very long, to enjoy the freedom and sovereignty to which it aspired. In a few short years, the entire territory was turned into a battlefield when the Republic was crushed by the invading forces of the Red Army and the people found themselves once again in captivity.

The Byelorussian Soviet Socialist Republic is not a sovereign state and her political, economic, and social position today is as a colony to Soviet Russia.

Russians occupy almost all key positions in the Byelorussian Republic and as a consequence drain the Byleorussian economy of its wealth and resources. The industrial development of the Republic serves primarily to foster the goals of Russian imperial expansion and is accompanied by the steady channeling of Byelorussian manpower for the express purpose of building a Russian empire in Siberia and Soviet Central Asia.

The Byelorussian language has been almost completely eliminated, not only from official use in administrative circles, but also in higher educational institutions, in secondary schools, and in a large number of elementary schools. By implementing policies of religious suppression, the Soviet Government has almost completely eradicated all public religious worship in Byelorussia.

Despite the purges of 1929–30, 1933, and 1937 and the mass deportations during 1939 and the 1950's, and despite the mass murders and starvation programs of 1946–48, the Communists have failed to suppress, let alone exterminate, the spiritual and moral resolve for establishing freedom in Byelorussia. On the contrary, the will of all Byelorussians has been strengthened in their desire for achieving independence.

Byelorussian Independence Day, March 25, 1918, is commemorated by all Byelorussians wherever they live—by the Byelorussian-American community by the emigrants throughout the free world, and by the members of the Byelorussian underground in BSSR. To these and to all other freedom-loving people, March 25, 1918, symbolizes the unquenched spirit of the Byelorussian people. Thus, the fight for Byelorussian independence is also a fight for emergence of all other captive national states everywhere and is a necessary step toward the ultimate establishment of world freedom and world peace.

At this time the Byelorussians in the BSSR do not have any possibility to defend their own national interests. It is for us to take up their aims for liberation from the horrors experienced during these past 50 years of Soviet Russian occupation, and for restoration of an independent Byelorussian state. We hope and pray that next March 25, we shall all rejoice in the attainment of the Byelorussian objective for independence.

IF ISRAEL LOST THE WAR

HON. LESTER L. WOLFF

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. WOLFF. Mr. Speaker, a constituent of mine, Richard Z. Chesnoff, of Bayville, N.Y., is one of three coauthors of a new and important novel entitled "If Israel Lost the War." The other authors of the book, published by Coward-McCann, are Edward Klein and Robert Littell.

The plot of the book is simple—what would have happened if the 6-day war of June 1967 had been reversed and Israel were the conquered and not the conqueror.

This hypothetical situation is, of course, a warning about what could happen in the future. The situation in the Middle East is more tense now than at any time since the 6-day war and the possibility of still another war is all too real.

There are those that question the wisdom of American support for Israel. I, for one, have long felt that the future of Israel, as the only democracy in the Middle East, is crucial to the future of the Mediterranean and in that sense crucial to the future of all the world.

If Israel lost the war the country would have ceased to exist and the world would have been put to shame. This did not happen in 1967 and it must not happen in the future.

Mr. Chesnoff and his coauthors have written a highly relevant book that I commend to my colleagues' attention as the United States debates its policy in the Middle East. "If Israel Lost the War" is not only an important novel with a frightening warning to the world, it is also a well-written, exciting book that makes its "what if" plot believable.

The new Prime Minister of Israel, Mrs. Golda Meir, has said of the book:

> Believe me, what Mr. Chesnoff and his colleagues have written could have happened here despite the courage of our people who would have fought to the end with sticks and stones. I really hope that "If Israel Lost the War" will help people understand what the war was all about and why we are determined not to let it happen again.

Mr. Speaker, "If Israel Lost the War" is a book that should be on all the Members' reading lists just as it should be read by all people interested in seeing Israel survive as the free, independent nation it is.

I am proud that Mr. Chesnoff, a constituent, is a coauthor of this important book.

RED CHINA—NOTHING HAS CHANGED

HON. ALBERT W. WATSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. WATSON. Mr. Speaker, one of the greatest frustrations felt by the American liberal is his inability to wield enough national consensus to force an administration into recognizing Red China or supporting U.N. membership for this regime.

Each year the liberals gather their weapons for another onslaught on the Chinese question, and with perennial regularity they go down to defeat. But the liberal is not a gracious loser, and his demands of late have become so vociferous as to be shocking even for a liberal. The latest pronouncement was among the cruelest blows of all, namely that of the Senator from Massachusetts (Mr. KENNEDY). As most of us know by now, the Senator made some rather astounding observations about Red China before a group of Chinese experts meeting in New York recently.

Of course, he failed to mention a few points which are of minor concern to the liberals, such as our treaty obligations with the Republic of China, the blatant defiance of the U.N. and its principles by Red China, the open aggression against the U.N. in Korea by Red China, the active role played by Red China in Vietnam, and so forth. As we all know, the list is practically endless.

It is just incredible how some well-meaning—and I give them the benefit of the doubt—Americans can actually suggest that we abandon our allies and good friends on Taiwan in favor of recognition and support of Red China.

Mr. Speaker, down my way in South Carolina, we have a rule of thumb when we are stocking a pond or lake with good game fish. We never dump a load of mature catfish in with bass, trout, etc. The reason is obvious. Catfish are scavengers and they thrive on the eggs of other fish. Certainly, no offense is intended toward the catfish. As a matter of fact, I will compare South Carolina catfish stew and hushpuppies with that found anywhere. Nevertheless, it is difficult to keep catfish out of a well-stocked pond, but it can be done. Now, Mr. Speaker, Red China is a great deal like that catfish. However, like the catfish, it can be contained.

Now, if the liberals have their way, Red China will gain world respectability while actively working for territorial conquests at the expense of its neighbors. For Mao and his gang of international gangsters the entire world is a giant lake and they are the scavenger fish. By thrusting this regime of dedicated revolutionaries on the world community, all

of our efforts in the last 20 years to hold it in check will go for naught.

Really, I am shocked and dismayed that the Senator from Massachusetts would even dare suggest that this Nation sanction the Peking government. In what possible way has Red China changed? Has it mellowed? Has it shown any inclination toward accepting the peaceful charter of the U.N., or for that matter any interest in even joining the U.N.? Why, of course, the answer to these questions is negative.

Mr. Speaker, beginning with the illegal takeover of the Chinese mainland by Mao and his Communist cronies, every President of the United States, including the brother of the gentleman in question, has unalterably opposed seating Red China in the U.N. and according diplomatic recognition to it.

American men are dying this very minute from weapons manufactured in Red China. Just over 15 years ago, American men were dying as a result of weapons fired by the Red Chinese. Recognition of Peking now or in the future would be a horrible and sad testament to every one of these brave Americans.

If admitted to the U.N., the Red Chinese would only use this organization as a forum from which to spew further venom on this country and other freedom loving nations. If the United States accepted this government as a diplomatic equal, the free nations of Asia and the Pacific would justifiably lose confidence in our pronouncements to oppose the spread of communism in that part of the world.

TESTIMONY OF GOV. RAYMOND P. SHAFER, OF PENNSYLVANIA, TO THE SUBCOMMITTEE ON ECONOMIC DEVELOPMENT OF THE SENATE COMMITTEE ON PUBLIC WORKS

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. FULTON of Pennsylvania. Mr. Speaker, it is a pleasure to include in the CONGRESSIONAL RECORD the strong statement by Gov. Raymond P. Shafer, of Pennsylvania, in support of extension of the Appalachian Regional Development Act, presented in testimony before the Subcommittee on Economic Development of the Senate Committee on Public Works on Wednesday, March 5, 1969:

STATEMENT BY HON. RAYMOND SHAFER, GOVERNOR OF PENNSYLVANIA, BEFORE THE SUBCOMMITTEE ON REGIONAL DEVELOPMENT OF THE COMMITTEE ON PUBLIC WORKS, U.S. SENATE, CONCERNING EXTENSION OF THE APPALACHIAN REGIONAL DEVELOPMENT ACT

Mr. Chairman and distinguished Senators, I am here today at the request of Governor Rhodes of Ohio who is currently State Co-chairman of the Appalachian Regional Commission to present testimony on behalf of all 13 Governors of the Appalachian States concerning S. 1072 which extends the Appalachian Regional Development Act.

As Governor of Pennsylvania, I also appear as a Member of the Commission and, with your permission, will also present a statement concerning the impact of this program upon my own Commonwealth.

Mr. Chairman, the 13 Governors like this program. We like it for many reasons.

It enjoys a direct line of communication with the President on matters affecting the welfare of 17 million Americans.

It is the kind of partnership between the Federal and State Governments which most Governors have advocated for a long time.

It provides a new kind of flexibility in Federal assistance that helps assure that public dollars are being spent on the right problems.

It is helping the states to bring many local jurisdictions together to solve their problems.

It provides a new way for states, localities, and the Federal Government to share talent, experience, and expertise in order to find the best answers to difficult problems.

Mr. Chairman, we Governors feel so strongly about the Appalachian Program that I felt compelled to discuss the program personally with President Nixon. In those conversations, I told him that the Appalachian experiment represents the kind of reform we need to make the American Federal system operate more efficiently. He agreed. He assured me that he was committed to this program and that it was his intention to keep the program answerable to the Office of the President in carrying out its mission.

Most of the Governors feel that the Appalachian Regional Development Program can serve as a model for the rest of the country—a model whose application to the rest of the United States is worth serious study by this Committee, the Executive Branch, the National Governors Conference, and other groups.

At my suggestion last June, the 13 Appalachian Governors subscribed to just such a recommendation and forwarded it to the Platform Committees of both political Parties. Since that time, many other Governors around the country have joined us. Last week, a special committee of the National Governors Conference, on which I serve, was directed to study the question of the nationwide application of regional commissions.

THE APPALACHIAN PROGRAM WORKS

Over 175 vocational-technical schools have been built with Appalachian assistance. They are capable of training 110,000 additional students in commerce, trades, and industry.

Since you approved creation of the Appalachian Housing Fund, the Appalachian Regional Commission has approved six times as many housing units for construction in the six months of the program's operation as were approved for construction under Federal housing programs in the preceeding six years.

When we started in 1965, Appalachia, with over 9 percent of the American population, was receiving only 7.2 percent of Federal grants-in-aid because many of its communities were too poor to participate in regular programs. With the new supplemental grant program which you approved under the Appalachian Act, Appalachia is now receiving 9.7 percent of Federal grants-in-aid.

Over $425 million in Federal, state, and local funds have been committed under this program for improving health and education in Appalachia.

New highways are being constructed, though not as quickly as we would like, and their impact is already detectable. In my own State, we can cite industries which are expanding or locating because of new locational advantages. And the same is true in many other states.

Many of the serious physical problems of Appalachia are being solved with help under this Act. By the end of this calendar year, every major mine fire in anthracite Pennsylvania will be under attack with Appalachian assistance. Land reclamation programs under the Appalachian Act have given a whole new sense of direction to Federal programs in this field.

THE IMPACT OF THIS PROGRESS IS NOW MEASURABLE

Employment is now increasing faster in Appalachia than in the rest of the U.S. and rate of unemployment is falling faster.

Per capita incomes in Appalachia are now rising more quickly than in the rest of the U.S.

And out-migration from Appalachia is only one-half of what it was in the previous decade.

All these are healthier signs than those of the 1950's—signs that progress has begun in Appalachia and that conditions are better.

However, Mr. Chairman, the Governors would be the first to admit that the task is barely begun. We have a long way to go. Unemployment in Appalachia as a whole is still higher than the U.S. and incomes in many areas are barely half those in the rest of the country.

That is why the extension of the Appalachian Regional Development Act is so critical. We cannot stop a job barely started. We cannot disappoint the millions of people who are banking on this program to help solve the problems which have afflicted our mountain areas for generations.

In your consideration of the bill, I urge you to review the current authorizations for the Appalachian Development Highway System. When Congress first authorized the Appalachian Development Highway System, that authorization was based on engineering estimates developed in 1963, or earlier.

As you well know, because of the international situation, it has not been possible for Congress to provide the level of appropriations necessary to provide that authorized amount within the six-year period in which the Highway System was originally scheduled to be constructed.

As a result, inflation has taken its toll. The original estimates of the costs of construction are now seriously out of date because of rising costs. And the longer it takes to construct the System, the more these costs will increase.

The Governors have recognized that Congress could not provide the annual appropriations originally anticipated and in June of 1968 they prepared a resolution recommending that the period for funding the Appalachian Development Highway System be extended by two years so that Congress might be able to appropriate the full amount of the authorization.

In doing so, however, they recognized that the longer it takes to construct the System, the more expensive the System becomes because of inflation.

To build the most effective System with the limited funds available, the states and the Commission determined the adequacy of existing highways within the designated Appalachian Development Highway System. We have concentrated construction on the least adequate sections of these highways. Because of the limited funds available, we estimate that we will be able to construct only 1,263 miles of the 2,600 miles of the Development Highway System. Construction of slightly over 1,000 miles of the presently approved System has been deferred out of sheer necessity.

It is obviously in the national, as well as Appalachia's, interest to build the entire Appalachian Development Highway System if the highways are to achieve the objectives Congress and the states have established.

It is our hope that this Committee will consider the situation and make it possible for us to assure that the entire System, as originally envisioned by Congress, is built.

We cannot overstress the importance of the Appalachian Development Highway Sys-

tem to the ultimate success of our whole undertaking. Not only will the Development Highway System make it possible for us to link the key economic centers of the Region to national markets so that they can support development of new employment, it will also make it possible for people in the Region to commute to jobs and services and for our children to reach better schools.

We frequently describe the Appalachian Development Highway System, together with the Interstate System, as a giant framework upon which we intend to concentrate the location of most of the new facilities and services being developed under the Appalachian Program. We are doing this because we believe it is the most effective way to assure that as many people as possible will have convenient access to these new services and facilities.

To date, 82 percent of Appalachian investments have been concentrated along the Interstate and Appalachian Highway Systems.

We are well aware that highway improvements alone are not the answer to Appalachia's problems. But without a good transport system which provides access to new educational, health, and other services—and, most importantly, to jobs—we cannot solve the problem at all. In the first four years of this program, we have invested more in Federal, state, and local funds in health and education—investments in the people themselves—than we have in the Appalachian Development Highway System. But the System is one of the important keys to our success.

Mr. Chairman, we have been extremely pleased with the administration and effectiveness of this program. But the Governors have recognized that a number of improvements could be made to the Act which would reinforce the program's effectiveness and accelerate our efforts to solve the Appalachian problem.

Our amendments deal, in the main, with increased efforts to provide manpower retraining and to assist smaller communities in dealing with their problems.

On behalf of the Governors, I respectfully submit to the Subcommittee for its consideration a number of amendments which would improve the operations of the Appalachian Program. We believe their incorporation into the Act would speed attainment of the goals you have set for us in Appalachia.

We owe this Committee a great vote of thanks for making it possible for us to begin to solve our problems in Appalachia.

Appalachia Pennsylvania exemplifies that which the program can accomplish for economic development, and better conditions of health, education and housing for the citizens of a State. It is bringing new life and hope where before lethargy and stagnation all too widely were accepted conditions of everyday life.

On the attached exhibit are shown the more than 180 projects that have been funded in Pennsylvania with Appalachia aid. The exhibit map that you see locates these projects. A total of $101,525,028* in Appalachia dollars has been channeled into these much-needed undertakings to add to the human and material wealth of our Commonwealth. There is no doubt that without the Appalachia program most, if not all, of these projects would still be little more than wished-for dreams: 26 access roads to reach industrial, recreational or school sites previously inaccessible; 32 mine fires being combatted; 7 mine subsidence projects undertaken; 4 strip mine areas being restored or corrected, to turn blighted lands into "promise lands"; 19 vocational technical schools to make realities out of promising new employment opportunities for our young people; 4 airports being expanded and improved to place communities in the main stream of transportation; 15 higher education facilities, to enhance the learning advantages of our college-age sons and daughters; 20 hospitals, 4 nurses' training facilities, and 13 mental health facilities to upgrade the health care of our citizens, and more, as you will note.

Pennsylvania has discovered in the Appalachia program a new vehicle for uniting Federal, State, and local financing for the solution of pressing problems. More than that—but less easy to measure—it has found in the Appalachia program a new means for uniting the will, the determination, and the spirit of men and women of diverse backgrounds and experiences into a cohesive force for the common good.

The experience I have related could be matched in most particulars by the other Appalachian states, each of whom I am confident views the Appalachia program as a successful experiment in creative federalism.

You have also made it possible for us to demonstrate that the three levels of government in the Federal system can work more effectively together than they have in the past.

The Governors believe that more effective ways for the states, the Federal Government, and the localities to work in partnership have become essential.

Federal assistance now covers the entire spectrum of our domestic concerns. The responsibilities of state government cover that same range of problems. So do those of a county commissioner or a mayor.

We cannot continue to work as if we were isolated entities within the Federal political system.

As far as the people are concerned we should all be working toward the same ends and should be finding better ways to discharge our responsibilities working together.

We believe the Appalachian experience will ultimately prove of greater value than any of us originally anticipated. Through this new venture in government, we may not only be able to find answers to Appalachia's problems; we have also come upon a new model with implications for the Nation as a whole.

It is for this reason that the Governors enthusiastically recommend extension of this Act.

*This figure includes all approved Appalachia projects under Sections 201A, 201B, 203, 205, 207, 211, 212, 214 and 302.

THE BYELORUSSIAN DEMOCRATIC REPUBLIC WHICH IS NO MORE SHOULD NOT BE EQUATED WITH THE BYELORUSSIAN S.S.R.

HON. SAMUEL N. FRIEDEL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. FRIEDEL. Mr. Speaker, in order to eliminate possible confusion regarding an important part of the world, I deem it advisable to invite the attention of my colleagues in Congress to the fact that the Byelorussian Democratic Republic, which unfortunately exists no longer, is not the same as Byelorussian S.S.R. This distinction becomes all the more important because this year is the 51st anniversary of the proclamation of independence of the Byelorussian Democratic Republic and the 50th anniversary of the existence of the Byelorussian S.S.R.

Byelorussia is a country located at the crossroads of Europe where Western culture and freedom met Eastern barbarian despotism.

At the time of World War I, the czarist Russian empire was disintegrating, the non-Russian nations liberated themselves as independent sovereign countries and on March 23, 1918, the Byelorussian Democratic Republic was proclaimed.

In connection with the marking of this day, one should also take cognizance that Byelorussians are often mistaken for Russians, yet they have, since the beginning of history, developed quite independently of Russia. To preserve their independence the Byelorussians had to endure severe trials for over five centuries, from the beginning of the 13th to the end of the 18th, and it was not until nearly the start of the 19th century that their destinies were linked with the czarist empire.

The Red Soviet Russian Government, in opposition to the Byelorussian Democratic Republic, created a fictitious statehood for the Byelorussian people, thus camouflaging their actual colonial status. For the past half century, this unhappy land has been subjected to a systematic and ruthless persecution on a national level on orders from Moscow. During a very short period in 1937, over 13,000 innocent Byelorussians were shot in cold blood by the Soviets. The Byelorussian Orthodox Church was completely liquidated that year and all its 2,000 clergymen were killed or deported into concentration camps and all religious life was ruthlessly suppressed by the atheistic Reds.

Former President Eisenhower said:

> To be successful in bringing peace with freedom and justice to the World, we must increase our joint efforts to make peoples around the World more aware that only in freedom can be found the right road to human progress, happiness, and fulfillment.

By the United States marking the anniversary of the independence of the Byelorussian Democratic Republic, though it no longer exists, and by unmasking the true nature of the puppet regime in Byelorussia, we follow our former President's wise words. Not only that, but by noting this day, the United States shows the world that it gives the people of Byelorussia moral support in their hard struggle against the evil forces of oppression and darkness and demonstrates that the free world does indeed care for suffering and oppressed humanity.

At this holy season, we all have faith that in the end a new day of freedom, justice, and liberation will most surely dawn and that Byelorussia will again be a "democratic republic" in every sense of the word.

RELIGIOUS LIBERTY DENOUNCED IN ZAMBIA

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. RARICK. Mr. Speaker, the threat of Zambia's President Kenneth Kaunda against Jehovah's Witnesses constitutes a religious threat to international peace.

Mr. Speaker, I include a news release from Lusaka, Zambia:

[From the Washington (D.C.) Post, Mar. 22, 1969]

JEHOVAH'S WITNESSES

LUSAKA.—President Kenneth Kaunda declared the days of Jehovah's Witnesses in Zambia are numbered.

He told the national council of his ruling United National Independence party the sect's policy amounted to anarchy and chaos.

The sect has been the victim of a violent campaign by the party since last December's general election, when it refused to vote for religious reasons.

THE FCC REACHES OUT

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. BRAY. Mr. Speaker, there has been a great deal of editorial comment all over the country on the recent FCC proposal to ban cigarette advertising on radio and television. The following, from the Indianapolis Star of February 9, 1969, correctly terms this as "glaring evidence of the evils of unbridled regulatory power":

THE FCC REACHES OUT

The proposal of the Federal Communications Commission for a ban on radio and television advertising of cigarettes is glaring evidence of the evils of unbridled regulatory power.

As things now stand the FCC is prohibited from issuing such an order. The 1965 law requiring a health warning on cigarette labels forbids the FCC to impose changes in cigarette advertising. This law will expire in June, unless extended.

Thus the FCC proposal amounts to fair warning of the sort of thing the commission will do if it has a free hand.

The power of the FCC to make such a ban—if the present prohibition should expire—was immediately challenged by the National Association of Broadcasters. We hope the NAB is right.

The power to ban—by decree—the advertising of a legal product would be an awesome power for the FCC or any other regulatory agency to have. This is power to strike a severely damaging blow to whole industries, on the basis of nothing more substantive than the opinions of the commission members.

Even more than that is involved. If the FCC has power to ban the advertising of a particular product, what is to prevent the extension of that power to complete control over all advertising and programming on radio and television?

The FCC has in fact been moving toward assertion of such power. Last June the FCC issued an order that broadcasters who carry cigarette advertising must also broadcast "a reasonable amount" of anti-cigarette announcements. It claimed authority to do this under its "fairness doctrine."

That was a precedent-setting action. It was the first time the fairness doctrine had been applied to advertising. If the precedent stands, who knows what other demands the FCC may make on broadcasters to give time for answers to their advertising?

Even more significantly, this order of the FCC imposed on broadcasters the obligation to give time to a specified kind of propaganda. If this precedent stands, what other kinds of propaganda may the FCC decree to be imposed on the ears and eyes of American radio and television audiences?

The power to do that is terrifying in its potential.

As to the specific controversy about cigarettes and health, decisions on action to be taken should be made by Congress. They should not be made by a regulatory body, and especially not by one whose competence and jurisdiction lie far outside the field of health.

In the absence of an authoritative, documented finding that cigarettes are so injurious that their manufacture ought to be prohibited, Congress has already gone about as far as it ought to go in attempting to discourage their use.

More urgently, Congress should review the authority of the FCC and the ways in which it is using its authority to control what Americans hear and see. On its present course, the FCC has the makings of a powerful manipulator of the feeding of propaganda to the public.

That's not what it was intended to be, nor what it should be. Congress should trim it back to proper size.

LETTER FROM A CONNECTICUT TEENAGE LEADER

HON. WILLIAM L. ST. ONGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. ST. ONGE. Mr. Speaker, in the 90th Congress I had introduced a joint resolution proposing an amendment to the U.S. Constitution to extend the right to vote to persons over the age of 18. Unfortunately, the previous Congress took no action on the resolution.

I am now reintroducing my resolution. I believe that events during the past year or two have clearly demonstrated the need for such modification of our Constitution to provide greater participation by younger people in public affairs.

In the light of these developments, I wish to bring to public attention the text of a letter which I have received a few days ago from the president of a teenage group in my home town of Putnam, Conn. Robert L. La Rochelle, president of the Teenage Democrats Club, informs me that his club is presently circulating a petition in favor of lowering the voting age to 18 and that the petition will soon be forwarded to the Connecticut State Legislature.

I think the approach of these young people is commendable and deserves to be encouraged. They are using the democratic way and process, rather than force and violence. They speak well of American youth and its role in a free society. I am therefore pleased to insert in the RECORD the text of their letter, as well as a brief news item from a recent issue of the Norwich Bulletin:

TEENAGE DEMOCRATS CLUB,
Putnam, Conn.

DEAR MR. ST. ONGE: As you may probably know, the Teenage Democrats Club of Putnam is circulating a petition in favor of lowering the voting age to 18 in the State of Connecticut. The people's response to this drive has been overwhelming and we are soon planning to visit the Connecticut State Legislature and forward the petition to the legislators.

We hope the State of Connecticut will set a precedent for the rest of the Nation to follow. We bring this information of the petition to you because we feel you can help forward our greatest cause: the participation of youth in a free society.

Our fight for 18-year-old voting isn't limited just to that subject. We ask for greater youth participation in all the affairs of government, because we feel we have something to offer.

We ask you to mention our work in the Halls of Congress as an example of progressive youth political action.

In this time of campus turmoil, we feel that we are doing something peaceful and constructive to reach our ends.

We have succeeded in sending teenage representatives to the Democratic Town Committee, being the first area political group to succeed in this attempt.

With an election in 1968 behind us and a new 1969 slate of officers ready to keep us moving for justice and peace, we wait the coming events concerning our projects with anticipation and a desire to succeed.

We feel our attempts at constructive action deserve recognition, because we believe we represent the majority of American teenagers.

Enclosed are copies of our latest activities. We would appreciate a mention of our petition drive in the CONGRESSIONAL RECORD, which would help us in our efforts.

Sincerely yours,

ROBERT R. LA ROCHELLE,
President.

TEENAGE DEMOS GET INVITATION

PUTNAM.—The Putnam Democratic Town Committee, recognizing that youth is interested in politics invites Teenage Democrats to send representatives to Democratic Town Committee meetings.

The committee felt the Teenage Democrats had earned the opportunity to express the viewpoint of youth because of its help in the last election.

At the January meeting, the town committee voted to invite teenage Democrats to choose from its membership of youths between the ages of 16 and 20 those to attend the meetings of the Democratic Town Committee.

These representatives will have the opportunity to express the views of the youth, but, not being committee members, will have no voting power.

President of the Teenage Democrats is Robert R. LaRochelle, son of Alderman Roland V. LaRochelle of Putnam. Other youth group officers are Peter Johnston, vice president; James Morey, secretary; Patricia Tetreault, treasurer; and James Dion, public relations director.

JANUARY 29, 1969.

THE 51ST ANNIVERSARY OF BYELORUSSIAN INDEPENDENCE

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. DERWINSKI. Mr. Speaker, today marks the 51st anniversary of the proclamation of independence by the people of Byelorussia. I am pleased to pay tribute on this occasion to the brave Byelorussians whose brief period of freedom was cut short by the Bolshevik forces of the Soviet Union.

The Soviet Government which now rules the Byelorussian people certainly

does not represent their wishes or hopes, but merely serves as an instrument of oppression. Thus, the Byelorussian people suffer in the same manner as the other captive peoples of communism under a cruel dictatorship.

May I take this opportunity to commend the many Americans of Byelorussian origin who continue to strive for the eventual restoration of freedom for their homeland.

This anniversary serves as a reminder that the spirit of freedom continues to burn in the hearts of the Byelorussian people behind the Iron Curtain and that the desire for independence and self-government continues to be the greatest weakness of the Soviet Union.

It is my hope that the new Director of the Voice of America will work to improve the broadcasts to the non-Russian people. It is also apparent that Radio Free Europe is not providing as an effective program as it could. Theoretically, Radio Free Europe as a private organization would be in order.

At this point in history we should emphasize the right of the people of Byelorussia to enjoy the self-determination of which they have been deprived by Communist dictators of the Soviet Union. The heroic people of Byelorussia have been extremely effective in maintaining their spirit and determination in the face of Communist oppression. We must not permit their spirit and determination to be in vain.

HAWAII EDUCATOR KIYOTO TSUBAKI URGES ISLAND TEACHERS TO DEVELOP WARM HEARTS AS WELL AS KEEN MINDS

HON. SPARK M. MATSUNAGA

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. MATSUNAGA. Mr. Speaker, more and more, it is becoming evident that we are living in a decade of dissent, an age of ferment and an era of social revolution. There lies beneath the restless searchings and the dissent, which rocks the templed walls of colleges and universities throughout the country, a warning. Unless we rise to meet this spiraling feeling of discontentment voiced by our young people, our future looks bleak.

On February 24, 1969, Mr. Kiyoto Tsubaki, a distinguished member of Hawaii's State Board of Education, voiced this very warning to two gatherings of Maui Island schoolteachers. Speaking at the Hawaii Federation of Teachers annual institute and at a meeting of teacher members of the Hawaii Government Employees Association, Mr. Tsubaki told the teachers that they should try to develop not only keen minds, but also warm hearts—"skills and knowledge are not enough."

Mr. Tsubaki's frank warning and advice makes good sense, for as he stated in his speech:

Attitudes beget attitudes. What we are hearing and what we are watching in circumstance are something of our own creation. We need to develop what the Greeks call a "good man"—a man with humanistic considerations, or a man possessing humanistic attitudes.

Mr. Tsubaki's speech is an excellent one, and one which I know my colleagues will find enlightening; therefore, it is with pleasure that I submit his speech for inclusion in the CONGRESSIONAL RECORD:

REMARKS OF KIYOTO TSUBAKI

Ladies and gentlemen:

It is indeed my pleasure to once again bring you greetings and aloha from the Chairman of the State Board of Education, Dr. Richard Ando.

I was invited here this morning to extend greetings. I have said it and thus ends my official function. Aloha!

But inasmuch as I still have a few minutes left, may I be permitted to make another entry right here and be allowed to share with you my anxiety and some of my personal thoughts relative to the kind of society in which we live today.

Please understand that I am reading my remarks this morning because I have another meeting to go to and I want to be sure that I say the same things here as I would be at the other meeting. I certainly do not wish to be accused of exercising some kind of expediency just because I am speaking to this group separately or to the other group separately.

If I can say any one thing about the present decade in our history, I think I can safely say that we are now living in a decade of dissent, an age of ferment, and an era of social revolution, if you will. We find many manifestations of this social enigma amongst the blacks, the economically and culturally deprived, our employed and unemployed, our youth in the colleges and high schools, our parents, our teachers throughout the country, and even in some of our churches. In fact it appears that all of us are in one way or another involved in some kind of turmoil from the home on up to international level. Indeed, our future looks mighty dim, rather frustrating and gloomy at times, and apparently every thinking individual is asking the question, where do we go from here?

But before asking ourselves that question, perhaps we should first try to analyze the causes—not so much the apparent, superficial causes; but rather the deeper, more fundamental causes behind the causes.

As I try to observe the way dissenters act and react, it appears to me that this whole bit revolves around two basic considerations—reason and attitudes.

It seems that in our schools we are trying our level best to give our youngsters the skills and knowledge, the so-called tools with which to reason; but are we teaching them enough about the true scientific reasoning process? To me, just giving our youngsters the skills and knowledge alone is not enough. I say this because I judge that skills and knowledge in the hands of the wrong people can be a very dangerous thing. It scares me no end every time I look at the five-year projections of achievement objectives of a PPB or Program Planning and Budgeting format now being used by the Department of Education. I find that these are always expressed in terms of achievement scores of skills and knowledge. And immediately I find myself asking the question, what is being done about developing what the Greeks called a "good man"—a man with human concerns, a man with humanistic considerations, or a man possessed of humanistic attitudes?

As we look around us, I suspect that some of us are saying, "Oh my, what's wrong with our people today? Just look at the way they are behaving. Their attitude is just terrible."

If life can be said to be a two-way street, I submit it is high time we realize that attitudes beget attitudes. Just listen to what people are saying. If we listen carefully, it won't take us long to realize that perhaps what we are hearing and what we are watching in circumstance are something of our very own creation. An educational philosopher back in the 30's once said that the success of an educational system can be measured only in terms of what kinds of parents our youngsters become. And not so long ago when an elderly gentleman was asked to define education, he pondered for a while and said, "Well, education to me is that which remains after I have forgotten everything else I learned in school."

I suspect what these two people were alluding to was that skills and knowledge alone are not enough—that perhaps in our curriculum we should try to develop not only a keen mind; but also a warm heart.

At the moment I am trying to get some of our curriculum revisors and developers to think about establishing humanistic values as the core of our state curriculum around which every program shall revolve—all pointing toward developing a "good man".

In the meantime, right amongst us in the Department of Education, in all our dealings with all our people, it may be well for all of us to begin practicing some humanistic considerations, re-orienting our own individual attitudes perhaps, to see if we can't work out our mutual problems on a mutual basis. This attitude of mutuality is mighty important to me as we relate ourselves day by day from the bottom up. This same attitude of mutuality becomes even more important when we relate ourselves especially from the top down because, in my estimation, the higher one goes the broader his base becomes and much, much greater the concerns and responsibilities as his attitudes and decisions begin to affect the welfare and happiness of more and more people like you and me.

And so, as a group, may I say let's begin to talk about it at least and let's see if we can't begin to mutually create a happy, warm society—a society of humanistic human beings.

I think it's worth trying.

Thank you.

GREEK INDEPENDENCE DAY

HON. PETER N. KYROS

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. KYROS. Mr. Speaker, March 25 occupies a very special place in the annals of man's struggle for freedom. On that day, in 1821, the people of Greece rose up to proclaim their independence after centuries of domination by the Ottoman Empire. Invoking the memory of past battles and past heroes, the Greek nation set forth to regain the liberty established during the Athenian golden age.

Several days previously there had been brief skirmishes between Ottoman troops and Greek irregulars. March 25, however, marks the feast of the annunciation, which to the Greek people means "the day of the good message." Independence was proclaimed. On March 25, 1821, the good message was that the struggle for freedom had begun anew.

Leaders and common citizens alike of the Western World, steeped in the traditions of classical antiquity, rallied to the cause of Greek independence. The

spirit of philhellenism swept through Europe and across the Atlantic, a far vaster divide in those days than now. Many persons from our own proud and young Republic joined in common struggle with the Greek people. Our own young men fought side by side with the Greek patriots. Other Americans contributed their savings, their intellectual talents, and their artistic work to the cause that was Greece's.

Bound together by a common loyalty to Hellenic ideals and a common passion for freedom, enduring bonds were forged between our Nation and the Greek people. These ties have not diminished during the ensuing years. During two World Wars and in struggles against Communist troops in the mountains of Greece and again in the mountains of Korea, our nations have stood together as one. Many citizens of Greece have come to this country, joining in the writing of our own Nation's historic saga.

I am proud to speak again of March 25, 1821, when the flame of liberty was lit again in Greece, when strangers fought together as brothers. May we ever remember this date, and may our common ideals ever endure.

OBSERVATIONS ON THE PRESIDENT'S ABM PLAN

HON. JONATHAN B. BINGHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. BINGHAM. Mr. Speaker, a recent edition of the Washington Post contained a remarkable collection of letters expressing opposition to the President's proposal for deployment of a thin antiballistic-missile system.

Irony and ridicule are sometimes powerful weapons, as these letters illustrate. They are as follows:

OBSERVATIONS ON THE PRESIDENT'S ABM PLAN

This is to register as strongly as possible an undoubtedly futile but heartfelt protest against Mr. Nixon's tragically unwise decision to go ahead with an ABM system. Is it possible he does not know that it will accelerate the arms race further (unless the Chinese and Soviet governments should have the improbable good sense we apparently lack, to use their resources for better things); will divert desperately needed money from domestic programs; will increase the stranglehold of the military on our already military-dominated economy; and will not defend or protect anyone in case of actual attack? We can only hope now that Congress will at least stand up and resist.

I can't think of a clearer case in recent times of "Emperor's new clothes." Certainly Mr. Nixon didn't think that *Mr. Laird* would tell him?

ANN MORRISETT DAVIDON.

HAVERFORD, PA.

I want President Nixon to know I heartily concur with his ABM decision. It is such a comfort knowing *American* missiles will be left on earth after we are all dead.

SANDRA WEISS.

SILVER SPRING.

Do the President and Senator Jackson seriously believe that deployment of even a limited ABM system is not an escalation of the arms race? Senator Jackson himself mentioned Russian development of a "third-generation" missile. It seems clear to me that the inevitable result of deployment of an ABM system by either country will be the development in the other country of a more sophisticated offensive system. This has been the pattern of the arms race in the past, and I can see no reason why things will be any different in the future just because the initial step is "defensive" rather than "offensive." The American people are getting another snow job and Mr. Nixon has taken a giant step down the road taken by Lyndon Johnson.

FRANK SIMONS, Jr.

WASHINGTON.

For those still confused as to why various students and Blacks are so willing to use violence, the Nixon ABM proposal offers a lucid explanation. After a barrage of scientific evidence against employment, the ABM is still accepted because the military-industrial alliance has the power to move such systems regardless of the opposition. Reasoned argument buttressed by factual evidence is irrelevant. And this is what the protesters so clearly see and adopt as a tactic. The hypocrisy of the Nation's leadership must end before social tensions destroy the country.

GERARD GIOVANELLI.

ARLINGTON.

Your editorial of March 15, dealing with the President's ABM decision, indicates that you have been taken in by his smooth public relations performance and have lost sight of the realities of his decision. His rhetoric cannot hide the fact that he has presented merely a warmed-over version of the earlier Sentinel system, packaged to deflate the intense public resistance which had built up in recent months. Although he chose not to emphasize it, his prepared statement makes clear that the system will still attempt to provide a "thin" defense of cities against a presumed Chinese attack, with all of the dangerous consequences which many people have pointed out—the rapidly escalating costs, the danger of an over-response from the Soviet Union, the added difficulties in attempting to negotiate an end to the arms race, and so on.

All of this is packaged to make it least vulnerable to attack by ABM opponents (in ABM jargon, the decision was surrounded by "penetration aids"), but this is no excuse for your having neglected to analyze its specific consequences. Construction of the system is to start with what appears to be a defense of our missile bases. But at the same time the sites will be selected and purchased to begin construction of the broader Sentinel system—just as the Army was doing when the Nixon Administration began its "re-examination." And how can this minimal system protect our missile bases (each having 150 Minuteman missiles)? If the Soviet Union were to attempt to build an offensive force that could attack our missiles, it would have to utilize thousands of warheads. Against such an attack the proposed system would be totally useless. So even from this point of view, the plan is either fakery or, more likely, the down payment on a very much larger and more costly system.

Mr. Nixon gives clear evidence that he has, in his now familiar style, refused to make a clear decision that might offend the military, while remaining unwilling to move directly into missile talks with the Russians. These, not ABM deployment, are the top priority in dealing with strategic weaponry. If these talks do not begin soon, developments in weapons technology, especially in multiple warheads, may well eliminate the chance we now have to move toward agreements that preserve the present stable balance.

LEONARD S. RODBERG.

SILVER SPRING.

It seems that the U.S. Government is busily trying to destroy itself and all else. The arms race has come to the point of total insanity: the ABM system is an example. With so many experts denying its validity, so many people protesting, ashamed to be part of this plot for total destruction, how can this Administration find a way around it to approve this deplorable monster? How can the military industrialists just think of their own huge profits? Great use they will make of it when, by accident, the whole thing explodes, taking them in the holocaust. Have these people lost all their sense? Can't they see the urgent things that must be done in our disturbed, riot-stricken cities? No security is assured once the "monster" is installed. Only more danger is assured, more wars. By God, we must stop this insane way of "protecting" us. Is the Administration totally blind to the truth?

Mrs. C. N. DOCKHORN.

WASHINGTON.

As an amateur chess enthusiast, I was thrilled by the conceptual purity and inner logical construction of Mr. Nixon's now revealed ABM deployment policy. Having recognized that this policy implies a set of national priorities which probably leads relentlessly to the ruin of our cities (Kt-Q6), the President has correctly abandoned the fatuous notion of trying to protect from hostile missiles that which increasingly can be expected to become less and less worth saving (Kt-K4!). (Having chosen this line of play, it is unthinkable that so astute a player as Mr. Nixon is contemplating the now discredited "guns and butter" continuation.) No doubt in the brave new world to come, in which computers deploy missiles to guard other missiles from missiles launched by other computers (Kt-B3), cities and the hapless creatures who once inhabited them will have long since come to exist only in memory bank (Kt-Kt5, resigns).

MICHAEL P. STERN, M.D.

ALEXANDRIA.

The same day President Nixon disclosed his decision to establish the ABM system, it was announced that District Head Start funds would be cut by one-third. Result: More games for generals, fewer for kids. I wonder what other good ideas Mr. Nixon has to help this country move forward together.

VICTOR R. HIRSH.

BETHESDA.

Now we are going to have the Sentinel ABM "safeguard" to go with nuclear "sufficiency." Mr. Nixon has picked from his options, but since the phrase is "keeping all the options open" there is another, one recently chosen, that he must have overlooked. Simply follow the precedent of the XB–70, produce not more than two Sentinel ABMs, stop, and put one in the air museum in Ohio where the XB–70 now rests.

This scheme has its advantages. It would be a carefully planned waste of defense funds, as opposed to the more or less hap-hazard methods in effect to date. The museum might be specialized to include only flying anomalies, and others from previous eras might be displayed: the Flying Wing, the B–36, Howard Hughes' flying boat whose maximum altitude was about 10 feet and the Navy's jet-powered seaplane that did little better, the Vanguard (watch it blow up on the pad) and Skybolt missiles, the Air Force's aptly named Dyna-Soar, and all those that have been overlooked. Room would be saved, of course, for the F–111 and the SST, as well as Spartan and Sprint of the Sentinel.

One problem remains. Projecting from past

experiences and future expectations, should the museum system be "thick" or "thin"? Let's remember to keep those options open.

DAVID JEFFREY.

ARLINGTON.

THE 51ST ANNIVERSARY OF BYELORUSSIAN INDEPENDENCE

HON. LESTER L. WOLFF

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. WOLFF. Mr. Speaker, today marks the 51st anniversary of the proclamation of independence of the Byelorussian Democratic Republic. But, as the United Byelorussian-American Commemorative Committee so poignantly expressed it:

In Byelorussia this national celebration is not permitted. This year, instead, marks the 50th anniversary of the existence of the Byelorussian SSR.

In 1919, after less than a year of independence, the people of Byelorussia were forced to accept the rule of the U.S.S.R.

And although the freedom of Byelorussia was so brief, it serves as a constant reminder of the desire of the people of Byelorussia for the basic right of self-determination. Thus it is that we join in commemorating the 51st anniversary of Byelorussia's independence.

On this auspicious day we renew our pledge to the ultimate freedom of all the captive peoples of the world, including the people of Byelorussia. The inalienable right of self-determination will someday be served.

THE 51ST ANNIVERSARY OF PROCLAMATION OF INDEPENDENCE OF THE BYELORUSSIAN DEMOCRATIC REPUBLIC

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. ROONEY of New York. Mr. Speaker, 51 years ago the people of Byelorussia formed the Byelorussian Democratic Republic and set down their beliefs in an amazing historical document. Meeting in Miensk, the National Convention proclaimed a constitution which provided equality for all under the law, freedom of speech and assembly, the right to form labor unions and strike, freedom of conscience, the right of minorities to autonomy and the inviolability of person and home. Recognition of the new Republic was granted by more than a dozen states and diplomats were sent abroad. But Soviet Russia could not tolerate the existence of such a free and democratic Republic so nearby and within 2 short years crushed the new government and murdered its leaders. Resistance continued for a few years more but the Bolsheviks had triumphed. Their reign of terror was nothing new to this tiny country bounded by Russia, Poland, and the Baltic States. For almost 1,000 years that unfortunate land had seen the scene of war, pillage, revolution, and counterrevolution. Through the twenties and thirties the Russian bloodbath was continued to be halted only by the start of World War II. The land was fought over several times by Russian and German armies and more than 2 million persons are believed to have died. At the war's end Russia once again renewed her persecution, charging this time that the Byelorussians had collaborated with the German enemy. What a tragic history for a people whose only crime seems to have been having the rapacious Soviet Bear for a neighbor. As we salute these people today, then, let us be a little mindful of our own good fortune and let us hope and pray that the people of Byelorussia, along with all captive peoples, will soon be free once again.

FOR LOVE OF CHILDREN

HON. GILBERT GUDE

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. GUDE. Mr. Speaker, we all realize the importance of a childhood full of attention and warmth in the development of a healthy and well-adjusted individual. Here in the District of Columbia there are children who, for no fault of their own, may not receive proper care in these crucial years of their lives. These are the 550 dependent, homeless youngsters at Junior Village, over half of whom are under 6 years of age.

I would like to bring to the attention of my colleagues an article from the Washington Daily News of March 3, 1969, which describes the now limited implementation of a broader program recommended by Fred Taylor, executive director of FLOC—For Love of Children. FLOC is a nonprofit, volunteer, interfaith organization here in Washington dedicated to promoting the welfare of all of the District of Columbia's children, those who will, or could be the active, contributing citizens of the future. According to the proposal designed by FLOC, Junior Village would be utilized as a temporary home for school-age children. Pre-school-age children would be automatically placed in a network of group homes all over Washington, such as the one described in the article below. In these homes, young children can receive the attention and care which they deserve and need while they develop as individuals.

I join with Mr. Taylor and FLOC in urging the District of Columbia Department of Public Welfare to take the lead in implementing this meritorious change in procedures for caring for homeless children. FLOC's is a 5-year plan to expand the number of group homes to 80, thus cutting costs of Junior Village and this current type of child care by one-half. With the appropriate efforts and emphasis now, this goal can be achieved much sooner than that. Not only that of each child, but the welfare of the entire community may be at stake.

The article follows:

FOR LOVE OF CHILDREN

(By Sarah Booth Conroy)

Mrs. Olive Robb is 75 years old. She has four babies, all under seven months.

At 7 in the morning, Mrs. Robb picks up the first baby to greet the day—or the loudest of the four. She changes his diapers. Tickles his toes. Warms his bottle.

Then she starts all over again with the next baby, and the next baby and the next baby.

DOUBLE MOTHERS

At 8 a.m. Mrs. Martha Walker joins Mrs. Robb.

A year ago, neither woman knew the other. Then they became involved with For Love of Children (FLOC). FLOC recruits foster parents to take care of children from the D.C. Welfare Department and contributes 20 per cent of the costs of running the home, buying the house if necessary.

FLOC played matchmaker to bring Mrs. Walker and Mrs. Robb together to make a home for babies who would otherwise be in an institution. The two women moved in together on Nov. 21 and the babies arrived within 10 days.

"We can see such a change in the children when they are petted and snuggled," Mrs. Robb said as she buttoned up the boy in the pink suit.

As she talked the five-month-old boy practiced the high jump in a swing hanging in front of a mirror between the living room and dining room. The other five-month-old boy sat in a baby holder on the kitchen table. The seven-month-old girl was in the play pen, thoughtfully looking at a brightly colored book. The baby sat in her carriage.

Mrs. Robb has already raised two sons of her own who live in this area. She has eight grandchildren, all now out of the baby category. A widow, she has a master's degree in German and taught at Roosevelt and Coolidge High Schools and the District's Americanization School before she retired.

"I'm taking care of these babies because I like the instant rewards," Mrs. Robb said. "What better job than to be grandmother in residence?"

Mrs. Walker, a divorcee, without children of her own, has a master's degree in child development. Until November, she was head of the pre-school nursery at Foundry Methodist Church. "But I wanted to work with babies," she said.

The two women agree they both like liver, Russian tea, music, books and babies. Nowadays all they have time for are the babies. "I haven't sent out my Christmas cards yet," said Mrs. Walker.

Mrs. Walker and Mrs. Robb do have some help tho. One of FLOC's eight mission groups, serve as Friends of the Family. At least one friend stops five times a week, including an evening, to relieve Mrs. Walker or Mrs. Robb. If there should come an emergency in the middle of the night, one of the friends would willingly answer the call.

Hopefully, the babies will be adopted, or placed in a more permanent foster home by the time they are a year old, leaving their bassinets for new babies for Mrs. Walker and Mrs. Robb to cuddle.

OUR GOOD TRUCKDRIVERS

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1969

Mr. FULTON of Pennsylvania. Mr. Speaker, in these days it is a pleasure to compliment our truckdrivers on their

good driving and responsible citizenship on our highways.

It is a pleasure to note the wonderful cooperation and assistance which so many of our truckdrivers give to our citizens in distress on the highways.

Having been helped myself several times by the willingness and voluntary assistance of truckdrivers, I want to add my compliments to our good truckdrivers, and particularly I want to compliment Major Gray, of Mid-South Co., from Memphis, Tenn.

I am inserting in the RECORD the following article by Virginia Payette from the Pittsburgh Post-Gazette, Friday, February 28, 1969:

COMMENTS

(By Virginia Payette)

It's every driver's bad dream. There you are, 50 miles from nowhere, it's pitchblack outside, bitter cold, and your engine has just started gargling nuts and bolts.

You know darned well there are cutthroats and robbers lurking out there in the frosty dark, just waiting to pounce when the motor gasps its last.

And while you sit there, dead by the road, a stream of luckier humans, snug and warm and motor purring, zips endlessly by.

But when someone does stop at night, legend has it, it's almost sure to be a truck driver. And as of last week, 30 miles up the hill from Nashville, that legend came true.

There we sat, old Betsy hissing with high fever and harboring an alarming clank somewhere in her gizzard.

Then, before old Dad could even start to look for his tools (which Sonny had probably sneaked off to college, anyway), there was a whoosh of air brakes and a trailer truck pulled in and parked 50 feet ahead.

From the comparative safety of what seems like a 10-story cab, as you stand there alone in the cheerless dark, the driver decides you look honest and climbs down—a combination of helpful mechanic, highway counselor and emergency chauffeur, to say nothing of angel-from-heaven.

Our truck driver turned out to be Major Gray, a handsome prototype from Memphis, who's been hauling trailers for 36 years. He makes the 10-hour Memphis-to-Nashville round trip daily, five days a week—100,000 miles a year.

He stuck a flashlight down Betsy's throat, diagnosed her garglings as a messed-up water pump, advised us to lock her up and leave her there, ride into Nashville with him, check into a motel, and call a wrecker in the morning.

How many people get a chance to bounce over the mountains in a heated cab, watch an expert handle a 10-speed shift, and be delivered to the front door of your motel in a 22-ton taxi?

And for all his service and advice Mr. Gray would take absolutely nothing.

"Wouldn't think of it," he said with a grin. "But if you ever have to ship anything ship Mid-South."

Turned out he was a good mechanic, too. It was the water pump.

So the next time your jalopy collapses on one of those super highways carefully engineered to avoid civilization, don't panic. Pray a little, look respectable, and I guarantee some angel in a noisy monster will happen along and help you out.

And may yours be as nice as our Major Gray.

SENATE—*Wednesday, March 26, 1969*

The Senate met at 12 o'clock meridian, and was called to order by the Acting President pro tempore.

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

O God of our life, judge of men and nations, our times are in Thy hands and we commit all our ways to Thee. We ask Thee not to lift us out of life, but to prove Thy power within it; we ask not for tasks more suited to our strength, but for strength more suited to our tasks; not to take our burdens from us, but to give us grace to carry them; not to banish our problems, but to give us higher wisdom to solve them. Give us the vision that inspires, and the grace of Jesus Christ who wore our flesh and walked the earth like a conqueror and abides with us now.

In His name we pray. Amen.

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Monday, March 24, 1969, be dispensed with.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

REPORT ON INTERNATIONAL EDUCATIONAL AND CULTURAL EXCHANGE PROGRAM—MESSAGE FROM THE PRESIDENT RECEIVED DURING ADJOURNMENT

Under authority of the order of the Senate of March 24, 1969, the Secretary of the Senate, on March 25, 1969, received the following message from the President of the United States, which (with the accompanying report) was referred to the Committee on Foreign Relations:

To the Congress of the United States:

I herewith transmit the report for fiscal year 1968 on the international educational and cultural exchange program conducted under the Mutual Educational and Cultural Exchange Act of 1961 (Public Law 87–256). During fiscal year 1968, 6,777 teachers, scholars, and distinguished leaders were involved in this program in the United States and in 126 other nations and territories. This was a reduction of 10 percent from the preceding year. Since 1949, a total of 125,777 persons have participated in the exchanges.

RICHARD NIXON.

THE WHITE HOUSE, *March 25, 1969.*

MESSAGE FROM THE PRESIDENT RECEIVED DURING ADJOURNMENT

Under authority of the order of the Senate of March 24, 1969, the Secretary of the Senate, on March 25, 1969, received a message in writing from the President of the United States submitting a nomination, which was referred to the Committee on Banking and Currency.

(For nomination received on March 25, 1969, see the end of proceedings of today, March 26, 1969.)

EXECUTIVE REPORTS OF COMMITTEES SUBMITTED DURING ADJOURNMENT

Under authority of the order of the Senate of March 24, 1969, the following executive reports of committees were submitted, on March 25, 1969:

By Mr. YARBOROUGH, from the Committee on Labor and Public Welfare:

Jerome M. Rosow, of New York, to be an Assistant Secretary of Labor.

By Mr. RANDOLPH, from the Committee on Public Works:

John B. Waters, Jr., of Tennessee, to be Federal cochairman of the Appalachian Regional Commission.

REPORT OF A COMMITTEE SUBMITTED DURING ADJOURNMENT

Under authority of the order of the Senate of March 24, 1969, Mr. LONG, from the Committee on Finance, reported favorably, without amendment, on March 25, 1969, the bill (H.R. 8508) to increase the public debt limit set forth in section 21 of the Second Liberty Bond Act, and submitted a report (No. 91–116) thereon, which was printed.

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States were communicated to the Senate by Mr. Geisler, one of his secretaries.

THE PROBLEM OF INFLATION—MESSAGE FROM THE PRESIDENT (H. DOC. NO. 91–92)

The ACTING PRESIDENT pro tempore laid before the Senate the following message from the President of the United States:

To the Congress of the United States:

Clearly this Nation must come to grips with the problem of an inflation that has been allowed to run into its fourth year. This is far too long, and it has already caused substantial distortions in our economy.

Inflation is a form of economic aggression against the very young and the very old, the poor and the thrifty. It is these Americans who are largely defenseless against the kind of price increases for food, clothing, medicine, housing and education that have swept over the Nation in the last few years.

Government has two major instruments for dealing with this problem. One is monetary policy, which should continue its program of restraint. The other is fiscal policy—the management of the Federal budget—which must turn away from budgets which have propelled the inflation, and turn instead to one with a strong surplus that will help to curb it.

The prospect of a thin budget surplus or a return to deficits would again nudge monetary policy off course. The result, as always, would be further increases in interest rates, a dangerously overheated economic engine, and the threat of accelerating the advance of the price level.

Because the problem of inflation was neglected far too long, we cannot risk even a neutral budget policy of narrow balance.

Only a combined policy of a strong budget surplus and monetary restraint can now be effective in cooling inflation, and in ultimately reducing the restrictive interest rates forced on us by past policies. This is fundamental economics, and we intend to deal with fundamentals.

We are determined to keep faith with America's wage earners, farmers and businessmen. We are committed to take every necessary action to protect every American's savings and real income from further loss to inflation.

The budget for the year beginning July 1, 1969, submitted in January, estimates the surplus at $3.4 billion. However, current examination of this budget reveals that some of its estimates of expenditures were low. For example, interest on the Federal debt will be far more than was estimated. This, along with such items as an underestimate of farm price support payments and a substantial overestimate of offshore oil lease receipts, means that a current analysis of the budget submitted in January shows a reduction in the surplus of $1.3 billion for this fiscal year and $1.7 billion for the fiscal year 1970.

Thus, half of the projected 1970 surplus has disappeared before the year begins. Similarly, more than half of this year's projected surplus of $2.4 billion will not be realized—and for the same reasons.

On the matter of cutting expenditures:

To produce a budget that will stop inflation, we must cut expenditures while maintaining revenues. This will not be easy. Dealing with fundamentals never is.

I intend to submit budget revisions which will reduce Federal spending in fiscal 1970 significantly below the amount recommended in January, even before those previous figures have been adjusted to reflect current conditions.

On the matter of maintaining revenues:

I am convinced that the path of responsibility requires that the income tax surcharge, which is expected to yield $9½ billion, be extended for another year. As I have said before, the surcharge is a temporary tax that must be ended as soon as our commitments in Southeast Asia and economic conditions permit. Because of budget and economic conditions, I reaffirm my support of the recommendation President Johnson made last January that the surcharge be extended, and I am transmitting to the Congress a request that this be done.

In addition, the scheduled reductions in the telephone and passenger car excise taxes must be postponed, and user charges equal in revenue yield to those now in the budget should be enacted. Together, these will produce close to $1 billion in revenue next year.

On the question of tax reform, this Administration remains committed to a more equitable and more efficient tax structure. In the coming month, the first specific proposals of that reform will be coming up to the Congress from the Treasury Department.

Taken together, these actions to reduce spending and maintain revenues will produce the strong budget surplus urgently needed to meet the inflationary threat.

Moreover, by proving Government's serious intent to counter the upward spiral of prices and wages, we will create conditions which will encourage the private sector to stop assuming a high rate of inflation in long-range planning.

Courageous Government action will modify the inflationary psychology which now afflicts business, labor and consumers generally. It is particularly hard on small business, and those of modest means in the management of their incomes and savings.

This ordering of our economic house—distasteful as it is in many respects—will do much to slow down the rise in the cost of living, help our seriously weakened position in international trade, and restore the sound basis for our on-going prosperity.

RICHARD NIXON.

THE WHITE HOUSE, *March 26, 1969.*

Mr. KENNEDY subsequently said: Mr. President, I ask unanimous consent that the message from the President of the United States on inflation be jointly referred to the Committees on Appropriations and Finance.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

EXECUTIVE MESSAGES REFERRED

As in executive session,

The ACTING PRESIDENT pro tempore laid before the Senate messages from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(For nominations this day received, see the end of Senate proceedings.)

MESSAGE FROM THE HOUSE

A message from the House of Representatives by Mr. Bartlett, one of its reading clerks, informed the Senate that, effective March 21, 1969, Representative CORBETT had resigned from the Joint Committee of Congress on the Library.

The message announced that the House had passed a joint resolution (H.J. Res. 584) making a supplemental appropriation for the fiscal year ending June 30, 1969, and for other purposes, in which it requested the concurrence of the Senate.

ENROLLED BILL SIGNED

The message also announced that the Speaker had affixed his signature to the enrolled bill (H.R. 8438) to extend the time for filing final reports under the Correctional Rehabilitation Study Act of 1965 until July 31, 1969, and it was signed by the Vice President.

HOUSE JOINT RESOLUTION REFERRED

The joint resolution (H.J. Res. 584) making a supplemental appropriation for the fiscal year ending June 30, 1969, and for other purposes, was read twice by its title and referred to the Committee on Appropriations.

AGREEMENTS WITH THE UNITED MEXICAN STATES ON RADIO BROADCASTING—REMOVAL OF INJUNCTION OF SECRECY

Mr. MANSFIELD. Mr. President, as in executive session, I ask unanimous consent that the injunction of secrecy be removed from Executive B, 91st Congress, first session, two agreements with the United Mexican States on radio broadcasting, transmitted to the Senate yesterday by the President of the United States, and that the agreements, together with the President's message, be referred to the Committee on Foreign Relations and ordered to be printed, and that the President's message be printed in the RECORD.

The ACTING PRESIDENT pro tempore. As in executive session, the request, without objection, is granted.

The message from the President is as follows:

To the Senate of the United States:

With a view to receiving the advice and consent of the Senate to ratification, I transmit herewith two separate but related agreements between the United States of America and the United Mexican States signed at Mexico City on December 11, 1968, namely:

(1) an agreement concerning radio broadcasting in the standard broadcasting band (535–1605 kHz), and

(2) an agreement concerning the operation of broadcasting stations in the standard band (535–1605 kHz), during a limited period prior to sunrise ("presunrise") and after sunset ("post-sunset").

I transmit also, for the information of the Senate, the report of the Secretary of State with respect to the two agreements.

Since the end of 1967, when the broadcasting agreement of January 29, 1957, ceased to be in force, there has been no agreement governing the relations between the United States and Mexico in the use of the standard broadcasting band. Relations of the United States with other major countries in the North American Region in the broadcasting field continue to be governed by the North American Regional Broadcasting Agreement of November 15, 1950, to which Mexico is not a party.

The two agreements with Mexico have been concluded after negotiations extending over a period of more than two years between United States and Mexican delegations, with representatives of the United States broadcasting industry participating as advisers to the United States delegation. The Federal Communications Commission and the Department of State express the opinion that the best interests of the United States would be served by ratification and entry into force of both agreements, the substance of which is understood to be generally satisfactory to broadcasting interests in the United States.

The first-mentioned agreement, re-

ferred to as the broadcasting agreement, contains detailed provisions designed to resolve many engineering and allocation problems between the United States and Mexico, as explained more fully in the report of the Secretary of State.

The other agreement, referred to as the pre-sunrise/post-sunset agreement, is tied to the broadcasting agreement in the sense that it can be effective only so long as the broadcasting agreement remains in effect. The regulations therein for station operation with daytime facilities for limited periods of time before the sunrise-to-sunset period heretofore prescribed will enable the Federal Communications Commission to implement plans for pre-sunrise operation of United States daytime stations, so that, for the first time, it will be possible for a large number of such stations, now operating on seven clear (I–A) channels accorded to Mexico in the broadcasting agreement, to have uniform starting times throughout the year. Whereas the United States would gain from the provisions for pre-sunrise operation, Mexico would gain from the post-sunset provisions.

The two agreements would be brought into force by the exchange of instruments of ratification and would remain in effect for a term of five years and indefinitely thereafter unless replaced by a new agreement or unless terminated by a one-year written notice from either party to the other party.

I recommend that the Senate give early and favorable consideration to the two agreements with Mexico.

RICHARD NIXON.

THE WHITE HOUSE, *March 25, 1969.*

LIMITATION OF STATEMENTS DURING TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. MANSFIELD. Mr. President, I ask unanimous consent that statements in relation to the transaction of routine morning business be limited to 3 minutes.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

COMMITTEE MEETINGS DURING SENATE SESSION TODAY

Mr. MANSFIELD. Mr. President, I ask unanimous consent that all committees be authorized to meet during the session of the Senate today.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

EXECUTIVE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate go into executive session to consider the nominations on the Executive Calendar.

There being no objection, the Senate proceeded to consider executive business.

The ACTING PRESIDENT pro tempore. The nominations on the Executive Calendar will be stated.

DEPARTMENT OF JUSTICE

The bill clerk read the nomination of Charles H. Rogovin, of Massachusetts, to be Administrator of Law Enforcement Assistance.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is confirmed.

DEPARTMENT OF LABOR

The bill clerk read the nomination of Jerome M. Rosow, of New York, to be an Assistant Secretary of Labor.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is confirmed.

APPALACHIAN REGIONAL COMMISSION

The bill clerk read the nomination of John B. Waters, Jr., of Tennessee, to be Federal cochairman of the Appalachian Regional Commission.

The ACTING PRESIDENT pro tempore. Without objection the nomination is confirmed.

Mr. MANSFIELD. Mr. President, I move that the President be immediately notified of the confirmation of the nominations.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

LEGISLATIVE SESSION

Mr. MANSFIELD. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to; and the Senate resumed the consideration of legislative business.

DESIGNATING THE VENTANA WILDERNESS IN CALIFORNIA

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceeed to the consideration of Calendar No. 112, S. 714.

The ACTING PRESIDENT pro tempore. The bill will be stated by title.

The LEGISLATIVE CLERK. A bill (S. 714) to designate the Ventana Wilderness, Los Padres National Forest, in the State of California.

The ACTING PRESIDENT pro tempore. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill which had been reported from the Committee on Interior and Insular Affairs, with an amendment on page 1, line 7, after the word "dated" strike out "August 15, 1967," and insert "March 14, 1969," so as to make the bill read:

S. 714

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in accordance with subsection 3(b) of the Wilderness Act of Septembr 3, 1964 (78 Stat. 891), the area classified as the Ventana Primitive Area, with the proposed additions thereto and deletions therefrom, as generally depicted on a map entitled "Ventana Wilderness—Proposed", dated March 14, 1969, which is on file and available for public inspection in the office of the Chief, Forest Service, Department of Agriculture, is hereby designated as the Ventana Wilderness within and as a part of Los Padres National Forest, comprising an area of approximately ninety-five thousand acres.

SEC. 2. As soon as practicable after this Act takes effect, the Secretary of Agriculture shall file a map and a legal description of the Ventana Wilderness with the Interior and Insular Affairs Committee of the United States Senate and the House of Representatives, and such description shall have the same force and effect as if included in this Act: *Provided, however,* That correction of clerical and typographical errors in such legal description and map may be made.

SEC. 3. The Ventana Wilderness shall be administered by the Secretary of Agriculture in accordance with the provisions of the Wilderness Act governing areas designated by that Act as wilderness areas, except that any reference in such provisions to the effective date of the Wilderness Act shall be deemed to be a reference to the effective date of this Act.

SEC. 4. The previous classification of the Ventana Primitive Area is hereby abolished.

The ACTING PRESIDENT pro tempore. The question is on agreeing to the committee amendment.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, was read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–115), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE

The bill, S. 714, would designate a total of 94,728 acres in the Los Padres National Forest in California as the Ventana Wilderness to be administered in accordance with provisions of Public Law 88–577, the Wilderness Act of 1964, by the Secretary of Agriculture. The area includes most of the Ventana Primitive Area and some contiguous lands which are predominantly valuable as wilderness resource.

DESCRIPTION

The proposed Ventana Wilderness lies on both sides of the Santa Lucia Range of mountains and the east side of the crest of the Coast Range, Los Padres National Forest. It is entirely within Monterey County, Calif., and is approximately 120 miles south of San Francisco, and is approximately 36 miles south of Monterey, by way of State Highway 1. The proposed wilderness contains the headwaters of the Carmel, the Arroyo Seco, the Little Sur, and North and South Forks of the Big Sur Rivers. Elevations range from 1,200 feet on the Big Sur River to 4,800 feet on Ventana Double Cone. The area is ideal for use by hikers and horsemen. It contains superb mountain scenery, basin-like valleys, unusual species of trees and wild animals, and is close to the large centers of population in the San Francisco Bay-San Jose area.

There is a great variety of vegetation. The rain forest on the western boundary changes to a typical southern California brush-type vegetation in the easterly portion of the area. Numerous species of conifers and hardwoods grow here; one is the California coast redwood growing at the most southerly limit of its range. Another conifer found in the area in the Santa Lucia fir, or bristlecone fir.

California black-tail deer, mule deer, and wild boar are found in the area. The four main rivers and many other streams contain trout. Small mammals, ranging from possum to spotted skunk, are often seen, along with an occasional black bear or mountain lion.

NATURAL RESOURCES

The timber is classified as noncommercial because of inaccessibility and relatively small volume. There is no grazing by domestic livestock within the area. No commercially significant mineral deposits have been found in the area and there is no known mineral production.

NONFEDERAL LANDS

A total of 2,510 acres are in non-Federal ownership. These are in nine parcels ranging from 37 acres to 640 acres in size, and are not occupied. The Forest Service is continuing a plan of acquisition, by exchange or purpose.

AMENDMENT

At hearings on S. 714, the major problem centered around area G, or Willow Creek, comprising approximately 3,000 acres. Nearby residents and conservationists were anxious to have this area included. The Forest Service left it outside its proposed boundaries.

Willow Creek is a year-round stream bordered by meadows and scattered oaks and sycamores. The area offers good opportunities for backpacking, hiking, camping and other similar recreation activities. It contains several hike-in camps which are used regularly by Boy Scouts and other groups.

The Forest Service left it out with the intention of managing it primarily for recreation without public road access and with no motor vehicle use permitted. Forest Service testimony indicated the only reasons for not including Willow Creek were to continue its present more intensive recreational use and because a fire line existed along the western side of Willow Creek to make a natural boundary on the ridge top. However, it was pointed out that fire line also exists on the eastern side along a ridge top to provide another natural boundary. The Forest Service also said it could manage the area either as wilderness or outside the boundaries as it had proposed. The committee decided to amend the bill and include the area.

RECOMMENDATION

The Senate Interior and Insular Affairs Committee favorably reports, as amended, S. 714, and recommends that it pass.

VISIT TO THE UNITED STATES BY HON. PIERRE ELLIOTT TRUDEAU, PRIME MINISTER OF CANADA

Mr. MANSFIELD. Mr. President, the President and the people of the United States of America have had the opportunity, over the past 2 days, to meet with, to get to know, and, in a sense, to evaluate a distinguished statesman, the Prime Minister of Canada, Pierre Elliott Trudeau.

Mr. Trudeau represents a new generation in politics, a new outlook on the world, and an up-to-date understanding of the realities of the globe on which we all exist.

As the leader of the predominant party in Parliament—as the head of his government, in fact—he is a person who has assumed great responsibilities not only in his own country but in his nation's relations with all the other countries of the world.

Prime Minister Trudeau, in my opinion, represents a fresh breeze from the north. His talks with our President, I am sure, have been fruitful and understanding, and the results of their meetings will, I believe, offer a continuing hope for the future of our two countries and perhaps together, a new hope for the world.

No one should underestimate Canada, large in size, small in population, but with a voice which has been, still is, and should be heard in the world's councils.

Mr. Trudeau, on the basis of the impressions he made in Washington, on the basis of what he has said, what he has done, and what he is attempting to do since assuming the office of the Prime Minister less than a year ago, is a man of candor, understanding, wit, and sympathy. While he is appreciative of our problems, as the working head of a sovereign nation, he must and he will pursue courses which he considers to be in the best interest of Canada. This is as it should be for any nation.

There will be differences between Canada and the United States from time to time, but that, too, is as it should be. I do not see any problems or disagreements, however, which are not capable of solution if reasonable attitudes are maintained. It is not a case of Canada depending upon the United States or of the United States depending upon Canada or one accepting the dictates of the other. Rather what is most needed is a mutual understanding and a mutual restraint since the two nations have not only an independent destiny but also a large measure of common destiny.

As a Senator from the State of Montana, which shares a 700-mile border with British Columbia, Alberta, and Saskatchewan, and as the majority leader of the U.S. Senate, I wish to thank Canada's Prime Minister for honoring us with his visit and President Nixon for having extended the invitation which brought him here.

Mr. President, I ask unanimous consent to have printed in the RECORD the text of Prime Minister Trudeau's press conference at the Canadian Embassy and also of the press conference held at the National Press Club, both on March 25 and both in Washington, D.C.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

PRIME MINISTER TRUDEAU'S PRESS CONFERENCE AT CANADIAN EMBASSY, WASHINGTON, D.C., MARCH 25, 1969

PRIME MINISTER. From our point of view the Minister, the Ambassador and our delegation, I think we all seem very pleased with not only the cordiality of the welcome but the approach that the President and his Administration took to us. There was no hard line, no pushing around. It was asking questions, supplying their own impressions . . . I think I had better try and answer any questions.

Question. Mr. Prime Minister, what was the emotion towards the achievement of this brief visit to Washington for Canada?

PRIME MINISTER. I think the fact that we laid the foundations for future exchanges. We laid the basis for personal relationships which will make it easier, as the President says himself, for us to pick up the telephone and cut through the red tape and communicate with each other directly if there are any problems which demand such communications. It was, to me, a bit surprising that we should establish so quickly such a feeling of cordiality and I think it was due largely to a deliberate attempt on the part of President Nixon and the Americans to emphasize the role in consultation that this Administration plans to follow.

Question. Sir, how tough are these domestic problems that are coming up—wheat and oil and so on? And do you think the consultations here are really going to further the solution of these problems?

PRIME MINISTER. Well they are very tough. I think the consultations will further the solutions to the problems and in the case of oil, as we announced, we will have meetings very soon, I believe the second of April has been chosen. The Americans as well as ourselves realize that the policy has to be revised, perhaps updated with new discoveries and the new levels of consumption and also with the reorganization of the North American market. We are encouraged in the sense that both countries have common interests in this, whether it be wheat or oil. It is not as though we are trying to score an advantage against the other country. We both have advantage in reaching common conclusions. The problem will be on wheat, whether we can convince the other producing nations to accept our point of view and on oil how we will envisage jointly the prospects for the future of this market and the future of this industry. In that sense it is encouraging that we have a community of interest but it does not mean that the solutions will be easy.

Question. Mr. Prime Minister, in your report to the President, did you spend a substantial amount of time on social and student unrest?

PRIME MINISTER. I did with the President and I did with the Vice-President. Most of my meeting with the Vice-President was on that problem. I found that he has a very great interest in the problem of community living but of course he has, as a politician, great experience with that area of our society, our social fabric. In the case of the President, we talked about it, we found that our approach was largely similar—I don't want to speak for him—but I was interested in feeling out whether their approach was strictly based on law and order or whether it had a broader sociological and psychological basis, and I found it was of the latter category. It is not merely a matter of re-establishing law and order, it is not either a matter of inventing new institutions to try to tackle these things. The President used the word "communication" very frequently in dealing with this, and my whole interpretation of the meeting was that in this field, as in others, he is a pragmatist and does not promise set solutions. He is willing to explore avenues with the other person. This I found very welcome. Only the future, of course, will tell what happens to pragmatists. I may be threatened by the same danger myself. If you're approaching too many problems on an "ad hoc" basis, you may suddenly find that the other guy with an ideology or a doctrine has outflanked you, but one must be wily enough, and I believe the President is, and I try to be.

Question. Do you think the President might come to Canada this summer, Mr. Prime Minister, any idea?

PRIME MINISTER. Well, in inviting him, I tried to make it pressing on the one hand, because I do want him to feel extremely welcome, but on the other hand I so much sympathize with a man in that very high office of such a big country that I didn't want to make him feel that he had to come soon to please us. I feel that it will be a miracle if he has time to do more traveling before many months are up. But we did not explore any precise dates except that I think very clearly he mentioned that he had been to Canada at the opening of the Seaway, and I said it would be a good chance to come back and celebrate the anniversary, early in July. But I do not know if he will entertain that idea or not.

Question. (Unclear)

PRIME MINISTER. One can only speculate and I would say very clearly that we were given the impression, we were not made to feel that there was some linkage or some bargaining here, that if we were nice on the military and strategic problems they would be nice on the other bilateral questions.

There was no connection in our talks between the problems, between the questions. Now what is back of the psychology of negotiation I can't say, but we were all very impressed. The Minister has told me that, as regards his own talks, was the fact that the Americans put their point of view, they asked us about ours, but there was no pressing, no compelling demand that we understand that point of view and that we behave accordingly. It was a simple statement of point of view and, as I say, no linkage between these questions.

Question. Mr. Prime Minister, can you give us any idea when you expect to come to a decision concerning the ABM policy and, while you're at it, can you enlighten us by what you mean by possible participation?

PRIME MINISTER. I didn't talk down here about possible participation, you mean in Parliament. We have found out, and I'm thinking because I want to make sure I'm not giving you any classified information, and I'm sure I'm not, we have found out that, in the system as now rearranged, the Spartan missiles won't create any problems for Canada, in the sense that they won't be using our air space. They will be exploding in the outer atmosphere . . . I shouldn't say the outer atmosphere, I should say outside of the atmosphere. They will not be causing problems of fallout or flash blindness in Canada. It's conceivable that the Sprint missiles which are part of the Safeguard system could cause, not problems of fallout we are told, but perhaps problems of air space. I say perhaps because there is no degree of precision to this and this is one aspect of it that we will want to look into, both from a technical and legal point of view. If the Sprints at any time are expected to use or to traverse or explode in Canadian air space, this could cause a problem. What the results would be I don't know. You see, it would be easier if such a problem didn't arise, but apparently there are circumstances in which it can. Now, should we just tell the Americans: "You use it and we'll close our eyes"? Or should we say: "We want you to ask us our general authorization"; or would we want to be consulted every time it's likely that a Sprint will use our air space? These are complex questions; depending on the way in which you answer them, you decide on whether you want to participate in some way in the control of the system; whether you want it within NORAD or not. These, as I say, are quite complex legal problems with technological basis, the answer of which we don't have completely yet and this may take some time before having all the answers.

Question. "Some time"—in weeks, months, before we make our decision?

PRIME MINISTER. Well no, it's linked to our defence review, it's linked to what we want to do in or out of NORAD, the way in which we see the orientation of our future defence policy, and, according to the decisions we make in the next few weeks, then we will either have a simple next step to make or a complicated one. All these problems are inter-linked and the position we take on NATO will determine our orientation on many of the others.

Question. I wonder if you regret at all not having met the American people? It's all been "official" Washington, as I see it, and no contact, hardly at all, with the public in Washington.

PRIME MINISTER. I regret it in the sense that the trip for me is always more interesting if I have a chance to meet old friends and make new ones amongst the American people, or the people of the country I happen to be in. But I know the Americans so well that it's just an added but minor frustration. I feel that perhaps I can meet other Americans in other American cities and make up for my laxity this time.

Question. Going back to NORAD, did Mr. Nixon ask you to reconsider the NORAD agreement, to include ABM?

PRIME MINISTER. No they did not. We repeated our position that when NORAD was renewed last year we demanded that the anti-ballistic missile system be not covered by any new agreements. On that they didn't take any pressing position, or even a suggested one. I think they are leaving it up to us completely. They feel that they can go ahead with NORAD without us, obviously, and I think they want to have us make up our own minds, and this refers to the earlier question. If we want to answer these other questions we may have to involve ourselves with whether a control system in which Canada participates is desirable or not. But we're not ready to take that step yet. We're not ready to ask the question yet.

Question. Did the Quebec issue . . . come up in your meetings with the President?

PRIME MINISTER. Certainly in no important context. I'm just trying to search my mind if there was any direct or indirect allusion to it. I think there was not. In my discussions with the Vice-President, when I was talking about urban problems and leverage on municipalities in the areas of housing and urban growth, I asked him about their state relations with the national Government, and we talked about the similar problem in Canada, provincial-federal relations, with no particular emphasis on any one problem, though.

Question. Could you tell us anything about the Administration's reaction . . . on Red China. Did you discuss it much . . .?

PRIME MINISTER. Yes, we did. I don't think it would be fair for me to speak about their position on it, beyond perhaps repeating that here, too, there was no arm-twisting and no attempt to oppose our views with strong counter-views. The President indicated that he had his own thoughts on this, on which I am not authorized to speak. There was no effort to, shall we say, violently alter the course of our actions.

Question. In last week's debate in the Commons you said that you were coming to speak with Mr. Nixon and discuss the roles (of survivors). You also said that the ABM problem was giving you great concern. Are you coming back to Ottawa tonight with less concern than before? Are you reassured?

PRIME MINISTER. No, I don't think the general question in my mind has been answered any more now than it was a week ago. I have more technical knowledge. We had some fairly elaborate briefings by officials of the U.S. Government. But our moral and political position on the ABM system, I am no more closer to being able to announce today than I was a week ago. With this new information I will be discussing in Cabinet how we answer the question I was asking in Parliament. Does this constitute escalation or not? Is this provocative or not? Is it, in the American mind, something which is irrevocable or not? On this I think the President and members of his Cabinet went out of their way to establish that this was to be implemented over a long period of time. I think the two sites which they want to be operational first will only be in operation around '73 under present time schedules. The President did emphasize that it's the kind of programme which could be accelerated or switched off, according to the way the East-West talks went. As a background to all this, what reassured me most is that the President repeated his desire to use NATO—not for confrontation so much as for dialogue and exchange between East and West. He sees an important linkage between NATO and between the whole question of nuclear escalation or de-escalation, the whole question of strategic arms limitation talks. He feels that the United States is in a better position to discuss the limitation of strategic arms with the Soviets, if the NATO rug isn't pulled out from under him, as it were.

* * * * *

Apparently I made a slip at one point, and I used NORAD instead of Safeguard. I know I mentioned this new Safeguard system, and I don't know in what context, but thank you, Romeo.

Question. When do you expect to make a statement on NATO policy?

PRIME MINISTER. Well, I think it's an open secret now, that the Cabinet is meeting on Saturday and Sunday to consider the latest input, that of the Parliamentary Committee. I would think that we'd be in a position to make a general statement within a few days after that weekend meeting. I say general because according to whether the statement is broadly a decision to stay in or to pull out, all kinds of supplementary statements will be necessary: how do we phase the pulling-out, if that's the decision; or in what sense do we orient the staying-in, if that is the decision. But the decision of principle I should think would be known in about a week or ten days.

PRESS SECRETARY. You said the Americans can go ahead with NORAD without us—what you meant was Safeguard in that context.

PRIME MINISTER. Ah, well this is the context, that we should strike out NORAD and put in Safeguard.

PRESS SECRETARY. The Americans can go ahead with Safeguard without us, instead of NORAD.

PRESS CONFERENCE HELD BY THE HONORABLE PIERRE ELLIOTT TRUDEAU, PRIME MINISTER OF CANADA, AT THE NATIONAL PRESS CLUB, WASHINGTON, D.C., MARCH 25, 1969

Ladies and gentlemen, we are more than glad to welcome today a man of tomorrow, Canada's dashing young Prime Minister—and I would like to stress that "young" because he is not all that much younger than myself. He is pictured by reporters in Canada as a member of the Jet Set, an intellectual, nonconformist, a French bon vivant, a bold adventurer, a swinger. Well, he may be all of these things, and I notice his press clippings don't contain any disclaimers by him. But he is also pictured as a possessor of a tough and thoughtful mind, a pragmatist, and not an arch-radical.

Prime Minister, it has been said that you came on a "get acquainted" visit to President Nixon. I think all of us here have the same approach to the first official visit of a head of government to Washington since the change in Administrations here. We have read a lot about you in the last 12 months since you were elected leader of the Liberal Party in Canada after the comparatively short experience of some three years in national politics. But we would all like to get more about you.

Canadians look to you as a unifying force, one who has stirred their nationalism and their desire to have a greater identity in international affairs. You have promised changes in foreign policy such as recognition of Communist China. You have promised a major effort to advance bilingualism and biculturalism across Canada.

As a French-Canadian you have expressed your major aim to be "One Canada," a Canada in which French-Canadians can feel at home in all parts of the country.

You are, as Time Magazine has described you, "a fairly unstuffy man who, when asked by a pretty young Trudeaubopper for a kiss, can respond with, "Why not? It's spring!" (Laughter)

You are broadminded and cultured, a lover of canoeing, a diver of mere championship caliber, a practitioner of Yoga, a driver of fast cars, and a bachelor—one who can command the company of beautiful women.

Summed up Time, last July, after your overwhelming election in the national elections in Canada: "Whatever else he does, he is certain to give Canada four years of color-

ful and unpredictable government." (Laughter)

So there is little wonder, Prime Minister, that we here in the United States—indeed, all of us in the Western world—are hanging from the rafters to get a glimpse of this most interesting head of government. You are not the first Canadian Prime Minister to speak at this Club, but you are certainly the first one in memory—at least in my memory—who has been followed to Washington by a planeload of Canadian reporters and who has, moreover, induced about 200 young ladies to greet you in the lobby of the National Press Club. (Laughter)

But someone commented to me just prior to this lunch that your first day in Washington yesterday appeared to stress the formal and, shall we say, the more serious side of the trip. This is in character, I might say, with the picture we have of the Prime Minister of one of the staunchest allies in the Western Alliance.

I would like to welcome you, sir, as the man who appealed to the Canadian people last year to "Take a bit of a chance" by electing you with a clear majority.

You are the man to whom the Canadian people have given their overwhelming confidence and whose success is important to all of us.

Lastly, sir, if you will forgive me, and if the fine French-Canadian people will forgive an Englishman trying to use their tongue, I would like to say this: (Speaking in French.) (Laughter and applause.)

I now take great pleasure in introducing the Prime Minister of Canada, the Right Honorable Pierre Trudeau. (Standing ovation.)

Prime Minister TRUDEAU. Mr. Chairman, distinguished guests, ladies and gentlemen: Thank you, Mr. Chairman, for your very warm welcome. Thank you for the invitation to speak to such a distinguished gathering.

The description you made of some of my activities is getting more and more difficult to live up to. I will tell you one aspect of it that comes rather easily, the bit about "It is spring!"

And I thank you for doing, as perhaps the Canadian people did a year ago, taking a chance on me, taking a chance on inviting me, to be patient with some of the ideas I want to express to you. They are meant essentially to indicate some of my approaches to the problem of government. They are not very original, as you will see, but as Winston Churchill said about another Prime Minister, "He is the only one we have." (Laughter)

The relations I have with the Press are always very warm. I feel very close to members of the Press, and especially abroad I feel they are very close—perhaps sometimes a little too close.

But one of the real pleasures of being here is really due to the fact that, being a Canadian, one knows that one always has a warm welcome in the United States.

There must be few countries in the world where individuals on either side of a border feel so much at home on the other. I hasten to add, however, that at times in our history we have paused to wonder whether your friendly invitations "to come and stay awhile" have not been aimed at Canada as a political unit rather than at Canadians as individuals.

Many of you will recall, I am sure, that your Articles of Confederation, as ratified in 1781, contained a clause which was an open invitation, and an exclusive one to Canada. And I read Article IV:

"Canada acceding to this confederation, and joining in the measures of the United States, shall be admitted into, and entitled to all the advantages of this union; but no other colony shall be admitted into the same unless such admission be agreed to by nine states."

So, we have always had a favored position. In any event, we did not join, and history has recorded our differences.

Two hundred years later, the results of our separate and distinct political existence are evident for all the world to see: Professional hockey is a major spectator sport from New York to Los Angeles, and "Peanuts" is one of the most popular comic strips from Halifax to Vancouver.

But Americans should never underestimate the constant pressure on Canada which the mere presence of the United States has produced. We are a different people from you. We are a different people partly because of you.

Our two countries have pushed against one another from time to time, perhaps more courteously in recent years than previously, when your invitation and your republicanism appeared more intimidating to us.

Canadians still smart when they recall President Theodore Roosevelt's tough instructions to Oliver Wendell Holmes, Jr., on the occasion of the Alaska-Yukon boundary arbitration. But how many of your historians have ever noted what Canada's first Prime Minister Sir John A. Macdonald was at one time contemplating as your fate?

In 1867 that gentleman wrote to a correspondent in Calcutta:

"War will come some day between England and the United States, and India can do us yeoman's service by sending an army of Sikhs, Ghoorkas and Beluchees across the Pacific to San Francisco, and holding that beautiful and immoral city with the surrounding California as security for Montreal and Canada." (Laughter)

You see, Mr. Chairman, that although Canadians may not always be able to follow through, we should never be sold short on imaginative proposals.

Indeed, a question which some of your Canadian newspaper colleagues are now beginning to ask about my government is whether our ideas are capable of implementation. It's a valid question.

Imaginative and original approaches to problem solving are always welcome, but they must be practical and, even more important, they must be effective.

Some of our policies may be of interest to this audience, and with your permission, I should like to speak about several of them in a few minutes.

But first, let me say that it should not be surprising if these policies in many instances either reflect or take into account the proximity of the United States. Living next to you is in some ways like sleeping with an elephant: No matter how friendly and even-tempered is the beast, one is affected by every twitch and grunt. (Laughter.)

There is in Canada at the present time a growing sense of unease that in a nation as rich as ours there is a problem of widespread poverty; that among people as dispassionate and understanding as are Canadians there is linguistic apprehensiveness and inequality; that in a world possessed of the technological means to journey to the planets, there exist terrifying threats to our environment and to our very existence.

Canada, by itself, cannot solve all these problems, and perhaps not even some of them. But we firmly believe that we can and must apply our talents and our resources in such a fashion as to seek solutions and, where appropriate, to persuade other states to cooperate with us in seeking these solutions. We have some qualifications for these tasks, and we have had considerable valuable experience which might prove to be of assistance to other states afflicted with similar problems. This is so partly because these qualifications, this experience, and the conditions which have spawned them, are similar in many respects to the differences and the difficulties which are found in the larger world community. And I wish to list some of them.

Canada is a federal state, the same as the U.S.A. Yet, two of our Provinces—Ontario and Quebec—are so populous in comparison with the other eight as to give to them an immensely influential position.

Nor is wealth in our country any more equitably distributed. The per capita income of the richest Province is about twice that of the poorest, and we have elaborate arrangements for redistribution of tax revenues among the Provinces of Canada.

Only one-third of all Canadians are of a stock that had English as its mother tongue, although two-thirds of the population live and work in English; the other third speak French daily as their normal means of communication—socially, in commerce and with government.

Within Canada there are French-speaking universities, radio and television networks, newspapers and labor unions. There is a complete language community.

Another item: One economy is founded largely upon foreign trade. In this respect I should pause to point out that we sell more to the United States, and buy more from the United States, than any other country in the world. The immense size of this trade bears out this emphasis. Canada's purchases from the United States each year exceed in value the total purchases of your four next largest trading partners: Japan, Britain, Germany, and France combined—more than your total sales to all of Latin America.

So it is this pattern of uneven economic development, this heritage of linguistic diversity, and this dependence upon continued international intercourse that leads us to think that perhaps by way of some example we may be of benefit to a world which is so desperately seeking solutions to pressing problems.

As I say this, I hope that we Canadians do not have an exaggerated view of our own importance. We prefer to think that our place in the world is such that we can occasionally experiment with good ideas without risking a complete upset of the whole international order.

We are as pleased as is any country when our views are sought or our assistance requested. But we may be excused, I hope, if we fail to take too seriously the suggestion of some of our friends from time to time that our acts—or our failure to act—this or that way will have profound international consequences or will lead to widescale undesirable results.

But as an example to others we hope that we are able on occasion to serve a beneficial purpose. Our close relationship with the United States is an important illustration of what I mean. The fact that Canada has lived and flourished for more than a century as the closest neighbor to what is now the greatest economic and military power in the history of the world is evidence to all countries of the basic decency of United States foreign policy.

And I add in all seriousness that every occasion on which our policies differ from yours in an important fashion, that difference—if of course it is founded on good faith and sound evidence, as we hope is always the case—contributes to your international reputation as a good citizen as much as it does to ours.

When Canada continues to trade in nonstrategic goods with Cuba, or proposes the recognition of the Peoples' Republic of China, or—as sometimes happens—finds itself supporting a point of view different from yours in the United Nations, the world is given evidence of your basic qualities of understanding and tolerance.

Because a state's foreign policies are in substantial part a reflection of its domestic scene, I wish to mention to you some of our basic programs.

What we are trying to do in Canada is to ensure to every individual the dignity to which he as a human being is entitled. Much of the unrest and turbulence now becoming evident in Western societies originates in the belief by the young, by the poor, by the minorities, that the massive socioeconomic machines that we have developed in our countries are incapable of recognizing them as persons, and of catering to their individual needs.

My government has stated again and again that it is dedicated to preserving the right of every individual to do his own thing.

We have proposed to the Provinces the amendment of the Constitution to include a far-sweeping charter of human liberties, a charter that will protect not only the classical political and legal rights which your Constitution has done here, but as well egalitarian and linguistic rights.

We have amended our criminal laws to permit more freedom to individuals to engage in acts which, sinful though they may be or appear to many, are not possessed of that injurious quality that we normally associate with criminal conduct.

We are examining with increased vigor such debilitating side-effects of an urbanized, technological society as environmental pollution, urban housing and transportation, the protection of spaces in which to play, to think, to be free from the pressures of noise and fumes.

We are attempting to find some lasting and just solution to the problems of our native peoples—the Indians and Eskimos.

We have introduced new concepts aimed at rehabilitating the economy of entire regions by supplying tailor-made programs designed to improve the quality of education, increase the efficiency of agriculture and industry, upgrade transportation facilities and strengthen social services and incentives.

All this is being done against the background of a federal political system and a bilingual society, as I mentioned earlier. If in these circumstances we are able to accomplish our goals, providing we do, it will be to achieve a better life for all Canadians, and if we manage to do it, we will demonstrate to our citizens that the social structure *is* capable of change, that it *is* sensitive to the needs and demands of individuals, that orderly processes do exist inside society able to act as a vehicle for the protestations and the challenges of the aggrieved, then we shall have succeeded not only for ourselves, but I believe we shall have illustrated that tribalism and withdrawal are not the answer, that diversity and nonconformity contribute to a more satisfying and culturally enriched life.

And, especially, Mr. Chairman, I think we will have demonstrated to the citizens that their government is capable of solving problems and of meeting crises when they arise, and perhaps preventing insofar as possible the arising of such crises.

Most of our advanced societies are now in the position where they practically have to reassure their citizens and demonstrate palpably that these crises can be met, that government, in short, can govern; and we have to do this by steering a mid-course between too much authority and too much liberty, and it is a great challenge for all of us.

It should not therefore be expected that this kind of nation—this Canada that I am describing—should project itself onto the international scene as a mirror image of the United States. Much as our two countries are alike, much as they have in common—both with one another and towards other nations—we are different. And each of us is healthier as a result of that difference.

It cannot be expected that a country which is so deeply involved in social changes within its own boundaries should not be examining as well its foreign policies. Canada is, as you know, now reaching the conclusion of the first methodical and total review of our foreign policy and our defense policy since the end of World War II. We have gone back to first principles in doing so, and we are questioning the continuing validity of many assumptions.

Some policies will, without question, be found wanting for the conditions of today and be changed. Others will be retained. I want to emphasize that this review is not an excuse to prove our independence; that independence needs no proving. Nor is it an exercise intended to illustrate to the United States our potential for irritation. We have no desire, and no surplus energy, for that kind of activity.

We are building a new society in Canada. It should not be surprising that the external manifestations of this society may be somewhat different than has been the case in the past. But just as one of the invariable principles of that domestic society is the primacy of the individual, so is one of the invariables of our foreign policy genuine friendship with the United States.

The usual way of stating this fact is to refer in somewhat grandiloquent terms to our 4,000-mile unguarded border, to our lengthy history of amity and harmony, and to the many projects in which we are jointly engaged. It could also be illustrated by proving how interdependent our two nations are in economic, in resource, in geographic, and in environmental terms.

I prefer, however, to express all this more on the level of hockey and Charlie Brown, however. One of our better known humorists, Stephen Leacock, put things in their proper perspective. Writing as an English-speaking person in a bilingual society, he said:

"In Canada we have enough to do keeping up with two spoken languages without trying to invent slang, so we just go right ahead and use English for literature, Scotch for sermons, and American for conversation." (Laughter)

Mr. Chairman, so long as we continue to behave like this, I think the warmth with which Canadians and Americans regard each other will protect us all from any sins our governments might in error commit. (Applause.)

Mr. HEFFERNAN. Prime Minister, perhaps I should explain that I only ask the questions as they are sent up from the floor.

The first one: After hearing Mr. Nixon's argument, are you now in favor of an ABM system?

Prime Minister TRUDEAU. Well, you know, in Canada we have a Cabinet system of government. We do not have the Presidential system. This really means, in effect, that all I can do now is go back to my Cabinet colleagues, report to them the new information we have received, report to them the new technological information that has been imparted to us, and we will have to assess the impact of this on our own approach to foreign affairs, and we will have to announce a decision. I could not say, therefore, if Mr. Nixon's arguments have changed my mind, because I don't believe any of you or anyone knows what my mind was before. (Laughter)

Mr. HEFFERNAN. We have a question in French, and the Prime Minister has kindly consented to read it himself and to reply in French.

Prime Minister TRUDEAU. If you know Quebec at all, you can be sure this is not a friendly question, or it is not put up by someone friendly. It is certainly bona fide. I can read French, but I cannot read everyone's writing. (Speaking in French.)

In a few words, this really means that though we were down here to meet the President and his Administration, we are aware of what the critics made of the decision on the ABM, and we did meet some of these critics socially yesterday, but that any formal discussion with them could not properly take place.

Fortunately, thanks to gentlemen and ladies like yourselves, we are made aware in a very immediate though direct way of what these criticisms are.

As I entered this building, I found one of these persons making an argument, a man with a picket sign telling us what we should tell your government to do.

Mr. HEFFERNAN. A two-part question, sir, which represents many which have been passed up to me: What are the reasons for the seeming lack of progress on your proposal to recognize Communist China—that is, the lack of progress in the Stockholm talks? Do you think it is possible to have a two-China or one-China/one-Formosa arrangement?

Prime Minister TRUDEAU. Well, on the lack of progress, our Secretary of State for External Affairs, Mr. Sharp, has indicated to Parliament that we were prepared to be very patient. I do not know how patient this really means.

One person has calculated that the Chinese intend to take as long in exchanging recognition as was taken by the country who delayed recognition, which would mean it would mean waiting 20 years. But this would be a frightening prospect. But there are more frightening ones: If we do decide to recognize the Vatican, we are 2,000 years late. (Laughter)

But, seriously, we do not think that there has been any undue delay. It is only two months now I believe since we made our first approach to the Peoples' Republic of China representative in Stockholm, and we have put to them our desire to enter into talks with a view to exchanging representation.

There has been, I believe, one meeting since, and there is really nothing more to report at this time. But it does not distress us at all. I think the important step has been made—that is our indication that we were prepared to embark upon diplomatic representations, and we were prepared—perhaps that is also by way of answering the other part of the question—to recognize Peking as the legitimate Government of China. This, in itself, is an answer to what we would do, or what we consider, to Formosa to be the legitimate Government of China. It is that we cannot recognize two governments. Therefore, we are indicating to Peking and to the world that we are now prepared to recognize it as the legitimate government.

What consequences will flow or not out of our determination, I suppose it would be even unwise to speculate too widely on them, and, as it were, to show all of our hand before reaching agreement with Peking.

But Formosa's claim to be the government of all China is one, of course, which we reject, once we recognize Peking as the government. What will follow, whether there will be one Formosa and one China, is really for these two countries to determine, more than ourselves.

As you know, the act of recognition of a country does not carry with it necessarily a recognition of that country's territorial claims. We can recognize the Argentine without recognizing its territorial claims over the Falkland Islands. Therefore, the fate of Formosa is really one which will be determined by the Taipei Government itself.

As to whether it will wish to continue asserting its claim of being the government of all China, or whether it will embark on some other course of being a sovereign state of its own, I cannot speculate on what course they wish to follow, nor what course Peking will wish to follow in its relations with it.

Mr. HEFFERNAN. There are a number of questions on the question of Canada joining the Organization of American States. The most direct of them:

Why doesn't Canada join the Organization of American States?

Prime Minister TRUDEAU. Well, as you know, we have been considering this for a long while. I think what has held us back most in

the past is, as in the present, the sense that if we join the Organization of American States, we would be a pale reflection of the American image, and we did not find this useful.

To be quite blunt, we have never evolved a very coherent and organic policy towards Latin America. We have been turned towards Europe, other parts of the world, much more than we have towards South America and Central America. And, not having a clear, coherent policy, had we entered the OAS, I am afraid we would have brought no new knowledge and no new resolve, and the danger of that would have been that either we would have reflected the State Department's views in all matters, and this would have been, I believe, not only detrimental to ourselves, but it would have been detrimental to the kind of relationship that we hoped to establish with Latin American countries. Or, on the other hand, we would have necessarily felt obliged in many cases to disagree with the State Department just to prove our independence, but without any logical or consistent background or policy toward it.

So what we have done in this new administration is to send a high-level delegation to South America, a ministerial level, which toured most of the countries of Latin America and Central America, and which is now embarked upon defining for ourselves a policy as regards these nations.

The question of the OAS is really only secondary. I think we all feel we would like to be part of it, but only if we can be a useful part. And if we find that our policy is one on which we can make a clear statement, one on which we can seek clear guidelines and principles which we would follow, then I think a normal step would be to ask for admittance to the OAS.

I might only point out in passing that I believe that many of the Latin Americans—most of them—feel very much as we do in this, and it was rarely the first or the second question they asked us, whether we would join the OAS. They were more interested in knowing where we were going in relation to them. And we indicated to them we wanted to establish much tighter links with this vast land mass which will have some half-million people by the turn of the century and which, if we do not consider it as one of the important parts of the world, can become obviously a very serious source of disturbance to world order.

Because of this, we want to increase our relations with South America and with Central America. We want to do it in the areas of trade, in the areas of culture, of exchanges of many kinds—of people, of students, of ideas. And as a next step we will consider the OAS.

I would say that our inclination is towards asking admittance, but with the timing to be determined.

Mr. HEFFERNAN. In the same field, Prime Minister, a nice easy one:

Why does Canada support Cuban intervention in Latin America by trading with Cuba?

And along with it:

What should Uncle Sam do about Fidel Castro?

Prime Minister TRUDEAU. Well, I suppose a long dissertation on Cuba would be repetition of one that you have heard and read many times.

I would perhaps reject the premises of the question that we do support Castro's activities in South America merely because we are trading with them. Because if that were the principle on which we were to base ourselves, we could argue that the United States does trade with a lot of governments—most countries in the world trade with a lot of governments with policies of which they do not approve. And I believe that one of the best vehicles of understanding and closer relationships between countries is trade. The missionaries come first, and the traders come next.

I think that the Canadian approach to these problems—and it has not been an original one—is that in our relations with other countries we should not try and intermingle the two types of issues. Short of being at the state of war with another nation, we do not believe that curtailment of trade is in any sense conducive to a lessening of tensions between countries. On the contrary. We trade with Communist China. We trade with Cuba. The United States trades with many countries, the policies of which I am sure your people disagree.

Therefore, what should the United States do with Fidel Castro? I suppose anyone in this room now would say the thing you shouldn't do is ask the FBI.

I think it is important to realize that the force of nationalism, the force of independence, the feelings of independence of a nation are pretty hard to stifle, and that in international relations—as in domestic relations—the catchword, the key word is communication. The key word is dialogue, in the same sense that we are beginning to discover within our societies that you cannot repress sources of discontent and hope that you will have a peaceful society. But the only way is to talk about the values which the discontented groups feel. Talk about bridging this gap, whether it be a generation gap or color gap or geographical gap within a society or a rich-poor gap. The only way to prevent two societies developing within the nation, each with its own set of values which reflects the other person's set of values, is to discuss these values, to meet, to exchange, as you try to do in your politics—as we try to do in ours. And if this is true within societies where tensions are mounting, it is certainly true in international society. And that is why we have the United Nations. That is why we have forums where we discuss the other person's values.

And we think that in the case of Cuba this applies just as much as it applies in the case of Red China. It is once again only by discussion and communication that you can perhaps not convince the other person that your values are the right ones, but convince him that he has had a chance to make his point, and that the discussion is based on reason and appeal to thought rather than to emotion. (Applause.)

Mr. HEFFERNAN. On oil, Prime Minister, what is your position for or against the continental oil policy for the United States and Canada? And are you here to discuss it now?

Prime Minister TRUDEAU. Yes, we are. We did discuss it, both the President and myself, and then our Ministers and officials. We have a continental oil policy of sorts. It was set up in the past, and it worked reasonably well.

The technical details of it are perhaps a bit elaborate, but essentially it means that Canadian oil producers sell to Western Canada and sell to the United States an amount roughly equivalent to the amount of oil that Eastern Canada purchases overseas and, notably, from the Venezuelan producers. It is a deal between the American Government and the Canadian Government which is cost-saving for both parties.

The new oil discoveries and the implementation of this past policy is creating problems. We did discuss them and we are announcing in a press release that there will be further meetings on the 2nd of April with a view to looking at this continental oil policy and discovering the new avenues that might want to be followed.

I think we have arguments for the United States in the sense that our oil is not only cheaper, but it is more secure in terms of defense in any future conflict. It is continental oil. It is more easy of access. And if we do not continue exploring and discovering new sources of oil, there might come a time when there will be an oil gap that we won't be able to fill on this continent.

Discoveries at Prudhoe Bay perhaps retarded for some years the development of such a gap, but I think it is very present in our mind, both the American and Canadian Government, and we will now be seeking to establish new guidelines for a policy which will be in the mutual interests of both countries to permit the encouragement and development of oil resources in Canada, and at the same time not disrupting your internal markets.

We find that the discussions went very well, that there was a great deal of understanding between our government on the over-all aims, and we are very optimistic that there will be emerging a renewed oil policy which will be satisfactory to both governments.

Mr. HEFFERNAN. A bank of questions on the question of draft evaders. What is the attitude of your government in regard to Americans who travel to Canada to evade the draft? Has their entry noticeably affected the thoughts or policy of Canadians? And is there a limit to the number you will admit?

Prime Minister TRUDEAU. When a question is restricted to draft-dodgers, the answer is a very simple one. The status of being a draft-dodger does not enter at all into our immigration policy. You can have your draft card in your pocket. If you are dodging the draft, you are not even asked about it and you are admitted to the Canadian border.

It is an irrelevant question from the point of view of our policy, and because it is not a relevant question, we do not have statistics on it. We do not know how many draft-dodgers have been admitted to Canada and have stayed there. I believe it is a policy which is similar to that practiced by the United States as regards draft-dodgers. We do know that a number of Americans come to Canada to evade the draft. We also know that a number, perhaps a superior number, of Canadians come to the United States to join the United States Army. We do not have statistics. Some of them are even fighting in Vietnam.

But what effect these draft-dodgers have on our students is a question which, of course, I am no more informed on than you might be, sir. Their presence has been felt. They have aroused a great deal of sympathy on the Canadian campuses. By and large they have proved to be good students, orderly students, and much of their attitude, I believe, is dictated by reasons of conscience rather than by any desire to upset a particular order of things.

If the question were to go on and ask about deserters, I might be in a more delicate situation. Our policy as to deserters is not as clear as that regarding draft evaders. In general, we do have statistics on this and, in general, Canadian policy has been, shall we say, a little less free towards deserters than to draft evaders, on the basis that immigration does consider whether a prospective immigrant has any moral or legal commitment in the country of origin. And this applies, of course, not only to American immigrants but to immigrants from all countries. We do have statistics on this. I believe that we admitted 56 deserters in Canada last year and this, as you see, is a very small number. There may be others in Canada but who have not asked for immigrant status and, therefore, on which we cannot report.

Mr. HEFFERNAN. Another question: Do you really think you can unify the French-English tradition in the Dominion? And how serious today is the threat of French Canada seceding from the commonwealth?

Prime Minister TRUDEAU. Well, this is a question on which there is no real answer except that many politicians have staked their political future on the hypothesis that there was no lasting danger of secession and, more important that we could unify, as the

question puts it, Canadians in spite of their linguistic differences.

I think the key to this—and it might be worth a word of explanation—is that we as a government—and it was the position of our party in the elections which, as you know, also scored resounding victories in the French part of Canada, which was an overwhelming return. Our approach is that there are not two nations in Canada, because if you are going to talk to two nations there is a danger that you will go towards two political nations and two distinct legal entities either called "states" or "countries" or "peoples."

Our approach to it is that language is merely a vehicle; it is a tool. We have one nation. We have one political nation and we want to remain one political nation. But in this nation we have taken the position that there will be two vehicles of communication. There will not be the French-Canadian and the English-Canadian. There will be French-speaking Canadians, which might include a lot of people of Italian, of Hungarian, of Rumanian ancestry, and there will be English-speaking Canadians which in fact include Canadians of all ethnic origins. Therefore, we do not try to distinguish two ethnic groups or say one ethnic group has a privileged status. We say there are in Canada many ethnic groups, as in the United States of America. And on the basis of history, we cannot say that English and French Canadians are the first or the best and that their languages should be the only official ones because if it were an historical basis, we would find that there were other people here before the English and French, the Eskimos and Indians and so on.

Therefore, we tend to look at this problem from a pragmatic point of view. We say, in fact, there are two large linguistic communities in Canada: the English-speaking and the French-speaking. And because of this, it will be important for members of those two communities to be able to communicate with the state in the official language of their choice. And this can be done. It can be legislated. We cannot legislate equality of two groups in the nation. It is not possible. I mean, you can say that the citizen of Guatemala is equal to the citizen of Germany. You can talk of an equation in international law, but within a society you cannot say the blacks will be equal to the whites, or the English will be equal to the French. This is not an operational concept. You cannot say there will be as many stores on Main Street of the French language as there is per capita French in the country. You cannot say there will be as many students in your school as there is a proportion of that group to the overall total. It is not an operational concept. But the language concept is an operational concept. It has worked in many other countries more or less well. (Speaking in French.)

It works in Switzerland where they have three and even four recognized languages. It works in South Africa; it works in Ireland; it works in Belgium. Not perfectly. It does not work perfectly in Canada, too, but we believe that the approach to the world of tomorrow is a pluralistic one, not based on ethnicity any more than it should be based on religion. And we reject any approach which tends to say that the state is the protector of an ethnic group—the French-Canadians in this particular instance. The state must be the servant of all citizens regardless of not only color and creed but of ethnic origin.

By rejecting this approach we do not reject, as I say, the legal declaration that the tools of communication shall be the English and the French language. This is once again not because they are superior or intrinsically better than any other language. It is because, as a pragmatic fact, we see that these are the tools of communication; that if the country is to hold together, each citizen of that linguistic community must feel that he can plug into his organs of government. And this is our approach. (Applause.)

Mr. HEFFERNAN. Perhaps following that up, sir: Do many Canadians feel that the British-North American Act of 1867 is outdated? What would you propose to update it?

Prime Minister TRUDEAU. We have been embarked upon constitutional negotiations in the past year a little bit. Our approach for some years was that there were very few important problems in Canada that could not be solved under the BNA Act, 100 years old as it was. But the urgent priorities for government were at all levels. They were questions of poverty, questions of urban growth, questions of environmental control, questions of law and order, questions of economic development and the correction of regional disparities. All these problems are top priority, and we fear that too much of our mental energies and time would be diverted into constitutional debates.

We feel that by and large the citizen in our country, as I suppose in many countries, is not so much interested in arbitrating quarrels between one level of government and the other, not so much interested in the results of competitions between, in our case, the central government and the provincial governments as to who should have power over what. The citizen is interested in being well governed from all levels of government. And that is why our approach to the constitution has been that first we must state that which unites us, those principles which we hold in common, all Canadians, rather than begin by opening the debate on a division of power, on the respective jurisdictions of the federal and provincial governments which, as I say, appear only secondary to the citizen. We have tried to define those values common to all. One of them, as I just said in answer to the previous question, being the linguistic beliefs; and that is why we have brought before the Provinces this approach to the constitution which, as I said in my remarks earlier, is the belief in a charter of fundamental human liberties. If we can state that in the constitution, if we can protect the citizen from governmental invasion of these rights, then we would have gone a long way to establish the community of feeling and of thought in Canada which is essential to any consensus of any government.

That is the first step. We have gone well beyond that. I don't want to bore at least the Canadian people in the audience by summing up what we have proposed, but beginning February of last year, until the present day, we have had many, many, many discussions on the most vital parts of the constitution. They go all the way from a charter of fundamental liberties to the institutions of federalism themselves; the role of the Senate in the federal form of government; the role of the Supreme Court; how it should be set up; the role of the national capital and the desirability of having it reflect the bilingual and multi-cultural character of our society.

These are all propositions which we have put to the Provinces, upon which debate and negotiation is going on at the present time.

There has been in recent months an emphasis put on by some Provinces on the fiscal aspects of it, on the use of the spending power by the federal government. This aspect is being debated, too, and my government's feeling on what the constitution might be could be best gathered by reading a fairly lengthy booklet on it which our Ambassador would be delighted to hand to you.

This is our general approach.

Mr. HEFFERNAN. There are many questions which we will not have time to ask. But maybe one we should deal with is: Did you and President Nixon have a meeting of the minds on the future of an international grains agreement; and more specifically, the world price of wheat; and do you think that price is too high?

Prime Minister TRUDEAU. Well, we did have a meeting of the minds at least on our approach to it. We did feel that this international agreement, which was drafted after considerable pain by producing, exporting and importing nations, it would be desirable if it could be respected.

We realize that beyond this pious wish there is much work to be done. One of the large and important exporters is, of course, the Government of Australia. The Prime Minister of Australia will be in this country and in our country in some days' time, and we have agreed that we should try and involve the Government of Australia in our approach to reestablishing respect for the international grains agreement. To this extent there has been a meeting of the minds.

We have not found out how we could get the world community to accept our point of view, but there has been called a meeting early in April of the exporting nations. They are to examine this problem. They will then examine the problem that was asked, sir, about whether the price has been set too high.

Our Canadian answer to this is that the price was set after a great deal of discussion and debate. It is perhaps easy or tempting now to say the price was too high because of the current situation of the producing nations and the surpluses in grain. But this is the basis of all commodity agreements. If we didn't have an agreement, we might be able to probably say the price is too high now; but in years of shortage, then the price would probably appear too low to us and we would be tempted, all of us exporters, to up the price considerably to the consuming nations. And that is why a balance must be established in all these international commodities, commodities which are internationally traded, and that is why we have this approach.

It is no longer the individual farmer who is selling his wheat or his sugar or his cocoa or whatever the other commodity is which is covered or should be covered by international agreements. It is the state itself which is involved. And we know that all of these policies, if they are not guided by an agreement, will tend to beggar each other, and the result will not be favorable.

In times of overproduction, it will be advantageous to the consuming nation; but in times of underproduction, it will be disastrous to them. And it is to average this out, sir, that we have these agreements. And on these general principles the President and his Administration agree very much with ours.

Mr. HEFFERNAN. Prime Minister, we are very indebted to you for coming here today and answering so many questions. And in acknowledgment of this we would like to present this Certificate of Appreciation from the National Press Club.

Prime Minister TRUDEAU. Thank you very much. (Applause.)

Mr. HEFFERNAN. Also, sir, we have a little gift—the official tie for the National Press Club. And we would implore you not to try to hang yourself with it, just to wear it.

Prime Minister TRUDEAU. Thank you very much. (Applause.)

Mr. HEFFERNAN. One final question—I don't know whether we are going to get this into air time. When is General de Gaulle coming for a return visit? (Laughter.)

Prime Minister TRUDEAU. I believe you have invited him to visit your country. We will see what he does if he goes to Louisiana, and then we will report. (Laughter and applause.)

(Whereupon, at 2:00 o'clock p.m., the conference was concluded.)

Mr. AIKEN. Mr. President, will the Senator from Montana yield?

Mr. MANSFIELD. I am delighted to yield.

Mr. AIKEN. Mr. President, I know we are all very much gratified by the results of the visit to Washington by our good

neighbors to the north, not only of Prime Minister Trudeau, but of the entire delegation from Canada.

We have heard much about the Prime Minister, and I, for one, am very much pleased with what he did and said while he was in Washington. He turned out not to be a fire-eater; and I am sure that when the chips are down, it will be found that he is not a shrinking violet, either. He impressed me, as he did all others who had a chance to talk with him, as being a good listener, an excellent listener, a man who tries to be fair, one who is dedicated to doing what is right when he knows what the right thing is.

Last night, at the Canadian Embassy, we had occasion to meet many of the Canadian officials, including besides Prime Minister Trudeau the Secretary of State for External Affairs, Mr. Mitchell Sharp, the Under Secretary of State for External Affairs, Mr. Marcel Cadieux, and others, as well as leading citizens and officials of the United States. We had a good discussion, which lasted rather longer than we anticipated. In fact, it ran pretty close to midnight.

As an indication of how informative and interesting that discussion was, I may say that for the first time in a long time our majority leader did not want to go home early.

Not only will Canada and the United States benefit from this visit by Prime Minister Trudeau and other Canadian officials, but the whole world, as well, will benefit from this first visit. I hope that the exchange of visits by our leading officials may become a habit.

Mr. MANSFIELD. Mr. President, I could not agree more with what the distinguished Senator from Vermont, the dean of Republicans in this body, has said about the meeting last night. I think it was the most interesting and informative one I have attended in my 27 years as a Member of Congress.

ORDER OF BUSINESS

Mr. MANSFIELD. Mr. President, I ask unanimous consent that I may be recognized for 2 additional minutes.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

VIETNAM

Mr. MANSFIELD. Mr. President, we should all be encouraged with the statement issued by President Thieu on yesterday to the effect that the Saigon government was willing to meet with the NLF in private and without conditions. President Thieu stated also that he opposed the renewed bombing of North Vietnam. This is the first encouraging sign in many months, if not the first during the whole period of talks and negotiations, to indicate that some movement is under foot and some progress may be made.

It is now possible, if the NLF and the Saigon representatives will get together, to begin laying the first building block toward the achieving of a responsible settlement of the war in Vietnam. I have no information of any kind as to what steps were taken leading up to President Thieu's statement, but I assume that the administration has been working in private and if it is responsible for this possible movement toward peace, then I want to give it full credit for what it has done in helping to break the impasse which has marked the Paris talks to date.

On the other hand, I am disturbed by the newspaper stories from Saigon that the U.S. military command has asked President Nixon to approve plans to attack bases in Cambodia.

It has been stated that Cambodian Chief of State, Prince Norodom Sihanouk, indicated in a recent speech that he would not object to the United States bombing Communist targets in his country. I question this allegation because an attack on Cambodia would very possibly bring that nation into the conflict, expand the war considerably, very likely bring about an increase in American forces, and would reduce all prospects, in my opinion, for a reduction in the war, a possible deescalation and would hinder the chances of American withdrawals at a future date.

This is dangerous talk covering a delicate area which involves a potential enlargement of the war which would decrease rather than increase the chances for peace. If this report is true, I hope, most sincerely, that the President will give it short shrift and immediately, and with emphasis, turn it down.

SENATOR SAXBE'S WISE WORDS

Mr. YOUNG of Ohio. Mr. President, during my recent factfinding visit to Vietnam, under authority of the Armed Services Committee, I spent a large part of a month last year not only in South Vietnam but also in Laos and Thailand. While in Saigon for approximately a week, I had an opportunity to take side trips throughout various areas in Vietnam, ranging from the area in Khesanh and in the northern highlands to the area around Da Nang.

I observed, to my surprise, that our many thousands of marines in Vietnam were on the defensive in the Khesanh and Da Nang area. I say much to my surprise for the reason our marines are the best trained and best equipped offensive fighting men in the entire world. As a veteran of 37 months of service in World War II, but in reality never more than a civilian in uniform, my belief that our marines should be leading offensive operations in the Mekong Delta and spearheading amphibious landing operations there and along the South Vietnam coast was shattered by the policy then followed under the leadership of General Westmoreland. At that time, our marines were on the defensive throughout Vietnam. Not any were engaged in offensive operations along the long shoreline of Vietnam or in any of the rivers interlacing huge areas in the Mekong Delta.

While in Saigon I managed on several occasions to get away from the VIP schedule and program and on my own do some sightseeing and interviewing. I was informed from reliable sources that Madam Ky, wife of Vice President Ky, owned vast holdings not far distant from Saigon of highly productive rice lands and also that she was either sole owner or part owner of a huge rubber plantation taken over from the French. Furthermore, I do not consider it can be claimed by any advocate of our involvement in the civil war in South Vietnam that Madam Ky might have been a young women of wealth and might have inherited this property. She was an airline stewardess at the time Air Marshal Ky married her. In Vietnam and throughout Asiatic nations young women of wealth do not engage in gainful employment as they do in the United States. Here is a blatant example of absentee landlordism.

The gravest mistake any American President ever made was the mistake of President Lyndon Johnson and now his successor, President Nixon, in supporting the corrupt militarist Saigon regime and waging an American war in what was a civil war in Vietnam. This undeclared war in which nearly 40,000 Americans have been killed in combat and more than 200,000 wounded in combat has become the most unpopular war in American history. We Americans who consider ourselves the most revolutionary nation in the world are fighting on the side of the tories of Vietnam. We are supporting a corrupt regime of militarists who overturned the duly elected civilian government in Saigon in a nighttime coup in June 1965; and we have taken over from the defeated French the fighting against the forces of national liberation seeking freedom for what was known as the French Indo-Chinese colonial empire. The VC, or forces of the national liberation front, have been fighting in South Vietnam as they did victoriously in what is now known as North Vietnam to redistribute the vast property of absentee landlords giving that land back to the peasants who were subjugated into serfdom and third-class citizenship by the French.

Mr. President, I associate myself with the statement made by my distinguished colleague from Ohio, Senator WILLIAM SAXBE, who recently stated in Columbus:

> In Vietnam we are backing the landlords and we should be backing the peasants. For what we are spending in Vietnam we should buy the land and give it to them. We should try land reform comparable to that done in Kenya and Mexico.

My colleague made a very perceptive and admirable statement. It is apparent to any observer in Southeast Asia that the Saigon regime is hopelessly corrupt and unconcerned for the lot of the South Vietnamese people and unconcerned regarding their welfare. They treat the mass of the Vietnamese in the countryside in the same manner as the French and Japanese colonial masters who preceded them.

Less than one-fourth of the arable land acquired by the Saigon government since 1954 for distribution to the peasants has actually been distributed. At the same time the National Liberation Front, or VC, have reportedly distributed some five times the amount of land distributed by the Saigon regime. In areas under control of the Saigon military regime, the old feudal system of absentee landlords still prevails. Top-level talk of winning the "political" war by "social reform" and "revolutionary development" remains empty verbiage. Wherever U.S.

troops, or friendly, so-called South Vietnamese soldiers establish "security" in the villages, the landlords return to collect back rents and reimpose a feudal system on the peasantry.

Mr. President, I wish to pay tribute to and express my respect and admiration for my colleague from Ohio (Mr. SAXBE) for speaking out loud and clear on this matter.

Unfortunately, more than $100 billion of American taxpayers' money has been dissipated, blown up into smoke, trying to crush the VC or forces of national liberation. During this month of March, an additional $2.6 billion or more will be spent in our undeclared war in Vietnam. It is most unfortunate that our new administration seems to be yielding subservience to the military-industrial complex and to the generals of the Joint Chiefs of Staff who have been proven wrong from November 1963 to this time. I praise my colleague, Senator SAXBE, for the good advice he has given on this subject to the leaders of this new administration and to his highly critical denunciation of the policies of aggression pursued by us in Southeast Asia.

When President Eisenhower left the White House in January 1961 there were 685 American military advisers in Vietnam. When President John F. Kennedy was assassinated in November 1963 there were approximately 16,000 American military advisers in Vietnam. With President Johnson in the White House our involvement in this civil war was escalated to more than 550,000 ground forces and airmen of our Armed Forces supported by more than 40 percent of our naval forces and 50 percent of our airpower. It was largely due to the efforts and determination of Secretary of Defense Clark Clifford that the demand of General Westmoreland for more than 200,000 additional fighting men to be sent to South Vietnam was denied.

In Vietnam General Westmoreland told me that the bulk of the VC fighting in South Vietnam were born and reared in South Vietnam. Gen. Richard Stillwell, his chief deputy, informed me that 80 percent of the VC, or forces of the Vietcong, fighting in the Mekong Delta which is south and west of Saigon were born and raised in that area. When I stated "Well then, we are involved in a civil war," the response reluctantly given was "Well, it could be termed an insurrection."

The great American tragedy is that nearly 240,000 of the finest young men of America have been killed and wounded in combat in this civil war in South Vietnam and thousands have died of bubonic plague, malaria fever, hepatitis, and other tropical ailments, and thousands more killed in what the Pentagon terms "accidents and incidents." Nor is the horrible end in sight. This tragedy and great wrong has been perpetrated by myopic generals of our Joint Chiefs of Staff and by President Johnson. Now President Nixon appears—and I hope I am wrong—even more warlike in supporting a corrupt Saigon regime which all along has rejected land reform but connives with absentee landowners and corrupt provincial leaders. Thieu and Ky have the backing of less than 20 percent of the population of South Vietnam. Their regime would collapse except for our support. They propose to fight on to the last American.

Again I report that my colleague, Mr. SAXBE, is deserving of praise and commendation for the statement he has made.

SOMETHING IS RIGHT IN THIS WORLD

Mr. PASTORE. Mr. President, the Senator from Rhode Island is happy to state this morning that something is right in this world. As the Monday news headlines bring details of the vandalism and violence that scars the Sabbath, one wonders if anything is right in this world.

Then the heart is refreshed by such an event as the "Rally for Decency" staged last Sunday, March 23, at Miami's Orange Bowl.

The 30,000 people gathered there may not have "made" the front pages of the Washington Star or the Providence Journal or the Boston Globe. But I was happy to see that the story was by no means "buried" by those newspapers.

Indeed, the story made its own headlines in the inside pages and its own heartlines for all whose eyes fell upon it.

I do not intend to sermonize. I could not improve on the truth and thrust of the Associated Press observer. His reporting speaks for itself.

Between the lines, the reader could find fresh confidence that the widely publicized vicious violence is but the madness of a minority.

When dignity and decency which mark the majority finds its voice, sanity will obliterate obscenity.

The Associated Press and the countless newspapers which carried the good news—all deserve the highest praise. Let me praise in the highest the stars of the entertainment world who participated so genuinely and so generously. The story deserves the utmost circulation.

To that end, I ask unanimous consent that it be printed in the RECORD at the conclusion and climax of my remarks.

The headline of the article reads, "Teens Draw 30,000 to 'Rally for Decency' in Orange Bowl."

Today, I say in the Senate of the United States, "Thank God."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TEENS DRAW 30,000 TO "RALLY FOR DECENCY" IN ORANGE BOWL

MIAMI.—Some 30,000 hand-clapping people, some waving signs saying "Down With Obscenity," rallied in the Orange Bowl yesterday to support a teen-agers' crusade for decency in entertainment.

Teen-agers organized the rally after Jim Morrison, lead singer of The Doors was charged with indecent exposure during a Miami concert on Mar. 1. Six warrants have been issued for Morrison's arrest.

"This is not a protest rally," said Julie James, 18, a member of the teen-age Rally for Decency executive committee. "We're not against something. We're for something."

Teen-age speakers gave three-minute talks on God, Parents, patriotism, sexuality and brotherhood, sandwiched between appearances by professional entertainers who donated their services.

"Five virtues" selected as the keynote of the rally were: "belief in God and that He loves us; love of our planet and country; love of our family; reverence of one's sexuality, and equality of all men."

"Sex is definitely being exploited and it is because society has been losing its reverence for one's sexuality," Miss James said.

The shirt-sleeved crowd, basking in a warm sun, cheered for such entertainers as Jackie Gleason, Anita Bryant and The Lettermen who appeared in order to applaud the teens' rally.

"I believe this kind of movement will snowball across the United States and perhaps around the world," Gleason said.

"I think it's great, there should be more things like that," said Tony Butala of The Lettermen.

"I always kid around on my show about how glad I am to be in Florida with the good golf weather and so on and after this decency rally, I can honestly add now that I am proud to be a Floridian," said Gleason.

He said after the rally that today's teenagers have many more temptations than teens in the past. "Perhaps I shouldn't say this, but television has a lot to do with it," he said.

The originator of the rally, Mike Levesque, 17, a senior at Miami Springs High School, said the idea grew out of a Catholic youth group discussion two days after The Door concert.

Levesque said he was thrilled by the rapid growth of the decency movement and the support it gained from adults.

The crowd was about evenly split between teenagers and adults.

Another member of the executive committee, Alan Rosenthal, 16, said telephone calls and letters poured in from around the country from teen-age groups interested in the movement.

He said, "We're going to try to come up with some kind of international youth organization. It could really tie the world together."

Numerous organizations, including major religious denominations, contributed to the rally. American Legion members passed out 10,000 small American flags.

STATEMENT BY SENATOR ALLOTT, OF COLORADO, BEFORE THE REPUBLICAN POLICY COMMITTEE

Mr. SCOTT. Mr. President, at the request of the Senator from Colorado (Mr. ALLOTT), I ask unanimous consent to have printed in the RECORD the statement made by the Senator from Colorado before the Republican policy committee on March 25, 1969, on the subject of student disorders on the campuses of American colleges and universities.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BEFORE THE REPUBLICAN POLICY COMMITTEE BY SENATOR GORDON ALLOTT, REPUBLICAN, OF COLORADO, CHAIRMAN REPUBLICAN COMMITTEE, MARCH 25, 1969

I want to speak briefly about student disorders on the campuses of American colleges and universities. After I have completed this brief statement, I have arranged to show you a film clip prepared by KLZ, the Time-Life station in Denver, taken at the time student militants—shouting obscenities, hurling chairs and lighted cigarettes—delayed for an hour a speech at the University of Colorado by Dr. S. I. Hayakawa, acting President of strife-torn San Francisco State College. I believe this film clip dramatizes the problem and the reality of the present situation in a way which rhetoric simply cannot reach.

Until recently, many thoughtful citizens tolerated the hijinks of student disorder with an attitude similar to the aristocratic Eng-

lish lady who said that she did not care what people did, so long as they did not do it in the streets and frighten the horses. Perhaps in remembrance of the springtimes of yesteryear, when sap quickened the veins of youthful inventiveness, many parents were apt to dismiss sit-ins and free speech movements as the evolutionary outcropping of the kind of campus fun and games in which they also had participated.

There is, however, little relationship between goldfish swallowing activities and the deliberate attempt to impose student control over our educational institutions. In cases where student militants are unable to gain control, they seek to destroy.

When the average citizen reads about the "demands" of college or high school students, he can easily become confused, and that is exactly how the revolutionaries would have it.

What we have tragically underestimated is the fact that *sincere students* were expressing their disenchantment with policy matters of the university with which they believe they have a right to be concerned—including some that have long been thought to be the sole prerogative of university officials. These demands have now spilled over into the largest perhaps ethical, demands of what they conceive the relationship of the university to society should be, e.g. Viet Nam, the draft, crisis in the cities, unlimited personal license.

Very often the organizers of student protest interject themselves into intra-campus issues which have some legitimacy, or which at least enjoy widespread popular appeal on campuses.

They interweave, for example, demands such as "beer on campus" with demands for student control over faculty and curriculum. Thus, the organizers are able to use popular issues as a front for their real aims, which include control and/or destruction of the institution.

In this way, students who are concerned with contemporary problems such as the Viet Nam war, the draft, the crisis in the cities, have become ready prey for the professional agitator and malcontent, because the professionals are able to turn these issues into militant protests against the "establishment."

When many of these student activists first transferred their energies and concern about the civil rights movement in the South to the barricades of student protest on their own campuses, they discovered, almost by accident, that the rules and traditions of campus regimentation had become so brittle that they were capable of breaking these rules with impunity. They must have noted with grim satisfaction that when their demands were pressed beyond polite discussion that campus administrators began to waver, bend, and break when confronted with the politics of contempt and unremitting, violent, physical confrontation.

Revolutionary efforts were fanned by the excitement of being on the leading edge of "progress" in academic reform. The techniques of insurrection suggested by new student heroes like Che Guevara, Mao Tse-tung, and Jules Debray showed increased signs of adaptability each time another campus administration was successfully overcome. Real or imagined social consciences, aroused by the works of Herbert Marcuse and the incoherencies of self-styled anarchists and fostered by trained revolutionaries, created a climate in which regard for the rights of their fellow man were dismissed by students in favor of wanton destruction of authority and all that represents it.

Inevitably, what was once regarded as isolated instances of militancy and violent disorder has become a pattern of conduct which, frankly to this Senator, now threatens the very fabric of our educational system in this country today. The techniques of responsible reaction by college administrators, have been marked by mounting frustration to say the least. In many, many instances college officials have, in good faith, tried to separate constructive student proposals from the more patently disastrous ones. Despite their efforts, however, the sounds of protest, orchestrated by groups like the Students for a Democratic Society, have been elevated into a crescendo of organized maelstrom, called rather euphemistically, student protest.

I have just returned from a weekend of meetings in Colorado. The people out there, still smarting at the rude response to Dr. Hayakawa, were treated to another outbreak of violence outside one of Denver's high schools on Friday. They want this kind of activity stopped and they are looking to those in authority to exercise judicious responsibility.

Recently, I obtained a document which was handed out at a meeting of the SDS East Coast Regional Offices held in Princeton, N.J., February 1–2, 1969. Because this document is so enlightening as to what the future portends with regard to the activist efforts of the SDS to continue insurrections in this country this Spring, I want to make excerpts available to you this afternoon. The entire document is, of course, available to any of you who might want to read it in its entirety.

I think after you read it, and you see the film clip, that you will share my deep concern with these pretentious little fascists. I sometimes think their only goal is to goose-step across the smoldering ashes of an academic wasteland holding the bloody scalp of capitalism in one hand and a Viet Cong flag in the other.

It is because of statements made in this document, and my continuing study of the problem, that I have already written to Attorney General Mitchell applauding his recent announcement indicating his intention to prosecute to the full measure of the law those professional agitators who are taking advantage of the freedom of this country in order to destroy the land, who in some misguided way equate forebearance with permissiveness and thus are willing to press the art of confrontation to its final, violent fulfillment.

Likewise, I applaud the President's statement over the weekend in which he indicated that federal funds should be denied to those who participate in this kind of anarchy.

I would submit to you that until we determine just how these revolutionaries and anarchists are financed, and then act to deny them funds for such purposes, we will not stop this problem. The best information I have indicates that prominent leaders in the student revolution movement have received financial backing from both public and private sources, such as tax-free foundations.

I believe that our federal government must keep a strict account of where and for what purposes its money is spent. I also agree with those Members of Congress who have called for greater scrutiny of money allocated by tax-free foundations. I believe Congress and the Administration should act on both counts without delay.

As Chairman of this Policy Committee, I have a deep concern over this matter, as I know you do, and I look to your guidance for suggestions of ways you may have in mind to cope with this problem.

EXCERPTS FROM SDS DOCUMENT OBTAINED FROM MEETING IN PRINCETON, N.J.

THE DEMANDS

After the agitation around the war, after Columbia, after Chicago, it is necessary to begin the creation of a self-conscious, mass, anti-imperialist movement throughout this country. Such a movement cannot be constructed without a real program to mobilize and struggle around: the left must establish itself in this country as not simply a disruptive agency, but as a social force that has a real power. This power can only come through the creation of a mass movement which identifies and fights in the interest of oppressed people in America and throughout the world. We believe that the best way of doing this is with a mass demand for conclusion of the issues that have been fought over by oppressed people and students for the last few years:

SMASH THE MILITARY IN THE SCHOOLS

No ROTC.
No war or counter-insurgency research.
No military or war recruiting.
No draft assemblies in high schools.
No high school sending of names to draft.
OFF the Pig; No Police Training on Campus.
No tracking in high schools.
Open admissions.

Such an attack would be defined by two considerations:

(1) The struggle should not be seen primarily as a university struggle; it is necessary to make students fight the universities not as students but as radicals attacking American imperialism . . .

(2) The demands are made in the interest of winning them. In the case of ROTC, a nationwide attack would severely hurt the military. ROTC exists on 348 campuses and in many Midwest high schools; in some places it is compulsory. As a result of VC and GI sharp-shooting, the military has been experiencing a severe shortage of officers. In the case of war company recruiting, a national attack might well begin a long-range attempt to deny the military-industrial complex a significant portion of its technicians. In the case of war research, a national attack on, for example, Project Agile, MIT, or the Research Analysis Corporation, could greatly hamper the efficiency of counter-insurgency from Bolivia to Watts. The strength of such a program obviously has to do with its national scope. Our demands, the comprehensive nature of our tactics, and the clarity of our arguments should show people that SDS indeed identifies with and fights for the liberation of oppressed people that, in terms of the nation is not simply a gadfly; that in terms of individuals, it is not simply concerned with students and others as IBM cards to be put through the radicalization computer. Both the demands and the struggle must be non-negotiable. Any anti-capitalist struggle today must, of necessity, be an anti-imperialist one. This means that the struggles against imperialism being waged in the Third World will define our struggle at home. Their battle is one of victory or death; and therefore the inflexibility of our position does not come out of romanticism, but rather out of the hard and intractable facts that necessitate social revolution for the great majority of the people in the world.

* * * * *

We must no longer resist imperialism, we must mobilize the people to combat it.

STRATEGY FOR CHAPTERS

(1) That chapters adopt as a base for their winter-spring offensives the eight demands outlined above, always making those demands explicitly anti-racist as well as anti-imperialist; that organizing at the chapter and regional level, as well as actions, be directed to these demands.

(2) That there be a national mobilization in early April, denoting the mid-point of the struggle, and providing a national focus for the politics and demands of the spring programs of SDS. That the politics and tactics of the mobilizations grow out of SDS programs, thereby directly trying into our on-going organizing, and, in its national character, helping in adding a national perspective to our daily work. The mobilization will carry a statement of the eight demands of the military program, and will be open to statement of other programs that may

develop later. The mobilization will be the clearest presentation since 1965 of SDS's position:

Support for black liberation, smash imperialism, negotiations are a fraud, U.S. get out of Vietnam, U.S. get (out) of Paris, immediate withdrawal. Our position on negotiations must be clear. The U.S. has used the Paris talks as a weapon in the waging of the war—as a cover-up for continued imperialism in Vietnam. At the same time, we do not condemn the NLF's use of negotiations as a tactic in their liberation struggle. Our slogan must be: Negotiations are a fraud; Immediate withdrawal.

Internationally the Vietnam struggle is the primary fight against American imperialism. If the Vietnamese people win their struggle against American imperialism, it will serve as the mightiest boost to the development of national liberation struggles yet seen. Clearly SDS as a revolutionary organization must create an anti-imperialist movement—a movement that supports the NLF and fights to end the war.

(3) That chapters and regions return after the national action to initiate militant actions around those demands, joining with high school and black groups wherever possible.

Step 1 will perhaps be the first attempt to co-ordinate organizing and local actions on a long-term basis around a national program and as part of a larger strategy. The necessity for regions to break down the demands to correspond to their real manifestations of imperialism in the local institutions is an absolute necessity. The movement within the U.S. has always partaken of a quality of uneven development—while this has allowed for isolated actions, such as Columbia or SF State to shock the entire movement into a qualitative leap in both ideological and political militancy it has also made the workings of the national program extremely difficult.

NATIONAL FOCUS

Step 2 therefore becomes the "common denominator" of the strategy, an action that gives national focus to the local organizing, that expresses the political and tactical level of the movement as a whole. Step 3, though, is the most important part of the program. It is here that the clarity of our national demands and nationally oriented politics will be matched by our local and regional actions. In the more developed regions, the militant and widespread nature of the revolts against imperialism and racism will clearly aid the whole strategy. In less developed regions and chapters, the national action and any low-level demonstrations that occur afterward will certainly contribute to the building of the movement at those chapters if not to the immediate winning of the eight demands, as may be possible in other areas.

How these regional struggles will proceed must be worked out at the regional level. At Boston, perhaps, a region-wide attack on MIT as a war-making institution which should (be) attacked nationally is possible.

* * * * *

IMPLEMENTATION

The creation of such a mass movement necessitates an amount of work that SDS has never yet engaged in: while we should be open to working with people in other organizations, SDS, primarily the local and regional chapters, should undertake to keep the organization and implementation of the program under its control, e.g., literature, fund-raising, tactics, advertising, travel. To meaningfully implement the program, the chapters and regionals must work collectively—a much more extended organizational version of the way things worked during the electoral program. In terms of building for a national conscious commitment of the movement and preparatory organization, we propose:

(1) Printing of this revised program in New Left Notes.

(2) Continued allocation of space by NLN for other papers—other regional models, longer analyses of imperialism and racism in relation to the program, organizer's articles, and reports of progress—region by region.

(3) Initial contacts from chapter to chapter and region to region, with high school groups and black groups.

(4) February 1 and 2 meeting of all chapters and regions that have approved the program or will do so, to cement the outlines of the national program, and to mandate, the NIC to call for the national mobilization and regional actions.

(5) Continuous contact between regions and chapters, exchange of organizing materials and regional strategies, perhaps setting up an office for co-ordinating the mobilization or elections of regional steering committees to implement regional strategies.

(6) April 12–13—National Mobilization.

(7) Spring Rebellion.

COAL MINE HEALTH AND SAFETY

Mr. BYRD of West Virginia. Mr. President, early today I appeared before the Labor Subcommittee of the Committee on Labor and Public Welfare and made a statement with reference to coal mine health and safety.

I ask unanimous consent to have my statement printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY U.S. SENATOR ROBERT C. BYRD, DEMOCRAT, WEST VIRGINIA, BEFORE THE LABOR SUBCOMMITTEE OF THE SENATE COMMITTEE ON LABOR AND PUBLIC WELFARE ON MARCH 26, 1969

Mr. Chairman, I appreciate this opportunity to appear before the Subcommittee. I know of the diligent efforts put forth already by the Subcommittee in the conduct of hearings on mine health and safety, and I am particularly cognizant of the keen interest which has been manifested by my senior colleague, Mr. Randolph, a member of this Subcommittee. These efforts by my colleague and by you and the other members of the Subcommittee are to be highly commended, Mr. Chairman, and I want to assure you that I will exert every effort and utilize the full capacity of my office as a Senator toward the enactment of whatever Federal law may be considered feasible and necessary, in addition to state laws, to improve health and safety in our mines.

I was raised in the home of a coal miner in a mining community of West Virginia. From the time I was a child I have been conscious of the mining accidents that exact a heavy toll of human life. I have seen automation relieve the physical strain of men whose principal tools were the pick and shovel, but I have been disappointed because improved safety has not kept pace with mechanization. It is past time for Congress to demand immediate safety progress in every way possible and simultaneously to develop a blueprint for a long-range program which will serve to eliminate the dangers that have always been a threat to life and limb in the mines.

It is sad indeed to reflect on the senseless waste of life and impairment of health experienced by miners in this country. In spite of our advances in industrial technology and our great achievements in the natural sciences, we have allowed thousands of our citizens to die and many more to linger with poor health because of intolerable health conditions in the mines.

I am deeply concerned, particularly about the harmful effects of coal dust pollution that exists in America's coal mines today. In addition to being a serious safety hazard, coal dust has serious effects on the health of coal miners. Thousands have developed the terrible disease of pneumoconiosis. This disease not only causes miners to suffer for years with a serious impairment of health, but it has also resulted in the premature death of many of them.

Last December, Charles C. Johnson, Jr., Chief of the U.S. Consumer Protection and Environmental Health Service, emphasized the health hazards of coal dust. He stated that at least 100,000 miners are running the risk of developing pneumoconiosis. Approximately 1,000 coal miners in Pennsylvania alone die each year from the disease. Although we have no reliable estimates on the death rate from the disease in West Virginia, we could certainly expect it to be intolerably high, since employment in the coal mines has been substantially higher in West Virginia than in Pennsylvania for many years, and the coal dust problem is similar in both states.

The results of a U.S. Public Health Service study of the extent to which miners in certain leading bituminous coal areas were afflicted by pneumoconiosis appeared in the Mining Congress Journal in 1965. It was reported that nearly "one out of every ten soft coal miners working in the coal fields of Appalachia has radiographic evidence of coal workers' pneumoconiosis." The study revealed further that approximately one out of five inactive miners was afflicted. Moreover, the prevalence rates for those who worked in the mines for over 20 years showed sharp increases.

The symptoms of the disease are painful and often debilitating. Moreover, many of the affected workers will have other associated respiratory problems which include emphysema, silicosis, and chronic bronchitis.

Once the progress of the lung disease sets in, there is no medical treatment known to alter its course. After the process starts, its progression is steady and rapid. It results in a disabling breathlessness that usually results in death from heart failure, asphyxia, or pneumonia.

The testimony presented to date here by representatives of both industry and the United Mine Workers of America has been highly gratifying. Both the industry and the union are demonstrating a new determination to safeguard the health and safety of mine personnel.

A few days ago, for example, I was shown photographs of a number of safety devices that have been developed recently and are not in general use, but which have been discussed before your Subcommittee, and which will reduce the number of mine accidents.

It would also appear that dust particles, which present a menace to health, can be reduced if more care is given to ventilating systems and if water sprays are brought into wider use at the face. These are other precautions which, I am told, can be applied at once.

The mining industry has further indicated additional safety devices in the development state, and I favor whatever research or demonstration experience is necessary to bring them into use without delay.

I believe that, for the long term, the federal government must utilize scientific and engineering talent to develop systems engineering for coal mines.

Using the "systems" approach, the mining, processing and use of coal would be seen as a single continuum in which every operation is linked to all the others. The goals of the system would be to produce adequate quantities of low-cost fuel while minimizing hazards to the health and safety of those employed in the industry, as well as the environmental pollution associated with coal. Every operation in the system would be designed with these goals in mind. For example, mining

methods would be selected, not merely for high productivity, but to reduce mine safety and health hazards as well. Today, by contrast, many hazards are actually caused by the mining methods used, and techniques have had to be developed to cope with problems that need not ever have arisen.

The systems concept has been most spectacularly applied to the Nation's space program, and the recent flights of Apollo Eight and Nine show how well systems engineering can work. It is time we applied it on and under the earth to solve problems that are rooted in the haphazard and undirected growth of today's technology. Problems like mine safety are not the inevitable results of industrialization; they are instead the undesirable by-products of an un-systematic technology.

I made a statement on this subject on the Floor of the Senate on February 28 of this year and I ask that it be included in the record of these hearings.

Techniques of roof support, haulage, ventilation, and other mining procedures must be devised which will remove health and safety hazards from our mines at the earliest possible moment. Then, and only then, will we have fulfilled an obligation long overdue to a vital segment of our citizenry.

In the past several months, during which mine health and safety have come into national prominence, the coal industry has been exposed to considerable criticism from every direction. The industry is responding in a constructive way, and eagerly seeks solutions to the many health and safety problems inherent in the mining of coal. This is gratifying. Coal mining is a dangerous work, and it is of vital importance to the Nation.

Although relatively few homes are heated by coal furnaces, a majority of our residences would be without heat were it not for this source of energy. Most home heating systems, whether they be gas or oil, are activated by thermostats requiring electricity for their operation. In addition, an increasing number of homes, schools, churches, and office buildings are heated by electricity. For the record, it should be stated that coal generated 63.6 per cent of all electric power produced by fossil fuels in 1968.

Recently, the Monongahela Power Company announced that a new 1.3-million-kilowatt generating plant would be constructed near Shinnston, West Virginia. It is another of a series of power stations arising in the rich coal fields of the Appalachian range. A complex of power plants in West Virginia and Pennsylvania is connected with long-distance transmission lines to bring energy into the large metropolitan areas extending from New York to Virginia. At the same time, unit trains laden with thousands of tons of coal are leaving West Virginia's mines daily to bring energy to electric stations as far away as New England, Florida, and the Great Lakes.

Coal is a necessary ingredient of the steelmaking process and of numerous other industrial activities. If coal output were terminated, America's economic progress would halt and our defense structure would be weakened.

Coal is the foundation of the defense effort, for without it there would be no steel for weapons or equipment. Coal is, in addition, a source of explosives, synthetic rubber, and countless other war products of the chemical laboratory. So long as Communism attempts to encroach upon free peoples, coal will remain a vital component of our national security.

We must have coal, but it need not come at the unnecessary sacrifice of the men who mine it. The spectacular increase in productivity of mines in the past quarter-century is a tribute to mine operators and workers, and I am confident that by continued cooperation and determination they will achieve safety standards heretofore assumed to be unattainable.

Mr. Chairman, I know that your Subcommittee will adopt whatever amendments to the mine safety laws may be considered necessary, and I assure you that I shall do everything I can to insure that your proposals will be acted upon with expedition when they reach the Senate Floor.

The Subcommittee has already conducted careful and thorough hearings, and its work is not yet done. Undoubtedly, the information you will have accumulated, as a result of the hearings, will be valuable in your approach to the preparation of legislation for consideration by the full Committee and the Senate. Through the collective judgment of the members of your Subcommittee, therefore, you will arrive at conclusions based on the evidence that has been submitted during the hearings. In this respect you will be in a far better position than I—or perhaps than any other individual who has appeared before you—to determine what is needed in the way of new legislation to protect the health and safety of the men who work in the mining industry. I merely want to state that there is an evident need for federal legislation and that I have confidence in the membership of this Subcommittee to point the way. I want to support you as much as I can in reaching that objective.

I do wish to propose, Mr. Chairman, that a federal law be enacted to provide compensation to disabled coal miners suffering from "black lung" who are not covered by state laws.

This may or may not be a legislative matter over which your particular Subcommittee would have jurisdiction, but I believe that here is a legislative gap which should be bridged, and it seems to me the only way to do it is through the enactment of federal legislation. If you will indulge me for a few additional minutes, I shall outline the general idea of what I have in mind.

For example, the West Virginia Legislature recently enacted a new compensation law covering pneumoconiosis, but I am advised that some of the "black lung" sufferers may not benefit from it because such workmen's compensation legislation cannot be retroactive.

So, unless a federal law is enacted to include those who may have retired before the new state law goes into effect, or for whom the statute of limitations may have expired, I am told that some of these people may have no recourse to compensation. Therefore, I propose that legislation be enacted to authorize compensation in such cases on a federal/state matching basis. Such legislation would only affect those miners disabled from pulmonary diseases contracted through exposure to coal dust and silica, etc., and who are not covered by state laws. Such a law could run for, say, a twenty-year period, with the federal government providing 100 per cent of the compensation and administrative costs the first year, with a provision for decreasing each of these categories by five per cent annually. This would take care of most of the miners who have been forced to retire already, and would gradually shift the burden to the states. However, by the end of the twenty-year period, I think one could properly assume that there would not be much of a burden remaining outside a state's normal workmen's compensation fund caseload.

The benefits could be $25.00 per week—which would be lower than the benefits to which such miners would be entitled under the compensation laws of any state, but this amount would at least provide an income of from $100 to perhaps $115 per month. This would prevent some of the families from having to depend on public welfare, and it would also encourage miners to act before a state's statute of limitations expires rather than take the chance of receiving benefits under the federal/state program at a level lower than those provided in a state's workmen's compensation program. As the federal contribution decreased, the state's contribution would increase under the program I propose.

Such legislation could leave the definition of pneumoconiosis to the respective state laws, and the operation of such a federal law would be based on an agreement between the Secretary of Labor and any state for the purpose of assisting such state in providing compensation to individuals who, as a result of their employment in the mining industry, are suffering from pneumoconiosis, who are unemployable, and who are not entitled to receive compensation under any state workmen's compensation law. The state agency administering the compensation law of a state would be responsible for all payments of compensation made pursuant to the federal/state agreement.

I am glad that you have given me the opportunity to make this statement today, and I appreciate the courtesy accorded me. I deeply thank Senator Randolph for working out the arrangements with you, Mr. Chairman, for me to be present at a scheduled time. My colleague and I see eye to eye on many things, and in our several discussions concerning mine health and safety we have agreed that the possibility of federal legislation on the subject is one which should have high priority.

PRESIDENT NIXON BACKS THE PENTAGON

Mr. YOUNG of Ohio. Mr. President, the decision by President Nixon to deploy a modified ABM system, now called Safeguard, supposedly to protect our offensive silos has started the Nation down a multibillion-dollar road, the end of which is not in sight. In doing so, the President missed a magnificent opportunity to reverse the momentum of the arms race and to display clearly our desire for peace and workable disarmament agreements.

It is crystal clear that the President's decision was a political one designed to appease the rapidly growing opposition in the Congress and throughout the Nation to any ABM program, and at the same time to protect the vested interests of the Pentagon and defense contractors in keeping this boondoggle alive, subject to expansion at the first convenient crisis.

Mr. President, the President's decision is a political compromise that could well compromise the future security and well-being of the Nation, indeed of world peace. Robert Lowell, the great poet once said:

> Compromise makes a good umbrella, but a poor roof; it is a temporary expedient, often wise in party politics, almost sure to be unwise in statesmanship.

Changing the name of the weapon and moving it from city to country, supposedly reducing the initial expenditure, and promising greater research on it answer none of the fundamental agreements against an anti-ballistic-missile system.

The Sentinel ABM was to cost $5.5 billion when first proposed by President Johnson. President Nixon estimates Safeguard will cost $6 billion to $7 billion. However, a record of military spending replete with miscalculated costs has certainly taught us that if the estimate now is $6 billion to $7 billion Safeguard will undoubtedly cost nearer to $10 billion or $12 billion.

Furthermore, for years Defense De-

partment officials have assured Americans that even if the Russians strike first we possess a second-strike capability with our Minuteman missiles in underground sites that would inflict unacceptable damage upon the Soviet Union. We were assured that the hardened sites were adequate and that we would not need additional protection for our intercontinental ballistic missiles.

Were we being misled then, or now? The argument that we need more protection of our land-based ICBM's completely ignores the fact that we have 41 Polaris submarines with more than 650 ICBMs which cannot be destroyed by a first-strike because they are underwater and moving all the time. These missiles have a maximum range of 2,875 miles and no area in the vast land mass of the Soviet Union or Communist China is safe from devastation from missiles fired from these submarines. The Poseidon program will soon increase this offensive power to 4,000 warheads capable of being fired from mobile bases under the oceans and seas of the world. If such a second-strike capacity will not deter an attack, nothing will. Placing the safeguard ABM around a small share of our land-based missiles will certainly not add one iota of credibility to our deterrent capacity.

Once an ABM system is installed—whether it be Sentinel, Safeguard or by any other name—it will follow as the night the day that the military-industrial complex will press for funds for a "thick" ABM system, so called, and for more powerful warheads. Then, proponents will probably claim that the Soviet Union intends to protect itself by placing its major industrial and defense facilities underground and that we must do likewise because of our greater concentration of industry and population. The cost—anywhere from $300 billion to $500 billion or more. It is not difficult to imagine the atmosphere of tension and terror that would result.

It is clear that deployment of the ABM will result in a squandering of national resources and treasure and will actually subtract from our national security rather than strengthen it. It would trigger an escalation of the arms race to a fantastically high and unbelievably costly plateau which would leave both sides with no more security than each has today. We should be considering arms cutbacks, not increases; encouraging disarmament negotiations, not a new arms race. Of course, this would terrify defense contractors, especially in the aerospace industry which is becoming a kind of national industrial welfare program.

Mr. President, last week the St. Louis Post-Dispatch, one of the great newspapers of the Nation, published an excellent editorial entitled "Mr. Nixon Backs the Pentagon." It clearly and concisely pointed out the inherent weaknesses of the President's decision to proceed with the so-called Safeguard ABM, and his inability to withstand the pressure of the military-industrial complex.

I ask unanimous consent to have the editorial printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MR. NIXON BACKS THE PENTAGON

President Nixon has elevated antiballistic missile policy to new heights of absurdity with his decision to deploy a temporarily limited version of the Sentinel system. His thinner-than-thin ABM program, to which he gives the name "Safeguard," will not safeguard anything except the vested interest of the Pentagon and the defense contractors in keeping this military boondoggle alive, subject to expansion at the first convenient crisis.

The President deserves commendation for facing up to the fact that there is no feasible way to defend the population of our cities from a missile attack. In rejecting a 'thick" defense system he thus rejects all the rubbish that has issued from the Pentagon about building an ABM system to reduce casualties in a nuclear exchange from 100 million to 40 million. Even 40 million dead, as he recognizes, amount to an unacceptable loss which nobody but a war-games theorist can even consider. The population can be protected from a nuclear exchange only if the exchange does not take place.

But while abondoning the "damage limitation" rationale for the ABM, Mr. Nixon adopts an equally preposterous one of his own. The bases are going to be moved away from the cities, where the political opposition to ABM is strongest, and their alleged purpose will be to "protect" our deterrent power to launch a retaliatory second strike. This protection is to be accomplished by "safeguarding" only two of the Minuteman missile bases. What about all the others? Mr. Nixon's own war-games theory evidently assumes that they will be destroyed. If they are, millions of people will be destroyed at the same time, if not by blast then by fallout. Would an enemy who could knock out our population and 90 per cent of our missiles with a saturation attack actually be deterred by the possibility that 10 per cent of our missiles might survive?

There is, of course, very little probability that the 10 per cent would in fact survive. The ABM system, whether thick or thin, whether based near the cities or on the great plains, depends upon delicate radar and other electronic devices which many qualified scientists say would be rendered useless by a saturation attack. In knocking out the 90 per cent of our bases left unsafeguarded the enemy could confidently count on knocking out the other 10 per cent, by disrupting their controls, as well.

If Mr. Nixon's assumptions are accepted for the sake of argument, still his policy won't hold water. For if the strategy of deterrence is valid at all—a question nobody seems to ask—it is as valid without the ABM as with it. We now have more than 600 Polaris missiles ready to launch from far-ranging submarines, and the Poseidon program is in process of proliferating these missiles into 4000 warheads, all to be fired from untargetable mobile bases under the seas. If such a second-strike capacity will not deter an attack, nothing will. The highly questionable ability to protect a small share of our land-based missiles is not going to add credibility to our deterrent capacity.

Nor is Mr. Nixon's suggestion that the ABM will protect us from the kind of attack China might be able to mount in the '70's any more persuasive. If the Chinese ever reach the point of madness where they wish to invite destruction of their own country they are not likely to fire missles at the Minutemen sites safeguarded by the Sentinel. They need only fire them at San Francisco, Los Angeles, Chicago, St. Louis, New York, Boston, and Washington, which are the places Mr. Nixon has decided cannot be defended. For that matter, a mad Chinese would not have to use missiles at all; he could plant nuclear bombs in suitcases at the bus depots.

The President's decision, unfortunately, is the kind that had to be expected from him—an act of political brokerage, giving everybody a little something, but in essence sustaining the military domination of foreign policy that has embroiled us in Vietnam and an insane arms race. In the pinch, although confronted with a unique opportunity to mobilize strong public support for a new and more promising policy, he could not withstand the pressure of the military-industrial complex in the opposite direction. One can only hope that Congress will do better.

EXECUTIVE COMMUNICATIONS ETC.

The ACTING PRESIDENT pro tempore laid before the Senate the following letters, which were referred as indicated:

REPORT OF NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

A letter from the Acting Administrator, National Aeronautics and Space Administration, reporting, pursuant to law, on an extraordinary contractual adjustment authorized by the NASA Contract Adjustment Board; to the Committee on Aeronautical and Space Sciences.

REPORT OF REAPPORTIONMENT OF AN APPROPRIATION

A letter from the Director, Bureau of the Budget, Executive Office of the President, reporting, pursuant to law, that the appropriation to the Veterans' Administration for "Compensation and pensions," for the fiscal year 1969, had been apportioned on a basis indicating a need for a supplemental estimate of appropriation; to the Committee on Appropriations.

PROPOSED MILITARY CONSTRUCTION, AIR NATIONAL GUARD

A letter from the Deputy Assistant Secretary of Defense (Properties and Installations), transmitting, pursuant to law, a report on the location, nature, and estimated cost of certain additional facilities projects proposed to be undertaken for the Air National Guard (with an accompanying report); to the Committee on Armed Services.

REPORTS OF COMPTROLLER GENERAL

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on the opportunity for savings by increasing transfers of excess property among Federal agencies, General Services Administration, dated March 21, 1969 (with an accompanying report); to the Committee on Government Operations.

A letter from the Acting Comptroller General of the United States, transmitting, pursuant to law, a report on an audit of financial statements of the St. Lawrence Seaway Development Corp., calendar year 1967, Department of Transportation, dated March 26, 1969 (with an accompanying report); to the Committee on Government Operations.

A letter from the Acting Comptroller General of the United States, transmitting, pursuant to law, a report on the examination of financial statements, fiscal year 1968, Tennessee Valley Authority, dated March 25, 1969 (with an accompanying report); to the Committee on Government Operations.

SERVICE OF SUMMONSES FOR JURY DUTY

A letter from the Director, Administrative Office of the U.S. Courts, transmitting a draft of proposed legislation to amend section 1866 of title 28, United States Code, prescribing the manner in which summonses for jury duty may be served (with an accompanying paper); to the Committee on the Judiciary.

REPORT OF CLAIMS PAID UNDER THE MILITARY PERSONNEL AND CIVILIAN EMPLOYEES' CLAIMS ACT OF 1964

A letter from the Secretary of Health, Education, and Welfare, transmitting, pursuant

to law, a report of all claims paid by this Department under the Military Personnel and Civilian Employees' Claims Act of 1964 for the period January 1, 1968 to December 31, 1968 (with an accompanying report); to the Committee on the Judiciary.

PROPOSED TENURE AND RETIREMENT BENEFITS OF REFEREES IN BANKRUPTCY

A letter from the Deputy Director, Administrative Office of the United States Courts, transmitting, a draft of proposed legislation to amend the Bankruptcy Act and the civil service retirement law with respect to the tenure and retirement benefits of referees in bankruptcy (with accompanying papers); to the Committee on the Judiciary.

REPORT OF DENIAL FOR EXTRAORDINARY RELIEF OF THE AMERICAN SHIPBUILDING CO.

A letter from the Assistant Secretary for Administration, Office of the Secretary of Transportation, reporting, pursuant to law, the Department denied the American Shipbuilding Co.'s application for extraordinary relief on a shipbuilding contract (with an accompanying paper); to the Committee on the Judiciary.

PROPOSED LEGISLATION TO IMPROVE AND MAKE MORE EFFECTIVE THE VETERANS' ADMINISTRATION PROGRAM OF SHARING SPECIALIZED MEDICAL RESOURCES

A letter from the Administrator, Veterans' Administration, transmitting a draft of proposed legislation to amend title 38 of the United States Code in order to improve and make more effective the Veterans' Administration program of sharing specialized medical resources (with an accompanying paper); to the Committee on Labor and Public Welfare.

PETITIONS AND MEMORIALS

Petitions, etc., were laid before the Senate, or presented, and referred as indicated:

By the ACTING PRESIDENT pro tempore:

A joint resolution of the Legislature of the State of Alaska; to the Committee on Commerce:

"S.J. RES. 29

"Joint resolution recommending the confirmation of Charles Meacham as Commissioner of the Fish and Wildlife Service, Department of the Interior

"Be it resolved by the Legislature of the State of Alaska:

"Whereas Charles Meacham has been nominated by Secretary of Interior Walter J. Hickel to be Commissioner of the Fish and Wildlife Service of the United States; and

"Whereas this office involves responsibility for the care and management of all fish, and wildlife under joint or exclusive United States control; and

"Whereas Charles Meacham has previously served in the Alaska Department of Fish and Game which manages one of the largest fisheries in the United States; and

"Whereas the State of Alaska has more fish and game resources than any other state in the United States; and

"Whereas Charles Meacham has been connected with the management of those resources as an employee of the Territory and then the State of Alaska for 12 years; and

"Whereas Charles Meacham has been active in International Fisheries negotiations since 1960, and since 1968 has served as the Advisor to the Governor of Alaska on International Fisheries matters; and

"Whereas Charles Meacham has 19 years of over-all experience in the field of fish and game management;

"Be it resolved that the Leigslature of the State of Alaska commends Secretary of Interior Walter J. Hickel for his nomination of Charles Meacham as Commissioner of the Fish and Wildlife Service, and respectfully urges the Interior and Insular Affairs Committee of the United States Senate and the Senate as a whole to approve the nomination of Charles Meacham.

"Copies of this Resolution shall be sent to the Honorable Walter J. Hickel, Secretary of the Department of the Interior; the Honorable Richard B. Russell, President Pro Tempore of the Senate; the Honorable Henry M. Jackson, Chairman of the Interior and Insular Affairs Committee; and to the Honorable Ted Stevens and the Honorable Mike Gravel, U.S. Senators, and the Honorable Howard W. Pollock, U.S. Representative, members of the Alaska delegation in Congress.

"AUTHENTICATION

"The following officers of the Legislature certify that the attached enrolled resolution, Senate Joint Resolution No. 29, was passed in conformity with the requirements of the constitution and laws of the State of Alaska and the Uniform Rules of the Legislature.

"Passed by the Senate March 7, 1969.

"BRAD PHILLIPS,
"President of the Senate.

"Attest.

"BETTY HANIFAN,
"Secretary of the Senate.

"Passed by the House March 10, 1969.

"JALMAR M. KERTTULA,
"Speaker of the House.

"Attest.

"CONSTANCE H. PADDOCK,
"Chief Clerk of the House.

"KEITH H. MILLER,
"Governor of Alaska."

A concurrent resolution of the Legislature of the State of Indiana; to the Committee on Interior and Insular Affairs:

"H. CON. RES. 93

"A concurrent resolution concerning national cemeteries

"Whereas, The men and women of the State of Indiana rise to rally around the colors when the state and nation are in peril and under attack by enemies both domestic and foreign; and

"Whereas, Many of these people pay the supreme penalty in the defense of the state and nation sacrificing their most precious possession, their lives; and

"Whereas, The congress of the United States has created and established national cemeteries for the burial of veterans of all wars; and

"Whereas, It has been brought to the attention of the 96th General Assembly of the State of Indiana that these national cemeteries both in Indiana and throughout the land are rapidly filling up leaving no room for present Vietnam and future veterans for burial; and

"Whereas, Veterans organizations such as the veterans of foreign wars of the United States, the American Legion, the Spanish American War veterans are urging the Congress of the United States, through resolutions passed through their national conventions including the national convention of the veterans of World War I, to establish national cemeteries throughout the land; and

"Whereas, The above named organizations and others including the last governor of the State of Indiana, Roger Branigin, have approved a location of a new national cemetery for the State of Indiana be on land owned by the government of the United States near highway # 63 south and just south of the Pfizer Corporation and which is now in the possession and jurisdiction of the United States prison which contains some 2600 acres, more or less; and

"Whereas, This location near Terre Haute is most desirable insofar as a large portion of land is available for the purpose of eliminating the shortage of burial space for veterans, and will in all probability work well with a proposed super jet air glide for Hulman Field which is in the general area; and

"Whereas, This land is not suitable and has been rejected by agricultural interests who refuse to purchase when offered for sale by the national government at $1.00 per acre: Now, Therefore

"Be it resolved by the House of Representatives of the General Assembly of the State of Indiana, the Senate concurring:

"SECTION 1. That our representatives in the Congress of the United States and the Congress assembled be requested and urged to pass and enact the proposed new national cemetery to be located at Terre Haute, Indiana, as the new national cemetery for the State of Indiana.

"SEC. 2. The principal clerk of the House of Representatives is directed to send a copy of this resolution upon the Senate's concurrence to each member of the Indiana Congressional Delegation and the principal clerk of the United States Senate and House of Representatives."

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. BYRD of West Virginia, from the Committee on Appropriations, without amendment:

H.J. Res. 584. Joint resolution making a supplemental appropriation for the fiscal year ending June 30, 1969, and for other purposes (Rept. No. 91–117).

By Mr. JORDAN of North Carolina, from the Committee on Rules and Administration, without amendment:

S. Res. 170. Resolution to print a report entitled "Review of United States Foreign Policy and Operations," as a Senate document (Rept. No. 91–118).

EXECUTIVE REPORTS OF COMMITTEES

As in executive session,

The following favorable reports of nominations were submitted:

By Mr. SPARKMAN, from the Committee on Banking and Currency:

Walter C. Sauer, of the District of Columbia, to be First Vice President of the Export-Import Bank of the United States.

By Mr. TYDINGS, from the Committee on the District of Columbia:

John A. Nevius, for appointment as a member of the Board of Directors of the District of Columbia Redevelopment Land Agency.

By Mrs. SMITH, from the Committee on Armed Services:

Nils A. Boe, of South Dakota, to be an Assistant Director of the Office of Emergency Preparedness.

Mr. MURPHY. Mr. President, from the Committee on Armed Services I report favorably the nominations of 60 flag and general officers of the Army and Navy and ask that these names be placed on the Executive Calendar.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

The nominations, ordered to be placed on the Executive Calendar, are as follows:

Maj. Gen. Oren Eugene Hurlbut, U.S. Army, to be assigned to a position of importance and responsibility designated by the President, in the grade of lieutenant general while so serving;

Don C. Bowman, Jr., and sundry other Naval Reserve officers, for promotion in the U.S. Navy; and

Harvey P. Lanham, and sundry other officers, for promotion in the U.S. Navy.

Mr. MURPHY. Mr. President, I also report favorably 1,569 appointments in

the Marine Corps in the grade of colonel and below. Since these names have already been printed in the CONGRESSIONAL RECORD, in order to save the expense of printing on the Executive Calendar, I ask unanimous consent that they be ordered to lie on the Secretary's desk for the information of any Senator.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

The nominations, ordered to lie on the desk, are as follows:

Bennett W. Alford, and sundry other officers, for appointment and promotion in the Marine Corps.

By Mr. LONG, from the Committee on Finance:

Eugene T. Rossides, of New York, to be an Assistant Secretary of the Treasury;

Paul W. Eggers, of Texas, to be General Counsel for the Department of the Treasury; and

Randolph W. Thrower, of Georgia, to be Commissioner of Internal Revenue.

By Mr. FULBRIGHT, from the Committee on Foreign Relations:

John A. Hannah, of Michigan, to be Administrator of the Agency for International Development;

Nathaniel Samuels, of New York, to be a Deputy Under Secretary of State;

Charles A. Meyer, of Pennsylvania, to be an Assistant Secretary of State;

William B. Buffum, of New York, a Foreign Service officer of class 1, to be the deputy representative of the United States of America to the United Nations, with the rank and status of Ambassador Extraordinary and Plenipotentiary; and

Christopher H. Phillips, of New York, to be deputy representative of the United States of America in the Security Council of the United Nations.

BILLS INTRODUCED

Bills were introduced, read the first time and, by unanimous consent, the second time, and referred as follows:

By Mr. DIRKSEN:

S. 1674. A bill for the relief of Col. John R. Frazier, U.S. Air Force (retired); to the Committee on the Judiciary.

By Mr. MANSFIELD:

S. 1675. A bill for the relief of William A. Gallagher; to the Committee on the Judiciary.

By Mr. METCALF:

S. 1676. A bill for the relief of Yung-Kuang Chao; to the Committee on the Judiciary.

By Mr. GURNEY:

S. 1677. A bill for the relief of Augusto G. Usategui, doctor of medicine; to the Committee on the Judiciary.

By Mr. MATHIAS:

S. 1678. A bill for the relief of Robert C. Szabo; and

S. 1679. A bill for the relief of Cesar Romero Estoye; to the Committee on the Judiciary.

By Mr. CHURCH (for himself and Mr. JORDAN of Idaho):

S. 1680. A bill to amend section 3 of the act entitled "An act to provide for the disposal of materials on the public lands of the United States," approved July 31, 1947, relating to the disposition by the Secretary of the Interior to moneys obtained from the sale of materials from public lands; to the Committee on Interior and Insular Affairs.

(See the remarks of Mr. CHURCH when he introduced the above bill, which appear under a separate heading.)

By Mr. HOLLINGS:

S. 1681. A bill for the relief of Dennis Yiantos; to the Committee on the Judiciary.

By Mr. FONG:

S. 1682. A bill to increase the maximum rate of per diem allowance for employees of the Government traveling on official business, and for other purposes; to the Committee on Government Operations.

By Mr. McGOVERN:

S. 1683. A bill to amend the Packers and Stockyards Act, 1921, as amended, so as to authorize the Secretary of Agriculture to obtain injunctive relief in certain cases under such act; to the Committee on Agriculture and Forestry.

By Mr. McGOVERN (for himself, Mr. ALLEN, Mr. BAYH, Mr. BURDICK, Mr CHURCH, Mr. EAGLETON, Mr. GRAVEL, Mr. HARRIS, Mr. HART, Mr. HOLLINGS, Mr. INOUYE, Mr. McCARTHY, Mr. McGEE, Mr. METCALF, Mr. MONDALE, Mr. MONTOYA, Mr. MOSS, Mr. NELSON, Mr. PROXMIRE, Mr. THURMOND, Mr. WILLIAMS of New Jersey, Mr. YARBOROUGH, and Mr. YOUNG of Ohio):

S. 1684. A bill to amend the Rural Electrification Act of 1936, as amended, to provide an additional source of financing for the rural telephone program, and for other purposes; to the Committee on Agriculture and Forestry.

(See the remarks of Mr. McGOVERN when he introduced the above bill, which appear under a separate heading.)

By Mr. BAYH (for himself, Mr. BIBLE, Mr. BOGGS, Mr. BURDICK, Mr. FONG, Mr. GRAVEL, Mr. HART, Mr. HARTKE, Mr. INOUYE, Mr. JACKSON, Mr. JORDAN of Idaho, Mr. KENNEDY, Mr. MAGNUSON, Mr. MANSFIELD, Mr. METCALF, Mr. McGEE, Mr. McGOVERN, Mr. MILLER, Mr. MONDALE, Mr. MONTOYA, Mr. MUSKIE, Mr. NELSON, Mr. RANDOLPH, Mr. RIBICOFF, Mr. TYDINGS, Mr. WILLIAMS of New Jersey, and Mr. YARBOROUGH):

S. 1685. A bill to provide additional assistance for areas suffering a major disaster; to the Committee on Public Works.

(See the remarks of Mr. BAYH when he introduced the above bill, which appear under a separate heading.)

By Mr. BIBLE:

S. 1686. A bill relating to age limits in connection with appointments to the U.S. Parks Police; to the Committee on Interior and Insular Affairs.

(See the remarks of Mr. BIBLE when he introduced the above bill, which appear under a separate heading.)

By Mr. BENNETT:

S. 1687. A bill to authorize the U.S. Commissioner of Education to make grants to elementary and secondary schools and other educational institutions for the conduct of special educational programs and activities concerning the use of drugs and for other related educational purposes; to the Committee on Labor and Public Welfare.

(See the remarks of Mr. BENNETT when he introduced the above bill, which appear under a separate heading.)

By Mr. YARBOROUGH:

S. 1688. A bill to authorize the establishment of the Dinosaur Trail National Monument in the State of Texas; to the Committee on Interior and Insular Affairs.

(See the remarks of Mr. YARBOROUGH when he introduced the above bill, which appear under a separate heading.)

By Mr. MOSS (for himself, Mr. MAGNUSON, Mr. HART, Mr. CANNON, Mr. COTTON, Mr. INOUYE, Mr. PROUTY, and Mr. GOODELL):

S. 1689. A bill to amend the Federal Hazardous Substance Act to protect children from toys and other articles intended for use by children which are hazardous due to the presence of electrical, mechanical, or thermal hazards, and for other purposes; to the Committee on Commerce.

(See the remarks of Mr. Moss when he introduced the above bill, which appear under a separate heading.)

By Mr. YOUNG of North Dakota:

S. 1690. A bill for the relief of Cely Oliveira; to the Committee on the Judiciary.

By Mr. HARRIS (for himself and Mr. HART):

S. 1691. A bill to remove the limitation on the number of civilian employees in the Division of Indian Health, within the Department of Health, Education, and Welfare; to the Committee on Finance.

(See the remarks of Mr. HARRIS when he introduced the above bill, which appear under a separate heading.)

By Mr. PEARSON:

S. 1692. A bill to provide for an income tax credit or deduction for certain political contributions, to revise the laws relating to corrupt election practices, and for other purposes; to the Committee on Finance.

(See the remarks of Mr. PEARSON when he introduced the above bill, which appear under a separate heading.)

By Mr. NELSON:

S. 1693. A bill to establish a National Commission on Federal Tax Sharing; to the Committee on Finance.

(See the remarks of Mr. NELSON when he introduced the above bill, which appear under a separate heading.)

By Mr. KENNEDY (for himself, Mr. HARRIS, Mr. HART, Mr. MONDALE, Mr. MUSKIE, Mr. NELSON, Mr. PELL, Mr. TYDINGS, Mr. WILLIAMS of New Jersey, and Mr. YARBOROUGH):

S. 1694. A bill entitled "Immigration Act Amendments of 1969"; to the Committee on the Judiciary.

(See the remarks of Mr. KENNEDY when he introduced the above bill, which appear under a separate heading.)

By Mr. CRANSTON:

S. 1695. A bill for the relief of Jose Molina-Nieto, his wife, Maria Jorge (Georgina) Luna de Molina, and their children, Maria Asunction Molina, Jacinto Molina, Marina Molina, Beatrice Molina, Ignacio Molina, Pedro Molina, and Eulalia Molina; to the Committee on the Judiciary.

By Mr. TYDINGS:

S. 1696. A bill for the relief of Wong Sau Chi; and

S. 1697. A bill for the relief of Dr. Camilo C. Balacuit and his wife, Dr. Norma Balacuit; to the Committee on the Judiciary.

By Mr. WILLIAMS of New Jersey:

S. 1698. A bill for the relief of Demetrios Rodas;

S. 1699. A bill for the relief of Angela Maria Russano; and

S. 1700. A bill for the relief of Jose F. Cabrera; to the Committee on the Judiciary.

S. 1680—INTRODUCTION OF A BILL TO PROVIDE COUNTIES WITH ADDITIONAL REVENUE

Mr. CHURCH. Mr. President, on behalf of myself and my colleague from Idaho (Mr. JORDAN), I introduce, for appropriate reference, a bill to amend the 1947 act providing for the disposal of certain materials on Federal lands.

Included in these materials is timber growing on the public lands, and this bill would direct that 25 percent of the gross revenues from the sale of timber on those lands under the jurisdiction of the Secretary of the Interior shall be paid to the counties in which the lands are situated, to be used for public schools and roads.

This measure also would direct that the base for payment of the counties' share of receipts from other forest lands would be the gross, not the net, figure.

The sponsors mean by gross revenues all moneys paid or deposited by purchasers of timber and forest products from the unreserved public lands and the national forests.

Mr. President, this bill is designed to bring relief to the hard-pressed counties of Idaho and other Western States in the fulfillment of their responsibilities for public education and local roads. Any one of us from a public land State is painfully aware of the impact on local governmental responsibilities, such as the maintenance of schools and roads, of Federal ownership of large areas of the lands within a county. As an example, some 64 percent of our own State of Idaho is in Federal ownership.

Certain of the public laws do provide for payment to the counties of a share of the revenues from Federal lands within the county. However, in the case of forest lands, the percentage has been computed on the basis of the net, rather than the gross. Federal administrative costs have an inevitable tendency to rise and with each increase in these costs, the counties' share declines. It has not been unusual for the gross revenue to be rising while the counties' share is declining.

Mr. President, this bill is identical to S. 1385, which Senator JORDAN and I sponsored in the 90th Congress; it was favorably reported by the Senate Interior and Insular Affairs Committee, and approved by the Senate, but did not reach House consideration.

I hope it will receive early and favorable action.

The ACTING PRESIDENT pro tempore. The bill will be received and appriately referred.

The bill (S. 1680) to amend section 3 of the act entitled "An act to provide for the disposal of materials on the public lands of the United States," approved July 31, 1947, relating to the disposition by the Secretary of the Interior of moneys obtained from the sale of materials from public lands, introduced by Mr. CHURCH (for himself and Mr. JORDAN of Idaho), was received, read twice by its title, and referred to the Committee on Interior and Insular Affairs.

SHARING OF PUBLIC LAND REVENUES WITH STATES AND COUNTIES

Mr. JORDAN of Idaho. Mr. President, I am pleased to join my colleague, Senator CHURCH of Idaho, in sponsoring a bill making payments more equitable to States and counties from revenues earned from Federal public lands in such States.

With the Forest Service managing more than 20 million acres of land in Idaho and the Bureau of Land Management administering some 12 million acres of Federal lands of the 53 million acres within our State boundaries, the earnings, as well as the administration of these lands and resources, are of concern to the people of my State.

Thus, with approximately two-thirds of Idaho in Federal ownership, a more equitable sharing of revenues from reserved, classified, and unreserved Federal public lands is essential. This bill amends the Materials Act of July 31, 1947, pertaining to the disposal of materials from unreserved public lands, as well as the acts of May 23, 1908, and March 1, 1911, as amended, concerning revenues from Forest Service lands, in order to provide more funds for public land States and counties to maintain their schools, roads, and other facilities.

Mr. President, the same problems exist in the other 10 contiguous public land States and in Alaska. There is a wide difference in the formula for sharing revenues from reserved and unreserved lands. Existing laws provide that 5 percent of the net proceeds from timber sales on unreserved domain lands are distributed to the States and counties in which the timber is harvested and another law distributes 25 percent of the revenues from reserved Forest Service lands to States and counties. This bill will provide a uniform rate for both at 25 percent of the gross amount paid or deposited for timber or timber products purchased.

In a 1962 study, published in 1965, made by the Forest Service with the assistance of the Association of County Officials, it was found that after allowing for contributions in kind furnished by the Forest Service, such as roads, firefighting, insect control, and other costs, and with the 25 percent of revenues after Knutson-Vandenburg Act deposits had been deducted from the timber sales, the timber counties of North Idaho would have received some $2 million more each year if these Forest Service lands had been in private ownership and on the tax rolls. We are not recommending this course of action but we do call for a more equitable sharing of revenue.

Mr. President, a bill numbered S. 1385, identical to this bill, was passed by the Senate on July 12, 1968, but was not considered by the House. I hope we can have early approval of this proposal which is of such importance to public lands States.

S. 1684—INTRODUCTION OF RURAL TELEPHONE SUPPLEMENTAL FINANCING ACT

Mr. McGOVERN. Mr. President, I have just introduced, on behalf of myself and 23 coauthors, including Senators ALLEN, BAYH, BURDICK, EAGLETON, GRAVEL, HARRIS, HART, HOLLINGS, INOUYE, MANSFIELD, MCCARTHY, MCGEE, METCALF, MONDALE, MONTOYA, MOSS, NELSON, PROXMIRE, THURMOND, WILLIAMS of New Jersey, YARBOROUGH, and YOUNG of Ohio, a bill to amend the Rural Telephone Act of 1949, generally known as the rural telephone supplemental financing bill.

Under the Rural Telephone Act of 1949, which was an amendment to the REA Act, we have helped to build or improve 525,000 miles of rural telephone lines serving 2.3 million subscribers living on 79 percent of the Nation's farms. The service is now preponderantly outdated eight-party service and, as you know, because customers are relatively sparse, low-interest capital is necessary to improve and extend the lines. They average 3.7 customers per mile compared to 16 per mile on independent systems and 40 for the Bell companies.

As of June 20, 1968, the rural telephone systems had pending loan applications for $302 million for which no funds were available. Appropriation of 2-percent loan funds has not kept pace with needs.

The RTA's have developed a supplemental financing plan, through a rural telephone bank, which is authorized in the bill. The House Agriculture Committee has reported the bill favorably by a large, bipartisan vote and I feel sure it will pass the Senate with similar support.

I ask unanimous consent, Mr. President, to have printed in the RECORD a detailed explanation of the bill.

The ACTING PRESIDENT pro tempore. The bill will be received and appropriately referred; and, without objection, the explanation will be printed in the RECORD.

The bill (S. 1684) to amend the Rural Electrification Act of 1936, as amended, to provide an additional source of financing for the rural telephone program, and for other purposes, introduced by Mr. MCGOVERN (for himself and other Senators), was received, read twice by its title, and referred to the Committee on Agriculture and Forestry.

The explanation, presented by Mr. MCGOVERN, is as follows:

EXPLANATION OF PROPOSED TELEPHONE SUPPLEMENTAL FINANCING LEGISLATION

Background

The Rural Electrification Act of 1936, as amended, presently has two titles. Title I established the Rural Electrification Administration and provided for the present 2% rural electrification loan program. Title II provided for the present 2% rural telephone loan program. The proposed supplemental financing bill is drafted as an amendment to the original Act and includes Titles III and IV which deal with financing for rural telephone systems.

Proposed policy of the Congress

The growing capital needs of rural telephone systems require the establishment of a Rural Telephone Bank to furnish "assured and viable sources of supplemental financing", with the objective that the bank will eventually become a privately owned, operated and financed corporation. Many rural telephone systems will continue to require financing under the present terms and conditions of the RE Act (2% interest, 35-year loans) and nothing in this proposal changes the loan purposes, terms or conditions authorized under the present telephone loan program.

TITLE III

Rural telephone account

Establishes in the Treasury of the United States a "rural telephone account". Into this account would go all REA assets, undisbursed loan balances, principal and interest payments from the present 2% REA telephone loan program, appropriations, and shares of capital stock of the Rural Telephone Bank.

The funds in the account would be used for advances on REA telephone loans, payment of interest and principal on borrowings from the Secretary of the Treasury, and investments in the Rural Telephone Bank.

TITLE IV

Rural telephone bank

Establishes a Rural Telephone Bank with the general purpose of obtaining an adequate supply of supplemental funds from non-Federal sources to be used in making loans to organizations which are telephone borrowers of REA. The telephone bank would be an instrumentality of the United States

and would have general corporate powers. As long as the telephone bank is an agency of the United States it would be authorized to use the REA services, facilities and employees, be subject to the supervision of the Secretary of Agriculture, and to specified provisions of various Federal laws.

Governor

The Administrator of REA serves as chief executive officer-Governor of the telephone bank.

Board of directors

Management of the telephone bank is vested in a 13-member board of directors which includes the REA Administrator, the Governor of the Farm Credit Administration, and five members to be designated by the President, three of whom shall be from the Department of Agriculture, and two from the general public. The six other members of the board will be selected from the directors, managers, and employees of rural telephone systems. Initially these six will be appointed by the President but later will be elected, three from among the cooperative rural telephone borrower systems and three from among the commercial rural telephone borrower systems. The board will prescribe by-laws, regulate the manner in which the bank shall conduct its business, and will be required to meet at least four times each year and make an annual report to the Congress.

Capitalization

Federal equity capital will be furnished the bank from the net collection proceeds of the rural telephone account (Title III). This capital, for which stock will be issued, is authorized to be appropriated over a ten year period in amounts up to $30 million annually and until the total capitalization of $300 million is reached. The Federal capital contribution, evidenced by the issuance of Class A stock, will bear annual interest in the amount of 2% until repaid in accordance with the bank's charter. Borrowers from the bank will furnish equity capital through the purchase of stock in amounts equal to 5% of their borrowings.

Classes of stock

The capital stock of the telephone bank will consist of three classes—A, B, and C. Class B and C stock will be voting stock.

Class A stock shall be redeemed and retired as soon as practicable after an initial 15-year period, or after the total of outstanding class A and B stock reaches $400 million. The minimum amount of Class A stock then to be retired would be an amount equal to 5% of the bank loans made each year. Class A stock shall be entitled to a return, payable from income, at the rate of 2% per annum on the amounts of Class A stock actually paid into the telephone bank. Such return shall be cumulative and shall be payable annually into miscellaneous receipts of the Treasury.

Class B stock will be issued to recipients of bank loans. Each borrower will be required to invest in the bank a sum equivalent to 5% of the total amount of the loan. Holders of this stock would not receive dividends but would be entitled to patronage refunds.

Class C stock will be available for purchase by rural telephone systems eligible to borrow from the bank and organizations controlled by such borrowers. This stock will be entitled to dividend from the income of the bank, but such dividend shall not exceed the current average rate payable on telephone debentures.

Borrowing power

The telephone bank is authorized to obtain funds through public or private sale of its debentures, provided that the amount of outstanding debentures does not exceed eight times the paid-in capital and retained earnings of the bank. Debentures would be issued at interest rates, and with terms and conditions determined by the bank's board of directors.

Lending power

The bank Governor is authorized to make bank loans to corporations or public bodies which are REA telephone borrowers. Loans will be made for periods not exceeding 50 years for the same purposes for which loans are made under Section 201 of the original Act, and for the financing, or refinancing, the construction, improvement, expansion, acquisition, and operation of telephone lines, facilities, or systems, in order to improve the efficiency, effectiveness, or financial stability of a borrowers system. Two types of loans will be available to borrowers from the telephone bank—an intermediate type loan and a full market rate loan. Eligible borrowers will receive loans carrying the intermediate interest rate, which shall be determined by the current average market yield on marketable securities of the United States having maturities comparable to those of the loans, but with an interest ceiling of 4%. Authority to make "intermediate" loans will terminate after an initial 15-year period. Full market loans will be available to borrowers at interest rates reflecting the average rate payable on the bank's debentures and allowance for estimated losses. Telephone systems with an average subscriber density of three or fewer per mile would be entitled to loans under Section 201 of the Act.

Loan limitations

Loans to finance acquisition of telephone facilities shall be approved by the Secretary of Agriculture. Such acquisitions must improve the efficiency, effectiveness or financial stability of the borrower's system and the size of each acquisition shall not exceed the borrower's existing system at the time it receives its first bank loan. Certificates of convenience and necessity from States with regulatory bodies, or a determination that there will be no duplication of lines, is required for telephone loans. No portion of any loan may be utilized to finance political activities.

Conversion of bank ownership and control

When, through retirement of the government's investment and the increase in borrower investment, the amount of stock held by the government represents less than one-third of the bank's capital, the process of converting the bank to borrower control and operation will begin: The REA Administrator will cease to be the Governor; the bank will cease to be a government agency; and the board of directors will consist of the REA Administrator and the FCA Governor plus six members elected by rural telephone voting stockholders of the bank. Special limitations on loan powers are eliminated after all government-held stock has been retired. Operations of the bank will continue to be subject to Congressional review.

S. 1685—INTRODUCTION OF BILL TO PROVIDE ASSISTANCE FOR MAJOR DISASTERS

Mr. BAYH. Mr. President, I introduce, for appropriate reference, a bill to provide additional assistance for areas suffering a major disaster. The sole purpose of this bill is to help alleviate the severe losses to property and livelihood so often inflicted on the unfortunate victims of unforeseen natural catastrophes.

Damages to State and local governmental agencies caused by floods, tornadoes, hurricanes, earthquakes, and other major disasters have been eligible for Federal assistance on a continuing, standby basis since Congress enacted the basic disaster relief law in 1950. The same has not been true, however, for the private sector. Except for special acts adopted retroactively from time to time following a few especially devastating disasters, until 1966 losses incurred by private individuals, families, or firms were almost wholly dependent on charitable efforts for help. In the latter year, legislation was enacted which permits long-term loans at low interest rates for certain kinds of losses, and in 1968 a flood insurance program was authorized, but much still remains to be done to fill in the gaps and to provide supplementary aid if individual hardships are to be helped substantially.

My involvement in disaster relief legislation dates back to the spring of 1965. A series of destructive tornadoes swept over the Midwest in April of that year and wreaked great havoc over a wide area, including my home State of Indiana. After personally viewing the enormous losses, both in life and property, caused by this calamity, I invited a number of Senators and staff members to meet with me to determine what actions might be taken to provide relief for these unfortunate people. As a result of considerable deliberation and consultation with experts in the field, this group formulated a major disaster bill—S. 1861—which was introduced on April 30 of that year with the cosponsorship of nearly 40 other Senators.

The primary philosophy motivating this proposal was to make sure that statutory authority existed which would enable the Federal Government to extend significant aid of all types to disaster victims immediately after a Presidential declaration without having to wait several months for specific congressional action. Consequently, the bill proposed long-term, low-interest loans, refinancing mortgage obligations, supplementary Federal sharing grants, emergency shelter and housing assistance, and standby aid for damages to schools, highways, and unincorporated communities. Although this bill was adopted by the Senate on July 22 of that year, it was not until October 17, 1966, that a shortened version passed the House and became law—Public Law 89-769—a few days later.

Unfortunately, several basic sections of the original bill were not included in the final version of the Disaster Relief Act of 1966. While the loan adjustment and several other provisions were adopted largely intact, and a very commendable section extending help for the repair of disaster damages to higher education facilities was added, a number of others were eliminated. Consequently, on January 12, 1967, 30 other Senators joined me in introducing a second bill—S. 438—which was designed to rectify these deletions. Hearings were held on this bill in June and July of that year, and it was reported out with some modifications by the Public Works Committee on April 2, 1968, but no further action was taken on it during the 90th Congress. In view of the need which still exists for supplementary disaster relief legislation, I have decided to submit a new, updated, and partly revised bill for further consideration this year.

The bill which I am introducing today would provide meaningful additional assistance for those who are subjected to the ravages of natural disasters. First, the Federal loan adjustment feature of the 1966 act would be made more equitable and useful by providing that disaster loans for homeowners and business concerns could be made without regard to whether or not financing could be obtained elsewhere. Although the Senate did approve this section by adopting on May 28, 1968, two amendments to the Housing and Urban Development Act of 1968, they were eliminated in conference and did not become part of the final law.

Hearings which were held by a subcommittee of the Public Works Committee as well as evidence which has come directly to me indicates that application of the present law tends to penalize the person with a good credit rating and favor the one who may be a bad risk. In order to qualify for a Small Business Administration or Farmers Home Administration disaster loan, a victim now must first prove that he has been refused credit by private institutions.

This means that a man who has regularly paid his debts and has established an acceptable credit rating will have to borrow funds to repair or rebuild his home or business at much higher interest rates and often for shorter periods than one who has been a wastrel or whose business is failing. The latter may qualify for 30- or even 40-year loans or mortgage refinancing at 3 percent while the former, who has conscientiously and regularly met his obligations in full, perhaps at great sacrifice, will have to assume the burden of 7 percent or higher refinancing costs. This gives rise to the patently unfair situation where the owners of two houses or two businesses which are side by side and which suffer equal damage in the same disaster are treated exactly opposite by the Federal Government, even though the real loss will bear as heavily on the resources of one as on the other. It is time to wipe out this completely unjustified distinction.

Secondly, the bill would authorize a new cost-sharing program under which States would be encouraged to develop comprehensive disaster relief plans. Any State establishing an approved disaster plan would be eligible for Federal grants up to 50 percent of the losses sustained in major disasters; State governments and individual owners would each assume 25 percent of the remaining cost. The President could authorize grants up to $250,000 for the purpose of assisting a State in preparing a comprehensive disaster relief plan, which would have to include flood-plain zoning controls. Payments could be made by State administering agencies for losses up to $30,000 in the case of homes and $100,000 for business concerns, but no grant could be made for any damage for which private insurance is available and collectible. The maximum Federal share under the grant program, therefore, would be $15,000 for homes and $50,000 for businesses, which would have to be matched with a maximum of either $7,500 or $25,000 by the State and the homeowner or business owner.

A third important section would expand Federal authority to provide emergency shelter for disaster victims. Where places of residence have been made uninhabitable by a major disaster, the President would be authorized to provide suitable shelter for either owners or tenants who were unable to do so for themselves. For this purpose the President could either purchase or lease housing, including mobile homes, which could be rented in turn to disaster sufferers. Emergency housing of this type could be rented for as long as necessary, and for 1 year the level of charges for it could be adjusted according to financial ability of the renters. A maximum charge of 25 percent of a family's monthly income could be levied for such emergency accommodations.

Again, hearings and other evidence indicate that present Federal authority is not sufficiently broad and unrestricted to handle adequately the staggering housing problems which frequently result from major disasters. This section would make certain that delays and deficiencies now encountered in getting these sufferers prompt and suitable accommodations would not be attributable to any gaps in statutory authority.

Fourth, the bill proposes a new program to help reimburse severe losses suffered by farmers as a result of major disasters. Agricultural producers have not in the past received aid commensurate with the damages which have been caused to their lands and herds by such unavoidable tragedies as tornadoes, floods, blizzards, and earthquakes. Eloquent testimony has highlighted the problems faced by farmers in putting their land back into production or restoring their livestock in the wake of a disaster which has destroyed fences, strewn fields with rubble and debris, ruined crops, washed away topsoil, or brought death to herds. Up to $10,000 would be authorized in grants equal to two-thirds of the cost of restoring lands to cultivation or replenishing livestock herds. The producer would have to bear one-third of the cost up to $15,000 as well as all over that amount.

Hearings disclosed that at present Federal disaster relief agencies are not authorized to render assistance in the removal of pollution-causing debris from inland lakes. There have been occasions in which health and safety hazards resulted from obstructions and contaminating material blown into waters by tornadoes and hurricanes or carried downstream by floods. In order to provide some measure of help in these cases, the bill would authorize the Office of Emergency Planning to make grants to a State or local government in order to help clear such dangerous debris from lakes.

Another section has been added to the bill which would help States suppress grass and forest fires, either on State-owned or privately owned lands, which threaten to become major disasters. Senator JORDAN of Idaho, who proposed this section of the bill, has pointed out that a small conflagration, which might begin either on private or public property, could quickly become a major fire threatening large areas because of the lack of sufficient manpower and equipment to quell it at the start. Such a holocaust, which pays no attention to jurisdictional or ownership boundary lines, can in a short time devour huge quantities of timber and grassland.

Although the U.S. Forest Service employs a sizable number of well-trained, able firefighters and possesses ample, modern equipment, this is often not true in the case of tracts owned privately or even by State and local governments. To meet this need the bill would authorize grants or loans to States which would assist them in combating forest and grass fires, irrespective of land title, in order to help prevent and control the type of disastrous conflagration which swept the Northwest in the summer and fall of 1967.

Another deficiency in the present law is the lack of any assistance for the cost of removing debris deposited on privately owned nonfarm property as the result of a major disaster. Senator YARBOROUGH brought to my attention last year the plight of several landowners who could not secure governmental help in clearing their property of large quantities of material driven there in a hurricane, and he suggested an amendment which is now section 9 of the bill.

In some cases wrecked boats or other large objects were left on the lawns of homeowners who had no means of recourse to collect damages. Costs of such debris removal can be very high, and I concur in the view that it is proper for them to be shared with the general public.

The bill does not provide for any fixed authorization amount for a very simple reason: no one is able to predict the number or severity of disasters which may strike in any one year. Open ended authorization will permit ample leeway for Congress to appropriate sufficient funds from time to time to carry out the specific provisions of the act as required by developments. It is important to remember, of course, that only major disasters declared by the President after a specific request for help has been received from a State Governor would be eligible for assistance.

No accurate estimates can be made of possible costs if the bill were to be enacted. Losses from major disasters have varied considerably from year to year, and there is no way to chart what the future will hold. Moreover, data are not available which would permit an analysis reflecting what the additional cost would have been if the bill had been in force during past years. There do not appear to be any meaningful statistics on uninsured losses incurred by private property owners which might have been assisted under terms of the bill. A key factor in this connection is that not all losses would have been eligible for compensation; to the contrary, only those which were not insurable and for which no other benefits had been received could be counted.

It should be stressed also that authorization of a flood insurance program last year in no way reduces the immediate need for this bill. Present indications are that it may be some time before

property owners will be able to secure adequate insurance protection for water damage. In any event, the proposed disaster relief bill would be entirely supplementary and complementary to any such reimbursement. The bill specifically provides that no disaster assistance would be available under the grant program for any loss where insurance is available and collectible. In the meantime there will be continuing need for assistance to those suffering from floods.

There is no danger of duplicating benefits or of payments to those who have other kinds of protection, since the bill specifically prohibits grants for any losses where insurance is available and collectible. Likewise, the Disaster Relief Act of 1966 contained language in section 10 which directs the head of each Federal department or agency administering any disaster relief program to assure that no person, entity, or concern receives any aid for a loss if assistance has been provided under any other program. Until flood insurance becomes generally available, or in those areas or circumstances under which it cannot be obtained, the bill would provide means whereby such losses could be shared in part with the public. Again it should be stressed that help would not be given for the occasional flooded basement, broken window or damaged roof; only in areas of widespread disaster in which great havoc has been caused and massive assistance is needed would the terms of the bill apply.

Some criticism has been aimed in the past at the grant section of the bill because it would provide direct government assistance for private losses. Perhaps it should be recalled that this would not be the first time that the National Government has appropriated funds to reimburse or help citizens. Direct or indirect payments to individuals or companies are not unknown to law. To mention but a few, Congress has made substantial appropriations in the past to compensate for losses, to bolster prices, to encourage land improvements, to divert acreage from production, to subsidize land, air and water transportation, to finance individual higher education, to reimburse hospital and medical costs, and to provide decent housing. To a family whose home has been destroyed it is just as important to provide help in restoring that home as it is to provide assistance for education, health care, or any of the other many programs financed in part through Federal funds.

It seems to me that the important issue is whether the National and State Governments should be willing to assume a portion of the losses suffered by innocent families which have been subjected to the traumatic experience of catastrophic property damages. Private charity can and does lend much help, especially for immediate personal and temporary needs, but it cannot muster sufficient financial strength in a short time to offset the tremendous losses to private property in an extensive disaster area. This is especially true for long-term, major expenses, such as the cost of repairing or rebuilding homes and businesses.

The financial burden of property losses in disasters will eventually fall on one or more persons, families or companies. It may be shared in part by the individual owner, by friends and relatives, by the bank which holds a mortgage, by the insurance company—if there is such protection available—by charitable organizations, as well as by other private or public institutions. Employing public funds to assist those who have incurred sizable losses in major disasters in one sense is something like a system of enforced public insurance. That is, all members of society would help absorb individual losses through small contributions in general taxes rather than through payment of premiums to an insurance company.

Mr. President, the frequency with which destructive floods, tornadoes, hurricanes, earthquakes, and wildfires have in recent years devastated large areas and made thousands homeless graphically illustrates the need for a comprehensive, systematic approach to disaster relief. It is impossible to foretell when or where disasters will strike or the extent of the damage that will be done, yet there can be no doubt that they will continue to occur as they have in the past. Various sections of the Nation, some more than others, and persons in all walks of life and with different means, always suffer in the aftermath of such tragedies.

Nearly 100 major disaster declarations have been made by the President in the last half dozen years and more than $100 million in Federal funds have been extended for direct relief, but much of this aid has gone to restore public facilities. Three very serious major disasters have been declared already this year, and the threat of extensive flooding is so great that the Army Corps of Engineers has obligated more than $2 million for emergency flood preparations.

This Nation has always been generous in coming to the rescue of persons all over the world who have been subjected to serious unexpected misfortunes. No matter what the cause or the place, when thousands have been made homeless, injured or threatened with famine in foreign countries, our people and Government have always responded promptly and fully to appeals for assistance. Yet we have failed to establish a permanent, all-encompassing program which would help restore the property and livelihood of our own citizens who have had their homes or businesses demolished by similar cataclysms.

The purpose of this bill is not to provide a Federal handout; rather, it is to help unfortunate victims, dealt cruel blows by entirely unexpected and unpredictable natural forces, to recover at least some degree of their former economic status and living conditions. Those who involuntarily undergo the awful experience and full fury of a natural disaster may never be able to restore their possessions completely or return untouched to their former way of life, but the American tradition of extending a helping hand to our compatriots and others in time of need is very strong.

Mr. President, I reiterate my plea for prompt and serious consideration of this measure. In time of disaster it is proper for our people to look for help, not only from their neighbors, private organizations, and their own communities, but also from their National Government. Let us complete the job which other Congresses have well begun; let us prepare now for future disasters by adopting adequate legislation to minimize the devastating effects these catastrophes have on the lives and economic well-being of our citizens.

I ask unanimous consent that the bill, together with a brief summary of, and comment on its provisions, be printed in the RECORD at the conclusion of my remarks.

The ACTING PRESIDENT pro tempore. The bill will be received and appropriately referred; and, without objection, the bill and summary will be printed in the RECORD.

The bill (S. 1685) to provide additional assistance for areas suffering a major disaster, introduced by Mr. BAYH (for himself and other Senators), was received, read twice by its title, referred to the Committee on Public Works, and ordered to be printed in the RECORD, as follows:

S. 1685

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Disaster Relief Act of 1969".

DEFINITIONS

SEC. 2. As used in this Act, the term "major disaster" means a major disaster as determined by the President pursuant to the Act entitled "An Act to authorize Federal assistance to States and local governments in major disasters, and for other purposes", approved September 30, 1950, as amended (42 U.S.C. 1855–1855g).

FEDERAL LOAN ADJUSTMENTS

SEC. 3. (a) In the administration of the disaster loan program under section 7(b) of the Small Business Act, any application for a loan thereunder in an amount of $30,000 or less in the case of a homeowner, or $100,000 or less in the case of a business concern, may be granted, if such loan is for the repair, rehabilitation, or replacement of property damaged or destroyed as the result of a major disaster, without regard to whether the required financial assistance is otherwise available from private sources.

(b) In the administration of subtitle III of the Consolidated Farmers Home Administration Act of 1961, relating to emergency loans, any application for a loan thereunder in an amount of $30,000 or less may be granted, if such loan is for the repair, rehabilitation, or replacement of property damaged or destroyed as the result of a major disaster, without regard to whether the Secretary of Agriculture finds that the required financial assistance can be met by private, cooperative, or other responsible sources (including loans the Secretary of Agriculture is authorized to make or insure under any other provision of law).

GRANTS TO STATES FOR ASSISTANCE TO HOMEOWNERS AND BUSINESSES

SEC. 4. (a) The President is authorized in accordance with the provisions of this section to provide assistance to the States in developing and carrying out comprehensive and practicable programs for assisting homeowners and business concerns suffering property losses as the result of a major disaster. For the purposes of this section, the term "State" includes the District of *Columbia,* the

Commonwealth of Puerto *Rico, the Territory of Guam, and American Samoa.*

(b) From the sums appropriated pursuant to subsection (i) the President is authorized—

(1) to make grants to any State, upon application therefor, in an amount not to exceed 50 per centum of the cost of developing a program referred to in subsection (a): *Provided,* That the total grants made to any State under this paragraph shall not exceed $250,000; and

(2) to make grants to any State, upon the basis of an approved State plan, to pay not to exceed 50 per centum of the cost of carrying out such a program.

(c) Any State desiring to participate in the grant program under paragraph (2) of the preceding subsection shall designate or create an agency which is specially qualified to administer such a disaster relief program, and shall, through such agency, submit a State plan which shall—

(1) set forth a comprehensive and detailed State program for assistance to homeowners and business concerns suffering property losses as a result of a major disaster;

(2) specify that the homeowner or business concern will assume 25 per centum of the property loss sustained by it as a result of such a disaster, and the State will agree to pay 25 per centum of such loss;

(3) provide that no homeowner or business concern shall be eligible to participate in such a State program unless the damage to the property of such owner or concern resulting from such a disaster exceeds 5 per centum of the value of such property prior to such a disaster, or $100, whichever is the greater;

(4) specify that the maximum amount of loss to be shared jointly by the homeowner or business concern, the State, and the Federal Government under such a program shall be $30,000 in the case of a homeowner, and $100,000 in the case of a business concern;

(5) provide a means of appraisal to establish the fair market value of the property of such owner or concern damaged or destroyed as a result of such a disaster;

(6) provide assurances that equitable treatment will be accorded all eligible property owners;

(7) contain satisfactory evidence that the State will adequately supervise such program;

(8) provide such fiscal control and fund accounting procedures as the President deems necessary; and

(9) set forth such further information as the President may by regulation require.

(d) The President shall approve any State plan which complies with the provisions of subsection (c) of this section.

(e) No grant may be made under this section—

(1) for any loss for which insurance is available and collectible in such State at reasonable rates;

(2) for any loss in a State which does not have approved flood plain zoning controls or other similar preventive measures in force; and

(3) to any public agency or organization for the loss of any property owned by such agency or organization.

(f) The President shall prescribe such rules and regulations as he deems necessary for the effective administration of this section, and to prevent the waste or dissipation of Federal funds.

(g) Each State receiving assistance under this section shall, through its designated State agency, make such reports as the President may require, and each such agency shall, upon request of the President, make available its books and records for audit and examination.

(h) The President may exercise the powers conferred upon him by this section either directly or through such Federal agency as he may designate.

(i) Such sums as may be necessary to carry on the purposes of this section are hereby authorized to be appropriated.

SHELTER FOR DISASTER VICTIMS

SEC. 5. (a) The President is authorized to provide dwelling accommodations for any individual or family whenever he determines—

(1) that such individual or family occupied a house (as an owner or tenant) which was destroyed, or damaged to such an extent that it is uninhabitable, as the result of a major disaster; and

(2) that such action is necessary to avoid severe hardship on the part of such individual family; and

(3) that such owner or tenant cannot otherwise provide suitable dwelling accommodations for himself and/or his family.

(b) Such dwelling accommodations, including mobile homes, as may be necessary to meet the need, shall be provided through acquisition, acquisition and rehabilitation, or lease. Dwelling accommodations in such housing shall be made available to any such individual or family for such period as may be necessary to enable the individual or family to find other decent, safe, and sanitary housing which is within his or its ability to finance. Rentals shall be established for such accommodations, under such rules and regulations as the President may prescribe and shall take into consideration the financial ability of the occupant. In cases of financial hardship, rentals may be comprised or adjusted for a period not to exceed twelve months, but in no case shall any such individual or family be required to incur a monthly housing expense (including any fixed exepnse relating to the amortization of debt owing on a house destroyed or damaged in a disaster) which is in excess of 25 per centum of the individual's or family's monthly income.

(c) In the performance of, and with respect to, the powers and duties conferred upon him by this section, the President may—

(1) prescribe such rules and regulations as he deems necessary to carry out the purposes of this section;

(2) exercise such powers and duties either directly or through such Federal agency or agencies as he may designate;

(3) sell or exchange at public or private sale, or lease, any real property acquired or constructed under this section;

(4) obtain insurance against loss in connection with any such real property;

(5) enter into agreements to pay annual sums in lieu of taxes to any State or local taxing authority with respect to any such real property; and

(6) include in any contract or instrument made pursuant to this section, such conditions and provisions as he deems necessary to assure that the purposes of this section will be achieved.

(d) Such sums as may be necessary to carry out the provisions of this section are hereby authorized to be appropriated.

ASSISTANCE TO FARMERS IN MAJOR DISASTER AREAS

SEC. 6. (a) The Secretary of Agriculture is authorized to make grants to farmers whose farmlands or livestock have been damaged as the result of a major disaster. Such grants shall be made (1) for the purpose of assisting such farmers to prepare such lands for cultivation and to restore such lands or livestock to normal productive capacity, and (2) only in the case of lands on the farm normally used in the production of an agricultural crop. No grant shall be made hereunder to assist in restoring lands or livestock to production unless the Secretary determines that the cost of preparing such lands for production has been increased as a direct result of such major disaster.

(b) The amount of the grant authorized under this section in the case of any farmer shall not exceed an amount determined by the Secretary to be equal to two-thirds of the total cost of preparing the damaged lands for cultivation and restoring them to normal productive capacity, and in no event shall the amount of any such grant in the case of any farmer exceed $10,000.

(c) The Secretary is authorized to impose such reasonable terms and conditions on the making of such grants as he determines necessary to carry out effectively the purposes of this section.

(d) Such sums as necessary to carry out the provisions of this section are hereby authorized to be appropriated.

SEC. 7. (a) The Office of Emergency Planning is authorized to make grants to any State or political subdivisions thereof for the purpose of lake clearance in cases where a major disaster has resulted in contamination of any lake by debris which has created conditions hazardous to health and safety.

(b) Such sums as may be necessary to carry out the provisions of this section are hereby authorized to be appropriated.

SEC. 8. (a) The Office of Emergency Planning is authorized to make grants and loans to any State to assist such State in the suppression of a fire or fires on State or privately owned forest or grass lands which threatens destruction of such proportions as to constitute a major disaster.

(b) Such sums as may be necessary to carry out the provisions of this section are hereby authorized to be appropriated.

SEC. 9. (a) The Director of the Office of Emergency Planning is authorized, upon application, to make payments to any person in reimbursement of expenses, not otherwise compensated for, which were incurred by such person in connection with the removal of debris deposited on privately-owned lands as the result of a major disaster. As used in this section, the term "person" includes an individual, corporation, association, firm, organization or local public body.

(b) Such sums as may be necessary to carry out the provisions of this section are hereby authorized to be appropriated.

EFFECTIVE DATE

SEC. 10. This Act and the amendments made by this Act shall apply with respect to any major disaster occurring after December 31, 1968.

The summary, presented by Mr. BAYH, is as follows:

PROPOSED DISASTER RELIEF ACT OF 1969—BRIEF SUMMARY OF AND COMMENT ON MAJOR PROVISIONS

Sec. 1. *Citation:* The Act would be cited as the "Disaster of Relief Act of 1969."

Sec. 2. *Definitions:* Retains the standard definition of a major disaster as one which is declared to be such by the President under the Disaster Act of 1950 (42 U.S.C. 1855–1855g). All other provisions of the act would be effective only in those instances where a major disaster has been determined and declared by the President.

Sec. 3. *Federal Loan Adjustments:* Disaster loans for homeowners up to $30,000 or for business concerns up to $100,000 under the Small Business Act, and disaster loans up to $30,000 under the Consolidated Farmers Home Administration Act of 1961, could be made without regard to whether or not the required financial assistance might be provided by private sources.

The purpose of this is to guarantee equal opportunity for all disaster sufferers who apply for disaster loans or readjustments to be treated on the same basis. The 1966 Disaster Act authorizes readjustment of loans for extended periods at minimum interest rates for owners of property severely damaged in major disasters. During the hearings considerable evidence was presented which indicated, however, that previously loans had been denied in some worthwhile cases on the ground that private financing, although at

higher rates and much less favorable terms, had been available. Section 3 would eliminate this kind of discrimination and should have been included with the other loan adjustment provisions.

Sec. 4. *Grants to States for Assistance to Homeowners and Businesses:* A new cost-sharing program would be established to enable homeowners and business concerns sustaining major disaster property losses to seek direct federal assistance. No state could participate in the program unless it first developed a comprehensive disaster relief plan and designated a state agency to administer aid to disaster victims. Grants up to $250,000 could be authorized by the President for the purpose of assisting a state in the preparation of such plans.

In states which had adopted approved disaster relief plans, the federal government could share up to 50% and the state government up to 25% of property losses in major disasters, with a maximum loss limit of $30,000 in the case of homes and $100,000 for business concerns. The property owner would have to bear at least 25% of the loss, and no grant could be made for any damage for which private insurance is available and collectible at reasonable rates. Likewise, no payment could be made for any loss in a state which failed to adopt flood-plain zoning controls.

Sec. 5. *Shelter for Disaster Victims:* The President would be authorized to provide necessary shelter for the owners or tenants of places of residence made uninhabitable by a major disaster and who are unable to provide suitable accommodations for themselves and/or their families. Housing could be acquired or leased, which in turn would be rented to disaster victims for such periods as may be necessary. Rentals for this emergency shelter, including mobile homes, could be adjusted for as long as one year according to the financial ability of the occupants, but in no case would they be required to pay more than 25% of the family's monthly income for such accommodations.

Sec. 6. *Assistance to Farmers in Major Disaster Areas:* A new grant system would be established for farmers who sustain extensive losses in major disaster areas. The Secretary of Agriculture would be authorized to make grants equal to two-thirds of the cost of restoring lands to cultivation or replenishing livestock herds, with the maximum amount paid to any farmer limited to $10,000. Reasonable terms and conditions could be imposed by the Secretary in making such grants, but no payment could be made to a farmer unless the Secretary determined that the cost of preparing lands for production had been increased as a direct result of a major disaster.

Sec. 7. *Lake Clearance:* Grants to States by the Office of Emergency Planning would be authorized for the purpose of enabling them to remove from lakes in disaster areas debris which would contaminate such lakes and which would create conditions hazardous to health and safety.

Sec. 8. *Grass and Forest Fires:* The Office of Emergency Planning would be authorized to make both grants and loans to any State to assist in the suppression of fires on either public or private property which threaten to become major disasters.

Sec. 9. *Debris Removal from Private Property:* The Office of Emergency Planning would be authorized to make payments as reimbursement of expenses incurred for the removal of debris deposited on privately-owned lands as the result of a major disaster.

Sec. 10. *Effective Date:* The Act would apply to all major disasters occurring after December 31, 1968.

S. 1686—INTRODUCTION OF A BILL RELATING TO APPOINTMENTS TO THE U.S. PARK POLICE

Mr. BIBLE. Mr. President, I introduce, for proper referral, a bill relating to age limits in connection with appointments to the U.S. Park Police.

Last week during the National Park Service appropriation hearings, it was pointed out that of the 363 positions authorized for this service 80 vacancies are available for qualified applicants.

One of the reasons, of course, is the restrictions of the Expenditure Control Act of 1968. The second and more restrictive reason is the requirement that applications proceed through regular civil service examinations contrary to the requirements imposed in recruiting for the Metropolitan Police force and other local law enforcement agencies. These agencies have already established age limits for recruits as follows: Alexandria, Prince Georges County, and the District of Columbia have set the age at 29 years. Arlington County at 30 years and Fairfax County and Montgomery County at 31 years. The White House Police are recruited from the Metropolitan Police and the U.S. Park Police.

It would appear to me that if we are to have a U.S. Park Police capable of doing the job it is required to do, a maximum recruiting age similar to the other law enforcement agencies in the area is absolutely necessary.

I would point out, Mr. President, that a similar bill passed the Senate in 1963 and was approved by the House Interior and Insular Affairs Committee, but did not clear that body.

Since adequate law enforcement is more important than ever, I urge early and favorable consideration of this measure.

The ACTING PRESIDENT pro tempore. The bill will be received and appropriately referred.

The bill (S. 1686) relating to age limits in connection with appointments to the U.S. Park Police, introduced by Mr. BIBLE. was received, read twice by its title, and referred to the Committee on Interior and Insular Affairs.

S. 1687—INTRODUCTION OF A BILL TO BE KNOWN AS THE DRUG ABUSE EDUCATION ACT OF 1969

Mr. BENNETT. Mr. President, my distinguished colleague in the House, Laurence J. Burton, has introduced a bill to authorize the U.S. Commissioner of Education to set up a program in the elementary and secondary schools to educate our young people on the dangers and uses of drugs. Like our crime rate, we have in drugs a problem that is already reaching critical proportions. Unless we move now to meet the problem head on, the quality of life in this country will be further seriously damaged by elicit drug use.

It is the responsibility and burden of all Americans to meet the challenge head on. I can not emphasize strongly enough that it is primarily a family obligation. I believe every American parent should acquaint himself with the dangers of illicit drug use and impress upon their children the consequences that may befall a teenager who experiments with them. However, not all of the problems can be met in the home, and a unique opportunity exists for our schools to make a valuable contribution in this field. Because drug abuse is a national problem and because many of the narcotic drugs flow in interstate commerce, it is reasonable that the Federal Government now provide new machinery for combating this problem.

Consequently, I am introducing the Drug Abuse Education Act of 1969, which will authorize the U.S. Commissioner of Education to make grants to our public schools and other institutions for the purpose of setting up and conducting educational programs regarding drug use.

The ACTING PRESIDENT pro tempore. The bill will be received and appropriately referred.

The bill (S. 1687) to authorize the U.S. Commissioner of Education to make grants to elementary and secondary schools and other educational institutions for the conduct of special educational programs and activities concerning the use of drugs and for other related educational purposes, introduced by Mr. BENNETT, was received, read twice by its title, and referred to the Committee on Labor and Public Welfare.

S. 1688—INTRODUCTION OF A BILL TO ESTABLISH THE DINOSAUR TRAIL NATIONAL MONUMENT NEAR GLEN ROSE, TEX.

Mr. YARBOROUGH. Mr. President, today I introduce, for appropriate reference, a bill to establish the Dinosaur Trail National Monument near Glen Rose, Tex.

This bill would authorize a national monument to protect the 135-million-year-old dinosaur tracks which have been preserved in the limestone bed of the Paluxy River, southwest of Fort Worth. These footprints can be clearly seen in the natural rock that forms the bed of the beautiful little river, and are believed to be the most numerous and best-preserved tracks in the world.

During the 90th Congress, my colleagues Congressmen BOB POAGE, of Waco, and JIM WRIGHT, of Fort Worth, sponsored House bills to create this national monument. I introduced a companion Senate bill, S. 1113, to protect this unique natural phenomenon. The citizens of Glen Rose and Somervell County also favored the preservation of these tracks as a national monument.

Mr. President, no action was taken on this bill during the last Congress. However, on March 25, 1969, the Department of the Interior announced that the Texas dinosaur site on the Paluxy River has been declared eligible for inclusion in the

National Registry of Natural Landmarks by Secretary of the Interior Walter J. Hickel. It is commendable that the Park Service has recognized the significance of this area, but I do not think that recognition as a national landmark is enough.

About 30 dinosaur tracks are said to be visible today, left by dinosaurs in mud which has hardened into limestone. More tracks are likely to be uncovered. Previously, some of the tracks were quarried and are on display at the American Museum in Austin, Tex. All of these tracks might be subject to removal unless a national monument is created to preserve the tracks as they were originally created by the feet of the dinosaurs.

The Interior Department points out in their press release of March 25, 1969:

Registration as a National Landmark does not involve change in land ownership and the National Park Service does not administer the sites or provide financial assistance.

It is for this reason that registration as a national landmark does not provide the necessary protection for this area. Though such recognition is indeed a significant and important step, it is just not enough to insure the preservation of these ancient tracks.

Mr. President, I ask unanimous consent that the text of the Department of the Interior news release of March 25, 1969, entitled "Texas Dinosaur Site To Be Landmark" be printed in the RECORD at the conclusion of my remarks. This release expresses the concern of the Interior Department that the dinosaur site on the Paluxy River be preserved.

Mr. President, I also ask unanimous consent that the text of my bill to establish the Dinosaur Trail National Monument near Glen Rose, Tex., be printed in full at this point in the RECORD.

The ACTING PRESIDENT pro tempore. The bill will be received and appropriately referred; and, without objection, the bill and news release will be printed in the RECORD.

The bill (S. 1688) to authorize the establishment of the Dinosaur Trial National Monument in the State of Texas, introduced by Mr. YARBOROUGH, was received, read twice by its title, referred to the Committee on Interior and Insular Affairs, and ordered to be printed in the RECORD, as follows:

S. 1688

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That in order to preserve for the benefit and enjoyment of present and future generations significant scientific features, the Secretary of the Interior may designate as the Dinosaur Trail National Monument such lands and interests in lands near Glen Rose, Texas, and the Paluxy River as in his discretion are needed for establishment of such monument.

SEC. 2. The Secretary of the Interior may acquire lands or interests therein within the Dinosaur Trail National Monument by donation, purchase with donated or appropriated funds, or exchange. When acquiring property by exchange, the Secretary may accept title to any non-Federal property within the boundaries of the national monument, and in exchange therefor he may convey to the grantor of such property any federally owned property under his jurisdiction which he classifies as suitable for exchange or other disposal. The values of the properties so exchanged either shall be approximately equal, or if they are not approximately equal the values shall be equalized by the payment of cash to the grantor or to the Secretary as the circumstances require.

SEC. 3. The Secretary of the Interior shall administer, protect, and develop the Dinosaur Trail National Monument in accordance with the provisions of the Act of August 25, 1916 (39 Stat. 535; 10 U.S.C. 1 et seq.), as amended and supplemented.

SEC. 4. There are authorized to be appropriated such sums as may be necessary to carry out the purposes of this Act.

The news release, presented by Mr. YARBOROUGH, is as follows:

TEXAS DINOSAUR SITE TO BE LANDMARK

Dinosaur tracks made in central Texas approximately 100 million years ago were declared eligible today for inclusion in the National Registry of Natural Landmarks by Secretary of the Interior Walter J. Hickel.

The huge footprints have been preserved in the limestone bed of the Paluxy River, near Glen Rose, southwest of Fort Worth.

The Registry of Natural Landmarks, begun in 1964, is maintained by the National Park Service to identify and recognize significant areas of natural value for future generations.

The Glen Rose site, soon to be developed by the Texas Department of Parks and Wildlife, provides fossil evidence of the development of life on earth dating to the Cretaceous period as measured in geological time.

Then it was that central Texas was lapped by waters of a shallow, warm sea at the close of "the age of reptiles." While dinosaur track impressions and fossils have been found in other parts of Texas, the National Park Service deems the Glen Rose site is nationally significant in that it proves to paleontologists that the huge reptiles walked upright instead of crawling.

Paleontologists call the trace fossils "ichnites," literally footprints in stone. As the mud became limestone, the footprints preserved a drama of that far-away time in the earth's development. In the same rock is another trackway identified as made by a smaller, flesh-eating dinosaur apparently tracking the great but defenseless herbivorous reptile whose deep prints may be seen today.

Registration as a Natural Landmark does not involve change in land ownership and the National Park Service does not administer the sites or provide financial assistance. At the Glen Rose site, the State of Texas is planning a recreation area to include camping, hiking and swimming in the Paluxy River.

S. 1691—INTRODUCTION OF A BILL TO REMOVE THE LIMITATION ON THE NUMBER OF CIVILIAN EMPLOYEES IN THE DIVISION OF INDIAN HEALTH

Mr. HARRIS. Mr. President, I introduce, for appropriate reference, a bill first presented to the Senate in 1968 as an amendment to Public Law 90–364. The amendment was approved by voice vote of the Senate, but was dropped in conference.

I have proposed in this bill the exemption of the Division of Indian Health, within HEW, from the freeze provided for in Public Law 90–364, insofar as personnel requirements and vacancies are concerned.

Health services which are furnished to the Indians are being greatly diminished by reason of the freeze, and in the very near future will be diminished to a critically low point. Without going into great detail, I would like to mention a few examples of the problems which have en because of the freeze.

One major problem is the critical shortage of nurses which has been intensified by the freeze. Approximately 100 nursing service personnel have been lost in the last year. A few examples of shortages are:

First. The Oklahoma City area reports reveal that Clinton Hospital is operating with only three of five authorized nurse positions filled and Lawton Hospital, in my hometown, is operating with only 13 of 18 positions filled;

Second. The Aberdeen area reports reveal that the new hospital at Belcourt, N. Dak., has five of 13 registered nurse positions vacant;

Third. The Anchorage Native Medical Center has 12 of 71 positions vacant while the Tanana Native Hospital has two of six positions vacant;

Fourth. The PHS Indian Hospital at Mescalero, N. Mex., has two of six positions vacant;

Fifth. The Navajo area reports that the Gallup Indian Medical Center has 18 of 46 registered nurse positions vacant and the Crownpoint Indian Hospital has four of seven vacant.

These shortages are but a few examples, with comparable examples in most Indian hospitals in the Nation.

Staff shortages are becoming critical in other categories of health service. The laboratory standard of the Indian hospitals throughout the Nation is below the level required by the Laboratory Improvement Act of 1967. Personnel needed for the control of such communicable diseases as tuberculosis, measles, and trachoma cannot be hired by reason of the freeze.

Great advancement has been made in the past few years in maternal and child health and family planning programs, as well as mental health programs and programs designed to eliminate nutritional deficiencies; however, due to the freeze on personnel, these essential programs are being severely restricted.

I ask unanimous consent to have printed in the RECORD a statement outlining the current effects on the Indian Health Service of employment limitations resulting from implementation of Public Law 90–364.

It appears that if the freeze on personnel is not removed, the advancements we have made in the past few years in Indian health services will be lost and medical care for the Indian in this Nation will reach a deplorable state. I therefore urge that favorable consideration be given this bill.

The ACTING PRESIDENT pro tempore. The bill will be received and appropriately referred; and, without objection, the statement will be printed in the RECORD.

The bill (S. 1691) to remove the limitation on the number of civilian employees in the Division of Indian Health, within the Department of Health, Educaton, and Welfare, introduced by Mr. HARRIS (for himself and Mr. HART), was received, read twice by its title, and referred to the Committee on Finance.

The statement, presented by Mr. HARRIS, is as follows:

HEALTH SERVICES AND MENTAL HEALTH ADMINISTRATION, INDIAN HEALTH SERVICE

EFFECT OF EMPLOYMENT RESTRICTIONS

General

The first notification of the employment freeze was received on July 5, 1968 and established the following guidelines:

(a) Non-permanent employment was frozen until July 1967 levels are reached.

(b) Full-time permanent employment was frozen except for commissioned officers whose orders were out on or before June 30, 1968 for entry on duty July 1, 1968 or later. Extreme hardship cases were reviewed on an individual basis.

On July 10, 1968, the absolute nature of the employment freeze was confirmed by a memorandum from DHEW stating that no agency could fill any permanent position at any time during July until the prescribed July 31 ceiling is reached. (The ceiling was furnished HSMHA but not to Indian Health Service).

On August 5, 1968 advice was received that appointments could be made, effective August 11, 1968, to 50 percent of all vacancies in permanent full-time positions occurring on or after August 1, 1968 in direct patient care activities. At this point in time all Indian Health Service activities *except* the Washington Headquarters were considered Patient Care Activities. Any proposed employment for Headquarters, Indian Health Service required the prior approval of the Executive Officer, HSMHA. Monthly ceilings on other than full-time employment were issued by HSMHA.

On October 10, 1968 authority was received to fill 70% of vacancies occurring in patient care activities as defined above, which resulted from resignation, retirement, removal or death. Authority was also granted to fill on a one for one basis vacancies occurring as a result of transfers outside of HSMHA to another governmental agency.

On January 8, 1969 DHEW, HSMHA established a ceiling of 185 vacancies in direct patient care which may be filled on a one for one basis *provided* that the September 30, 1968 employment levels are not exceeded. However, on September 30, 1968 the Indian Health Service had accumulated 224 vacancies which could not be filled because of the freeze. In addition, the definition of what constitutes direct patient care positions specifically excluded the following categories of personnel: Public Health Educators, Community Health Professionals, Chauffeur-Interpreters, Sanitary Engineers and Sanitarians, and Sanitary Aides. Many positions previously considered to be in direct support of patient care activities are also excluded such as ward clerks, housekeeping, laundry and maintenance personnel.

The Departmental definition of Direct Patient Care activities, therefore, is more restrictive that that maintained by the Indian Health Service which considered that all field activities of the Service constitute Direct Patient Care and only the Washington Headquarters constitutes an overhead activity.

Attached is a tabulation reflecting the monthly accumulation of vacancies during the period July, 1968 through January, 1969.

Since June 30, 1966—the employment level target of PL 90-364—many new programs have been added or expanded including family planning, trachoma control, sanitation facilities construction for new Indian housing, field health clinics, and mental health services. Full-time medical officers are now serving 11 health centers which previously received only occasional medical service. These 11 new clinics serve Indians in Alaska, Kansas, New Mexico, North Dakota, Oklahoma, South Dakota and Washington. Program emphasis has been placed on preventive health services and on making comprehensive health services accessible and acceptable to the Indian people.

From FY 66 to FY 68 there was a 1.8% increase in admissions. Based on workload data for the first quarter of FY 1969 this trend would appear to be continuing and the resultant FY 69 workload is projected at a 1.7% increase over FY 68 and 3.5% over FY 66. Personnel in FY 68 increased over FY 66 by 2.3%. FY 69 personnel projections based on first quarter employment reflect a 2.5% decrease over FY 68.

Inpatient GM&S workloads reflected a 3.4% decline from FY 66 to FY 68 and FY 69 workloads reflect a decrease of 9.5% over FY 68 workload data. Although inpatient days and ADPL have shown slight decreases in projections for FY 69, admissions have continued to rise and the average admissions per hospital employee have risen from 23.7 in FY 66 to 25.2 in FY 69, which compares with a national average of 16.31 to 1 in community hospitals.

Average daily patient load reflects the approximately 11% reduction in average length of stay from FY 68 to FY 69. There are several apparent reasons for the reduced patient stay and average ADPL in terms of the increased workloads reflected in the outpatient data from FY 66 to FY 68. Patients are being seen in greater numbers in outpatient facilities, conditions are being diagnosed in early stages and treatment days in hospitals reduced as a result.

Operation of hospitals, health centers and health stations

The attrition process is affecting every form of activity—medical, para-medical, hospital administration, food service, maintenance—all types of personnel required to enable the Division's direct patient care activities to continue to provide health services of the quality and quantity required by the Indian people. The authority to fill 70% of permanent full-time vacancies has provided little relief. Because of the acute shortage of nursing staff—a staff which was marginal in number at best before the imposition of employment restrictions—54 of the 76 appointments made under the 50% and 70% formulas have been nursing staff. In spite of the priority given to nursing, approximately 100 nursing service personnel have been lost during the first quarter of this fiscal year. This loss includes nearly 70 registered nurses.

The critical shortage of nurses affects all areas. The Aberdeen Area reports that the new hospital at Belcourt, North Dakota, has five of 13 registered nurse positions vacant. The Anchorage Native Medical Center has 12 of 71 positions vacant, while the Tanana Native Hospital has 2 of 6 positions vacant. The PHS Indian Hospital at Mescalero, New Mexico, also has 2 of 6 positions vacant. The Navajo Area reports that the Gallup Indian Medical Center has 18 of 46 registered nurse positions vacant and the Crownpoint Indian Hospital has 4 of 7 vacant.

Another example of the critical staff shortage is found in medical and X-ray technicians. The Division has been attempting to bring the laboratory standard of its facilities up to the level required by the Laboratory Improvement Act of 1967. Progress toward providing the same quality of laboratory services for Indian patients as is accepted for the general U.S. population has been halted and reversed. From June 30 to September 30, 1968, the number of technicians serving the Division's 51 hospitals, 63 health centers, and over 300 health stations has decreased from 164 to 154—a loss of ten technicians in spite of the fact that 6 of the 76 permitted appointments have been technicians.

The 30-bed annex of the Phoenix Indian Hospital has been closed. The patients involved will receive care at the main hospital or in contract medical care facilities and in many cases not at all because of space and financial restrictions. Other hospitals, including the Gallup and Anchorage Medical Centers, have had to restrict patient services and specialty care.

The vacancy situation in support personnel is also becoming increasingly critical. The Alaska Area reports that only one laundry man is available on a full-time basis to process 18,000 pounds of laundry a week. The hospital at Kotzebue is authorized 16 maintenance positions, of which six are vacant, including that of a plumber. Maintenance projects which are essential if the installation is not to deteriorate cannot be accomplished before the freeze-up.

At all installations the concern for medical and nursing care is mounting daily and the stark fact is that at many of our hospitals current and foreseeable staffing levels will not be able to provide an adequate or safe level of patient care.

As part of the Division's continuing attempt to raise the health level of its beneficiaries and to assure their involvement in the Indian health program, the Division established a School of Practical Nursing at Albuquerque, New Mexico. On September 17, 1968, seventeen Indian girls graduated from that school after completing a one-year nationally accredited program in practical nursing. Before they entered training, the Division made a commitment for employment of these girls following their graduation and licensure. Although the Division of Indian Health has the vacancies and urgent need for all of them, the current freeze precludes their employment.

Field health activities

Current projections of outpatient data indicated a marked reduction in the trend towards increasing workloads established by the 17.5% increase in services rendered in hospital clinics in FY 68 over those rendered in FY 66. FY 69 projections indicate only a slight increase of 1% in hospital outpatient clinic workloads. The significant trend is reflected in the marked reversal in a trend established in field clinic outpatient services. In FY 68 these services represented a 12.1% increase over FY 66. The projections for FY 69 indicate a reduction of 17.3% in field clinic outpatient workloads. The current personnel limitations which face the Division have caused a realignment in staff from field health activities to provide support for hospital inpatient and outpatient clinic activities to maintain minimum care of acute GM&S illness.

Although both the Hospital Outpatient Clinics and the Field Medical Clinics each provide both preventive and therapeutic services on an outpatient basis, only 16% of the services provided at the hospital are preventive, while 37% of the services provided at Field Medical Clinics are preventive.

Finally, although 63% of field clinic visits are therapeutic, one must remember that field clinics have been established in the more isolated Indian villages precisely because the inhabitants of these villages are prevented by distance or terrain from regular visits to hospital clinics. In these villages, every therapeutic visit can also be considered a preventive visit, since early treatment prevents progression and complication of the disease.

The following are specific examples of the major program activities which will be curtailed by this dramatic decrease in field medical services:

Communicable disease control

It has been shown that about 2% of contacts of tuberculosis cases develop the disease within 5 years. In FY 68, 540 active new cases of tuberculosis were diagnosed. These cases will have from 5 to 25 contacts per case for a total of 2700–13,500 contacts who require immediate and continued follow-up. If follow-up cannot be provided, at least 54 cases of active tuberculosis can be expected to develop among these contacts. Reduction in the tuberculosis control pro-

gram will inevitably result in higher tuberculosis morbidity and an increasing reservoir of active cases to spread the disease.

Measles is one of the most communicable of the infectious diseases. It is also a very serious disease among Indian and Alaska Native children due to the frequency and severity of its complications, notably pneumonia and encephalitis. By providing an aggressive measles immunization program, the Indian Health Service has been able to reduce the number of cases by two-thirds in the past five years. This progress will be lost as unimmunized infants enter the population at risk.

Trachoma is the leading cause of blindness among Indians. Approximately 30% of school age Indian children had the disease prior to the intensive trachoma control program initiated in FY 1967. The prevalence of the disease has been reduced through this intensive program to 7% in this age group. Past experience has shown that trachoma incidence rapidly increases in the absence of an intensive control program. Progress in controlling this serious eye disease will be lost as field health activities are cut back.

Maternal and child health and family planning

Preventive health programs in maternal and child health have received high priority. Good prenatal care and comprehensive health services for Indian infants are essential if their excessive morbidity and mortality are to be reduced. Evidence is also mounting that adequate prenatal care is related to a lowered incidence of mental retardation.

Success of the Indian Health Service MCH program can be seen in the 25% increase from FY 66 to FY 68 in Indian mothers receiving prenatal care, in the 20% decrease in complications of pregnancy, 10% decrease in prematurity rates (1965–1967) and the decrease in mortality from 50.3 infant deaths per 1,000 live births in 1960 to 34.5 in 1967.

Family planning is accepted as an essential to responsible parenthood and to the maximum growth and development of children. The percent of women of child-bearing age who have participated in family planning has increased from 9.2 in FY 66 to 28.5 in FY 68. During the same period births in Indian Health Service hospitals have decreased by 6.5 percent.

These activities are being severely restricted as the loss of IHS staff continues under the present personnel restrictions.

Mental health

The Indian people are not only subjected to most of the stresses of modern living but have the additional burden of cultural conflict. These factors have precipitated a diversity of social and personality conflicts and mental illnesses that result in high rates of suicides and accidents, excessive use of alcohol, family disorganization, child neglect, school dropouts and unemployment. The IHS community mental health programs are designed to combat these mental health problems through comprehensive programs stressing prevention. The success of this approach is shown in the reductions in the number of patients who must be sent away from their home community to a mental institution.

NUMBER OF ADMISSIONS TO STATE MENTAL HOSPITAL

Area service unit	Fiscal year 1966	Fiscal year 1967	Percent decrease
Navajo area	11	30	73
Bethel service unit	13	8	38
Kotzebue service unit	22	8	64

While these are small numbers upon which to base precise long-term predictions, it seems reasonable to conclude that continued efforts to improve mental health will result in a decrease of hospitalization in State Mental Hospitals for acute mental illness in those areas where we initiate a mental health program.

As a result of the present personnel restrictions, two areas (Portland and Billings), which were to have the initial phase of a mental health program, have been forced to postpone their mental health program at least until next fiscal year.

In one area (Aberdeen), the psychiatrist has left to join the faculty of Yale Medical School and cannot be replaced. Progress in this Area thus has been halted.

In four areas, needed professional mental health workers have not been hired. The loss of psychologists and support staff diminishes the impact of programs.

Public health nursing

Public Health Nurses are the major providers of home health services to Indian families. Their role is critical in maintaining continuity of care between the health care institutions and the home, in case finding, health teaching in the home, and in the preventive health programs identified above. The projected result of the present personnel restrictions will be a minimum reduction in services provided in homes, schools, and clinics of 7% in FY 69 as compared to FY 68.

This, however, only represents a minimal loss in services to be anticipated as a result of the "freeze." What is more likely to happen is that, as the loss of clinical nursing personnel continues and the demands for care of the sick increase, it will become necessary to draw additional public health nursing personnel away from the preventive program. Care of the sick and injured must have the highest priority and public health nursing personnel will of necessity be utilized to provide care. As this occurs, the reduction in preventive services will be even greater than indicated.

Nutrition

The poor nutritional status of the Indian and Alaskan Native has recently received national publicity and resultant Congressional concern. Nutritional deficiencies in this population have long been recognized by the Indian Health Service which has focused special efforts on the needs of nutritionally vulnerable groups—the infant and preschool child and woman in the child-bearing age. IHS nutritionists have been extending their skills through providing consultation and training to all health personnel and education to the Indians themselves.

New projects are now being introduced to support further improvement of the nutritional health of the Indian. These include the food stamp program; an increase in the variety and quantity of USDA commodity foods; nutritional studies; and the involvement of OEO workers, community health representatives and other non-professional aides in nutrition services.

Indian Health Service nutritionists are essential to the implementation and success of these endeavors. Yet one of the 13 nutritionists on duty June 30, 1968 has left the program and another vacancy is anticipated. Rather than increasing nutrition services to the anticipated FY 69 staffing of not less than 20, there will actually be a decrease of two positions. Two areas, including the Navajo reservation where inadequate nutrition is widespread, remain without any professional nutrition staff. Twenty-four percent of the Indian population received needed nutritional services in FY 66 and twenty-three percent in FY 68. Twenty percent are receiving services presently. With a staff increase to 20 nutritionists, 33% of the population would be provided these services.

Unless nutrition services for the Indian and Alaska Native, and consequently their nutritional health, can be strengthened, the morbidity and mortality from malnutrition itself, and from infectious and chronic diseases and other nutrition related health problems will remain high.

EFFECT OF DECREASE IN PREVENTIVE DENTAL SERVICES

The currently anticipated reduction in dental services due to the personnel restrictions include 5,000 topical fluoride (preventive) treatments in addition to 24,000 curative and other services. Topical fluoride treatments would prevent 40% of the tooth decay in the 5,000 individuals treated. This increase in decay will necessitate an increase in restorative care which cannot be provided with a reduction in manpower. These teeth must ultimately be extracted because dental decay caused an irreversible loss of dental tissue and eventual involvement of the pulp with pain and infection following. To maintain an adequate masticatory function and cosmetic effect it then becomes necessary to replace the extracted teeth with artificial appliances.

A Cost-Benefit-Analysis shows that the cost to construct a prosthetic appliance to replace a missing tooth is approximately 13 times greater than to fill it. The end result of loss of teeth is gross disfigurement which can never be completely corrected even by an artificial appliance.

It should be noted that one dental assistant will add approximately 33% to the services provided by a dentist. Two dental assistants will increase his capacity to provide care by more than 60%.

Therefore, a decrease in staff would greatly increase the backlog of need to a point from which the Indian Health Service has progressed several years ago. This fact is further complicated by the increase in the Indian and Alaska native population. It could take many years to return to the current level of dental health.

HEALTH EDUCATION

At present, 56% of the Service Units are provided with full time health education services. About 41% of all patients in all medical care facilities are provided organized educational services designed to maximize effectiveness of treatment, prevent recurrence and to prevent spread of diseases.

About 52% of the population at risk (community) receive organized education and information for motivation to reduce the risk. During FY 69 health education services were anticipated to provide organized programs for 65% of all service units, health education experience for 68% of all patients seen in IHS facilities for selected disease and injury problems, and preventive health education services to 70% of the population at risk from selected disease and injury conditions through organized community-based health education experience.

The personnel restrictions of PL 90–364 will permit no increase in IHS health education services this fiscal year and any loss of health education staff will further increase the disparity between need and services provided. By greatly intensifying efforts with present staff—this will probably hold the line at present level of operations.

The optimum level of operation is to provide full time health education services in all Service Units, provide all patients in all medical care facilities with organized health education to prevent recurrence and spread of disease, and to provide at least 80% of the target population (whole community) with intensified efforts in health education, information and learning experiences for motivation to reduce the risk from diseases and injury.

OFFICE OF ENVIRONMENTAL HEALTH WORKLOADS AND STAFFING SUMMARY

Sanitation facilities construction activities

Workloads in the Sanitation Facilities Construction activity are based on the level of appropriation and whether the funds are to construct facilities to serve existing homes

or to serve new housing constructed under one of the Federal or tribal housing programs. A comparison of the workload and staffing requirements for construction of the facilities within an 18-month to 2-year period after the appropriation follows:

WORKLOADS AND STAFFING—SANITATION FACILITIES CONSTRUCTION ACTIVITY

[Dollar amounts in millions]

Fiscal year	Workloads			Staffing		
	Number of project	Number of homes	Amount	Needs	Authorized	Deficiency
1966	67	6,500	$6.2	68	68	0
1968	125	7,400	10.5	111	106	5
1969	174	10,830	17.1	188	125	63

The table indicates that the SFC activity is 63 positions below the minimum staffing required to implement effectively the authorized construction activity on a timely basis. To accomplish the authorized program other methods (especially contractual) have been sought out and used. These methods are costing substantially more than the cost if our own staff were carrying out the work. These increased costs have resulted in reductions in the original number of homes to be served.

Any reduction in the on-duty staff that will result from personnel leaving the program, coupled with an inability to replace them, will further reduce the number of homes that can be served, or will delay construction beyond the normal 18-month to 2-year time to complete the authorized program. Should either of these developments take place, the Indian and Alaska Native tribes affected will most assuredly react strongly.

Environmental Health Services activities

Workloads in the Environmental Health Services activities are based on minimal services criteria for Indian and Alaska Native families and communities. The criteria include the necessity to provide technical assistance to Indian and Alaska Native families following the installation of basic sanitation facilities. These special continuing services are of utmost significance for the long term operation of installed facilities.

Workloads and staffing for these services are presented in the following table:

WORKLOADS AND STAFFING—ENVIRONMENTAL HEALTH SERVICES ACTIVITY

Fiscal year	Family and community services rendered	Family and community services required	Authorized [1]	Needed	Defici
1966	51,500	107,000	154	354	200
1968	83,100	130,000	192	380	188
1969	87,000	140,000	207	380	173

[1] Budget positions including prorata.

The staffing deficiencies in the authorized program cause serious delays in the provision of essential technical assistance to Indian and Alaska Native families and to community officials.* An example of these essential services is the provision of technical assistance to Indian families and communities on water supply and waste disposal facilities installed under PL 86–121. To the average urban or rural American, these facilities would generally be considered simple but to the typical Indian who has never had a water faucet, toilet, automatic water system, septic tank, etc., available to him before finds these installations very sophisticated and complex. From 1966 through the completion of facilities authorized in 1969 there will be nearly 25,000 homes receiving these complicated, little understood mechanical facilities. Experience dictates that the failure to provide adequate technical assistance to the recipients of the facilities can result in about 30% of the facilities having one or more inoperative components at any point in time. If timely assistance is not provided, these conditions rapidly lead to a complete breakdown and a subsequent need for major repairs or replacement of the facility. Therefore, any increase in the gap between needed and authorized staffing as a result of the inability to fill vacancies as they occur will further reduce the capability to deliver services to meet the essential needs of these disadvantaged people and contribute to the time required to accomplish the Indian Health Services' goal.

INDIAN HEALTH SERVICE PERSONNEL CHANGES—INDIAN HEALTH SERVICES APPROPRIATION

Month	Gross vacancies	Accessions	Net vacancies
July 1968	238	115	123
August 1968	115	46	69
September 1968	84	52	32
October 1968	86	43	43
November 1968	49	34	15
December 1968	20	17	3
January 1969	61	54	7
Total	653	361	29

S. 1692—INTRODUCTION OF CAMPAIGN FINANCE ACT

Mr. PEARSON. Mr. President, I introduce, for appropriate reference, a bill entitled "The Campaign Finance Act of 1969" which I first submitted 2 years ago to reform and revitalize the present system of financing campaigns for Federal office.

In the many months since this proposal was first brought forward 2 years ago the need for its enactment has been made still more urgent. The cost of being nominated and elected to high political office has always been great, but it is growing so rapidly in both absolute and relative terms that it is beginning to endanger the democratic beliefs upon which our Republic is based. Indeed, many feel the point has already been reached where a candidate must be either rich himself or have rich friends if he is to successfully seek political office, particularly when the costs of campaigning for these offices are often 100 times the salary the winner receives.

Mr. President, the reported campaign finance figures in recent years lend conclusive weight to this disturbing forecast. In 1964, for example, the 107 Republican and Democratic committees operating at the national level reported spending $34.8 million, more than twice the $17.2 million disbursed in 1956 and 39 percent more than the $25 million spent in 1960. And in the 4 years since this enormous increase was noted, spending at the national level doubled once again in 1968 to roughly $70 million. Clearly something must be done to broaden the base of political contributions if these tremendous costs are to be met in a healthy manner.

Perhaps the most shocking fact of all is that high as these figures are, they represent only a small portion of total political spending for these election years. They cover only expenditures by national level committees which filed reports with the Clerk of the House of Representatives. They do not reflect State and local expenditures on behalf of national party tickets, nor do they contain the amounts spent in senatorial and congressional elections. Furthermore, these figures also exclude expenditures made in connection with primary or nomination campaigns which can be every bit as expensive as a general election. Money spent by nonpartisan groups in support of voter registration drives and other political activities is similarly ignored.

In 1964, the last Presidential year for which complete figures have been compiled and analyzed, it is estimated that the total cost of all political races—National, State, and local was really around $200 million. In 1960, this figure was between $165 and $175 million. In 1956, the total was $155 million, and in 1952, it was $140 million. Thus, campaign expenses are steadily growing at the rate of $5 or $6 million a year.

Mr. President, these high and rapidly multiplying costs of running for public office have created serious dangers to our system of choosing our highest political officials. Because men must often be wealthy to consider seeking public office, many individuals of great ability but limited means never even try or if they do, are often defeated by better financed candidates. The cost to the American public of this lost talent cannot be measured.

Perhaps the most serious problem, however, created by the rising financial demands of public life is the need for nonwealthy candidates to rely upon a few rich individuals and pressure groups for their campaign funds. This reliance is unhealthy, for it reduces the importance of citizen participation in campaigns and limits the political independence of candidates.

Large donations, per se, are not unhealthy. Big contributors, be they indi-

* Services include all technical and consultative activities such as follow-up surveys of completed facilities, bacteriological sampling, food sanitation surveys, comprehensive surveys of institutions, individual homes and communities, rabies clinics, insect control actions and meetings with families and community leaders to promote good sanitary practices.

viduals or interest groups, often want no more than to donate to the democratic system under which they live. Others are merely using their contributions as a way to insure a full hearing for their views. Unfortunately, however, some expect direct favors for their donations and it is the need to rely on this type of contributor that often severely endangers the integrity of hard-pressed candidates of limited wealth. Even if their principles somehow remain uncompromised, the suspicion of collusion remains in the public mind and respect for our political system is lessened thereby.

Mr. President, this dangerous financial marriage of convenience means that we must move quickly to insure that the massive amounts of money needed by our political parties come from as wide a variety of sources as possible. Only in this way can we insure that our traditional political principles will be successfully maintained. Let us act, therefore, to broaden the contributions base and thus expand the power and influence of the individual citizen over our election system. Let us do more to bring even larger numbers of average citizens into the campaign process. And let us act carefully to frame our efforts in such a way as to assure the right of easy entry into the political arena of new and independent candidates and groups.

The Federal Government has a proper and, indeed, necessary role to play in achieving these goals. The Campaign Finance Act of 1969 is designed to enable the Government to meet this obligation by using Federal tax incentives to stimulate small- and medium-sized donations. Thus, the bill provides a 50-percent credit against Federal income tax payments for gifts up to $20 to candidates for Federal office and to State and National party central committees. An individual giving the maximum $20 would be able to subtract $10 from his final tax payment. A contributor would not be allowed to abuse this benefit by giving a number of $20 contributions to a variety of candidates and committees, receiving a partial tax credit for each such contribution. Only one such credit is permitted in any given year. A husband and wife filing a joint return would be permitted to claim a 50-percent credit for up to $40 in contributions.

In addition, the bill for a tax deduction of contributions up to a maximum of $500 a year per tax return. This measure is designed to complement the small gift tax credit by encouraging medium-sized donations. These donations are needed, of course, but any tax incentive designed to stimulate such gifts must be kept within reasonable limits if we are going to be able to maintain some controls of over the size of campaign contributions. The $500 ceiling proposed in this legislation would help provide that control.

Mr. President, both the partial tax credit and tax deduction incentives are needed. Though a contributor may not take advantage of both during the same year, he may freely choose whichever incentive yields the greatest personal benefit. Thus, by offering such a choice, the two incentive measures proposed here will stimulate a much broader spectrum of the body politic than would exclusive reliance on either one.

Many individuals have asked why the Federal Government should offer a material reward of any kind for an act of citizenship that should be readily forthcoming on a purely voluntary basis. There is much merit in such a question and the view it expresses. That is why, for example, I oppose any form of direct subsidy from the Federal treasury. Such a subsidy would completely break the link between the contributor—in the case, the taxpayer—and the candidate. This link is important, not only for philosophic reasons, but also because it is a useful way to forge a feeling of identity between the giver and the recipient that is likely to lead to still greater campaign involvement at all levels by the giver. And one of the greatest needs in American politics today is more participation in the process by the average citizen. But clearly some type of incentive is needed. Good citizenship should indeed be its own reward, but if we are to broaden the currently low level of general public participation in financing campaigns for Federal office, then obviously some stimulus must be provided. Obviously, the Government has as much reason to provide for the election of unobligated candidates as it has to encourage fundraising through the present system of tax deductions for contributions to health, educational, welfare, and religious programs. If corruption exists, in part it is due to a lack of citizen support for political candidates. The twin benefits proposed in the legislation introduced today would help encourage this needed citizen support and, equally important, it would do it in such a way as to preserve that precious link between contributor and candidate that lies at the heart of our democratic election process.

Mr. President, these incentives are limited by this legislation to candidates seeking Federal office. Much as I sympathize with the grave financial problems of candidates who seek State and local office, the fact is that the tax incentives provided by this bill are derived from the Federal Government and should apply only to Federal candidates if the proper political division of our republic is to be maintained. If local contributions for local candidates are to be encouraged, then it is the State, not the Federal tax laws which should be modified.

At every level political parties have not been as successful in raising funds, in part because they lack the social respectability of the more acceptable charity drives. The reason for this, unfortunately, is that political donations are often viewed with a journalistic eye and politics is considered a tainted profession that is the exclusive province of the very wealthy and the special interests.

The difficulty with this attitude, Mr. President, despite the fact that it is sometimes justified is that it often brings about the very situation it decries. Dynicism and disrespect are not the elements upon which to build a sound democracy. Public affairs should be the concern of every citizen and all should participate fully. Any attitude which hinders or discourages the development of this ideal is to be deplored. If our political system is to function equitably and efficiently, political office must not only be regarded as respectable, but it must also be considered in the highest tradition of public service and good citizenship.

The Campaign Finance Act allows the Federal Government to give official sanction to the practice of political giving by offering tax benefits for contributions. Political donations may thus gain a measure of respectability they now lack. In addition, if these measures were coupled with an educational campaign, they would go far toward eliminating the cynical view of public life which now denies the campaign contributions the acceptability enjoyed by charitable and educational donations.

The cost of general elections is considerable. But, a fact often overlooked is that the influence of money in primaries is even greater. These expenditures, which do not have to be reported under Federal law, can be tremendous—especially in our larger States. For example, it has been estimated that senatorial primary costs in California and New York alone can reach $1 million to $2 million.

As Alexander Heard, chancellor of Vanderbilt University once remarked:

> Money probably has its greatest impact in the choice of public officials in the shadowland of our politics where it is decided who will be a candidate for a party nomination and who will not. The effect of money in politics is probably more certain in determining who the candidates will be than in determining the outcome of the elections.

Thus, Mr. President, if we are to insure that our highest public offices are to be open to all men of ability and not just to men of means, candidates in primaries or for nomination as well as nominees must be permitted to draw upon the broad base of financial support which hopefully will be created by the tax benefits contained in this bill.

In 1952, approximately 3 million persons gave money to some party or candidate. In 1956, the figure was 8 million; in 1960, 10 million; and in 1964, roughly 12 million people made political contributions. The complete 1968 figures are not yet available.

Projections indicate that between 25 and 33 percent of the 57.3 million American households would contribute if the tax incentive were effectively publicized and full cooperation achieved. Thus, between 14 and 19 million contributions total a maximum of $280 to $380 million would be available for campaign use. Of this, the Government in effect—by virtue of the tax incentives—would pay half, or $140 to $190 million.

Mr. President, it is true these estimates are based on current figures and that claims for tax benefits will probably increase as the public becomes more familiar with the program. Nonetheless, it is unlikely that contributions will increase as dramatically as maximum projections would indicate, for many, when polled, who say they will contribute, often do not do so when confronted by a party solicitor.

Thus, the costs to the Federal Government of these incentives will not be prohibitive. Indeed, in terms of the benefits these tax measures will bring, the cost will be quite reasonable.

Mr. President, while these benefits will be considerable, greater public campaign support must not be encouraged without also establishing adequate safeguards against its misuse. We must be careful to provide an incentive for political participation, but not an opportunity for illegal gain.

Tax credits may be easily abused by unscrupulous individuals. Thus, some system of verification must be established if we are to avoid creating virtually unlimited possibilities for corruption. This verification can take various forms and the exact procedure can be determined after a thorough review of the alternatives.

Stimulating contributions is one way of solving the current campaign finance crisis. Others exist, of course, among them being programs designed to actually reduce the costs that are now imposed on candidates, particularly by the publically-regulated broadcast industry. I will deal with some of these alternatives in subsequent legislation.

But still another area of campaign finance activity is in need of reform, Mr. President. I am speaking, of course, about the hopelessly inadequate system we now employ for controlling and reporting political contributions and expenses. Merely to funnel large sums of money into the present political structure through any type of Federal incentive could prove self-defeating unless accompanied by meaningful reforms of our control and reporting system, which is 44 years old and wracked with inconsistencies and unenforceable provisions.

In general, our campaign finance laws are more honored in the breach than in the observance. Indeed, they have become so ineffective that the integrity of our political system itself is often thrown into question. The fact remains that the Federal Corrupt Practices Act and section 609 of title 18 of the United States Code simply have failed to control campaign financing.

For example, experience has shown that the present limitation of $3 million imposed by section 609 of title 18 of the United States Code on the annual expenditures of an interstate political committee in no way limits national campaign spending. It merely leads to a proliferation of such committees, for the law imposes no limit on the number of committees which may receive funds up to the $3 million ceiling.

For example, in 1960, there were 70 national level committees in operation. By 1964, this figure had increased to 107.

In addition, Mr. President, committees which operate exclusively within one State are not subject to any Federal reporting regulations at all. Thus, there is a wide discrepancy between reported campaign expenditures and total disbursements.

The Federal Corrupt Practices Act limits a candidate for U.S. Senator to $25,000 in campaign expenses and a candidate for U.S. Representative to $5,000. These figures are patently ridiculous and are easily circumvented by establishing a number of ostensibly independent committees to support the candidate's cause.

Similarly, an individual is legally prohibited from giving more than $5,000 to any one committee in a given year. Yet, he may make as many donations as there are committees supporting the candidate.

Mr. President, this bill would establish uniform reporting requirements for all such committees while removing any artificial limits on spending by individuals and committees alike. Past experience would indicate that merely tightening spending limitations would have little or no effect on actual disbursements and would prove to be administratively burdensome.

As the President's Commission on Campaign Costs said in its 1962 report on financing presidential campaigns:

> Full and effective disclosure is the best way to control excessive contributions, on the one hand, and unlimited expenditures on the other. Publicity has a cleansing and policing power far more powerful than that of limitations.

Under the provisions of the bill, every committee which received contributions of $100 or more would be required to report them to a Registry of Election Finance in the General Accounting Office. All committee expenditures of $100 or more would also have to be reported to the Registry. In addition, candidates, whether successful or not, would be required to make full disclosure of their campaign gifts to the Registry.

Mr. President, not only would penalties be levied against anyone who failed to comply with these provisions, but the Registry would be required to issue periodic reports summarizing the information it received, thus making it available for public consumption.

Moreover, while there would be no limit on the amount of money an individual could contribute to a committee or candidate, any person who donated more than $2,500 would have to file a report on his contributions with the registry.

In addition, this bill would prevent the selling of campaign souvenirs at more than $5 each. Thus, campaign magazines could not longer be used as ill-disguised devices for eliciting large amounts of money camouflaged as advertising from groups and corporations which otherwise would not be able to contribute.

Last year the Senate passed an election reform bill designed to meet some of these problems. It did not go as far as I would like and was not as comprehensive as the proposal I submit today, but at least it represented a start. Unfortunately, this bill failed to clear the other body and thus we must start from the beginning again. The combined tax incentive, reporting, and control program offered by the Campaign Finance Act just introduced will, I hope, provide the basis for the thoroughgoing reforms that the system obviously needs and which the American people have a right to demand.

Mr. President, no man, no matter how humble his means, should be denied the opportunity to hold elective office. Today, this is not the case. The exact nature of the reform needed is a matter of great controversy. Nonetheless, through the swirl of pros and cons, one fact is clear. As Erwin Canham of the Christian Science Monitor phrased it:

> Around the neck of every American candidate hangs the terrible burden of raising money. It is a tin cup that weighs a ton.

I ask unanimous consent that the bill be printed in the RECORD.

The ACTING PRESIDENT pro tempore. The bill will be received and appropriately referred; and, without objection the bill will be printed in the RECORD.

The bill (S. 1692) to provide for an income tax credit or deduction for certain political contributions, to revise the laws relating to corrupt election practices, and for other purposes, introduced by Mr. PEARSON, was received, read twice by its title, referred to the Committee on Finance, and ordered to be printed in the RECORD, as follows:

S. 1692

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Campaign Finance Act of 1967".

TITLE I—TAX TREATMENT OF POLITICAL CONTRIBUTIONS

TAX CREDIT

SEC. 101 (a) Subpart A of part IV of subchapter A of chapter 1 of the Internal Revenue Code of 1954 (relating to credits against tax) is amended by renumbering section 40 as section 41, and by inserting after section 39 the following new section:

"SEC. 40. POLITICAL CONTRIBUTIONS.

"(a) GENERAL RULES.—In the case of an individual, there shall be allowed, as a credit against the tax imposed by this chapter for the taxable year, an amount equal to one-half of the political contributions (as defined in subsection (c)) payment of which is made by the taxpayer within the taxable year.

"(b) LIMITATIONS.—

"(1) AMOUNT.—The credit allowed by subsection (a) shall not exceed $10 for any taxable year, except that in the case of a husband and wife who file a joint return under section 6013 for the taxable year, the credit shall not exceed an aggregate of $20.

"(2) APPLICATION WITH OTHER CREDITS.—The credit allowed by subsection (a) shall not exceed the amount of the tax imposed by this chapter for the taxable year reduced by the sum of the credits allowable under section 33 (relating to foreign tax credits), section 35 (relating to partially tax-exempt interest), section 37 (relating to retirement income), and section 38 (relating to investment in certain depreciable property).

"(3) VERIFICATION.—The credit allowed by subsection (a) shall be allowed, with respect to any political contribution, only if such political contribution is verified in such manner as the Secretary or his delegate shall prescribe by regulations.

"(c) DEFINITIONS.—For purposes of this section and section 218—

"(1) POLITICAL CONTRIBUTION.—The term 'political contribution' means a contribution or gift to—

"(A) the national committee of a qualified political party;

"(B) the senatorial or congressional campaign committee of a qualified political party, not to exceed one committee for each House of the Congress, as designated by the national committee of such party;

"(C) the State committee of a qualified political party as designated by the national committee of such party;

"(D) a local committee of a qualified political party as designated by the State political committee of such party; or

"(E) an individual who is a candidate for President or Vice President of the United States or Senator or Representative in or Resident Commissioner to the Congress of the United States in any general, special, or primary election in any State, or in any national, State, or local convention of a qualified political party, for use by such individual to further his candidacy for such office.

"(2) QUALIFIED POLITICAL PARTY.—The term 'qualified political party' means—

"(A) in the case of contributions made during the taxable year of the taxpayer in which the electors of President and Vice President are chosen, a political party presenting candidates or electors for such offices on the official election ballot of ten or more States, or

"(B) in the case of contributions made during any other taxable year of the taxpayer, a political party which met the qualifications described in subparagraph (A) of this paragraph in the last preceding election of a President and Vice President.

"(3) STATE.—The term 'State' includes the Commonwealth of Puerto Rico, any territory or possession of the United States, and the District of Columbia.

"(d) ELECTION TO TAKE DEDUCTION IN LIEU OF CREDIT.—This section shall not apply in the case of any taxpayer who, for the taxable year, elects to take the deduction provided by section 218 (relating to deductions for political contributions). Such election shall be made in such manner and at such time as the Secretary or his delegate shall prescribe by regulations.

"(e) CROSS REFERENCES.—

"For disallowance of credits to estates and trusts, see section 642(a)(3)."

(b) The table of sections for such subpart A is amended by striking out the last item and inserting in lieu thereof

"Sec. 40. Political contributions.

"Sec. 41. Overpayments of tax."

(c) Section 642(a) of the Internal Revenue Code of 1954 (relating to credits against tax for estates and trusts) is amended by adding at the end thereof the following new paragraph:

"(3) POLITICAL CONTRIBUTIONS.—An estate or trust shall not be allowed the credit against tax for political contributions provided by section 40."

DEDUCTION FROM GROSS INCOME

SEC. 102 (a) Part VII of subchapter B of chapter I of the Internal Revenue Code of 1954 (relating to additional itemized deductions for individuals) is amended by renumbering section 218 as section 219 and by inserting after section 217 the following new section:

"SEC. 218. POLITICAL CONTRIBUTIONS.

"(a) ALLOWANCE OF DEDUCTION.—In the case of an individual, there shall be allowed as a deduction any political contribution (as defined in section 40) payment of which is made by the taxpayer within the taxable year.

"(b) LIMITATIONS.—

"(1) AMOUNT.—The deduction under subsection (a) shall not exceed $500 for any taxable year.

"(2) VERIFICATION.—The deduction under subsection (a) shall be allowed, with respect to any political contribution, only if such political contribution is verified in such manner as the Secretary or his delegate shall prescribe by regulations.

"(c) ELECTION TO TAKE CREDIT IN LIEU OF DEDUCTION.—This section shall not apply in the case of any taxpayer who, for the taxable year, elects to take the credit against tax provided by section 40 (relating to credit against tax for political contributions). Such election shall be made in such manner and at such time as the Secretary or his delegate shall prescribe by regulations.

"(d) CROSS REFERENCE.—

"For disallowance of deduction to estates and trusts, see section 642(i)."

(b) The table of sections for such part VII is amended by striking out the last item and inserting in lieu thereof

"Sec. 218. Political contributions.

"Sec. 219. Cross references."

(c) Section 642 for the Internal Revenue Code of 1954 (relating to special rules for credits and deductions for estates and trusts) is amended by redesignating subsection (i) as subsection (j), and by inserting after subsection (h) the following new subsection:

"(i) POLITICAL CONTRIBUTIONS.—An estate or trust shall not allowed the deduction for political contributions provided by section 218."

EFFECTIVE DATE

SEC. 103. The amendments made by this title shall apply only to taxable years beginning after December 31, 1967.

TITLE II—AMENDMENTS TO CRIMINAL CODE

DEFINITIONS

SEC. 201. Section 591 of title 18 of the United States Code is amended to read as follows:

"§ 591. Definitions

"When used in sections 597, 599, 602, 608, and 610 of this title—

"(a) The term 'election' means (1) a primary or run-off primary election, or a convention, or a caucus of a political party, held to nominate a candidate, and (2) a general or special election.

"(b) The term 'candidate' means—

"(1) an individual who has taken the action necessary under the law of a State to qualify him for nomination for election, or for election, to the office of Senator or Representative in, or Resident Commissioner to, the Congress of the United States, or, if the State has no such law, an individual who has received contributions or made expenditures, or who has knowledge that any other person has received contributions or made expenditures, with a view to bringing about such individual's nomination for election, or election, to such office; or

"(2) an individual who has received contributions or made expenditures, or who has knowledge that any other person has received contributions or made expenditures, with a view to bringing about such individual's nomination for election, or election, to the office of President or Vice President.

"(c) The term 'political committee' includes any national, senatorial, congressional, State, or local committee, association, or organization or any branch or subsidiary of such a committee, association, or organization which accepts contributions or makes expenditures for the purpose of influencing or attempting to influence in any manner whatsoever the result of an election of a candidate or candidates, and which receives contributions or makes expenditures in the aggregate of $100 or more.

"(d) The term 'contribution' includes a gift, subscription, loan, advance, or deposit of money, or anything of value, or any transfer of funds between committees, and includes a contract, promise, or agreement to make a contribution, whether or not legally enforcible and includes a donation of services of a person employed by the donor if the value of such services exceeds $100.

"(e) The term 'qualified contributor' means any person other than a person who is prohibited by any statute of the United States from making contributions.

"(f) The term 'expenditure' includes a payment, distribution, loan, advance, deposit, or gift of money, or anything of value, or transfer of funds between committees, and includes a contract, promise, or agreement to make an expenditure, whether or not legally enforcible.

"(g) The term 'person' includes an individual, partnership, committee, association, corporation, and any organization or group of such persons.

"(h) The term 'State' includes the Commonwealth of Puerto Rico, any territory or possession of the United States, and the District of Columbia."

POLITICAL PURCHASES

SEC. 202. Section 608 of title 18 of the United States Code is amended to read as follows:

"§ 608. Limitations on political purchases

"(a) Whoever, being a candidate, political committee, or national political committee, sells to anyone other than a candidate, political committee, national political committee, or qualified contributor, any goods, commodities, advertising, or articles of any kind or any services, shall be fined not more than $5,000 or imprisoned not more than five years, or both.

"(b) Whoever, other than a candidate, political committee, national political committee, or qualified contributor, buys from a candidate, political committee, or national political committee any goods, commodities, advertising, or articles of any kind or any services, shall be fined not more than $5,000 or imprisoned not more than five years, or both.

"(c) Subsections (a) and (b) shall not interfere with the usual and known business, trade, or profession of any candidate.

"(d) In all cases of violations of this section by a partnership, committee, association, corporation, or other organization or group of persons, the officers, directors, or managing heads thereof who knowingly and willfully participate in such violation shall be punished as herein provided."

REPEAL

SEC. 203. Section 609 of title 18 of the United States Code is repealed.

CONTRIBUTIONS BY CONTRACTORS

SEC. 204. Section 611 of title 18 of the United States Code is amended to read as follows:

"§ 611. Contributions by corporations, firms, or individuals contracting with the United States

"Whoever, including a corporation, enters into any contract with the United States or any department or agency thereof, either for the rendition of personal services or furnishing any material, supplies, or equipment to the United States or any department or agency thereof, or selling any land or building to the United States or any department or agency thereof, if payment for the perform-

ance of such contract or payment for such material, supplies, equipment, land, or building is to be made in whole or in part from funds appropriated by the Congress, during the period of negotiation for, or performance under such contract or furnishing of material, supplies, equipment, land, or buildings, directly or indirectly makes any contribution of money or any other thing of value, or promises expressly or impliedly to make any such contribution, to any political party, committee, or candidate for public office or to any person for any political purpose or use; or

"Whoever knowingly solicits any such contribution from any such person, for any such purpose during any such period—

"Shall be fined not more than $5,000 or imprisoned not more than five years, or both."

CONFORMING AMENDMENT

SEC. 205. So much of the sectional analysis at the beginning of chapter 29 of title 18 of the United States Code as relates to sections 609 and 611 is amended to read:

"609. Repealed.
"611. Contributions by corporations, firms, or individuals contracting with the United States."

TITLE III—CORRUPT FEDERAL ELECTION PRACTICES

DEFINITIONS

SEC. 301. As used in this title—

(a) The term "election" means (1) a primary or runoff primary election, or a convention, or a caucus of a political party, held to nominate a candidate, and (2) a general or special election.

(b) The term "candidate" means—

(1) an individual who has taken the action necessary under the law of a State to qualify him for nomination for election, or for election, to the office of Senator or Representative in, or Resident Commissioner to, the Congress of the United States, or, if the State has no such law, an individual who has received contributions or made expenditures, or who has knowledge that any other person has received contributions or made expenditures, with a view to bringing about such individual's nomination for election, or election, to such office; or

(2) an individual who has received contributions or made expenditures, or who has knowledge that any other person has received contributions or made expenditures, with a view to bringing about such individual's nomination for election, or election, to the office of President or Vice President.

(c) The term "political committee" includes any National, State, senatorial, congressional, or local committee, association, or organization or any branch or subsidiary of such a committee, association, or organization which accepts contributions or makes expenditures for the purpose of influencing or attempting to influence in any manner whatsoever the result of an election of a candidate or candidates, and which receives contributions or makes expenditures in the aggregate of $100 or more.

(d) The term "contribution" includes a gift, subscription, loan, advance, or deposit of money, or anything of value, or any transfer of funds between committees, and includes a contract, promise, or agreement to make a contribution, whether or not legally enforcible and includes a donation of services of a person employed by the donor if the value of such services exceeds $100.

(e) The term "expenditure" includes a payment, distribution, loan, advance, deposit, or gift of money, or anything of value, or transfer of funds between committees, and includes a contract, promise, or agreement to make an expenditure, whether or not legally enforcible.

(f) The term "person" includes an individual, partnership, committee, association, corporation, and any organization or group of such persons.

(g) The term "State" includes the Commonwealth of Puerto Rico, any territory or possession of the United States, and the District of Columbia.

REGISTRY OF ELECTION FINANCE

SEC. 302. (a) There is created in the General Accounting Office a Registry of Election Finance, hereafter referred to as the "Registry."

(b) The Registry shall be headed by a Registrar of Election Finance, hereafter referred to as the "Registrar", who shall be appointed by the Comptroller General of the United States without regard to the provisions of title 5, United States Code, governing appointments in the competitive service and may be removed by him at will.

(c) The Registrar shall perform such duties as may be delegated or assigned to him by regulations or orders of the Comptroller General. The Comptroller General may designate an employee of the General Accounting Office to act as Registrar during the absence or incapacity of, or during a vacancy in the office of the Registrar.

(d) All officers and employees of the General Accounting Office serving in the Registry other than the Registrar, shall be appointed under the provisions of title 5, United States Code, governing appointments in the competitive service and shall be compensated in conformity with the provisions of chapter 51 and subchapter III of chapter 53 of such title relating to classification and General Schedule pay rates.

(e) Section 5315 of title 5, United States Code, is amended by adding at the end thereof the following:

"(78) Registrar of Election, Finance, General Accounting Office."

ORGANIZATION OF POLITICAL COMMITTEES

SEC. 303. (a) Every political committee shall have a chairman and a treasurer. No contribution and no expenditure for the purpose of influencing a nomination or an election shall be accepted or made by or on behalf of a political committee at a time when there is a vacancy in the office of chairman or treasurer thereof. No expenditure shall be made for or on behalf of a political committee without the authorization of its chairman or treasurer, or their designated agents.

(b) Every person who receives a contribution for a political committee shall, on demand of the treasurer, and in any event within five days after the receipt of such contribution, render to the treasurer a detailed account thereof, including the amount, the name and address of the person making such contribution, and the date on which received.

(c) All funds of a political committee shall be kept separate from other funds.

(d) It shall be the duty of the treasurer of a political committee to keep a detailed and exact account of—

(1) all contributions made to or for such committee;

(2) the name and address of every person making any contribution, and the date and amount thereof;

(3) all expenditures made by or on behalf of such committee; and

(4) the name and address of every person to whom any expenditure is made, and the date and amount thereof.

(e) It shall be the duty of the treasurer to obtain and keep a receipted bill, stating the particulars, for every expenditure made by or on behalf of a political committee of $100 or more in amount and for any such expenditure in a less amount, if the aggregate of expenditures to the same person in any year exceeds $100. The treasurer shall preserve all receipted bills and accounts required to be kept by this section for periods of time to be determined by the Comptroller General in accordance with published regulations.

REGISTRATION AND STATEMENTS OF POLITICAL COMMITTEES

SEC. 304. (a) Each political committee which anticipates receiving contributions or making expenditures in the aggregate of $100 or more in any calendar year for the purpose of influencing or attempting to influence in any manner whatsoever the nomination or election of a candidate or candidates shall, within ten days after its organization, file with the Registry a statement of organization. Each such political committee in existence at the date of enactment hereof shall file a statement of organization with the Registry at such time as prescribed by the Comptroller General.

(b) The statement or organization shall include—

(1) the name and address of the political committee;

(2) the names, addresses, and relationships of affiliated or connected organizations;

(3) the area, scope, or jurisdiction of the political committee;

(4) the name, address, and position of the custodian of books and accounts;

(5) the name, address, and position of other principal officers, including officers and members of the finance committee, if any;

(6) the name, office sought, and party affiliation of each candidate whom the political committee is supporting; or, if the political committee is supporting the entire ticket of any party, the name of the party;

(7) a statement whether the organization is a continuing one;

(8) what disposition of residual funds will be made in the event of dissolution;

(9) a listing of all banks, safety deposit boxes, or other repositories used;

(10) a statement whether the political committee is required by law to file reports with State or local officer, and if so, the names, addresses, and positions of such persons; and

(11) such other information as shall be required by the Comptroller General by published regulation.

(c) Any change in information previously submitted in a statement of organization shall be reported to the Registry within a ten-day period following the change.

(d) Any political committee which, after having filed one or more statements of organization, disbands or determines it will no longer receive contributions or make expenditures shall so notify the Registry.

REPORTS BY POLITICAL COMMITTEES

SEC. 305. (a) At the times specified below, the treasurer of a political committee shall file with the Registry, on forms prescribed by the Comptroller General, a report containing the information required by subsection (b):

(1) Between the 10th and 20th days of June and September in each year;

(2) On the fifteenth day and on the fifth day, next preceding the date on which is held an election with respect to which such political committee has made expenditures; and

(3) On the 1st day of January of each year. Such statements shall be cumulative during the calendar year to which they relate, but where there has been no change in an item reported in a previous statement during such year, only the amount need be carried forward. The statement filed on the 1st day of January shall cover the preceding calendar year. Where no contributions or expenditures have been accepted or made within a calendar year, the treasurer of a political committee need not file a statement with respect to such year.

(b) Each report under this section shall disclose, complete as of the day next preceding the date of filing—

(1) the amount of cash on hand at the beginning of the reporting period;

(2) the name and address of each person who has made one or more contributions to

or for such committee (including the purchase of tickets for events such as dinners, luncheons, rallies, and similar fundraising events), in the aggregate amount or value, within the calendar year, of $100 or more, together with the amount and date of such contributions;

(3) the total sum of individual contributions (as defined in section 301(d)) made to or for such committee during the reporting period and not reported under paragraph (2);

(4) the name and address of each political committee or candidate from which the reporting committee received, or to which that committee made, any transfer of funds, together with the amounts and dates of all such transfers;

(5) each loan to or from any person, together with the names and addresses of the lender and endorsers, if any, and the date and amount of such loan;

(6) the total amount of proceeds from (A) the sale of tickets to each dinner, luncheon, rally, and other fundraising event; (B) mass collections made at each such event; and (C) sales of items such as campaign pins, buttons, hats, ties, literature, and similar materials;

(7) each contribution, rebate, refund, or other receipt not otherwise listed under paragraphs (2) through (6);

(8) the total sum of all receipts by or for such committee during the reporting period;

(9) the name and address of each person to whom an expenditure or expenditures have been made by such committee within the calendar year in the aggregate amount or value of $100 or more, and the amount, date, and purpose of each such expenditure;

(10) the name and address of each person to whom an expenditure for personal services, salaries, and reimbursed expenses of $100 or more has been made, and which is not otherwise reported, including the amount, date, and purpose of such expenditure;

(11) the total sum of expenditures made by such committee during the calendar year; and

(12) such other information as shall be required by the Comptroller General by published regulation.

(c) No contribution or expenditure need be reported under this section which is made solely for the purpose of influencing the election of a person or persons seeking State or local office and from which no benefit will accrue to any candidate as herein defined.

(d) Debts or unpaid bills in the single amount or value of $100 or more which are incurred during a campaign for election, by or on behalf of the candidate, and which remain unpaid at the end of forty-five days following the date of the election, shall be listed separately on the first postelection report and shall be kept current on all subsequent reports until the debt is retired. There shall also be listed the total amount of debts and unpaid bills of less than $100.

(e) A national, senatorial, congressional, State, or county committee of a national political party, of which there shall not be designated more than one for each party for each such political unit, need not file separate reports for candidates supported, but may file the information required by this section at one time with respect to its entire activities for the period covered by the report.

REPORTS BY CONTRIBUTORS

SEC. 306. Every person (other than a political committee) who, singly or together with the members of his immediate family, makes contributions to a political committee, or makes other contributions or expenditures for the purpose of influencing the nomination or election of a candidate, aggregating in all more than $2,500 within a calendar year, shall file with the Registry, at such times and in such form as shall be prescribed by the Comptroller General, a report of such contributions and expenditures. For the purposes of this section, the term "members of his immediate family" includes his spouse and a child, parent, grandparent, brother, or sister of the candidate and any of their spouses.

REPORTS BY CANDIDATES

SEC. 307. (a) Every candidate, during the period he receives or expends funds on behalf of his candidacy, shall file with the Registry, on a form to be prescribed by the Comptroller General, reports of his receipts and expenditures made for the purpose of influencing his election. Such reports shall be filed on the same date as are specified for political committees to file. Such reports shall contain a correct and itemized detailed report of contributions received and expenditures made by him in aid or support of his activities as a candidate, or for the purpose of influencing his election, in the same manner as required of the treasurer of a political committee by section 305, and shall include amounts expended from his own funds and amounts received or expended by his immediate family (as defined in section 306).

(b) The reports required to be filed by subsection (a) shall be cumulative, but where there has been no change in an item reported in a previous report, only the amount need be carried forward.

REQUIREMENTS AND REGULATIONS

SEC. 308. (a) A report or statement required by this title to be filed by a treasurer of a political committee, by a candidate, or by any other person, shall be verified by the oath or affirmation of the person filing such report or statement, taken before any officer authorized to administer oaths.

(b) A copy of a report or statement shall be preserved by the person filing it for a period of time to be designated by the Comptroller General in a published regulation.

(c) The Comptroller General shall prescribe and publish such regulations as he shall determine to be required to carry into effect the provisions of this Act.

DUTIES OF THE COMPTROLLER GENERAL

SEC. 309. It shall be the duty of the Comptroller General—

(1) to develop prescribed forms for the making of the reports and statements required by this title;

(2) to prepare and publish a manual setting forth recommended uniform methods of bookkeeping and reporting for use by persons required to make reports and statements required by this title;

(3) to develop a filing, coding, and cross-indexing system consonant with the purposes by this title;

(4) to make the reports and statements filed with him available for public inspection and copying during regular office hours, and to make copying facilities available;

(5) to preserve such reports and statements for a period of ten years from date of receipt;

(6) to prepare and publish, within ten working days after the 20th day of June and September, and after the 1st of January, of each year, and within three calendar days after the due dates of the preelection reports, summaries of the respective reports received; such summaries shall contain, in addition to such other information as the Comptroller General may determine, compilations disclosing the total receipts and expenditures appearing in each report by categories of amounts as he shall determine, and shall also include the name and address, and amount of contribution of each person listed alphabetically, shown to have contributed the sum of $100 or more; and such summaries shall be grouped according to candidates and parties;

(7) to prepare and publish an annual report including compilations of (A) total reported contributions and expenditures for all candidates, political committees, and other persons during the year; (B) total amounts expended according to such categories as the Comptroller General shall determine and broken down into candidate, party, and nonparty expenditures; (C) total amounts contributed according to such categories of amounts as the Comptroller General shall determine; and (D) aggregate amounts contributed by any contributor shown to have contributed the sum of $100 or more during any calendar year;

(8) to prepare and publish from time to time special reports comparing the various totals and categories of contributions and expenditures made with respect to preceding elections;

(9) to prepare and publish such other reports as he may deem appropriate;

(10) to assure wide dissemination of summaries and reports;

(11) to make from time to time audits and field investigations with respect to reports and statements filed under the provisions of this title, and with respect to alleged failures to file any report or statement required under the provisions of this title;

(12) to report suspected violations of law to the appropriate law enforcement authorities; and

(13) to prescribe rules and regulations to carry out the provisions of this title.

ADVISORY BOARD

SEC. 310. (a) There is hereby established a bipartisan advisory board to be known as the Advisory Board of the Registry of Election Finance, hereafter referred to as the "Board". The Board shall be composed of twelve members at least half of whom shall not be in the employ of the United States. The President and the Comptroller General shall each nominate two members; the majority leader of the Senate, the minority leader of the Senate, the Speaker of the House of Representatives, and the minority leader of the House of Representatives shall each nominate two members, one of whom shall be a Member of Congress. The Comptroller General shall receive such nominations and shall appoint the members of the Board. The Board shall select a Chairman from among its members. A member of the Board shall serve for a term of two years and may serve for more than one term. If for any reason a member of the Board shall fail to serve a complete term, his successor shall be nominated by the official who nominated such member and the successor shall be appointed by the Comptroller General to serve the unexpired term.

(b) The Board herein established shall be constituted not later than ninety days following the appointment of the Registrar.

(c) The Board shall advise and make recommendations to the Comptroller General and to the Congress with respect to (1) the means for effectively publicizing the information submitted in the reports and statements required by this title, (2) any need for legislation, and (3) such other matters as the Comptroller General or the Board may determine.

(d) Members of the Board, while attending meetings or conferences of the Board or otherwise serving at the request of the Comptroller General, shall be entitled to receive compensation at a rate to be fixed by him but not exceeding $75 per diem, including traveltime, and while away from their homes or regular places of business they may be allowed travel expenses, including per diem in lieu of subsistence, as authorized by section 5703 of title 5, United States Code, for persons in the Government service employed intermittently.

PENALTY

SEC. 311. (a) Except as provided by subsection (b), whoever violates any provision of this title shall be fined not more than $1,000, or imprisoned not more than one year, or both.

(b) Whoever willfully violates any provision of this title shall be fined not more than $10,000 and imprisoned not more than two years.

SAVING PROVISION

SEC. 312. This title shall not be construed to annul the laws of any State relating to the nomination or election of candidates, unless directly inconsistent with the provisions of this part, or to exempt any candidate from complying with such State laws.

REPEAL

SEC. 313. The Federal Corrupt Practices Act of 1925 (2 U.S.C. 241 et seq.) is repealed.

S. 1693—INTRODUCTION OF A BILL TO ESTABLISH A NATIONAL COMMISSION ON FEDERAL TAX SHARING

Mr. NELSON. Mr. President, during the 89th and 90th Congresses close to 200 pieces of legislation were introduced to provide a system of Federal-State tax sharing.

In January 1969 President Nixon's task force on urban affairs recommended a system of tax sharing, as did the National Commission on Urban Problems, appointed in 1967 by President Johnson and chaired by former Senator Douglas.

Tax sharing between the Federal and State governments is clearly an important issue today and will become more important in the future.

Throughout the United States, Democratic and Republican legislators and leaders are vigorously supporting plans to solve State and local fiscal problems by sharing Federal revenues.

A multiplicity of proposals already have been made, and many more are on the way. A monumental partisan contest is underway to see which political party gets the credit for helping the States and cities the most.

There are serious reasons for this national phenomenon. The needs of State and local governments are growing faster than their revenues. At the same time, the field of the Federal income tax is growing more rapidly.

It would be unrealistic to believe that a tax sharing bill will be enacted during the 91st Congress. Federal-State tax sharing is incredibly complicated and it would be irresponsible for the Congress to rush a plan through without exhaustive consideration. The enormous expenditures for the Vietnam war have not been stopped and the end is not in sight. We are told that the administration will favor retention of the tax surcharge beyond June 30 to maintain the Nation's fiscal balance, while it undertakes an open-ended spending commitment to a new missile program. This, then, is obviously not the year in which a new, innovative tax sharing plan will become law.

Our responsibility today is to determine what we can do in 1969 to begin deliberations so that a tax sharing plan can be enacted in the near future, when the current fiscal crisis has abated.

I believe the answer is to create a National Commission on Tax Sharing to work out the details of such a plan and report back to Congress in 1971.

THE STATES' PROBLEM

When I was Governor of Wisconsin from 1959 to 1963, I was constantly aware of the fact that State and local governments have increasing difficulty in raising necessary revenues.

I recognize the need for some kind of sharing of tax dollars between the huge and powerful Federal Government, with its growing revenue sources, and the State units of government.

It is almost impossible in many instances for the legislatures, city councils, and county boards to raise taxes to pay for vital State services, especially in the fields of education, health, and welfare.

Too often, Governors, State legislatures, mayors, and city councils, facing the choice of a tax increase or a cut in vital programs, must sadly choose the latter. Local and State governments sometimes are unable to discharge their responsibilities.

What is the answer to this problem? I do not believe any one person knows precisely—nor does any one group of economists, nor any one political party, nor does any group of Federal or State officials.

The riddle of the financing of State and local governments has no simple answer.

But this does not mean that we should not look at the problem of revenue sharing. It convinces me, however, that no plan we will see or hear about in the opening months of this Congress will be the ultimate plan we will want to approve.

BASIC CONCEPTS OF TAX SHARING

Generally, all proponents of revenue sharing favor some kind of plan which returns money to the States after it has been collected by the Federal Government.

Block grants were first used in 1836 during the Jackson administration and represented even then a radical departure from the conventional method of disbursing Federal aid. The disbursement of $28 million to the States under the terms of the Surplus Distributions Act of 1836 represents the only instance in U.S. history when Federal funds have been granted to the States without conditions governing the use of the funds.

There are a few instances now where some Federal funds are returned directly to a few States for education and road aids. These are derived to begin with from those same States in the form of sale of public lands and the sharing of grazing receipts.

Since 1836, therefore, this country has made no move to enact any other method of tax sharing as we are now defining the term.

In 1960, Walter Heller, then chairman of the department of economics of the University of Minnesota, proposed that rising Federal revenues be distributed to State and local governments with little or no strings attached.

This recommendation did not get serious attention until the spring of 1964, but other pressing matters of fiscal nature prevented this proposal from receiving congressional consideration. The tax reduction bill of that year was one important roadblock, and also because the Federal budget had been running chronic deficits since 1960. Heller based his plan on the supposition that the budget would have surpluses for the next 2 years and would, therefore, make the proposal possible.

The Democratic platform of 1964 also stated that its candidates would further "development of fiscal policies which could provide revenue sources to hard-pressed State and local governments to assist them with their responsibilities."

The Republican candidate for President in 1964 also embraced this idea by recommending that a portion of Federal income taxes be returned to the States and that these governments be given a larger share of revenues derived from inheritance taxes.

In a statement issued on October 28, 1964, President Johnson declared the intention of the administration to carry out the pledge of the Democratic Party. He proposed that the Federal Government should make available to State and local governments "some part of our great and growing Federal tax revenues—over and above existing aids."

President Johnson then appointed a task force composed of individuals from government and business and headed by the distinguished Joseph A. Pechman, director of economics at Brookings Institution, to study the possibility of setting aside a fixed percentage of Federal revenues each year in a trust fund for distribution to State and local governments.

TWO BASIC CONSIDERATIONS ARE INVOLVED

First, when this plan was suggested in 1964, the rapid growth of the gross national product and the closing down of military bases prompted thoughts of budgetary surplus by the end of fiscal year 1966. It was feared that a surplus before full employment of manpower and resources had been achieved would cause "fiscal drag." This in turn would retard the then current high rate of business expansion.

The second factor, and still the most important one, is that State and local governments are badly in need of new revenue sources for their ever-growing needs in schools, colleges, health services, and welfare problems.

State and local expenditures are still growing at an expanded rate. During the 10-year period from 1957–67 State and local governmental expenditures rose from $47.6 to $106.7 billion; a rise of $59.1 billion. Over 54 percent of this increase was expended on programs of health, education, and welfare. State and local revenues rose from $38.2 to $91.6 billion during the same period; a rise of $53.4 billion. While Federal tax revenues increased during that period by 65 percent, State and local tax revenues rose by 113 percent. Property tax increases equaled 41 percent of the combined State and local increases and almost all of the local increases. This places a tremendous burden on the moderate income property owner.

Mr. Pechman, of the Brookings Institute, forecasts that State and local expenditures will rise at a current level of 7 percent a year and will total $103 billion in 1970. At the same time revenues will rise according to the increase of the GNP at a rate of 5 percent a year, and will only total $88 billion in 1970, a deficit of $15 billion.

Most States have tax systems which place heavy emphasis on sales taxes, fees, and property taxes rather than progressive income taxes. Naturally, local governments find it difficult to support rising costs of necessary programs.

Nearly one-third of State and local revenue is derived from real property taxes. Almost one-half is raised through sales taxes and fees. Income taxes provide only a little more than 7 percent of the total.

Therefore, even if a difference between revenues and expenditures of some $20 to $30 billion a year could be raised from this existing State and local revenue system, the largest amount of the money would have to be derived from the highly regressive sales taxes and property taxes. Besides the fact that this penalizes the obvious group of poor and older citizens, this would also discourage homeownership and accelerate the trend of deterioration of property in our already troubled cities.

Nearly 80 percent of this money will be spent for health, education, and welfare—areas in which States not only have maintained but should maintain the principal responsibility.

Where is this money going to come from? These expenses can hardly be deferred.

EXAMPLE OF STATE TAXATION SYSTEM

Since I am most familiar with my own State of Wisconsin, let me bring the facts closer to home by citing some examples from figures compiled by the nonpartisan Wisconsin Taxpayers' Alliance. These figures will be updated by the alliance within the next few days, and I will place them in the RECORD then. This group states that Wisconin State and local tax collections in the last decade have grown much faster than the Federal collections—in 1954 State and local collections equaled 30 percent of all taxes collected. By 1964 they had grown to 39 percent of all taxes collected. This appears to be the average for other States as well.

Total States and local taxes raised in Wisconsin increased from $265 million in 1944 to $1,246 million in 1964. This represents an increase of 500 percent. The Federal tax collections for the same period increased from $822 million to $1,959 million or slightly more than twice.

Meanwhile, the percentage of money expended by the State of Wisconsin on education for the 5-year period ending 1964 rose from 22 to 26 percent of all money spent. Every 2 years the State must provide for approximately 100,000 more pupils than in the previous 2 years. Each biennium must provide for college classroom space equal to the entire pre-World War II enrollment at the University of Wisconsin.

Wisconsin, of necessity, had to resort to almost every possibility in order to raise the necessary revenues; the broadly based and progressive income tax, corporate and personal, a 3-percent sales tax, high property taxes in local communities, borrowing by local units to finance capital expenditures, gasoline taxes, sportsmen's licenses, tuition, and license fees.

But after all these taxes are raised, the State only keeps about 11 percent with which to finance its operations. Eighty-three percent of the taxes collected by the State—about $1 billion total collected—were spent by the local units of government. Six percent went into the highway fund by law, leaving the State to spend the final 11 percent for all the functions of the State and government.

UTILIZATION OF REVENUES

If Federal tax revenues continue to grow as expected, these courses of action would be open to the Congress:

First. Expansion of the Federal budget to use the full increase in revenue;

Second. Tax reduction;

Third. Retirement of national debt;

Fourth. Expansion of Federal spending through grants-in-aid for specific programs. This latter method has been used more and more in increasing amounts.

In 1934, 18 grant-in-aid programs were in existence to send money back to State and local governments for specific purposes. By 1964, there were 68 programs for State and local governments plus 60 more programs for disbursements of funds to individuals and institutions. As of last year some 140—depending on how you count them—programs existed in the grant-in-aid field.

In terms of dollars expended, $126 million was spent for Federal grants-in-aid in 1934 and this had risen to $10,060 million in 1964—a rise of eightyfold. Average expenditure per program for Federal grants-in-aid increased in the same period of time from $7 to $148 million. In 1965 the figure was $10.9 billion. By 1966, according to the Bureau of the Budget, $13.3 billion was being spent through grants-in-aid programs. I expect to have more figures within the next few days.

Naturally, along with the increase in the programs more and more strings have been attached and a growth in the Federal bureaucracy has been the direct result. This may or may not have resulted in some weakening of the State and local governments.

EFFICIENCY OF STATE GOVERNMENTS

State governments are vitally important to our system of government today in the late 1960's. Their function has evolved into one of greater responsibility than ever before, especially in the fields of education, hospitalization of the sick and mentally incapacitated, law enforcement, the control of traffic and safety, the system of highways, regulation of utilities, insurance, and conservation of our natural resources.

We should lend more emphasis, not less, to the role of the State governments. They should be made stronger, not weaker. The State unit is the most efficient unit and the most rational form of a government dealing with regional problems of any other in existence today. They should be given increasing responsibilities and nurtured so they grow in an orderly and logical fashion.

Nevertheless, State governments have many difficulties. They must modernize and reorganize their outmoded way of administering their responsibilities. In many cases they are still in the horse-and-buggy stage, still trying to serve an industrial society with a system that was designed to function in an agrarian economy.

The modern State government must develop, therefore, intensive plans and guidelines which will chart their future course through the expansion of our private enterprise economy, bearing in mind, that the local governments must be made a partner in this development.

State governments should evaluate their present situation and develop compresentive plans, projecting needs for the next half century in State facilities, recreation, land use, the State's economy, intercity and mass transportation, population growth and migration, and recreation resources and needs.

To do these things, both in the planning and in the implementation stages, States need money. And that is what all of these tax-sharing plans are designed to do—to get back to the State and local units of government, money which will enable them to do all of these things and more.

RECENT PROPOSALS FOR TAX SHARING

The newspapers have been filled with ideas coming from all sides, many of them with great merit, at first glance.

The best known, of course, is the Heller-Pechman plan, which basically is a return of 2 percent of the Federal income tax base, returned to the States on a per capita basis. In 1966, this would have involved the sum of $5.6 billion based on total taxable income returned with no strings attached. I recently read that Mr. Pechman said that there was no reason why the States should not be compelled to turn over a fixed portion of such income to the cities. I believe Mr. Heller on the other hand, feels that reapportionment of the State legislatures in time would mitigate the possible problems of rural legislatures refusing to share funds with urban centers.

HENRY S. REUSS, Representative from Wisconsin, has also embraced the idea of revenue sharing with his own plan, but he gets a good deal more specific and does attach a few strings. He would like to provide $15 billion over a 3-year period to States which would take steps to modernize State and local governments. He would also like to see regional coordinating committees for each of four regions set up. His plan, as I understand it, would allocate money on the basis of population with no State receiving less than $500,000. The formula also apportions funds according to total population per State with up to 20 percent of the total set aside for supplements to States with low per capita income, or a high incidence of poverty, dependency, or urbanization.

The Senator from New York (Mr. JAVITS) also introduced a plan some time ago in this House, which was designed to establish in the Federal Treasury an amount equal to 1 percent per year of all total individual income taxes. In 1965 this would have amounted to $2.65 billion. Roughly, this was to be shared by means of a formula which tied the total population of the State to its revenue-raising efforts in comparison to the rest of the States. About 85 to 90 percent of

the total fund would be divided up in that manner. In addition, about 10 to 15 percent of the total fund would be distributed in an income redistribution formula. Simply stated, the State which is lowest on the list of the 50 in terms of per capita national average income would receive more than the State next higher on the list and so on, until the more affluent States would receive none. Here again a string was attached, however, because all money returned would have to be spent for health, education, or welfare programs, State payments in lieu of property taxes, debt service, or disaster relief.

The plan which the Secretary of Defense, former Congressman Laird of Wisconsin, suggested when in the House was that of merely returning a flat percentage of Federal taxes collected from each State to that State with no strings attached. He cited precedence in the Wisconsin plan for tax sharing. In Wisconsin all income taxes collected by the State are shared to the extent that 50 percent goes back to the community from which it was collected, 10 percent to the county, and 40 percent is retained by the State. Former Representative Laird does suggest that some kind of equalization formula applied throughout the country would insure that poorer States would receive a greater percentage of the funds they collect because of their greater need for assistance.

In addition, this plan is designed to partially supplant rather than to supplement some Federal grants-in-aid programs.

Senator GOODELL, of New York, introduced tax-sharing legislation while a Member of the House of Representatives, and has introduced such legislation this year in the Senate. His plan would return a fixed percentage of Federal revenues to the States. In fiscal years 1970 and 1971, it would be 3 percent, in fiscal year 1972, 4 percent, and 5 percent in fiscal year 1973. In the first year of operation, it is estimated that $2.42 billion would be made available for the States.

ARGUMENTS FOR THESE PROPOSALS

In an expanding economy based on 1965 tax rates Federal revenues increased on the average by about $6 billion per year. Economists fear that additional taxes would siphon off too much money from the private sector of the economy. A Federal surplus would thus result before full employment of manpower and resources is achieved. Such a surplus has the effect of retarding economic growth, and in time, the forces of recession set in. It is believed that enactment of a sharing proposal would avert this so-called fiscal drag which such surpluses may exert upon the national economy. Naturally, 1969–70 expenditures for defense and Vietnam will preclude this possibility.

Tax reduction measures would also counteract the restrictive effects a budget-surplus would produce. Tax reduction bills usually take too long to get through Congress, however, and recessions can take effect faster than legislation. By making excess revenues available to State and local governments automatically, action would get underway immediately to offset the the contractive effect of such surplus.

It is apparent that the largest area of unmet needs lies in the services provided by State and local governments.

State and local governments have been increasing their outlays much more rapidly than the Federal Government during the past several years in attempts to meet mounting obligations.

Representative HENRY REUSS suggests that State and local governments may not use these Federal funds wisely if they are granted, nor will they increase their own taxes and expenditures for necessary programs. Past experience, I feel, proves that this would not be the case. A large proportion of total State and local outlays over the past years have been used for educational, health, and welfare purposes—an indication that they are cognizant of the needs of their people in these areas and are attempting to meet them.

The argument is made that grants made to State and local governments should be on a "no strings attached" basis, that these groups should be allowed to operate without tight supervision and restrictions—free from Federal control. The argument continues that the spread of "growing bureaucracy" will be halted. State and local governments will then be in a stronger financial position, and a better fiscal balance can be achieved between all three levels of government.

Other arguments for the scheme encompass the idea that unconditional grants will free Federal Government from much redtape and overhead currently necessitated under Federal programs. Present aid programs are becoming so numerous, diverse, and complex that it is difficult for the less sophisticated, governmental bodies to take advantage of them. It has been pointed out that more Federal listings appear in some phone books than do State listings.

During fiscal year 1963 the Treasury Department itemized some 66 programs of direct aid to State and local governments. These do not include numerous other programs of assistance disbursed directly to individuals and institutions within the States. During the recent past, direct payments to State and local governments have almost tripled—from $3.8 billion in fiscal year 1956, to $10.9 billion in fiscal year 1965. In 1965 alone, Congress added some 10 to 30 programs, depending upon how one considers a separate program. Despite the talk of "creative federalism" and "local responsibility" every one of those dollars has a string attached—and sometimes even hawsers and cables.

Making additional revenues available, it is argued, would enable Federal officials to devote more time and energy to more pressing problems of national defense, international relations, and so forth. Loosening restrictive Federal controls would relieve Congress of overseeing the programs. The Congress would also be freed from constant pressuring of lobby groups seeking special projects or benefits for their particular districts.

And, there are arguments which say that unconditional grants will be a boon to low-income cities and States. Stringent matching requirements currently imposed on numerous programs make it difficult for some units to take advantage of some grants-in-aid, or if they do, some of their own programs must suffer. If as some spokesmen recommend, Federal revenues are shared on the basis of population, rather than on the amount of Federal taxes paid, poorer States might be the principal beneficiaries.

ARGUMENTS AGAINST THE PROPOSALS

In 1965, the plan Heller proposed presumed continued prosperity and Federal budget surpluses. Even though we still do have prosperity, much of which is based on a war economy, the surplus is nowhere in sight right now. Between 1961 and 1965 there was a full expansion of economic activity but a full utilization of industrial capacity and full employment was not attained. Budget surpluses have always been the exception rather than the rule in the past 30 years—only seven times as a matter of fact. Thus, with budget surplus an uncertainty the local government would have a difficult time in trying to determine their projected Federal share. Such uncertainties would certainly preclude them from projecting intelligent budgets. This would be an unfair hardship. And once they receive a tax share, it would be difficult or impossible to cut back or cut out the program in years of budget deficit. It would not be fair to make these distributions, therefore, based on surplusage. Indeed Congress can control its own deficits and surpluses based on the amount of spending it wants to engage in. Thus, the Heller argument for sharing, based on the Federal budget surplus, poses some serious problems.

Critics of tax sharing fear that without Federal supervision and control, the local governments will not use the funds properly. These local units may be tempted to reduce their own taxes and curtail vital programs. This has been evidenced in some sections of the country which are gearing up their economy through low local taxes, designed to attract industry and meanwhile waiting for Federal programs to help them with basic programs such as sewer and water, industrial parks, and the like.

There is apprehension that rural dominated legislatures will make allocations of funds which will not be in the best interest of the majority of the citizens. County leaders are fearful that money may never trickle down to the local level from the State level. Similarly, civil rights leaders fear that funds will be spent to support segregated schools, housing, and other facilities. Failure of the Federal Government to control the actual distribution of funds below the State level undoubtedly will cause bitter controversy among State, county, and city leaders as to just how these funds will be spent.

It is also possible that local level governments will be even more dependent upon Washington instead of becoming stronger and more self-reliant. It is also feared that Federal power will be enlarged rather than diminished by giving further aid to these governing bodies.

Rather than doling out public funds, some feel that any surplus funds should be used to reduce the national debt.

There is also strong opinion by other high Federal officials that the funds can be better spent on Federal programs such as mass transit, cancer research, welfare programs, and so forth, and that these programs should not be sacrificed for the sake of aiding State and local governments.

The main controversy, in any case, will revolve around just how much Federal control and supervision shall be exercised over the disbursement of these funds.

TAX SHARING RAISES MANY QUESTIONS

Why not simply cut taxes and let the State and local governments raise their own taxes as necessary to produce the same amount of new revenue?

Even though most plans do not advocate that Federal string, how can we be sure that asking for modernization is not really a string after all—or that the greater share going to less prosperous States is not a qualification at the outset?

Once such a program is begun, how can it ever be changed? Since each Federal legislator is affected, will this not become a giant "boondoggle" and "pork barrel"? Would not it become as unworkable and as ungainly as some of the giant grant-in-aid programs we now have?

How can we say that the Federal programs which may suffer cuts as the result of the return of money to the States are less valuable than those which the States will spend money on?

And how will the States ever know how much is going to be allocated to them during each succeeding year of Congress? How will they ever know how to budget wisely?

Is it not possible that putting States on the Federal payroll instead of letting them raise their own revenues for their own needs might weaken States even further rather than strengthening them and might this not shift even more power to Washington?

Some officials admit to a fear of tax sharing on other grounds. Many existing Federal programs are open end, that is, the cost to the U.S. Government is limited only by the ability and the willingness of the States to come up with matching funds. What would happen if the States used their tax-sharing money to match Federal grants under old programs? At least one Federal official believes that the States could bleed the Federal Treasury with its own money.

CONGRESS NOT THE PLACE TO DRAFT THE BEST PLAN

The complexities involved in tax sharing are so great, and the disparities in the plans already offered are so broad, that it is obvious that we need a thorough examination of this subject by a blue-ribbon commission. The Congress and its own committees will still have to give a thorough review of the commission's recommendations, but at least we will have the benefit of extensive considerations and we will have a broadly acceptable proposal to use as a starting point for congressional action.

I happen to disagree with those people who suggest that we should automatically plow back 1, 2, or 5 percent of the personal income taxes to the States, with or without strings, by whatever formula they have devised thus far. This is too great a departure from the usual method of expenditure to start on a program of this sort quickly. All the ramifications should be studied in a year-long recital of fact and opinion. With the state of our economy now being controlled to a great extent by the Vietnam war, this is no time to begin this program. We can afford to buy the time now.

Furthermore, I am not prepared to automatically agree that a program of this kind should supplant rather than supplement the Federal aid programs.

I think that both the urgency for haste and the arguments for gradually replacing the grants-in-aid program may be politically motivated, designed to embarrass rather than to be constructive. I urge a "go slow" attitude at this time.

Mr. President, I am sending to the desk a measure which will provide for a Commission to study the possibilities of sharing Federal revenues with the States and local governments. This Commission is designed to examine the entire issue by a cross section of the country's leading authorities; including economic leaders of the Congress, the Executive, business, labor, academicians, and the general public. In addition, a Federal interagency committee is authorized which will provide information, liaison, cooperation and coordination for the Commission. The bill further provides for an executive group which will provide continuity, staff, and technicians to administer and conduct the day-to-day operations of the Commission. The cost is limited to $1 million and it is to report back by January 1, 1971.

I urge again that now is not the time to rush.

The war in Vietnam almost certainly precludes the possibility of enacting any kind of a revenue-sharing plan in this session, at least.

There are many plans being formulated, all based on different premises, all designed to accomplish different goals, and all involving different sums of money.

The complex nature of the concept, and the somewhat radical departure from our previous way of doing business calls for a comprehensive study.

If an equitable tax-sharing plan can be developed that strengthens the States and does not expand the Federal bureaucracy, then we should do it. But any such new program requires the extensive and expert study which only a blue-ribbon commission can give.

Mr. President, I ask unanimous consent that the bill be printed in the RECORD.

The ACTING PRESIDENT pro tempore. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 1693) to establish a National Commission on Federal Tax Sharing, introduced by Mr. NELSON, was received, read twice by its title, referred to the Committee on Finance, and ordered to be printed in the RECORD, as follows:

S. 1693

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

(a) that in recent years there has been an ever-increasing growth in the needs for State and local governmental services in areas of traditional State-local responsibility;

(b) that the rising demands for spending by State and local governments have strained their ability to meet all their revenue needs;

(c) and there are now being suggested several legislative proposals under which the Federal Government would assist the States and local governments in meeting their financial problems by sharing with them certain portions of the Federal tax revenues;

(d) that the problem of the financing of State and local governments is of great complexity and the proposals for its solution represent a radical departure from accepted methods of providing Federal financial assistance;

(e) that there is an urgent need for a thorough study and appraisal of all questions raised by revenue sharing proposals in order to enable the Congress to determine which of the available proposals or possible alternatives are best designed to provide financial assistance to the State and local governments and meet the needs of their citizens for essential public services; and

(f) that such a study and appraisal can best be carried out by a high level commission comprised of public and private members representative of a cross-section of the economy and the citizenry of our Nation.

SEC. 2. In order to carry out the objectives of this Act, there is hereby established the National Commission on Federal Tax Sharing, hereinafter referred to as the "Commission".

SEC. 3. (a) The Commission shall be composed of twenty-seven members as follows:

(1) The Secretary of the Treasury, or his designee;

(2) The Director of the Bureau of the Budget, or his designee;

(3) The Chairman of the Council of Economic Advisers, or his designee;

(4) The chairman of the Committee on Finance of the Senate, or his designee;

(5) The chairman of the Ways and Means Committee of the House of Representatives, or his designee;

(6) The chairman of the Joint Economic Committee of the Congress, or his designee;

(7) Fifteen members to be appointed by the President, by and with the advice and consent of the Senate, from among persons outside the Government, of whom three shall be drawn from labor, three shall be drawn from management, three shall be drawn from farmers' organizations, three shall be drawn from the academic profession, and three shall be drawn from among other private persons with a competency in the areas of study of the Commission;

(8) Three members to be appointed by the President from a panel of at least six persons designated by the United States conference of Governors from among its members; and

(9) Three members to be appointed by the President among a panel of at least six persons designated by the National League of Cities from among the mayors of our Nation.

(b) The President shall designate a Chairman of the Commission.

(c) Fourteen members of the Commission shall constitute a quorum.

(d) Any vacancy in the Commission shall not affect its powers, but shall be filled in the same manner in which the original appointment was made.

SEC. 3. The Commission shall conduct a comprehensive and impartial study and appraisal of all proposals to establish a system for the sharing of a portion of the Federal tax revenues with the States and local governments, including, but not limited to, making a determination of the following:

(a) The total amount of Federal revenues which might be available annually for sharing with the States and local governments.

(b) The portion of such revenues which should be allotted to each State and the extent to which each State should be required to distribute any of such revenues received by it to its local governments.

(c) The best manner of achieving an equitable allotment of any shared revenues among the States while helping to equalize the public services available to citizens in the different States.

(d) The extent of Federal control and supervision which should be exercised over the disbursement of any shared revenues to the States and local governments and the uses to which such revenues may be applied.

(e) The effect which the operation of any such system of revenue sharing might have upon the viability of the States as members of our Federal system.

(f) The extent to which any such system for the disbursing of Federal revenues should supplement or supplant alternative methods for the utilization of such revenues, such as specific grant-in-aid programs, direct Federal spending programs, tax reduction, and retirement of national debt.

(g) Any ramifications which might accompany the establishment of such a revenue sharing system not otherwise considered pursuant to a determination of the preceding questions.

SEC. 4. The Commission may transmit to the President and the Congress such interim reports as it deems advisable concerning its findings and recommendations and shall transmit a final report to the President and the Congress not later than January 1, 1971. Such final report shall contain a detailed statement of the findings and conclusions of the Commission together with its recommendations for such legislation as it deems appropriate. The Commission shall cease to exist thirty days after transmitting its final report.

SEC. 5. (a) A member of the Commission who is a Member of Congress, in the executive branch of the Government, a governor of a State, or a mayor shall serve without compensation in addition to that received in his regular public employment, but shall be entitled to reimbursement for travel, subsistence, and other necessary expenses incurred in the performance of duties vested in the Commission.

(b) A member of the Commission who is from private life shall receive compensation at the rate of $100 per diem while engaged in the actual performance of duties vested in the Commission and shall be entitled to reimbursement for travel, subsistence, and other necessary expenses incurred in the performance of such duties.

SEC. 6. (a) The Commission shall have power to appoint and fix the compensation of such personnel as it deems advisable, without regard to the provisions of title 5, United States Code, governing appointments in the competitive service, and the provisions of chapter 51 and subchapter III of chapter 53 of such title relating to classification and General Schedule pay rates. In addition, the Commission may procure temporary and intermittent services to the same extent as is authorized for the departments by section 15 of the Act of August 2, 1946 (60 Stat. 810), but at rates not to exceed $$75 per diem for individuals.

(b) The President is authorized to appoint, by and with the consent of the Senate, an executive secretary to oversee the work of the staff of the Commission under the general direction of the Commission. The executive secretary may be paid without regard to the provisions of chapter 51 and subchapter III of chapter 53 of title 5, United States Code, relating to classification and General Schedule pay rates.

SEC. 7. The Department of the Treasury shall provide for the Commission necessary administrative services (including those related to budgeting, accounting, financial reporting, personnel, and procurement) for which payment shall be made in advance, or by reimbursement, from funds of the Commission in such amounts as may be agreed upon by the Commission and the Secretary of the Treasury.

SEC. 8. (a) The Commission is authorized to negotiate and enter into contracts with private firms, institutions, and individuals to carry out such studies and to prepare such reports as the Commission determines to be necessary to the discharge of its duties.

(b) The Commission is authorized to secure directly from any executive department, agency, or independent instrumentality of the Government any information it deems necessary to carry out its functions under this Act; and each such department, agency, and instrumentality is authorized and directed to cooperate with the Commission and, to the extent permitted by law, to furnish such information to the Commission, upon request made by the Chairman.

SEC. 9. The Commission, or any subcommittee or panel thereof as authorized by the Commission, may, for the purpose of carrying out its functions and duties, hold such hearings and sit and act at such times and places as the Commission or such subcommittee or panel may deem advisable.

SEC. 10. There is hereby established an interagency committee to be known as the Advisory Committee on Tax Sharing, consisting of the heads of any departments, agencies, and independent instrumentalities of the Federal Government (or their designees) concerned with or interested in any areas of study considered by the Commission, to advise the Commission and to maintain effective liasion with the resources of such departments, agencies, and instrumentalities. Such Committee shall elect a Chairman from among its members.

SEC. 11. There are hereby authorized to be appropriated to the Commission, out of any money in the Treasury not otherwise appropriated, such sums, not to exceed $1,000,000, as may be necessary to carry out the provisions of this Act.

ADDITIONAL COSPONSORS OF BILLS AND JOINT RESOLUTIONS

Mr. BYRD of West Virginia. Mr. President, at the request of the distinguished Senator from Wisconsin (Mr. NELSON), I ask unanimous consent that at its next printing, the name of the Senator from Missouri (Mr. EAGLETON) be added as a cosponsor of the bill (S. 1612) the generic labeling bill.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. BYRD of West Virginia. Mr. President, at the request of the Senator from Wisconsin (Mr. NELSON), I ask unanimous consent that, at its next printing, the name of the Senator from New Jersey (Mr. WILLIAMS) and the Senator from Maine (Mr. MUSKIE) be added as cosponsor of the bill (S. 860) to create a Cabinet-level Department of Consumer Affairs.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. KENNEDY. Mr. President, on behalf of the Senator from Washington (Mr. MAGNUSON) I ask unanimous consent that, at its next printing, the name of the Senator from New Mexico (Mr. ANDERSON) be added as a cosponsor of the bill (S. 1589) the Hospital Emergency Assistance Act.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. KENNEDY. Mr. President, on behalf of the Senator from Minnesota (Mr. MONDALE) I ask unanimous consent that, at its next printing, the names of the Senator from Alaska (Mr. GRAVEL), the Senator from Oklahoma (Mr. HARRIS), the Senator from Michigan (Mr. HART), the Senator from Washington (Mr. JACKSON), the Senator from Massachusetts (Mr. KENNEDY), the Senator from Wyoming (Mr. MCGEE), the Senator from Montana (Mr. METCALF), the Senator from Utah (Mr. MOSS), the Senator from Maine (Mr. MUSKIE), the Senator from Rhode Island (Mr. PELL), the Senator from New Jersey (Mr. WILLIAMS), the Senator from Texas (Mr. YARBOROUGH), and the Senator from Ohio (Mr. YOUNG), be added as cosponsors of the bill (S. 1291) to provide an expanded legal services program within the Office of Economic Opportunity.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. MUSKIE. Mr. President, I ask unanimous consent that, at its next printing, the names of the Senator from New Jersey (Mr. WILLIAMS), and the Senator from Connecticut (Mr. RIBICOFF) be added as cosponsors of the bill (S. 1090) to authorize funds to carry out the purposes of title V of the Public Works and Economic Development Act of 1965, as amended, and for other purposes.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. MUSKIE. Mr. President, I ask unanimous consent that, at its next printing, the name of the junior Senator from Connecticut (Mr. RIBICOFF) be added as a cosponsor of the bill (S. 1), the Uniform Relocation Assistance and Land Acquisition Policies Act of 1969.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ADDITIONAL COSPONSOR OF RESOLUTION

Mr. MUSKIE. Mr. President, I ask unanimous consent that, at its next printing, the name of the Senator from Connecticut (Mr. RIBICOFF) be added as a cosponsor of the resolution (S. Res. 78) to establish a Select Committee on Technology and the Human Environment.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. MOSS. Mr. President, I ask unanimous consent that, at its next printing, the names of the Senator from Wyoming (Mr. MCGEE), the Senator from Utah (Mr. BENNETT), the Senators from Nevada (Mr. BIBLE and Mr. CANNON), the Senator from Oregon (Mr. HATFIELD), the Senator from North Dakota (Mr. YOUNG), and the Senator from Arizona (Mr. GOLDWATER) be added as cosponsors of the bill (S. 28) the Water Rights Act of 1969.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. MOSS. Mr. President, I ask unanimous consent that, at its next printing, the name of the Senator from Massachusetts (Mr. KENNEDY) be added as a cosponsor of the bill (S. 1446) dealing with natural resources.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. YARBOROUGH. Mr. President, I ask unanimous consent that, at its next printing, the name of the Senator from Utah (Mr. Moss) be added as a cosponsor of the bill (S. 309) to provide for improved employee-management relations in the postal service.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. YARBOROUGH. Mr. President, I ask unanimous consent that, at its next printing, the names of the Senator from New York (Mr. GOODELL) and the Senator from Florida (Mr. GURNEY) be added as cosponsors of the bill (S. 335) to prevent the importation of endangered species of fish or wildlife into the United States; and, to prohibit the interstate shipment of any domestic species taken contrary to State law.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. YARBOROUGH. Mr. President, I ask unanimous consent that at its next printing, the names of the Senator from Wisconsin (Mr. NELSON), the Senator from New York (Mr. JAVITS), the Senator from Montana (Mr. MANSFIELD), the Senator from Massachusetts (Mr. BROOKE), the Senator from Illinois (Mr. DIRKSEN), the Senator from Alaska (Mr. STEVENS), the Senator from Hawaii (Mr. FONG), the Senator from Utah (Mr. Moss), and the Senator from Montana (Mr. METCALF) be added as cosponsors of the bill (S. 1519) to establish a National Commission on Libraries and Information Science.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. JAVITS. Mr. President, I ask unanimous consent that, at its next printing, the names of the Senator from Kentucky (Mr. COOK), the Senator from Kansas (Mr. DOLE), the Senator from Nebraska (Mr. HRUSKA), the Senator from Iowa (Mr. MILLER), and the Senator from California (Mr. MURPHY) be added as cosponsors of the bill (S. 1478) to establish a commission to study the antitrust laws.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. METCALF. Mr. President, I ask unanimous consent that, at its next printing, the name of the distinguished junior Senator from Alaska (Mr. GRAVEL) be added as a cosponsor of the bill (S. 607) the Utility Consumers Counsel Act of 1969.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. CANNON. Mr. President, I ask unanimous consent that, at its next printing, the names of the Senator from Idaho (Mr. CHURCH), the Senator from West Virginia (Mr. RANDOLPH), and the Senator from New Jersey (Mr. WILLIAMS) be added as cosponsors of the bill (S. 819) to exempt senior citizens from paying national parks and forests entrance, admission, or user fees.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. SCOTT. Mr. President, on behalf of the Senator from Texas (Mr. TOWER), I ask unanimous consent that, at its next printing, the names of the following Senators be added as cosponsors of the bill (S. 364) to equalize the retirement pay of members of uniformed services of ALLEN, Mr. ALLOTT, Mr. BAKER, Mr. BENNETT, Mr. COOK, Mr. COOPER, Mr. COTTON, Mr. CRANSTON, Mr. CURTIS, Mr. DODD, Mr. DOLE, Mr. DOMINICK, Mr. EASTLAND, Mr. FANNIN, Mr. FONG, Mr. GOLDWATER, Mr. equal rank and years of service: Mr. HOLLINGS, Mr. INOUYE, Mr. MAGNUSON, Mr. MATHIAS, Mr. MCCARTHY, Mr. MCGOVERN, Mr. Moss, Mr. MURPHY, Mr. PEARSON, Mr. PELL, Mr. PROUTY, Mr. RANDOLPH, Mr. SCOTT, Mr. SPARKMAN, Mr. THURMOND, and Mr. YARBOROUGH.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. HRUSKA. Mr. President, I ask unanimous consent that, at its next printing, the name of the Senator from Alaska (Mr. STEVENS) be added as a cosponsor of the bill (S. 1623), the Criminal Activities Profits Act.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. BENNETT. Mr. President, I ask unanimous consent that, at its next printing, the name of the distinguished Senator from Oklahoma (Mr. HARRIS) be added as a cosponsor of the bill (S. 845), the ammunition redefinition bill.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. BENNETT. Mr. President, I ask unanimous consent that, at its next printing, the name of the distinguished Senator from Colorado (Mr. ALLOTT) be added as a cosponsor of the bill (S. 1613) to rename Glen Canyon Dam the Dwight D. Eisenhower Dam.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. BAYH. Mr. President, I ask unanimous consent that, at its next printing, the name of the Senator from Texas (Mr. YARBOROUGH) be added as a cosponsor of the joint resolution (S.J. Res. 1), the direct popular vote for President amendment.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

SENATE RESOLUTION 171—RESOLUTION TO PROVIDE FOR THE FURTHER PRINTING OF THE ANNUAL REPORT OF THE SPECIAL COMMITTEE ON AGING

Mr. WILLIAMS of New Jersey submitted the following resolution (S. Res. 171); which was referred to the Committee on Rules and Administration:

S. RES. 171

Resolved, that there be printed for the use of the Senate Special Committee on Aging two thousand nine hundred additional copies of its report to the Senate, "Developments in Aging—1968," pursuant to Senate Resolution 223.

SENATE RESOLUTION 172—RESOLUTION TO PROVIDE FOR THE EMIGRATION OF IRAQI JEWS

Mr. WILLIAMS of New Jersey (for himself, Mr. CASE, Mr. CRANSTON, Mr. GOODELL, Mr. HARRIS, Mr. HART, Mr. JAVITS, Mr. MATHIAS, Mr. MONDALE, Mr. MURPHY, Mr. NELSON, Mr. PROXMIRE, Mr. RIBICOFF, Mr. SAXBE, Mr. SCHWEIKER, Mr. SCOTT, Mr. TYDINGS, Mr. YOUNG of Ohio, and Mr. GRIFFIN) submitted the following resolution (S. Res. 172); which was referred to the Committee on Foreign Relations:

S. RES. 172

Whereas there are approximately 2,500 Jewish people living in Iraq, many of whose families have resided in that land for generations dating back to the Babylonian era;

Whereas Iraq is engaged in a campaign of harassment, intimidation and persecution to the point of depriving them of a means of livelihood and of their civil rights and liberties;

Whereas many of these Jewish people now find it necessary and desirable to leave Iraq;

Whereas several nations, including the United States, offer opportunity for asylum and refuge to any of these persecuted people who may be permitted to emigrate from Iraq; and

Whereas it has been the traditional and historic policy of the United States to be actively concerned with those subject to persecution in foreign lands: Now, therefore, be it

Resolved, That it is the sense of the Senate that the President of the United States undertake negotiations, alone or in concert with other heads of state to secure and facilitate the emigration to acceptable lands of refuge of the Jewish remnant in Iraq.

Mr. SCOTT. Mr. President, I have today joined in sponsoring the resolution urging assistance to the Jews of Iraq so that they may escape from the nightmare existence which they are now experiencing. The 2,500 Jews remaining in Iraq are all that is left of a once proud and flourishing community dating back to ancient Baghdad. No Jews have been permitted to leave Iraq since 1963, and during this time they have become the scapegoats of a military regime.

Since June 1967 they have been living under virtual house arrest, under constant surveillance and harassment. They have been fired from their jobs and forbidden to sell their property. Their telephones have been taken away from them, and their mail censored.

Thet infamous spy trial and public hanging of 14 defendants, including nine Jews, which took place in Baghdad in January shocked the world. This action by the Iraqi military regime caused worldwide condemnation. The condemnation has not influenced the regime in power. They continue the systematic persecution of the Jews of Iraq.

The resolution we submit today urges that the President of the United States undertake negotiations, alone or in concert with other heads of state, to secure and facilitate the emigration to acceptable lands of refuge of the Jewish remnant in Iraq.

The U.S. immigration laws will permit them to come here, and they will be welcomed. Many other countries will also open their doors, if these unfortunate people are permitted to leave Iraq.

Mr. NELSON. Mr. President, the persecution and harassment of Jews living in Arab countries, coupled with the flurry of anti-Semitism in other areas of the world, causes men of conscience to be greatly concerned.

The brutal and barbaric actions of the Iraq Government toward its Jewish citizens, along with the repressive atmosphere prevalent in Egypt, Syria, and Libya, deserve the condemnation of the civilized world.

This prejudice and bigotry have promoted irrationality and prevented a truly lasting settlement to the political problems of the Middle East. While the history of man is checkered with these illogical hatreds, it seems to me that modern man must make progress toward solving these primitive biases.

The persecution of innocent people must cease and the intolerable conditions ought not to be permitted by the Arab governments. Meaningful steps must be taken by responsible government officials to still the shrill cries of hatred that trumpet throughout many Arab lands.

Today I am cosponsoring a resolution calling for an end to the intimidation of Jews in Iraq, and the spirit of it applies equally to other nations of the world. This Senate resolution specifically urges that Jewish citizens be free to emigrate from their native land if they wish to do so.

The deprivation of basic human rights and civil liberties is senseless and cannot be allowed to exist free of dissent.

NOTICE CONCERNING NOMINATION BEFORE THE COMMITTEE ON THE JUDICIARY

Mr. EASTLAND. Mr. President, the following nomination has been referred to and is now pending before the Committee on the Judiciary:

Louis O. Aleksich, of Montana, to be U.S. marshal for the district of Montana for the term of 4 years, vice George A. Bukovatz.

On behalf of the Committee on the Judiciary, notice is hereby given to all persons interested in this nomination to file with the committee, in writing, on or before Tuesday, April 1, 1969, any representations or objections they may wish to present concerning the above nomination, with a further statement whether it is their intention to appear at any hearing which may be scheduled.

NOTICE OF HEARINGS ON OMNIBUS JUDGESHIP BILL

Mr. TYDINGS. Mr. President, the Subcommittee on Improvements in Judicial Machinery will begin hearings on S. 952, the omnibus judgeship bill, and related bills, including, S. 474, S. 567, S. 585, S. 852, S. 898, S. 1036, and S. 1216, on April 15 and 16, at 10 a.m. in room 6226, New Senate Office Building.

All persons wishing to be heard on these bills or on the need for additional Federal judgeships and related matters should contact immediately the subcommittee in room 6306, New Senate Office Building.

NOTICE CONCERNING NOMINATIONS BEFORE THE COMMITTEE ON THE JUDICIARY

Mr. EASTLAND. Mr. President, the following nominations have been referred to and are now pending before the Committee on the Judiciary:

Harold O. Bullis, of North Dakota, to be U.S. attorney for the district of North Dakota for the term of 4 years, vice John O. Garaas.

George W. F. Cook, of Vermont, to be U.S. attorney for the district of Vermont for the term of 4 years, vice Joseph F. Radigan.

James L. Treece, of Colorado, to be U.S. attorney for the district of Colorado for the term of 4 years, vice Lawrence M. Henry.

Benjamin F. Holman, of the District of Columbia, to be Director, Community Relations Service, for the term of 4 years, vice Roger W. Wilkins.

On behalf of the Committee on the Judiciary, notice is hereby given to all persons interested in these nominations to file with the committee, in writing, on or before Tuesday, April 1, 1969, any representations or objections they may wish to present concerning the above nominations, with a further statement whether it is their intention to appear at any hearing which may be scheduled.

NOTICE OF HEARING

Mr. JACKSON. Mr. President, I would like to announce for the information of the Senate and the public that the Senate Committee on Interior and Insular Affairs will hold an open hearing on the nomination of Mr. Harrison Loesch, of Montrose, Colo., to be Assistant Secretary of the Interior for Public Land Management. The hearing will be held on Monday, March 31, 1969, at 10 a.m. in the committee room, 3110 New Senate Office Building.

Any Member of the Senate who is interested is invited to attend and participate in the hearing.

Mr. President, I ask unanimous consent that a biographical sketch of Mr. Loesch be printed in the RECORD at this point.

There being no objection, the biographical sketch was ordered to be printed in the RECORD, as follows:

DATA: HARRISON LOESCH

Family: Born Chicago, Illinois, March 10, 1916, to Joseph B. Loesch and Constance Harrison Loesch; married to Louise Mills, June 19, 1940; children, one son, Jeffrey H. Loesch, born June 14, 1946.

Education: Montrose Colorado school; B.A., Colorado College, 1936; Denver University Law School, 1936–1937; Ll.B. Yale University, 1939.

Military service: Enlisted Pvt. AUS, 3–1942; OCS, Field Intelligence training, commission 10–1942, assigned 314th T.C. Gp., 9th A.F., North Africa (1943), Sicily, England, France, Germany. Distinguished Unit Citation, Air Medal (Cluster). Discharged, major, 10-1945.

Bar admissions: Admitted to Bar, Colorado, 1939; United States District Court; United States Court of Appeals, 10th Circuit.

Professional associations: Moynihan & Huges, Associate, 1939–1942; Strang & Loesch, 1945–1956; Loesch & Kreidler, 1956–1961; Loesch, Kreidler & Durham, 1961 to date.

Bar association memberships: Seventh Judicial District (President 1956); Colorado (Board of Governors 1950–1952; 1960–1963; President 1961–1962); American.

Organizations: Rotary, Elks, University Club of Denver, VFW, American Legion, Boy Scouts of America.

Politics: Republican.

Religion: Protestant (Preference, Episcopal).

Public land law experience: As a Colorado lawyer, I have had extensive representational experience with the Bureau of Land Management and all phases of the Taylor Grazing Act including process, procedure, administrative appeals and litigation covering rights and duties of permittees, exchanges, sales of isolated tracts, withdrawals, grazing districts, and homestead entries.

During the uranium boom of the 1950's, I became experienced in the AEC procedures involving exploratory permits, leases and claims on withdrawn lands, as well as the ordinary process concerning mining claims on open public lands. These latter are of course the same as lode mining matters which had already been a substantial part of my practice.

In connection with the establishment and enlargement of the Black Canyon National Monument, I have dealt with the hierarchy of the National Park Service on trades, purchases, re-surveys and other administrative procedures, and have been instrumental in effecting compromises which benefited both the public and the land owners.

Of late years, I have handled the procedures provided for granting title to small residential tracts to long-time occupants of invalid (or invalidated) mining or mill-site claims.

I claim expertise in Colorado water law, and have handled all phases of individual and ditch company appropriation procedures, development, and litigation. I have dealt with the Bureau of Reclamation, the Uncompahgre Project Association, and the Tri-County Water Conservancy District on administrative accommodations for development of municipal and rural domestic supply for the entire area. Water matters have become of particular moment with progress of Colorado River development upstream from Glen Canyon, and have intimate connection with the use and disposition of public lands in the entire 5-state area, so acquaintance with Bureau of Reclamation rules, regulations and procedures is pertinent.

I have handled negotiations for access roads to public lands and have participated in litigation concerning them. I have some knowledge of the procedures involved in obtaining licenses for transmission line rights of way across public lands, and the rules and regulations involved in the process of building access roads to private lands.

This experience has afforded me a reasonable knowledge of the organization, structure and function of the Bureau of Land Management, the Bureau of Reclamation, the Rural Electrification Administration, the Forest Service, the Geological Survey, the Land Office, the Bureau of Mines, and the state organizations which interact with and supplement them.

NOTICE OF HEARINGS

Mr. JACKSON. Mr. President, for the information of Members of the Senate and the public, the Senate Interior and Insular Affairs Committee has scheduled the following hearings before the full committee through April 30:

March 27, full committee: 10 a.m., executive, room 3112. Briefing and information hearing on operations under Outer Continental Shelf Lands Act.

March 31: Nomination hearing of Harrison Loesch, Assistant Secretary for Public Lands.

April 15 and 16, full committee: 10 a.m., open, room 3110. S. 1075 and other measures to establish a national environmental policy.

April 22, full committee: 10 a.m., open, room 3110. S. 1076, Youth Conservation Corps bill.

April 29 and 30, full committee: 10 a.m., open, room 3110. Alaska native land claims.

At the April 15 and 16 hearings on S. 1075 and other measures to establish a national environmental policy, the committee will hear testimony from representatives of the administration and from the general public.

At the April 22 hearing on S. 1076, a bill to establish a Youth Conservation Corps, testimony will be received from representatives from the administration and the general public.

At the April 29 and 30 hearings on Alaska Native land claims, testimony will be received from the representatives of the administration, the State of Alaska, the Alaska natives, and the general public. At the present time, there are no bills pending before the committee on this subject. Last February I requested the Department of the Interior to draft legislation designed to implement recommendations for a proposed legislative settlement which were made by the Federal Field Committee for Development Planning in Alaska. When this drafting service is completed, the measure will be introduced for the committee's consideration together with other bills which may be introduced prior to the hearing.

RICHARD BREVARD RUSSELL

Mr. BYRD of West Virginia. Mr. President, earlier this month, I stated to the Senate my great pleasure whenever I see tribute paid to the extraordinary capabilities of Senator RICHARD RUSSELL, one of the Senate's true true giants of all times.

It has been good to note the remarks of Senators on both sides of the aisle in tribute to him this week, and I want to add my own words to the expressions of warm wishes for more carefree days ahead for the able senior Senator from Georgia.

The news of his illness is hurtful to me, as it surely is to all who know him. I wish that it lay within my power to perform some deed that would take away this trouble which has come to him.

This legislative body and this Nation have real need of his wisdom, his tremendous capacities for dedicated service, his proven abilities for leadership and conciliation, and his talent for making his associates want to stand tall in relation to his own great personal stature.

Indeed, when I think of the current wide usage of the term "charisma," I feel surprise that many years ago it was not applied to RICHARD BREVARD RUSSELL. Webster's dictionary describes the term as "a quality of extraordinary spiritual power attributed to a person capable of eliciting popular support in the direction of human affairs."

Can there be any doubt in anyone's mind, who has seen and heard the Members of the Senate speaking on the floor this week and in the years gone by, that the words spoken are testimony to a man—RICHARD BREVARD RUSSELL—who through his own great quality of spirit leads others to rise beyond and above themselves to serve the best interests of this Republic?

I believe that deep measure of charisma would have redounded to even greater benefit for this Nation had the turn of the wheel of political fortune placed him in the White House, giving to all Americans a greater exposure to his influence and added opportunity to achieve new levels.

THE SLEEPING BEAR DUNES NATIONAL LAKESHORE

Mr. HART. Mr. President, I have introduced this year a bill to establish the Sleeping Bear Dunes National Lakeshore in Michigan.

The purpose of this legislation is to perpetuate for the benefit and enjoyment of people now and in future generations, the special beauty and values of the Sleeping Bear Dunes landscape.

The 61,000 acres which we have carefully designated for this national lakeshore encompass an expensive diversity of scenic beauty. Crowning it all are the great dunes, themselves. Yet, our objective is not only to preserve the dunes, but also the setting of forested hills and natural lakeshore in which they are found.

Again, today, I stress the urgency of this project. This nationally significant landscape stands poised on the edge of decision. This Congress must decide. We can act now to pass S. 1023 and the identical House bill, H.R. 4287, establishing the Sleeping Bear Dunes National Lakeshore, to adequately protect and appropriately plan for the development of this landscape. If we do not, this special landscape cannot long withstand the threats of cottage subdivision, commercial development, and honky-tonk encroachment. These destructive forces have gathered pressure in recent years. Now, they are closing in for the kill.

Mr. President, never before in the 10 years that I have been actively working for this project have I felt this heavy weight of utter urgency. This is the year the die will be cast.

I am delighted, therefore, to call to the attention of my colleagues the editorial support of the New York Times for the Sleeping Bear Dunes National Lakeshore.

Mr. President, I ask unanimous consent that the editorial, "Of Men and Dunes," from the Sunday New York Times for March 16, 1969, be included at this point in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OF MEN AND DUNES

Natural sand dunes, the unending masterwork of wind and water, are among nature's more fascinating and useful creations. To the human eye, their clean lines and fantastic and changing shapes are a delight. To shore birds and migratory birds, they nurture and protect life itself. Birds nest in the beachgrasses and depend for food on the salt ponds and fresh-water pools behind the dunes. To the sea and the lakes, dunes are nature's own barrier to the devastation effects of violent storms.

But something there is in many men that does not love a dune. The only wild, clear call that they hear at the edge of the sea is the screech of profit and the bulldozer's mournful crunch. The land speculator and the summer cottage builder, the highway contractor and the jetport planner, all these see only a beach to be leveled and subdivided into lots and paved with blacktop and sold for dollars.

In recent years, the struggle to save surviving sections of the nation's seashores and lakeshores has made progress. From Cape Cod and Fire Island to Texas's Padre Island and California's Point Reyes, some dunes have been saved by Federal law. But more remains to be done, and old battles have sometimes to be won a second and a third time.

The dunes created by Lake Michigan provided two such battlegrounds. The Indiana Dunes, just east of Chicago at the southern end of the lake, were rescued after a long fight between conservationists led by former Senator Paul H. Douglas and steel companies which wanted to build a deep water port. But the Chicago, South Shore and South Bend Railroad is now pressing the National Park Service for permission to construct a marshalling yard within the boundaries of the lakeshore.

Before this railroad issue is even settled, there is already talk in Indiana that a new jetport may be built immediately south of the national lakeshore. If the so-called Chesterton site is selected, jets would spew oil and fumes as well as roaring noise over the dunes.

Far to the north at the western edge of the State of Michigan, the lake has created the beautiful Sleeping Bear Dunes, so named because their profile from a distance resembles a great bear curled in sleep. Ten years ago the National Park Service identified these dunes as one of the dozen shoreline areas in the nation most worth saving. Michigan's Senators introduced a bill to protect them as a national lakeshore in 1959. The years have passed but the bill has not.

Intensive private development now menaces the viability of Sleeping Bear as a national lakeshore. Meanwhile, the cost of the Government of acquiring the land has risen by one-third. The bill has been reintroduced in both houses of Congress, but hearings have been delayed until the Nixon Administration makes its position known. It is imperative that legislative action be completed this year. Congress waits, but the grasping hands of the land speculators are busy. Soon the Sleeping Bear may not be sleeping but dead.

Mr. HART. Mr. President, this welcome expression from a great national newspaper well known for its concern with conservation is another illustration of the growing support for the Sleeping Bear Dunes National Lakeshore. It is my hope now that the new administration will move with dispatch to support this legislation, and that the Congress will address itself to this matter with the sense of urgency that is required.

SENATOR GOLDWATER ADDRESSES THE ASSOCIATION OF AMERICAN FIGHTER PILOTS

Mr. TOWER. Mr. President, on Friday, March 21, my good friend and colleague, Senator BARRY GOLDWATER, addressed the Association of American Fighter Pilots in Houston, Tex. His remarks on that occasion have, I believe, an important and significant bearing on numerous matters now under consideration in the Congress of the United States.

In short, Mr. President, the Senator from Arizona deplores what he describes as a deliberate campaign being directed against the concept of military strength in the United States. Because of its timeliness and importance I ask unanimous

consent that the text of Senator GOLDWATER's speech be inserted in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS BY SENATOR BARRY GOLDWATER OF ARIZONA BEFORE THE AMERICAN FIGHTER PILOTS ASSOCIATION, HOUSTON, TEX., MARCH 21, 1969

Mr. President, Members of the American Fighter Pilots Association, as you probably all know, I returned recently to the political wars after a self-imposed sabbatical leave of four years in my native Arizona. Of course, in Washington everyone wants to know how it feels to be back. This is the question I get in the Senate, in the Senate Armed Services Committee, in the Senate Preparedness Subcommittee and all of my other old haunts around the nation's capital. And I tell them all that I feel exactly like the first Kamikaze pilot who ever made a round trip.

I also dwell to some extent on the various changes that I have noticed since my return. Maybe I don't have to tell you that the change I like the best is the one I find in the Pentagon. Not only am I delighted that the office of Secretary of Defense is no longer held by our computer-minded, one-time Ford Company official, Robert S. McNamara, but I am even more delighted that the vital post is now occupied by former Congressman Melvin Laird.

This brings me to the subject of my remarks tonight. They are directed to a defense of the nation's military establishment and a defense of this nation's military men.

I wish to be very blunt. I believe it is nothing short of disgraceful that such a defense has to be made. But the actualities of the present situation in our national affairs are such that loud and strong voices need to be raised.

If they aren't, we will soon develop a national frame of mind against anything that smacks of defense. We will be permitting an erroneous public attitude to develop which can spell nothing but trouble for the defense of the United States and the security of the free world.

This nation, no matter what your sophisticated academic and scientific spokesmen would like you to believe, must be strong and powerful. This is an absolute necessity in today's world. We are a long way from reaching a point where we do not need weapons, defense systems and the military men to operate them. It would be wonderful if, by waving a magic wand, or passing a particular piece of legislation, or adopting some specific executive program, we could make mankind forever noble. If this could be done, we wouldn't need weapons or generals or admirals or soldiers or sailors or fighter pilots. We wouldn't even need policemen—the churches could handle all our needs.

But, unfortunately, man's nature is not susceptible to quick change of this sort. He will, despite all the education that the academic community can cram into his skull, still have traces of greed, hatred and avarice in his nature. He will still be susceptible to the temptations and impulses which today lead men to fights and nations to war.

This is no mystery. It's a fact of life. Any reasonable individual will understand and accept this premise because he knows that it is true and that it is not subject to questioning. However, when you listen to some of the self-styled pacifists, peaceniks and all-out enemies of the military, you begin to wonder if we might have missed something somewhere along the line. Because their arguments are founded on wishful thinking, they would have us believe that if the United States only stopped building military weapons that that would be the answer to peace throughout the world. They would have us believe that by some magic or miracle of ideology we could shame our enemies into following suit. The realities of power and strength and counter power and counter strength have no meaning for these people. They have developed an over-simplified and ridiculous idea that the way to promote world peace is to object to anything or anyone used in the waging of war. This is what causes protest movements against the Reserve Officers Training Corps on campuses, against service recruiters in colleges, against military draft boards, against any kind of service installations that might be used by the Army, the Navy, the Air Force, the Marine Corps or the Coast Guard in time of war.

It is this same attitude on a higher plain that causes trouble for our military men in the Defense Department. The great outcry against war has led almost automatically to a suspicion of our military brass. It's getting as though the liberal press treats any recommendation by the Joint Chiefs of Staff as a form of evil, per se. To this element of our national media, anything connected with the military is dangerous. They would have the American public believe that every man who ever wore an officer's uniform is interested personally in unleashing nuclear war.

The attitude which I have been describing has already led us into trouble that may take many years to correct. This suspicion of the military; this deliberate attempt to minimize the voice of the military in the development of defense policies, was a hallmark of the McNamara regime in the Pentagon. You all remember that unhappy interlude. The "whiz kids" took over. The battle cry became "cost effectiveness to the end." The voices of experienced military men, trained in service academies and tested in combat, were drowned out by the whirrings and beepings of the computers. Sound advice on hard military matters gave way to chalk talks and glib televised press conferences wherein anyone holding a pointer to a chart passed as an expert.

What happened was this. To avoid or steer clear of the possible evil of centralizing power and authority in the hands of the military, McNamara permitted over-centralization in the hands of less qualified civil servants. We traded military expertise for scientific guesses based on computer findings. We didn't achieve a proper balance between military and civil authority. We achieved an improper balance of untrained civil authority over experienced military authority.

The result of all this has been that during the past decade the pendulum of defense organization has moved too far in the direction of economy and efficiency and too far away from defense readiness and force modernization.

The bomb shortage of the early 1960's; the efforts to save money through the concept of "commonality" in the TFX (now F–111B) program with no alternative available when it failed; and the low risk procurement policies typified by the current requirement that services have all technology "in hand" before a contract is let—all these are examples of this trend.

The mistakes stemming from overemphasis on civilian decision-making in the Defense Department are too numerous to mention. To tell you the truth, I don't like to think too much about it; because when I realize what happened in the Defense Department over the last eight years, it literally scares me to death. It makes me worried for the future of my country and the future of freedom throughout the world.

I'm sure you all know the old saying that one should not put all his eggs in one basket. Nowhere is this more pertinent than in the field of defense activities. To rely solely on missiles in order to save the cost of the backup bomber force is an example of what I mean. Others involved are the building of only conventional ships to save the cost of nuclear engines and to economize by not developing, testing, and stockpiling certain military space systems, or not to develop new and better tactical nuclear weapons on the wishful hope that our enemies won't do it if we don't.

Real and lasting economies in defense spending can only be realized, I am convinced, by optimizing military policies, strategy and tactics to most fully exploit all the products of technology. The inevitable need to develop and maintain the most advanced systems possible in order to guard against the fact that an enemy could build and use these against us means that any reliance on older systems—for whatever reason—will eventually add to the cost of defense.

Thus only by absorbing the increased costs of new advanced weapons through reduction in quantity of forces and systems that sole reliance on these will permit, can we hope to keep defense spending at a minimum and national security at a maximum.

I do not insist that the military should be in charge of everything. I do not recommend a general for the office of Secretary of Defense. I do not necessarily insist that civilian experts be replaced in the Defense establishment merely because they do not wear an admiral's stripes or a colonel's chickens. I do, however, argue strenuously and persistently that military experience and military men be given their proper voice in the determination of policies upon which our safety and the protection of our millions of citizens must ultimately depend. In many areas of defense policy I am convinced that trained military opinion is not only desirable but essential to success. There are other areas where I believe top scientific and technical knowledge should prevail. However, we have nothing to gain and a great deal to lose by adopting the fallacious belief that because a military man is trained to fight that he is automatically a proponent of warlike or war-producing attitudes and policies. I might say here that the most eloquent and ardent proponents of peace that I have ever had the pleasure of knowing were military men who had seen at first hand the horrors of war. It has long been my feeling that to become a practical and effective advocate of peace in our times requires personal experience with the alternative.

I believe that the public debate now going on concerning President Nixon's advocacy of a modified ABM system will bring out even more latent distrust, and even hatred of the military. The radical left is even now busy trying to convince the American public that the ABM system is a device cooked up by the military men in the Pentagon to siphon off billions of dollars from antipoverty projects and other social welfare programs. Great emphasis is being placed upon the opinions of scientists who all of a sudden have become great experts in the whole area of military defense. It is reminiscent of the time back in the Truman Administration when many prominent scientists were opposing development of the H bomb. You may remember some of those arguments. The scientists told us that the H bomb would be inordinately expensive that it probably would not work and that its development would alter the world balance of power. Of course we know now that they were wrong on every point. Not only did the H bomb work but it proved to be less expensive than the scientific estimates and the Russians promptly developed one of their own. If President Truman had listened to the advice of scientists like Dr. J. Robert Oppenheimer the balance of power *would* have been drastically altered—but in favor of the Soviet Union because while the scientists were trying to get the President to junk our H bomb program the Russians were pushing ahead at top speed.

It has often been said that if an Army general endeavored to tell the scientists about

their theories on physics he would quickly be told to "get lost." But the scientists never seem a bit reluctant to tell the generals and the admirals all about their specialized business.

This is what is happening today in the debate over the ABM system. The greatest emphasis is being placed on the arguments of the scientists and others who oppose the system. Considerably less emphasis is being placed on the arguments of those who know that we *must* make some headway in the area of missile defense. The Soviets are already way ahead of us, not only in the development but in the deployment of an ABM system to protect their major cities. The very least that we must do is to develop a system to protect our deterrent to war. This, to my way of thinking, is little more than the maintenance of intensive research and development in a vital defense field where the Soviets are far ahead of us. It is the absolute minimum that the President could recommend in keeping with a proper regard for the safety of this nation. In this the President and his Secretary of Defense, Mr. Laird, need our determined help and assistance. And I believe that the wishes of the American people will finally be felt and this program adopted. In the meantime I would warn you to be aware, constantly aware, of the never-ending effort to down-grade and discredit the military establishment without which our country could not long survive. It is a determined and deliberate campaign which must be fought at all times.

And rest assured that you will have no trouble identifying these attacks on the military. Most of them contain certain key words and phrases taken from the utterances of American Presidents in attempts to justify a totally unwarranted premise. For example, I predict that you will hear more and more about a word President Nixon used not so long ago with regard to our nuclear strength. The word he used was "sufficiency." He said this perhaps was a better word than "superiority" in referring to our relative nuclear strength as opposed to that of the Communist world. I am sure I don't have to tell you that the word "sufficiency" can be taken to mean whatever the person using it wants it to mean. There is no doubt in my mind that when President Nixon used the word "sufficiency" he had reference to sufficient nuclear strength to close what he himself termed a "security gap" during the Presidential campaign. And, of course, to the proponents of unilateral disarmament, the word "sufficiency" could mean almost any level of strength.

In the attacks on the military also you will find repeated reference to a phrase once used by former President Dwight D. Eisenhower. This phrase, which incidentally turned up six times in a recent speech by former Vice President Hubert H. Humphrey, is "military-industrial complex." Time and again these words of our great ex-President are quoted in an effort to convince Americans that such a complex does exist and poses some kind of an evil, mysterious threat to our continued existence.

I would remind you that when Dwight Eisenhower mentioned the possibility of unwarranted influence being acquired by such a complex, he had some other profound things to say. I want to quote one passage in particular. He said and I quote, "We face a hostile ideology—global in scope, atheistic in character, ruthless in purpose and insidious in method. Unhappily the danger it poses promises to be of indefinite duration. To meet it successfully, there is call for, not so much the emotional and transitory sacrifices of crisis, but rather those which enable us to carry forward steadily, surely, and without complaint the burdens of a prolonged and complex struggle—with liberty the stake. Only thus shall we remain, despite every provocation, on our charted course toward permanent peace and human betterment. . . "A vital element in keeping the peace is our military establishment. Our arms must be mighty, ready for instant action, so that no potential aggressor may be tempted to risk his own destruction."

In closing, gentlemen, let me warn you that the anti-defense campaign in this country is accelerating rapidly. I predict that in the weeks to come you will see it reach an almost hysterical pitch among certain groups. And it will have many facets. One will be a new, all-out propaganda drive against the Nixon Administration's military effort in Vietnam.

Another facet of this drive will be an all-out campaign against every conceivable type of defense expenditure. This part of the campaign will get under way on March 28 and 29 at a Congressional conference on "The Military Budget and National Priorities." This conference, which has been arranged by a group of liberal House and Senate Democrats, is strictly a lobbying effort to drum up Congressional support for cutting defense budgets. It has no official standing with the Congress. In fact, it will temper with the jurisdiction of such duly established groups as the House and Senate Armed Services Committees and the House and Senate Appropriations Committees.

I believe it is important for everyone who has any interest in the defense of this nation to understand clearly what is going on today. This campaign is not confined to opposing military men or even a dominant military voice in preparedness matters. It is aimed directly at the concept of military strength itself. I tell you emphatically that we are seeing today a concerted and well-organized attempt *to destroy the military effectiveness of America* in the misguided belief that such action might somehow serve the cause of world peace.

VIRGIN ISLANDS REPRESENTATIVE

Mr. JACKSON. Mr. President, on June 28, 1968, the Governor of the U.S. Virgin Islands signed into law an act of the Virgin Islands Legislature which established in the office of the Virgin Islands Representative to Washington, and provided for the election of the first Representative at the 1968 general election. At that election, on November 5, the people of the Virgin Islands elected Mr. Ron de Lugo as their first Representative to Washington.

Many Members of this body know Mr. de Lugo well. This Congress passed the Revised Organic Act of the Virgin Islands in 1954. Since that time, Ron de Lugo has worked effectively to bring to fruition the processes of democracy which that document promised the people of the Virgin Islands.

The office of the elected Representative to Washington is another step on the long road to self-government within the context of the Federal-territorial relationship, and in the election of Ron de Lugo the people of the Virgin Islands have made an excellent decision.

Ron de Lugo is a man who brings to Washington broad experience and an intimate knowledge of the islands and of the people whom he represents.

He was born in Englewood, N.J., on August 2, 1930. Ron's father was the late Angelo de Lugo, a native of St. Thomas. His parents returned to St. Thomas where Ron lived until he enlisted in the U.S. Army in 1948. His military duty took him to Japan and included service with the Armed Forces Radio Service.

He returned to the islands in 1950 as program director of the newly opened WSTA radio station. Ron de Lugo is well known for his efforts in the revival of the famous St. Thomas Carnival in 1952. In that same year he was named "Man of the Year" by the New York Professional League. In 1954, he served as campaign manager for the Democratic Party of the Virgin Islands. In 1955, Ron joined WIVI radio on St. Croix distinguishing himself as a leader in the fight for a jet airport for St. Croix. The same year he was instrumental in organizing the Democratic Party on St. Croix.

At the age of 26, Mr. de Lugo became the youngest person to win a seat in the Legislature of the Virgin Islands in 1956 and he was also elected a delegate to the Democratic National Convention. Senator de Lugo served as minority leader in the legislature from 1958 to 1967, except for the period when he served as administrator for the island of St. Croix, from April 1961 to August 1962. He resigned a year later, responding to a draft from the Democratic Party, to return to the Legislature of the Virgin Islands.

In 1960, Ron was elected Democratic national committeeman for the Virgin Islands and was seated at the Los Angeles Democratic Convention. At 30, he was the youngest member of the national committee.

Ron de Lugo's most recent accomplishment in his career of public service was his landslide election on November 5, 1968, to this Washington office. His broad public support in the Virgin Islands is obvious from the 75 percent of the vote which he received.

Ron is married to the former Maria Morales, and they have moved to Washington with their three children: Jay, 17; Maria Christina, 10; and Angela Maria, 8.

I know that all the Members of this body join with me in welcoming Ron de Lugo to Washington, and I am sure that he will receive the consideration and the cooperation to which he is entitled as elected Representative of the people of the Virgin Islands.

THE HEADSTART PARENTS CHOIR OF KANSAS CITY, KANS.

Mr. PEARSON. Mr. President, it was recently my privilege to attend the 70th annual meeting of the Kansas Conference on Social Welfare in Wichita. At the conference a heart-warming performance was given by a unique choir made up entirely of parents of Headstart children in Kansas City, Kans.

This group does not receive any outside funds from public or private sources, yet its approximately 60 members not only trained themselves as an outstanding musical group but have made their own choir robes and dresses at costs some 90 percent below usual prices.

This kind of resourcefulness is characteristic of the parents of Headstart children at London Heights Methodist Church in Kansas City. I understand they have a motto:

If you have courage yourself, you can do it.

Not only in the wonderful cooperative effort of the choir, which I heard and enjoyed so much, but also in the spirit of neighborliness they show in solving problems of babysitting, transportation, and finances, these parents are setting for their children the kind of example that offers great hope for the future.

Furthermore, Mr. President, this admirable group of parents is an interracial one, having as one of its purposes to promote "togetherness of the races." This goal is a high and difficult challenge for all Americans, but a group of parents so determined and willing to cooperate is a source of encouragement for all Americans, black and white, as they strive to meet the challenges of racial integration.

Mr. President, this unique group is a heartening example of how a Government program such as Headstart can stimulate very positive, if unexpected, results in communities where these programs are at work.

THE ELECTORAL COLLEGE

Mr. HART. Mr. President, the senior government students of New Haven High School, New Haven, Mich., recently completed a poll. This exercise, I am sure, was very instructive to them and might be somewhat instructive to us.

New Haven is not a large community but it is a fine one and I think it could be considered a representative one.

These enterprising youngsters compiled a booklet giving pro and con arguments on our electoral system. The booklets were distributed in the community and later collected, along with the views of the readers.

The results were relayed to me in a letter from the project cochairman, Vicky L. Jackson. Her letter is clearly stated and I ask that it be printed at this point in my remarks.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

NEW HAVEN COMMUNITY SCHOOLS,
New Haven, Mich., March 18, 1969.

SENATOR PHILIP HART: The Senior Government Classes of New Haven High School sponsored a campaign to determine how the community of New Haven felt about our present Electoral College system. The complete project took three weeks.

The students were divided into groups, which were responsible for finding out certain information concerning the Electoral College. This information was then compiled and put into booklet form.

The booklet consisted of the following sections. 1) An introduction, explaining to the public exactly what the Government Class was attempting to present. 2) Criticisms in opposition of the Electoral College. 3) Criticisms in favor of the Electoral College. 4) Exactly how the College functions. 5) An opinion sheet. The booklets were designed to give all views of the Electoral College. Then from there, the Electorate was asked to make its own decision.

A door-to-door campaign was conducted in passing out the booklets. The students then returned to the homes in a few days to pick the booklets up.

When all the booklets were turned in, the results were compiled. There was a total of four hundred booklets distributed. From these, a total of 313 was returned. From the total booklets returned; 20.4% of the people suggested we keep the Electoral College just as it is; 56.3% of the people suggested we eliminate the College; 23.1% of the people suggested we amend the Electoral College; and .2% of the people voiced no opinion.

We, the Government Classes of New Haven High School, would like to thank the Community of New Haven for its splendid participation in our project.

Respectively submitted,
VICKY L. JACKSON,
Cochairman.

THE 51ST ANNIVERSARY OF BYELORUSSIAN INDEPENDENCE

Mr. PERCY. Mr. President, I am pleased to join my colleagues in commemorating the 51st anniversary of Byelorussian independence, which was observed on March 25. I sincerely believe that the desire of any people to assert their national identity is a cause worthy of our attention.

Fifty-one years ago, the Byelorussian people declared their independence and were able, for a few brief months, to live according to their own ideals and beliefs. During its short-lived existence, despite the great difficulties created by World War I and its chaotic aftermath in Eastern Europe, the Byelorussian Government was able to make significant advances in education, culture and social welfare.

On March 25, 1918, the Rada—Congress—of the Byelorussian National Republic proclaimed the sovereignty of Byelorussia and published a Declaration of Independence which said in part:

"A year ago, the peoples of Byelorussia, together with all the peoples of Russia, threw off the yoke of Russian tsarism which, taking no advice from the people, had plunged our land into the blaze of war that ruined most of our cities and towns. Today we, the Rada of the Byelorussian National Republic, cast off from our country the last chains of the political servitude that had been imposed by Russian tsarism upon our free and independent land. From now on, the Byelorussian National Republic is to be a free and independent power. The peoples of Byelorussia themselves, through their own Constituent Assembly, will decide upon the future relations of Byelorussia with other states.

Although these laudable objectives were to be lost beneath the inexorable westward march of the Red army, the right to rule their own destiny still lives in the hearts of many men and women who recall those fateful days.

Today all Americans join with our fellow citizens of Byelorussian ancestry in renewing our own devotion to the principles of freedom and in our prayerful hope that the day will come when the people of Byelorussia as well as peoples everywhere can join us in our full enjoyment of the blessings of liberty.

SURTAX NEEDS HAVE NO HIGHER PRIORITY THAN TAX NEEDS

Mr. McINTYRE. Mr. President, the President of the United States has today proposed that the 10-percent surtax be continued for another year. I would like to take this opportunity to comment briefly upon the single most important income tax issue facing the American people and the Congress, the urgent, immediate need for tax reform.

This issue is as clearly raised by President Nixon's request for an extension of the surtax as are the issues of national fiscal policy and inflation to which his message refers.

A simple extension of the surtax may, it is true, be of assistance to the needs of our overall economy. But it is not fair, it is not right, to impose the entire cost of anti-inflationary measures on the low and middle income taxpayers who are not able to take advantage of the loopholes and subsidies in our tax laws.

Is it fair, for example, to provide the billion dollar oil companies with an oil depletion subsidy while refusing to provide the average American taxpayer with a pocketbook depletion subsidy? Is it fair to expect a taxpayer with a tax bill of $600 to pay a $60 surtax, while men with net incomes of $100,000 paying no tax now escape the surtax completely?

I do not believe that the surtax, no matter how desperately it may be needed, can be extended this year without its being more fairly and evenly applied to all our citizens earning adequate incomes. The President said today:

We are determined to keep faith with America's wage earners.

There is only one way that the Congress can keep faith with America's wage earners, if the surtax is extended. That way is to see that the burden of the surtax is shared by all Americans through effective tax reform.

CEASING PROLIFERATION OF FEDERAL POWER

Mr. BENNETT. Mr. President, the Utah State Legislature recently passed House Joint Resolution 12 memorializing Congress to terminate the expansion of Federal control and power over State and local governments.

I think President Nixon appreciates this problem and consequently created the Office of Intergovernmental Relations. I think the resolution by the State legislature is a clear indication that the people of Utah feel capable of dealing with their own problems with a minimum of Federal interference. Of course, the problem of adequate financing of public programs is always present. I think the wise approach and eventual solution is a program of Federal tax sharing which would provide financial assistance with a reduction in political controls.

I ask that the Utah Legislature's resolution be placed in full in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

H.J. RES. 12

A joint resolution memorializing Congress to cease and desist the proliferation of Federal power

Be it resolved by the Legislature of the State of Utah:

Whereas, the Congress of the United States continues to expand the proliferation of federal control over our cities, counties and states, and

Whereas, this proliferation of national government is contrary to the thinking of our founding fathers, contrary to the fundamental tenets of federalism, and

Whereas, if such proliferation does not cease, our federal system, which once mani-

fested a delicate balance between federal and state powers, will become a giant state engulfing monster;

Now, therefore, be it resolved by the 38th Legislature of the State of Utah, both houses concurring therein, that Congress be memorialized and respectfully requested to cease and desist from further encroachment on state and local powers reserved to the states under the Constitution of the United States;

Be it resolved further that Congress immediately consider systematic withdrawal of many of the non-productive and expensive federal agencies which result in unnecessary taxation imposed upon citizens of this and other states, and allow states to appraise their own social and economic needs and levy and collect taxes to provide for these indigenous problems.

Be it resolved further that the Secretary of State of Utah be, and he is hereby directed, to send copies of this resolution to the Senate and House of Representatives of the United States, to United States Representative Wilbur D. Mills, and to the Senators and Congressmen representing the State of Utah in Congress.

CRACKDOWN ON CAMPUS RIOTERS

Mr. BYRD of West Virginia. Mr. President, I have long been a strong advocate of cracking down on campus rioters, and I urge the administration to take steps to enforce existing laws which provide the machinery for barring Federal aid to students involved directly in disturbances and riots at academic institutions.

As a longtime supporter of a more forceful stand against campus rioters, and having voted for such legislation which was passed last year, I hopefully anticipate the enforcement of those laws.

While students may have the right to peacefully petition for changes and improvements, they have no right to disrupt college activities or infringe upon the rights of those who do conduct themselves in accordance with decency and a respect for orderly processes.

The public is becoming thoroughly fed up with the overpermissiveness which has allowed young revolutionaries to run wild on our college campuses.

In speaking about contempt for law and order in this Chamber on August 23, 1965, I quoted Supreme Court Justice Frankfurter who once said:

> If a man can be allowed to determine for himself what is law, every man can. That means first, chaos; then, tyranny.

Since the occurrence of the Los Angeles riots which seemed to serve as a stamp of approval for wholesale rioting, a series of riots has continued to plague us from coast to coast and many of these militant activists, rioters, and agitators seem to believe that they can determine academic administration and policy by lawlessness and minority rule by force.

Justice Frankfurter went on to say:

> Lawlessness, if not checked, is the precursor of anarchy.

The time has come to check the lawlessness that is being witnessed on campuses across the country. And the time has come for academic administrators, parents, teachers, Federal enforcement agencies, and the majority of students who are seriously seeking an education to join Dr. S. I. Hayakawa, acting president of San Francisco State College, and Rev. Theodore M. Hesburgh, of Notre Dame, in demanding prompt ejection from the campus, arrest for disorderly conduct, and arrest where property destruction occurs. An automatic denial of Federal funds to convicted students is long overdue.

The 1968 Education Act received my support and it indicates quite clearly that students who are receiving a loan or guarantee of a loan or grant and who have been convicted by any court of general jurisdiction of crimes involving force, trespass, or seizure of property to prevent officials and students from engaging in their duties or pursuing their studies shall not receive said funds.

It is folly for the Government to continue to finance militant activity with taxpayers' money. Student loans are administered by college authorities and it is time that some of these same authorities eliminate the rioters, rabble-rousers, and radicals—for these are three R's that do not belong in any school.

Let me read to you today, Mr. President, from a speech I delivered last week at Shepherd College, located in Shepherdstown, W. Va., at which time I addressed a number of our West Virginia honor students at this distinguished institution. I will read only that portion of my address in which I refer to a letter written by the head of a university to a friend in 1825. Describing a campus riot and how it was handled, he said in part:

> The students have returned into perfect order under a salutary conviction that they had not before felt that the laws in future will be rigorously enforced, and the institution is strengthened by the firmness manifested by its authorities on the occasion. . . .
>
> We have no further fear of anything of the kind from the present set, but as, at the next term, their numbers will be more than doubled by the accession of an additional band, as unbroken as these were, we mean to be prepared, and to ask of the legislature a power to call in the civil authority in the first instant of disorder, and to quell it on the spot by imprisonment and the same legal coercions provided against disorder generally committed by other citizens from whom, at their age, they have no right to distinction.

The author of that letter was Thomas Jefferson, the first rector of the University of Virginia. There is no doubt in my mind that Mr. Jefferson, if he were alive today—great believer in a democratic society that he was and champion of the rights of all men—would take the same decisive action against college violence and destruction.

In closing, Mr. President, let me say that this great Nation of ours has some of the finest institutions of higher learning to be found anywhere and I am certain that I stand with millions of other concerned American citizens that the time has arrived to replace Government paternalism with Government responsibility in the immediate enforcement of our existing laws.

I ask unanimous consent to insert in the RECORD the provisions of section 411 of Public Law 90–557, to which I have referred.

There being no objection, section 411 of Public Law 90–557 was ordered to be printed in the RECORD, as follows:

SEC. 411. No part of the funds appropriated under this Act shall be used to provide a loan, guarantee of a loan or a grant to any applicant who has been convicted by any court of general jurisdiction of any crime which involves the use of or the assistance to others in the use of force, trespass or the seizure of property under control of an institution of higher education to prevent officials or students at such an institution from engaging in their duties or pursuing their studies.

KIDNEY DISEASE

Mr. MAGNUSON. Mr. President, I would like to introduce into the CONGRESSIONAL RECORD for the benefit of my colleagues an article from the Wall Street Journal dated March 10, 1969, which focuses appropriate attention in the gravity of kidney disease in our country.

Senator JACKSON and I have introduced legislation which attempts to meet the problem of kidney disease in a comprehensive fashion and hopefully offer treatment to more than 8,000 Americans who die each year because of the lack of kidney machines and trained personnel.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE COST OF LIVING: SOME KIDNEY PATIENTS DIE FOR LACK OF FUNDS FOR MACHINE TREATMENT—ARTIFICIAL ORGAN WORKS WELL, BUT USE IS COSTLY—FEDERAL GRANTS, DONATIONS DWINDLE—INSURANCE DOESN'T MEET BILLS

(By Jim Hyatt)

The effort to treat sufferers from chronic kidney disease by machine, which once promised to save thousands of lives a year, is floundering for lack of financial support.

High costs have plagued the so-called artificial kidney program from the outset. Hospital bills for the twice-weekly machine blood "washings" that take over the kidneys' vital function of removing blood wastes and adjusting body chemistry now run from $10,000 to $20,000 annually per patient. That's the main reason only about 1,700 Americans currently receive the treatments, while an estimated 8,000 people will die this year for lack of them.

But even this far from adequate situation is deteriorating. Federal grants have been running out at the 14 hospitals designated by the U.S. Public Health Service about three years ago as demonstration centers for the process; without Government help, some of them have had to reduce the number of cases they handle.

Some private hospitals have been forced into similar cutbacks because of difficulties in attracting donations to support patients who can't pay the cost themselves. Indeed, private support of any kind has been slow in coming.

COMING OUT SECOND BEST

"The cost per capita of the treatment is an overwhelming drawback when we approach organizations for help," says Dr. Frederic B. Westervelt, director of the kidney care demonstration center at the University of Virginia School of Medicine in Charlottesville. "They say, 'Look what we can do for $10,000 a year—we can give 20 people an artificial leg.' When they measure what they think is the greatest good for the greatest number, we come out second best."

As a result of this lack of funds, hospital committees that once spent weeks agonizing over which artificial kidney candidates would receive the life-giving treatments, called hemodialysis or simply dialysis, now find that the decision has been taken out of their

hands. "Who gets the care here now is determined purely by ability to pay—we don't like it, but that's the way it is," says Dr. Daniel Leb of the Louisville (Ky.) General Hospital's kidney center, run by the University of Louisville School of Medicine.

Physicians' chagrin over the financial obstacles to the treatment is heightened by the highly advanced state of artificial kidney technology. The prototype of the present artificial kidney machine, which resembles a squat old-fashioned washing machine, was developed in 1943 in Holland by Dr. Willem J. Kolff, who now is a resident of the U.S. The patient is connected to the machine, and his blood is pumped through a series of tubes, coils and filters.

The key element of the device is a thin cellophane membrane immersed in a saline solution. Through the process of osmosis, wastes in the blood that otherwise would accumulate and cause death pass through the membrane into the solution. At the same time, vital chemicals normally added to the blood by healthy kidneys pass from the solution into the blood. The "cleansed" blood then is returned to the body.

A SURGICAL BREAKTHROUGH

For a number of years, the machine could be used only when a few treatments would suffice—such as in cases of acute infections—because the surgery required to connect the patient with the machine was difficult and dangerous. In 1960, however, a team of specialists from the University of Washington devised a system that made the artificial kidney available to individuals who had suffered irreparable kidney damage and needed frequent blood washings. In minor surgery, they permanently inserted small plastic tubes in an artery and vein in a patient's arm or leg. During dialysis, the machine is easily connected to the body through those tubes; when the treatment is finished, the tubes are plugged and covered with a small bandage.

Recently, some doctors have improved on this method. By increasing the flow of blood through an artery and a vein, they enlarge them to the point where they can be easily punctured with large needles for connection to the kidney machine. This makes the mechanics of dialysis about as simple as giving blood.

Dialysis is time consuming; the twice-weekly treatments take from six to 13 hours each, depending on the patient and model of machine used. But it is painless, and patients undergoing the life-long treatment can lead a nearly normal life. Clyde Shields of Seattle, who nine years ago received vein and artery implants from the University of Washington team and became the first person to start regular dialysis by machine, still is regularly employed as a mechanic. He is 49 years old.

THE ROLE OF TRANSPLANTS

Treatment by kidney machine isn't the only alternative open to victims of kidney failure. Kidney transplant operations have been performed since 1954 with a high and growing rate of success. Up to last year, three-fourths of the transplant patients who received a kidney from a blood relative had survived for at least one year after the operation (people have two kidneys but can live with just one). The one-year survival rate for a person who received a kidney from a cadaver was 45%.

The utility of this operation is limited, however. Many kidney patients might not survive a transplant operation because of poor general physical condition, and not nearly enough suitable organs are available for those who could benefit. Only about 2,000 kidney transplants have been made in the past 14 years, an average of less than 150 a year.

Moreover, transplant candidates often require dialysis. They usually must undergo the treatment while awaiting an organ, and they must fall back on the machine if the operation fails.

Amid the general gloom over the outlook for artificial kidney treatment, some see a hopeful sign in the recent trend for more patients to receive machine dialysis at home instead of in a hospital. The savings from such a move can be substantial. The first-year bill for home dialysis, including $3,000 to $4,000 to purchase the artificial kidney machine itself and fees for training a family member to run it, usually total about $10,000. After that, it costs $3,000 to $5,000 a year to maintain the machine and buy the various components and chemicals that must be changed after every use.

About 200 of the 1,700 Americans on machine dialysis currently are treated at home, and some kidney specialists say they have high hopes that the number will rise sharply in the next few years. In 1967, the U.S. Public Health Service moved to accelerate the trend by setting up 12 home treatment training centers around the country and promising them $4 million over a five-year period.

But many experts in the field strongly doubt that home care will assume the majority of the treatment burden in the near future. They point out that some patients don't have a relative who can assume the job of operating the complex artificial kidney, others don't have homes where the treatments can be safely carried out and still more have strong fears about entrusting themselves to the care of a family member when a mistake could prove fatal. Moreover, even patients who intend to purchase their own artificial kidney must receive hospital dialysis for several months while a relative is being trained to run the machine.

THE FINANCIAL SQUEEZE

To date, the financial squeeze has been hardest on the hospitals picked by the Federal Government in 1965 and 1966 to demonstrate the feasibility of the widespread use of artificial kidneys. The Federal grants—which totaled $2.5 million—paid the operational costs of the kidney centers and permitted them to admit patients who couldn't pay for their own treatments. Federal funds for medical projects go only for research or treatment-demonstration purposes, not for daily general patient care, so the centers knew the funds might not be renewed when the grants expired. But many of them felt that the Government wouldn't cut them off after having made a commitment.

Since it became clear that the grants would stop in the wake of the Government economy drive caused by the war in Vietnam, the centers have moved to pare their rolls. None have summarily cut off any patients, but when a patient receives a transplant or moves to home care, he isn't replaced.

The center at Cleveland's Mt. Sinai Hospital, for instance, now has only 17 patients on dialysis, down from 30 in 1967; its Federal grant expired Dec. 31. The unit at the University of Alabama Medical Center in Birmingham now only accepts patients likely to receive transplants fairly quickly; if new funds can't be obtained, it plans to phase out its artificial kidney program as soon as other facilities can be found for its 15 present patients.

PAY IN ADVANCE

The center at Hennepin County General Hospital in Minneapolis, whose Federal grant expired Dec. 31, now requires some prospective patients to put $12,000—funds for at least one year's care—in an escrow account before they can begin dialysis. "A couple of people have felt they'd rather die than spend the amount of money involved," says one doctor at the hospital.

A bill now pending in Congress would commit new Federal money for artificial kidney programs, but its prospects for passage aren't clear now. A similar bill made little headway last year.

The outlook for developing other sources of funds is even less bright. Only a half dozen states support dialysis patients, and few others show signs of following. New York has the largest state program; according to Dr. Ira Greifer, medical director for the National Kidney Foundation, Medicaid in New York helps pay dialysis bills for more than half of the state's 400 dialysis patients and the state has set up a Kidney Disease Institute to coordinate the various public and private kidney treatment projects. But state officials say that about 900 New Yorkers a year need the treatments, and their efforts help only a fraction of those who need financial help.

Ordinary types of health insurance often pay some costs of dialysis but typically fall far short of meeting the actual expenses. The average maximum major medical policy benefit of $10,000 "just about covers the preliminary steps to start a patient on dialysis," says L. A. Orsini, an official of the Health Insurance Association, a New York-based trade group.

A few companies now offer kidney treatment policies. Western States Life Insurance Co. in Sacramento, Calif., for instance, sells a $50,000 maximum benefit group policy for an organ transplant or dialysis. However, most private insurers have been reluctant to enter the field.

Persons covered by the Federal Medicare program for the elderly receive little aid for dialysis. Medicaid, the Federally assisted program adopted by some states to help low-income people pay medical expenses, provides more aid—$25 for each in-hospital dialysis treatment—but still leaves substantial bills.

What's left for some kidney disease sufferers, then, is charity. While organized support for kidney care has been slow in coming, instances abound of local largess in individual cases. Last Christmas, for example, residents of Whitesville, Ky., a town of fewer than 1,000, raised $26,000 in four days for Roscoe French, a 33-year-old carpenter for whom machine dialysis represented the only chance at life.

Even well-off victims may end up needing charity. "If you aren't indigent when you start dialysis, you soon will be," says one physician.

WE MUST MAKE A CHOICE

Mr. STEVENS. Mr. President, the March 11, 1969, issue of the Chase Manhattan Bank publication, the Petroleum Situation, contains a concise, authoritative and balanced review of the problems raised by the recent proposal to construct an oil refinery at Machiasport, Maine, to process foreign oil. This article bears out the points made by the Senator from Louisiana (Mr. LONG) in his recent speech and confirms my fears, expressed at the time of his speech, that the issues raised by the Machiasport proposal involve questions of regional protectionalism, national security, and resource planning of the highest importance.

This importance was underlined, again, yesterday as Prime Minister Trudeau and President Nixon announced Canadian-American discussions to begin April 2 on reviewing the North American oil policy. Prime Minister Trudeau, in commenting on these discussions, emphasized the need for continuing exploration and development of North American oil reserves, both for national security and price stability. The discoveries at Prudhoe Bay in Alaska and such proposals as

Machiasport underline, I believe, the importance of maintaining our responsible oil quota program.

Mr. President, I ask unanimous consent that the article may be made a part of the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

We Must Make a Choice

Probably more of the world's problems stem from the lack of effective communications than from any other cause. There is indeed much evidence of the difficulties that can arise from a breakdown of communications within the family, in business, in education, in religion, in government—and between nations.

In recent months, a highly unfortunate situation has developed—for the most part—because of both improper and insufficient communications. It is a development that has pitted one region of the United States against another. And from the earliest days of this nation the multiple and lasting dangers of that sort of conflict have been apparent.

The problem had its beginning last year with a proposal to build an oil refinery in Maine. Sometimes the announcement of a new refinery is met with vigorous objections from the area in which it is to be located. Recently, the residents of a community in another New England state—Rhode Island—successfully resisted the construction of a refinery in their area. But, in the case of Maine, the proposed new plant was welcomed. It would provide certain economic advantages. There would be some opportunities for employment—but not many, because modern refineries are operated mainly with automatic controls. The plant would also constitute a new tax base, of course.

But the foremost reason for wanting a refinery in Maine, reportedly, was based on the belief that it would provide lower priced petroleum products. Somehow, there has developed a widespread impression that petroleum products cost much more in New England than elsewhere in the nation because the region does not have any refineries, if this were true, the consumers of New England, or any other region for that matter, would understandably have cause for complaint. But the impression is erroneous—it is based upon misinformation.

Actually, prices in New England do not differ significantly from those in most other sections of the nation. Reflecting variations in the basic elements of cost, consumer prices naturally are not precisely the same everywhere—but the differences are usually minor. Let's look at the facts. Here is a summary table that compares the price of gasoline in Boston—the leading New England market—with prices in three other major markets and also the average for all of the United States. In each case, basic elements of cost contributing to the consumer price are shown:

REGULAR GRADE GASOLINE PRICES IN 1968

[In cents per gallon]

	Boston	Philadelphia	Norfolk	Chicago	U.S. average
Crude oil cost	7.0	7.0	7.0	7.0	7.0
Refinery margin	3.6	3.6	3.6	3.6	3.6
Transportation and terminal costs	2.0	1.9	1.4	1.2	1.6
Jobber/dealer margin	10.2	9.1	10.9	12.8	10.7
State and Federal taxes	10.5	11.0	11.0	10.0	10.8
Consumer price	33.3	32.6	33.9	34.6	33.7

For all of the markets shown, the cost of crude oil is based upon the U.S. average price. And the refinery margin is based upon the average at the Gulf Coast—the scene of the nation's largest and most competitive refinery complex. Chicago, Philadelphia and Norfolk all have refineries nearby that serve part of the local market needs—but the refinery margin is essentially the same as at the Gulf Coast.

Clearly, the price of gasoline in Boston is not out of line—it is neither the highest nor the lowest, and is below the U.S. average. A comparison for other petroleum products will indicate a similar situation. Because of variations in local distribution costs, prices in other parts of New England range slightly above or below the Boston level.

Although petroleum product prices in New England are currently in line with those elsewhere in the nation, this has not always been the case. For several years within the past decade, New England prices were substantially lower than the average for the nation as a whole. A combination of factors—slower market growth, a general business recession in 1958, and oversupply—brought about depressed petroleum prices throughout the nation. But for various economic reasons, conditions were even more severe in New England. Price warfare persisted for several years until 1964, when improved economic conditions led to gradual price recovery. In 1963, the price of regular grade gasoline in Boston was 3.4 cents per gallon below the national average. But, by 1968 it had recovered to a level of only 0.4 cents under the nationwide average. Let's see what happened to the elements of cost between those years.

CONSUMER PRICE OF REGULAR GRADE GASOLINE IN BOSTON

[In cents per gallon]

	1963	1968	Change
Crude oil cost	6.9	7.0	+0.1
Refinery margin	3.8	3.6	−0.2
Transportation and terminal costs	1.8	2.0	+0.2
Jobber/dealer margin	5.0	10.2	+5.2
State and Federal taxes	9.5	10.5	+1.0
Consumer price	27.0	33.3	+6.3

Although most of the increase occurred at the jobber/dealer level, that element of cost in 1968 was nevertheless still below the average for the nation as a whole. The jobbers and dealers—small local businessmen—are badly squeezed in periods of depressed prices. And they, like all other business men, have encountered sharply rising costs in recent years. Included are the costs of government, which rose between 1963 and 1968 by more than one-third at the federal level and in New England by nearly 50 percent at state and local levels. Taxes are a cost of doing business that ultimately must be passed on to consumers—to think otherwise is illogical. Under the circumstances, the petroleum industry has performed a commendable feat indeed in holding prices down. In thirteen years—between 1955 and 1968—the average consumer price of gasoline in the nation, excluding taxes, rose by only 1.5 cents per gallon. Over the same period, state and federal excise taxes increased by more than twice as much—3.1 cents per gallon. But, relatively few consumers are aware of these facts—because of insufficient effective communications. And there is a tendency to blame the petroleum industry for all of the increase.

From the figures presented in the foregoing tables, it should be apparent that a new refinery located in New England would be able to provide lower priced petroleum products only if it could obtain crude oil at a lower cost. And it could do that only if it obtained the oil from a foreign source. Generally speaking, crude oil from some foreign sources can be delivered to East Coast ports for 2.5 to 3.0 cents per gallon less than oil of domestic origin. It is cheaper because it can be found and produced at a lower cost. Various economic factors are involved. Oil in the United States is found in smaller reservoirs and the cost of material and labor is higher. Transportation costs are higher too. Oil transported from the Gulf Coast to New England—or any other U.S. port—must, by law, be shipped only in tankers registered in the United States. And the labor costs on these ships are much higher than on vessels of foreign registry.

If crude oil from a foreign source is available at a lower cost, why shouldn't a refinery located in New England use it rather than domestic oil? For that matter, why shouldn't refineries everywhere operate on foreign crude oil if the nation's consumers can thereby be provided with lower priced petroleum products? Why, indeed? There are reasons vital to the nation's welfare why they should not. Many good arguments can be presented for free trade between nations when the benefits derived outweigh any harmful effects. But the security of the United States is tied directly to the degree of its petroleum self-sufficiency.

It is absolutely essential to any developed nation that it have an adequate and continuous supply of primary energy. And in the United States as much as three-fourths of all the energy consumed is petroleum—oil and natural gas. It is used nearly everywhere in the home, in industry, in commerce, in agriculture, and by all the Armed Forces. For the nation's vast transportation system, oil is virtually the only form of energy used. Clearly, any prolonged shortage of oil would be devastating. And an adequate domestic supply is the only sure way of avoiding such a shortage.

Recognizing the dangers posed by rapidly rising imports of lower cost foreign crude oil, the President of the United States imposed mandatory controls in March 1959. In part, the Presidential proclamation reads as follows: "The new program is designed to insure a stable, healthy industry in the United States capable of exploring for and developing new hemisphere reserves to replace those being depleted. The basis of the new program, like that for the voluntary program, is the certified requirements of our national security which make it necessary that we preserve to the greatest extent possible a vigorous healthy petroleum industry in the United States."

To limit imports in a manner that would be entirely equitable is an impossibility. But the controls as originally established in 1959 were reasonably well conceived. They were, however, susceptible to manipulation for political reasons and were therefore difficult to administer. From the beginning there have been numerous efforts to alter or circumvent the regulations—and some have been successful. It is, of course, unrealistic to think that any change that gives an economic advantage to some indidividuals or companies or regions will go unchallenged. Others, understandably, will clamor for equal treatment for competitive reasons. And each change in the import regulations has to a degree undermined the original intent of the control. The extent of the erosion thus far has raised

widespread concern over the future status of the control—and some doubts that it will survive.

Surely, if import controls were removed, the action would mark the beginning of the end for domestic producers. The price of domestic crude oil would doubtless fall by 35 to 40 percent. And this would remove much of the incentive to search for new reserves. Producers would continue to produce oil and natural gas from reserves already found, but they could not afford to use their capital to find more—it would instead be shifted into other fields of economic endeavor that provide a better rate of return. Within a few years the nation's dependence upon foreign oil would soar from 21 percent now to more than 50 percent. And, as a result, the nation would be placed in a highly vulnerable position. Based upon past experience, there is positively no reason for believing that petroleum imports would be continuously available—instead, there are obvious reasons for believing otherwise. And in the event of another international war, the position of the United States would be critical. A successful military effort would require fully adequate supplies of petroleum at all times. And, because the private economy is far more dependent upon petroleum now than during World War II, it would be impossible to ration supplies to the degree they were during that conflict—to do so would lead to a breakdown of activities that necessarily must go on in support of the military effort.

Unlimited imports of foreign oil would have a severely damaging effect upon the future supply of natural gas too. Most gas reserves are found incidental to the search for crude oil, and if the financial incentive to find oil is destroyed, new gas reserves would not be discovered either. The wellhead price of natural gas is much too low to warrant a separate search for gas alone. Natural gas can be imported, but only to a limited degree. For the most part, consumers would have to do without, if the supply from domestic sources was limited.

Over the past ten years, domestic producers have spent a total of 44 billion dollars in their efforts to find oil and natural gas reserves in the United States. In the next decade, they will need to spend twice that much if the nation's current level of self-sufficiency is to be maintained. These capital expenditures flow through, and favorably influence, many sectors of the nation's economy. But, under the circumstances created by unlimited imports of foreign oil, relatively little of this money would be spent in the United States. Oil and natural gas are now produced in 32 of the nation's 50 states—and all of them would feel to varying degrees the detrimental economic impact of uncontrolled imports. In addition, the nation's balance of payments would be affected adversely.

Clearly, consumers would benefit if the import controls were removed. But only to a limited degree.

SCHOOL DESEGREGATION

Mr. HART. Mr. President, it is always interesting to read newspapers from various parts of the country to see how interpretations of the same events often vary from one section to another. An event may be seen one way in Washington and still another way in Michigan, in California, or in South Carolina.

In this connection, I found an editorial which appeared on Sunday, March 16, in the State of Columbia, S.C., quite interesting. I believe that my colleagues who have been following developments in the title VI school desegregation program might also find the editorial informative, and I ask that it be included at this point in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Columbia (S.C.) State, Mar. 16, 1969]

HOPE FOR THE SOUTH

If reports from Washington are to be believed, Richard Nixon told the truth when he promised, back during the campaign, to remove the thumb-screws from Southern school boards. Desegregation is still the mandate. But the word from the White House is that Mr. Nixon will shun the advice of neo-Reconstructionists, out to take their pound of flesh in vengeance for 200 years of slavery.

Robert Finch, the new Secretary of Health, Education and Welfare indicated as much weeks ago—first in an interview with the Associated Press and later in a more expansive conversation with *U.S. News and World Report*. Now comes confirmation from the White House, where Dixie Republicans, it is said, this week had their worst fears laid to rest.

The Nixon program like all Gaul, is divided into three parts. First, the administration will take into consideration the immense social problems involved in Southern school desegregation. Second, HEW will devise new guidelines, carefully avoiding the inflexible racial quotas that marked the Johnson years. Third, those school districts that need special technical and financial help in moving toward compliance will get it.

So far, the Nixon plan is apparent in only outline form—a hint here, a vague something there, a shadow glimpsed out of the corner of the eye. It would be nice to have the text of the new guidelines or some other concrete measurement of precisely what the Nixon White House has in mind. This will have to wait, but while we're waiting a little speculation cannot hurt.

First off, can anyone imagine the Johnson administration giving the kind of assurances that have come recently from the White House aides and Secretary Finch? "The court has never really said that segregation itself is unlawful—or at least *de facto* segregation," Mr. Finch told *U.S. News*. "The court has said if you commit deliberate acts of discrimination, then you are in violation of the law." The words are unmistakably those of Mr. Finch. It simply would never have occurred to any of LBJ's lieutenants to suggest such a thing.

Then there is politics to consider. Mr. Nixon is President by virtue of his Southern support. Let there be no mistake about it. His nomination, in fact, came about because the South held firm for Nixon at a crucial moment during the convention. Not only that, but Sen. Strom Thurmond, who held the South for Nixon, did so, despite considerable risk, because he had Mr. Nixon's assurance that school pressures would ease up.

It is simply unthinkable that President Nixon would fail to honor that kind of political commitment. To turn his back against the South almost certainly would be to pass a death sentence on Senator Thurmond and perhaps destroy the Republican Party in the South for years to come. For Nixon himself, it could mean a Dixie revolt at the next GOP convention and perhaps a one-term Republican President. Anything could happen once the word got around that presidential promises were being repealed like the Confederate debt.

All these things suggest that Mr. Nixon intended to keep his word when he gave it and will do so. This is not to say that the clock can be set back to *Plessy* v. *Ferguson*. Those days are gone. But indications are that the days of Lyndon Johnson are gone, too, and that the Nixon days will be a vast improvement.

THE SAFEGUARD ABM SYSTEM

Mr. BENNETT. Mr. President, although the Safeguard ABM debate is far from over, I personally believe that President Nixon has made a very wise decision and I shall support him as long as the evidence clearly shows that the ABM will, in fact, work and is needed for American security.

I find it rather strange that some Members of the Congress are attempting to defeat a purely defensive system on grounds that it will not work, that it is not necessary and that it is provocative to the Soviet Union. I think there is a preponderance of evidence that it will work and I see nothing provocative in a defensive system at a time when the Soviet Union has crushed the spark of freedom in Czechoslovakia, has reached near nuclear parity with the United States and is building an offensive force which may soon eclipse the power of the United States. If we do not preserve the necessary American defensive posture, it will not be too many months or years until these same opponents of the ABM will be crying that the United States has become a second-rate nuclear power. We heard such cries during the 1960 presidential election. We saw similar arguments during the long and bitter debate over the hydrogen bomb and we are now witnessing it again.

I am convinced that cooperation with the Soviet Union is possible, but it will never work if this Nation allows itself to fall behind the Soviet Union in military power. That is essentially what the opponents of ABM are saying. They are closing their eyes to the developments surrounding Russia's missile capacity. They ignore her emergence as a world naval power and her development of nuclear weapons, larger in many respects than this Nation now has. I am convinced that the people of America are not being fooled by the political rhetoric and the hollowness of the arguments used by the ABM opponents.

The Ogden Standard-Examiner recently published a very penetrating editorial supporting President Nixon's ABM decision. I ask unanimous consent that it be incorporated in the RECORD at this point.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Ogden (Utah) Standard-Examiner, Mar. 15, 1969]

ABM DECISION BOLSTERS MINUTEMAN

President Richard M. Nixon's decision to press for construction of a "safeguard program" of anti-ballistic missiles underlines the importance placed on the Utah-made Minuteman missiles as the "bedrock" of U.S. defenses.

The new Republican President, after lengthy conferences with military and civilian leaders, told a Friday news conference that two ABM bases will be operational by 1973 if his recommendations are followed.

One would help guard the 200-missile Minuteman silo complex, America's first, around Malmstrom Air Force Base at Great Falls in north-central Montana.

The second would protect the nation's newest Minuteman base at Grand Forks, N.D., where 150 of the latest models of the Utah-built, solid-fuel intercontinental bal-

listic missiles are war-ready in their deep silos.

The Nixon plan differs in several respects from the ABM program announced in October 1967 by the Johnson administration.

President Johnson and his then-secretary of defense, Robert McNamara, proposed putting a "thin line" of Sentinel Missiles around America's key cities.

This brought protests—ill-founded, we believe—that such placement would endanger the cities by making them prime targets as well as being subject to damage should the nuclear warheads accidentally detonate.

Some of the most vigorous protests came from Salt Lake City, one of the Sentinel sites proposed in the Johnson-McNamara program.

Mr. Nixon has taken this into consideration in ordering the initial ABM installations around the Montana and North Dakota Minuteman bases. Both are located in areas where population density is comparatively sparse.

If the Nixon plan is followed, we agree that our land-based retaliatory forces—the Minuteman missiles—will be protected against what the President termed any possible "direct attack" by the Soviet Union, as well as against any nuclear weapons launched by Red China.

The Great Falls and Grand Forks Sentinel squadrons, by their strategic locations on the northern approaches to 48 of our states, should also be capable of blunting the damage that might be caused by accidental missile launches by either Russia or China.

President Nixon's "safeguard" ABM system is, we feel, a logical compromise between an elaborate antiballistic missile network and the current, unguarded system of ICBM system of ICBM bases.

The "doves" will continue to maintain that any form of ABM network will jeopardize the possibility of long-range peace with the Soviet Union.

Russia will certainly issue statements following the same "soft" line and charging that the United States—only a few hours after the approval of our Senate of the nuclear test ban treaty—had escalated the arms race.

Such an attitude is typical of the Communists.

They already have an ABM network around their main cities and major missile bases, where the Russian version of the Minuteman is in place and readily capable of striking the heart of our nation.

So we can expect that the U.S.S.R. propaganda would favor keeping the United States ICBM network vulnerable to a missile attack.

The Reds always cry "do as we say, not as we do."

The $6–7 billion requested by President Nixon to construct the two Sentinel bases would, we believe, be a wise investment in security for our country.

THE 51ST ANNIVERSARY OF THE PROCLAMATION OF INDEPENDENCE OF THE BYELORUSSIAN DEMOCRATIC REPUBLIC

Mr. DODD. Mr. President, yesterday, March 25, marked the 51st anniversary of the proclamation of independence of the Byelorussian Democratic Republic.

In the Soviet Union, for obvious reasons, this anniversary will not be celebrated. But it will be the object of solemn observances by the Byelorussian community in this country and other parts of the free world.

It is all too customary to think of the Soviet Union as a single monolithic state. Actually, it is a vast prison house of nations, as a study published by the Senate Subcommittee on Internal Security many years ago pointed out.

When the Bolsheviks first came to power, Lenin promised the unconditional right of self-determination to the various minority nationalities who had been subjected by the czarist regime.

Taking this declaration at face value, the Ukrainian people, the Byelorussian people, the Georgians, and other non-Russian nationalities, moved to set up states of their own that would be independent of Bolshevik rule.

But as soon as the Bolsheviks were able to mobilize the military forces necessary to put down these independence movements, they scrapped their promise of self-determination and moved to destroy the dozen or more independent national governments that had sprung up at the time of the November revolution.

The fate of Byelorussia was characteristic of the fate that befell the other independent non-Russian republics. By way of telling this story, I ask unanimous consent to insert into the RECORD at this point the text of a statement in the form of a letter which I received from Mr. Michael Bachar, chairman of the United Byelorussian-American Commemorative Committee.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

UNITED BYELORUSSIAN-AMERICAN COMMEMORATIVE COMMITTEE,
Kew Gardens, N.Y., March 7, 1969.

HON. THOMAS J. DODD,
U.S. Senate,
Washington, D.C.

DEAR SIR: The day of March 25, 1969 will mark the anniversary of great importance for American citizens of Byelorussian origin. On this day Byelorussians everywhere in the countries of the free world will celebrate the 51st anniversary of the proclamation of independence of the Byelorussian Democratic Republic.

In Byelorussia, however, this national celebration is not permitted. This year, instead, marks the 50th anniversary of the existence of the Byelorussian SSR.

The Byelorussian SSR is not a sovereign state. Soviet Russia turned Byelorussia into its own colony by military conquest. At the time of the First World War, the Tsarist Russian Empire was disintegrating. All the non-Russian nations liberated and restored themselves as free, independent and sovereign countries. The Byelorussian constituent body—the First all-Byelorussian Congress—assembled on December 17, 1917 in Miensk, the capital of Byelorussia. It was composed of 1,872 freely elected delegates from all areas of Byelorussia. Their first task was to take the necessary steps for establishing an independent Byelorussian Republic. Since participating communist delegates were of a small minority, they were unable to change the trend. Therefore, an armed force, dispatched by the Bolshevik-Russian government, overran and dispersed the Congress. Immediately following this action, however, Congress met and chose the Executive Council which, on March 23, 1918, proclaimed the independence of the Byelorussian Democratic Republic. The elected Byelorussian government acted vigorously on the diplomatic arena and organized armed forces which fought for national independence.

The Soviet Russian government, in opposition to the Byelorussian Democratic Republic, decided to create fictitious statehood for Byelorussian people. In Moscow in November 1918 the Central Committee of the Russian Communist Party (Bolsheviks) passed a resolution establishing the Byelorussian Soviet Socialist Republic. The candidates for the government of BSSR were selected in Moscow and dispatched to Byelorussia. In connection with the departure of those candidates from Moscow on December 29, 1918 Stalin sent a telegram to Myasnikoff, a Russian ruler in Byelorussia, which read as follows: "The Byelorussian are departing for Smalensk today. They are carrying a manifesto. The Central Committee of the Party and Lenin is asking to have them accepted as younger brothers, who as yet may be without experience, but who are ready to give their lives for the Party and Soviet work."

In the city of Smalensk on December 30, and 31, 1918, the sixth north-western provincial conference of the Russian Communist Party (Bolsheviks) took place. This conference, consisting of Russians and internationalists, named itself after the first meet- of the Communist Party (Bolsheviks) of Byelorussia. There were participating 162 delegates with voting rights and 25 delegates with consulting right. This meeting sent a greeting to the Central Committee of the Russian Communist Party (Bolsheviks) in Moscow, which also contained this statement: "By proclaiming the establishment of the Communist Party (Bolsheviks) of Byelorussia, the conference confirms its uninterrupted ideological, tactical and organizational connection with the Russian Communist Party, which was created during many years of common activity. The conference further confirms that in the future the communists of Byelorussia will follow the leadership of the Central Committee of the Russian Communist Party (Bolsheviks) and consider it as the higher authority of the Party".

On December 31, 1918 the conference approved "the provisional revolutionary workers' and peasants' government for Byelorussia", which had been previously appointed in Moscow and which consisted of communists only. As a matter of ethnic formality two Byelorussians: Zhylunovich and Charviakou, were added to this government. The leading part of this government, however, was composed of non-Byelorussians. On January 1, 1919 this government announced a manifesto which had been prepared earlier in Moscow. This date and this act are considered the foundations for the Byelorussian SSR.

On February 2, 1919 the first assembly of Soviets of BSSR convened in Miensk. It was composed of 230 delegates, of which number 213 were communists and 17 sympathizers. The representative of the Soviet Russian government, Sverdloff, had announced the decision of the All-Russian Central Executive Committee which recognized the Byelorussian SSR. Answering this recognition, the assembly decided to maintain close federal connection between the BSSR and RSFSR.

On February 3, 1919 this assembly accepted a constitution, a national emblem and a flag for BSSR, modeled after the Russian SFSR.

Created by Soviet Russian government in this way, the BSSR is camouflaging the actual colonial status of Byelorussia. For the entire 50 years of this Soviet Russian domination, Byelorussians have been subjected to a systematic and ruthless persecution on a national level.

This rule has been marked by economic exploitation, social oppression, mass terror, political deportations, imprisonments and murders. Denial of religious freedom to all faiths openly continuous. A low standard of living, malnutrition and substandard housing are permanent features of this Soviet rule. The end result is that during this period Byelorussian nation has lost over six million of her population.

At this time Byelorussians in the BSSR do not have any possibility to defend their own national interests. Therefore, we take the liberty to ask you for support of the aims of the Byelorussian nation for liberation

from the horrors experienced during these past 50 years of Soviet Russian occupation, and for restoration of an independent Byelorussian State.

Very respectfully yours,

MICHAEL BACHAR,
Chairman.

SEWARD WILL PROSPER

Mr. STEVENS. Mr. President, Senators have heard me speak of the economic problems facing the city of Seward, Alaska, and of the enterprising efforts of the people of that city to overcome these problems.

Seward has one of the finest deepwater, ice-free ports in the world. As the southern terminus of the Alaska Railroad, it has in the past served as the principal entry point for the railbelt of Alaska. Now with the growth of the port of Anchorage and the use of roll-on, roll-off facilities at the abandoned military port of Whittier, Seward finds itself without the economic base it depended on.

Seward was an all-America city; its recovery from the disastrous 1964 earthquake, tsunami wave and fire was remarkable. Its recovery was a tribute to its desire to survive and prosper. Mr. President, Seward will survive its economic problems. It will survive, and I will do all I can to help.

Mr. President, I ask unanimous consent that the city of Seward Resolution 740 may be made a part of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

THE CITY OF SEWARD RESOLUTION 740

Whereas, The City of Seward and its citizens are imperiled with economic transportation extinction due to a dramatic decline in the number of vessels using the docking facilities here, and

Whereas, The Alaska Railroad has consistently neglected its responsibility to the community as a major economic factor in the continued prosperity of the entire area, and

Whereas, it has become apparent to all citizens in the community that firm action must be initiated in order to prevent Seward's ultimate extinction as an important factor in Alaskan transportation and as a participant in the overall growth of the state, and

Whereas, the citizens of the City of Seward have exhausted their financial resources in the aftermath of the 1964 Good Friday Earthquake, never to regain these losses, now,

Therefore, be it resolved that the citizens of the City of Seward, Alaska through their elected officials propose that the following development plan for the Port of Seward, Alaska be reviewed by the members of the Alaskan Delegation to Congress and that they, Senators Stevens and Gravel and Representative Pollock, present this proposal for consideration before the United States Congress for final determination and action. Said Development Plan to be outlined as follows:

MISSION ONE

The citizens of the City of Seward, Alaska, propose that immediate consideration be given to the construction of two railslips to be located adjacent to the railroad dock. The installation of these railslips will provide needed accommodation to Trainships using the roll-on/roll-off method of loading and discharging railroad cars. In connection with the construction and operation of these twin railslips, it is also proposed that consideration be given to construction of a Truck terminal and warehousing area for the use and general convenience of truck lines and their employees who will be encouraged to utilize the expanded full-service facilities.

The citizens further propose that priority attention be given to the immediate need for construction of a railslip on the east side of the Alaska Railroad Dock which, in their opinion, constitutes the most feasible location for the initial construction activity. Next it is proposed that the second trainslip be constructed on the west side of the Railroad Dock in such a way as to permit simultaneous operation with the Dock itself and the twin railslip. It is proposed that action be initiated on an emergency basis, if necessary, to promote the return of economic well-being to Seward.

MISSION TWO

The citizens of Seward further propose that The Alaska Railroad freight tariffs as administered under the authority of the Interstate Commerce Commission be favorably revised to encourage shippers to utilize Seward's dock facilities. The proposal asks that consideration be extended for a 10-year period following the completion of the second railslip.

MISSION THREE

The citizens of Seward request the United States Congress to establish a Blue Ribbon Commission to investigate the feasibility and potentiality of a high speed transportation corridor linking the cities of Kenai, Soldotna and Seward by means of a highway and a railroad that would further expand the economic profile of the Kenai Peninsula.

MISSION FOUR

The citizens of Seward dedicate themselves to the tasks ahead and request this assistance in bringing Seward forward through dramatic economic improvement. The citizens, through their elected officials, petition the Congress of the United States to give this matter priority attention consistent with the needs of the Nation and to implement as soon as possible, positive steps toward fulfilling this request.

EXHIBITS

The following exhibits are attached hereto and made a part of Resolution No. 740:

Exhibit A: Aerial view of Federal Railroad Dock and proposed site for railslip-warehouse facilities.

Exhibit B: Drawing showing present layout of Alaska Railroad facilities and the proposed railslip locations. (T-S 3 shows alternate in case extra land area is required for second railslip.)

Exhibit C: Map of Seward and Harbor area.

And, be it further resolved that James R. Filip, City-Clerk Treasurer of The City of Seward, Alaska, be and is hereby directed to submit this Resolution to the Alaskan Delegation in Congress.

This Resolution shall be effective on the date of its passage and approval.

Passed and approved by The City Council of The City of Seward, Alaska, this 3rd day of March, 1969.

E. G. SKINNER,
Vice Mayor.

Attest:

JAMES R. FILIP,
City Clerk-Treasurer.

POSTHUMOUS AWARD OF MEDAL OF HONOR TO SGT. RODNEY M. DAVIS

Mr. TALMADGE. Mr. President, the Vice President today will present the Medal of Honor posthumously to Sgt. Rodney M. Davis of Macon, Ga., who made the supreme sacrifice for his country and who gave his own life in order to save the lives of his comrades in battle in Vietnam.

Sergeant Davis' wife, two small children, and other members of his family from Macon are to be present for the ceremonies and to receive the Medal of Honor. All the Nation, and indeed all the free world, is indebted to the young men of America who are fighting so gallantly in Vietnam, and we are especially proud of those valiant men who have gone above and beyond the call of duty. Such a gallant man and brave marine was Sergeant Davis, and I join the Nation in saluting his memory today.

I ask unanimous consent that there be printed in the CONGRESSIONAL RECORD Sergeant Davis' citation, as well as a brief profile of his outstanding career in the U.S. Marine Corps.

There being no objection, the citation and profile were ordered to be printed in the RECORD, as follows:

The President of the United States in the name of The Congress takes pride in presenting the Medal of Honor posthumously to Sergeant Rodney M. Davis, United States Marine Corps, for service as set forth in the following citation:

For conspicuous gallantry and intrepidity at the risk of his life above and beyond the call of duty while serving as the right guide of the Second Platoon, Company B, First Battalion, Fifth Marines, First Marine Division, in action against enemy forces in Quang Nam Province, Republic of Vietnam, on 6 September 1967. Elements of the Second Platoon were pinned down by a numerically superior force of attacking North Vietnamese Army Regulars. Remnants of the platoon were located in a trench line where Sergeant Davis was directing the fire of his men in an attempt to repel the enemy attack. Disregarding the enemy hand grenades and high volume of small arms and mortar fire, Sergeant Davis moved from man to man shouting words of encouragement to each of them while firing and throwing grenades at the onrushing enemy. When an enemy grenade landed in the trench in the midst of his men, Sergeant Davis, realizing the gravity of the situation, and in a final valiant act of complete self-sacrifice, instantly threw himself upon the grenade, absorbing with his own body the full and terrific force of the explosion. Through his extraordinary initiative and inspiring valor in the face of almost certain death, Sergeant Davis saved his comrades from injury and possible loss of life, enabled his platoon to hold its vital position, and upheld the highest traditions of the Marine Corps and the United States Naval Service. He gallantly gave his life for his country.

SGT. RODNEY M. DAVIS, USMC

Rodney Maxwell Davis was born April 7, 1942, in Macon, Georgia. He attended elementary and high schools there, and graduated from Peter G. Appling High School, May 29, 1961.

Shortly after graduation, he enlisted in the U.S. Marine Corps in his hometown, August 31, 1961; then reported for recruit training with the 1st Recruit Training Battalion, Marine Corps Recruit Depot, Parris Island, South Carolina. Upon completion of recruit training in December 1961, he was transferred to the Marine Corps Base, Camp Lejeune, North Carolina, and underwent Individual Combat Training with the 2d Battalion, 1st Infantry Training Regiment, graduating the following February.

He then joined Company "K", 3d Battalion, 2d Marines, 2d Marine Division, FMF, at Camp Lejeune and served as a Rifleman until May 1964. While stationed at Camp Lejeune, he was promoted to private first class, April 1, 1962, and to lance corporal, January 1, 1964.

Lance Corporal Davis was ordered to London, England, for a three-year tour of duty

as Guard with the U.S. Marine Detachment, Naval Activities. He was promoted to corporal, January 1, 1966, and to sergeant, December 1, 1966.

Ordered to the Republic of Vietnam in August 1967, he was assigned duty as a Platoon Guide with Company "B", 1st Battalion, 5th Marines, 1st Marine Division. While serving as the right guide of the Second Platoon against enemy forces in Quang Nam Province on September 6, 1967, he was mortally wounded when he threw himself upon a hand grenade to save his comrades from injury and possible death.

His medals and decorations include: the Purple Heart; the Good Conduct Medal; the National Defense Service Medal; the Armed Forces Expeditionary Medal; the Vietnam Service Medal; the Military Merit Medal; the Gallantry Cross with Palm; and the Republic of Vietnam Campaign Medal.

Sergeant Davis is survived by his wife, Mrs. Judy P. Davis; two children: Nochola Amanda (born July 21, 1965), Samantha Jane (born August 14, 1966), of 2120–B Meriwood Drive, Macon, Ga; his parents, Mr. and Mrs. Gordon N. Davis of 2154 Neal Avenue, Macon; three brothers, Mr. Gordon N. Davis, Jr., of 813 Whitney Avenue, Albany, Georgia, Howard H. and Robert C., of the parents' address, and one sister, Debra E., of the parents' address.

MARYLAND DAY

Mr. MATHIAS. Mr. President, yesterday we marked the 335th anniversary of the founding of Maryland on March 25, 1634.

The Free State enters its 336th year with many challenges, but with firm confidence; with difficulties, but with determination; with hazards ahead, but with a history of achievement from which to draw new guidance and strength.

As we face the tests of the future, we can gain comfort and conviction from the Marylanders of the past, the men and women who laid down firm principles in the midst of earlier turbulence, and gave the State and Nation sound leadership through critical times of change.

Charles Carroll of Carrollton was one of these Marylanders who excelled in vision and maturity. Member of the Continental Congress, first U.S. Senator from Maryland, and unrelenting champion of freedom, Charles Carroll of Carrollton was significantly the last survivor of the signers of the Declaration of Independence. It was typical of his very existence that he came to symbolize the Declaration and the ideals that it embodies.

His lifespan from 1737 to 1832 bridged the transition from the feudalism of Lord Baltimore's proprietary rule to vigorous democracy. His understanding bridged the distance from the traditional education which he received in Louis XV's France to the sturdy American ideals of national freedom and personal liberty which he advanced.

In 1774, Carroll wrote:

> I will either endeavor to defend the liberties of my country, or die with them: this I am convinced is the sentiment of every true and generous American.

He recognized, long before most of his countrymen, the inevitability of American separation from the English crown, and recognized too the need to secure liberty not only for the American flag, but under that flag for every citizen. In public and private life, he fought to banish forever the religious intolerance which had penetrated Maryland, the colony founded on toleration.

In 1776 Carroll witnessed many triumphs, for in that crucial year he served in the Maryland convention which voted for independence; went as a delegate to the Continental Congress, where he signed the Declaration of Independence; and led the State convention which, that fall, adopted Maryland's new constitution and the bill of rights which became a model for the new Nation.

Charles Carroll of Carrollton was a remarkably modest man, who continually declined honors while accepting service where he felt he could contribute most. Elected as Maryland's first U.S. Senator, he resigned that office to continue service as a Maryland State senator in 1792 when it became unlawful to hold both posts. Consistently he emphasized the strengthening of Maryland as a foundation stone in a durable Union.

The causes which Charles Carroll advocated, and the principles he advanced, are as vital now as they were in his time. Now, as then, Marylanders are responding to the threat of prejudice, to the shadow of injustices, and to the need to reshape and redesign institutions of government.

There is, however, a difference. The Maryland of 1776 had a population of only about 225,000 and by the time of Carroll's death was still under 500,000. Today, Maryland has grown so that her population is about 4 million and her human and material resources exceed those of many nations of the earth. The distinction between the Maryland of Carroll and the Maryland of 1969 is the greater obligation that our greater wealth and power impose. We must not despair of equaling the shining achievements of Charles Carroll. We owe both the past and the present, indeed, we owe Charles Carroll and his compatriots themselves, the establishment of even higher goals.

We are observing Maryland Day today both in the Free State, and in the National Capital which Charles Carroll of Carrollton was instrumental in bringing to the banks of the Potomac, to lands ceded by Maryland for the seat of Federal Government. In marking this day, we should both reflect upon the past and respond to the present—for the cause of liberty is as pressing today as ever, and our efforts and achievements can only be as great.

A SUCCESSFUL TECHNICAL COLLEGE AT LINN, MO.

Mr. SYMINGTON. Mr. President, for more than a century Linn, Mo., has had national fame as the home of a newspaper with a unique name, the "Unterrified Democrat," established soon after the Civil War and published throughout those years, until recent months, by the Zevely family.

Now, thanks to the vision and leadership of the superintendent of the Linn R–2 School District, this county seat of Osage County, Mo., has another claim to fame in a successful 2-year school which could well be a pattern for other schools to meet this growing need in our modern technology.

As reported recently in the St. Louis Post-Dispatch, on March 18, Linn Technical College was started in 1961 under the direction of Thurman L. Willett, superintendent of that school district with a class of 36. It now has an enrollment of 450.

I ask unanimous consent that the article be inserted at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MANY OF TOP U.S. FIRMS RECRUIT STUDENTS FROM LINN COLLEGE

LINN, Mo., March 17.—Some of the nation's industrial giants regularly pay tribute to a small "college" in this central Missouri town of 1050 population.

Such nationally-known firms as McDonnell Douglas Corp., Ford Motor Co., Lockheed, Chrysler, Caterpillar, Honeywell, Ralston-Purina, Radio Corporation of America and International Business Machines Corp., regularly recruit graduates of Linn Technical College.

Recently a recruiter from McDonnell Douglas, Missouri's largest employer, was sent to the college. Before leaving he signed up 15 prospects.

Linn Tech is not a college in the sense that it offers degrees. But it does offer thorough training in electronics, design drafting, automobile mechanics and machine tool technology. Next year a course in aviation technology will be added.

Linn Tech was started in 1961 with 22 day students and 14 night students. The only course available was electronics. It has since grown to an enrollment of 450—all but two from Missouri.

The school was founded by Thurman L. Willett, superintendent of the Linn R-2 School District since 1955. It is the realization of a dream Willett has had for more than 25 years.

In 1942, while Willett was superintendent of a small school district in Southeast Missouri, he took stock of a high school graduating class.

He was chagrined to realize that none would go on to higher learning. Some could not afford college; some didn't want to continue. But many would have benefited from some type of additional training.

It was then that he conceived the idea of a two-year technical training school to help prepare young persons who couldn't afford the extra schooling needed to get better paying jobs in a society that was already embarked upon technological change.

World War II, and a 10-year stint in private enterprise intervened. But in 1955, Willett received his master's degree in education from the University of Missouri. He took his new degree along when he went to take over as superintendent at Linn.

He begged, borrowed and scrounged enough money and material to open the first electronics course in 1961. Classes were held in the basement of one of the Linn school buildings.

From that small beginning, the school has grown in stature as well as enrollment.

But the success of the school has created one of its biggest problems. As the school's reputation grows, so does the number of applicants.

Housing space in Linn is hard to find.

Two years ago, when local space ran out, Willett set up a billet in the basement of his home for 10 students. This year he has seven staying at his home. They are in addi-

tion to three preschool youngsters of his own, which make a full house.

Willett recently appeared before the Missouri House Education Committee to support a bill that would let his and other school districts sell revenue bonds to build dormitories.

Since that meeting the House passed the bill and sent it to the Senate.

Willett believes the bill is a must if Linn Tech is to survive. Although the technical school is part of the Linn R-2 district, it is operated separately. None of the taxes in R-2 are used.

"There are too many people who think we are using public school money for the tech school," Willett said. "Consequently, we have not been able to pass a single bond issue for the development of our regular schools."

Willett said the dormitory would be paid off from rentals charged the students.

He wants to build a dormitory housing about 60 students. This would relieve the crowded situation without taking away any income from local residents who have fixed up their homes to rent to students, he said.

The students clean up their own classrooms. They are paid the minimum wage of $1.25 an hour out of matching funds from the Federal Government. The fund is administered by the students.

In its short existence the school has established one tradition. Each Friday is "dress up" day when everyone must wear a coat and tie. The instructors feel this is good training for the day when most of the graduates will be working in white collar jobs.

It also has been noticed by companies who hire Linn Tech graduates.

BYELORUSSIA

Mr. SCOTT. Mr. President, March 25 marked the 51st anniversary of the independence of Byelorussia, an independence of tragically brief duration.

During the centuries in which Byelorussia was governed by the Czars, its brave people tried time and again to free themselves from the embrace of the Russian bear; each time their efforts were crushed by force of arms.

On March 25, 1918, the Byelorussian people proclaimed their independence and a free democratic republic was born. Communist intrigue and military intervention soon strangled the new nation, and by January of 1919 Byelorussia was formally bound to the Soviet Union. The new government was not elected or approved by the Byelorussian people, and was made up largely of non-Byelorussians dispatched from Moscow.

Following the defeat of Hitler, the people of Byelorussia again tried to reestablish the independence of their homeland, but again the commissars proved themselves more imperialistic than the Czars.

For the entire 50 years of this Soviet domination, Byelorussians have been subjected to systematic and ruthless persecution on a national level. The striving and hope for national identity still lives, however, and the people of the free world join in hoping that the brief moment of freedom which Byelorussia once experienced will someday be restored.

CONGRATULATIONS TO THE COAST GUARD AIR STATION AT LOS ANGELES

Mr. MURPHY. Mr. President, I would like to take this opportunity to pay special tribute as well as offer my sincere congratulations to 38 dedicated officers and men of the Coast Guard Air Station in Los Angeles.

In recent weeks, the Coast Guard Air Station has played a vital, life-saving role during crises in the area.

The first of these occurred on January 13 when a Scandinavian Airlines DC–8 crashed with serious loss of life off the Los Angeles coast. On January 18, a United Airlines 727 went down in the same vicinity.

In both cases, helicopters from the Coast Guard Air Station at Los Angeles International Airport were over the crash areas almost immediately. These helicopters were the first rescue units to respond, arrive on the crash scenes, locate survivors and direct surface units to the sites.

In neither case were these operations easy. During the SAS disaster, the Coast Guard operated with a ceiling of only 700 feet and visibility, in heavy rain and fog, of about 1 mile. They made 13 sorties to the scene, putting in almost 30 flight hours. Extremely hazardous flying conditions existed during the United Airlines operation, also. Visibility was often less than 1 mile, again in heavy rain, yet the helicopters flew 14 sorties lasting a total of 19.4 hours.

While the Coast Guard established its air station at the Los Angeles International Airport in 1962, to provide immediate assistance for any airline crash off the airport, no commercial air carrier had been involved in an accident requiring Coast Guard help until the SAS crash. During this period, however, the air station responded to an average of 175 calls for other types of assistance yearly.

These emergency calls, Mr. President, are extremely wideranging as well as being highly perilous. Only the other day one of the Coast Guard's helicopters was able to save an 80-foot commercial fishing vessel from going on the rocks by blowing it away from shore with its rotor wash. This is not an infrequent type of emergency to which these men are summoned. They have saved people stranded on nearby cliffs. They have removed many injured or sick seamen from vessels at sea. They conduct countless routine searches for overdue boats.

"The saving of life is the fruit of our efforts," Comdr. P. W. Tifft, Jr., commanding officer of the air station, has told me.

This was dramatically underscored during the recent Los Angeles-Santa Barbara flood disasters. Between January 25 and 28, Commander Tifft's men air evacuated 49 people isolated by flood waters. During these operations they flew 20 sorties during 26 hours. The lifesaving versatility of their work included flying bales of hay to horses stranded by water northwest of Santa Barbara and in delivering vital food and medical supplies to isolated regions near Carpinteria and Malibu. All this, Mr. President, with visibility often less than 440 yards and a ceiling of a mere 200 feet.

These dedicated men, as their commander expresses it, "are always ready and strive for a high degree of professionalism in responding to calls of distress from the people of Los Angeles."

I, and all who know of their work, commend and thank them.

HAROLD E. HUGHES: EVANGELIST FROM THE PRAIRIES

Mr. TYDINGS. Mr. President, the current issue of Harper's magazine contains a profile of the distinguished junior Senator from Iowa which I commend to Senators. Larry L. King, a frequent contributor to Harper's and a writer of wit and perspicacity, sought out his subject in the town of Ida Grove, Iowa, on HAROLD E. HUGHES Recognition Day. Not surprisingly, Ida Grove was recognizing a native son with all the pride and ceremony that a town of 2,300 can muster, and congratulating itself and him on his election to the U.S. Senate. That HAROLD HUGHES had previously served his fellow townsmen and the rest of the people of Iowa for three successful and progressive terms as Governor helped to explain the intense excitement in that town on that day.

The author expected the visit to be a sentimental pilgrimage, enlivened by the clamor of rhetoric, well wishers, and favor seekers. Having witnessed other such scenes more than once, he was not prepared for HAROLD HUGHES who reserved for himself 4 hours of that public day for private thought. From that point on, the author began to discern some of the unique qualities of his subject that have won Senator HUGHES the trust of his constituents and the admiration of countless friends and associates.

The list of HAROLD HUGHES' progressive accomplishments as Governor of a traditionally conservative State is remarkable. Larry King quotes a close associate explaining how it happened:

> His secret is his ability to communicate with people. . . . He's simply talked sense to them—told them the truth. . . . That kind of practical integrity is appreciated in Iowa.

That quality is appreciated by all of us. Senator HUGHES is warmly and accurately portrayed in the article to which I refer. I ask consent that it be printed in the RECORD for the pleasure and acquaintance of his colleagues.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HAROLD E. HUGHES: EVANGELIST FROM THE PRAIRIES

(By Larry L. King)

Turncoat Republican, Vietnam dove, advocate of international disarmament, latter-day disciple of Eugene McCarthy, ex-drunk, social do-gooder, Iowa's former Governor is now his state's Senator and may yet surprise his constituency with what he attempts to do.

The women were up and baking cookies, cupcakes, and fruit tarts long before the sun, having sent their husbands off to their shops and stock barns even earlier than usual. The children, having awakened to this day of rare promise, wandered sleepy-eyed about the warm winter kitchens of Iowa, sniffing baked goods, and asking questions: "How did a real Governor ever get borned in Ida Grove, Mamma?"

For weeks the citizens of Ida Grove, population 2,300, had been anticipating the biggest day in its history. Now, on the morning of Harold E. Hughes Recognition Day, Mayor Tony Schau, a shy country fellow who probably would prefer wrestling a bear to public speaking, and might have more luck, wor-

ried over the official proclamation he would attack—not without grave danger to the English language—at the banquet in Community Hall that night. Husky 4–H Clubbers and glow-faced little Future Homemakers promised themselves to cater the Governor's banquet with dignity and dispatch. Betty Hutchinson, who writes a column called "Pertinent Piffle" for the Ida County *Pioneer Record*, wondered what she should ask Governor Hughes in the personal interview he had consented to; finally she decided to solicit his suggestions on how Ida Grove might best court "progress." (The Governor, possibly expecting a grilling on the state budget or the Vietnam war, would blink at the question and reply, well, he couldn't say without making a detailed study of the situation; it is up to each town to declare its unique assets and problems and to measure these carefully and proceed accordingly, and this has apparently been done in Ida Grove and the town is definitely moving forward—a most un-Hughes-like speech, the antithesis of his usual blunt candor; one must remember that many good men have been softened by protective considerations of home.) In the lobby of the Ida County State Bank, workers and bank executives collaborated in the hanging of a huge streamer: "Welcome Home Harold, Eva, and Family." "Some have been hoping we can convince him to move back here," a local booster said. "It would be mighty sweet advertising for the town."

Two bodies of opinion existed over how the guest of honor should be properly addressed. One group held that since Harold Hughes would be Governor for another month he should be called by that title; a dissenting element, holding that the Governor had just been elected to a higher office and within the month would be sworn in as United States Senator, felt that any appellation other than "Senator" might constitute a personal insult. No such thing, the first group cried in rebuttal, because there are only fifty Governors as against one hundred U.S. Senators and so we must call him "Governor," else the town is ruined. Two signs erected some years ago reflected this community division: the sign at Ida County Airport welcomed its very occasional travelers to "The Home of Governor Harold E. Hughes"; another on the outskirts of town, near the main highway, had been altered to welcome passersby to the hometown of "Senator" Hughes.

Shortly before 11:00 A.M. Governor Hughes, driving a black limousine and accompanied by his wife and sixteen-year-old daughter, tooled by the sign prematurely welcoming him as Senator and, with not a surplus look nor sentimental pause, rolled on through the brief business district to the Ida Grove Motel on the far edge of town. One had, in old newsreels, novels, and real life, followed many men returning to their native earth: Wendell Willkie standing in an open convertible, cops sirening him through the hometown crowds, as he permitted Elwood, Indiana, a glimpse of him after his nomination for President; Willie Stark, exhorting the woolhats and rednecks from the steps of the Mason City courthouse in *All the King's Men* country, telling them how he was going out to the old home place and raid his pappy's smokehouse; Lyndon B. Johnson searching for his boyhood tracks in the poor dust of Johnson City. They had all come back with smiles on their famous faces, reveling in the parades and music and oratory.

So a moderately jaded observer of such political kingfish, sharing a trailing automobile with one of the Governor's aides-de-camp, was surprised to see the Governor roll on through town, neither calling attention to himself nor chasing old landmarks across the railroad track. "The Governor isn't that much of a sentimentalist," his assistant said. "He operates a little different than most politicians. He doesn't want you to interview him today. You can observe him in public but he doesn't want you talking to him—at least on issues; he'll be busy with old friends when he's out in public and when he's not in public he wants to meditate."

He wants to what?

Yes, the man said, the Governor simply likes to sit and think. He's of the opinion that public men don't do enough of that.

Cheers for the notion, but did the Governor expect to actually spend his day in solitary meditations when the whole of Ida Grove lay at his feet, anxious to honor him and trembling to begin?

The assistant noted that official events didn't begin until 3:00 p.m., and the Governor therefore had four hours of leisure time.

The visitor said hell, there would be a march on the Ida Grove Motel once word got around that the Great Man had arrived: celebrity stalkers, job seekers, precinct czars, and other assorted old pests.

"People out here pretty well respect your privacy," the assistant said as we parked outside the Ida Grove Motel.

But, the visitor protested, I've flown all night to get here and talk to this man. He's been something of a middle-America folk hero back in the East: great things are predicted for him. He's hot copy. National exposure as he enters the Senate is the kind of break politicians pray for. Maybe you'd better tell him how advantageous this could be to his Washington career.

The aide smiled and said, "Don't ever try that approach on Harold Hughes. I *told* you he was different from most politicians."

Governor Hughes passed by en route to the motel office, a sober countenance upon him, a really bleak and cheerless look. When he emerged he offered only a token wave before disappearing into his rooms. The visitor did not then know an interesting bit of the Governor's history—that the Governor is an ex-alcoholic—or he might not have so readily observed, "He looks like a man who needs a drink."

There was a long and silent afternoon with the visitor restlessly rattling around his own motel room while the Governor presumably meditated behind an adjoining wall and traffic disturbed the distant highway some three times an hour. The visitor stared on the chilled, brown winter landscape of rural Iowa and wondered what sort of prairie guru the folks had elected here.

Iowa is not given to losing its head. Though it contributed a Henry Wallace who got involved in matters of the occult, observed exotic diets, killed little pigs, and flirted with radicals and Reds in his Progressive party phase, FDR and not Iowa got him to the Vice-Presidency. The only time Iowans gave us a President they offered that paragon of Old Guard virtue, Herbert Hoover. More often than not the Iowa electorate chooses cautious Stone Age Republicans whose endless peregrinations to Washington disturb neither the status quo nor anyone's mental processes, including their own. Senators such as Bourke B. Hickenlooper or Jack Miller serve their many terms untroubled by imagination or national travail. The most notorious Congressman from Iowa is cranky old H. R. Gross, a seventy-year-old knee-jerk best remembered for castigating the Reverend Bill Moyers for dancing the frug in the White House, for complaining when a State Department wife turned up at some official function "half naked," for trying to deny Harlem its preference for Adam Clayton Powell, and for going into a screaming snit at the merest thought of bureaucrats with new schemes in mind on spending.

Iowa is bedrock country. Faith-of-our-Fathers country; it is incredibly clean, and its quiet villages are trim and tree-lined. It is overwhelmingly white, instinctively Republican, and rural even in its cities. There is about it a joyless sense of order, rote, and commercial hustle common to the Germans between their holier wars; and refugees from the Eastern Seaboard or even the Southwest, when suddenly faced with Iowa, tend to be mesmerized by the supposition that such places exist only in stories by MacKinlay Kantor, paintings by Norman Rockwell, and old Walt Disney productions with Fred MacMurray, freckled boys, and big friendly dogs. It is capable of the Old Testament furies: in one recent issue of the Des Moines *Tribune* were articles reporting eighteen persons arrested in Ottumwa for conducting "a loud party" past midnight and a wife who received thirty years in prison for pinging her husband with a letter opener so slightly that he was home from the hospital within the week, and an upbraiding of Frank Sinatra after he'd had the temerity to suggest that " 'The Star-Spangled Banner' is a terrible piece of music." One night after the visitor had been turned away from the most preferred hotel in Des Moines because the sweet old lady desk clerk obviously suspected his beard, he stood alone in downtown Des Moines—dark and dead as the grave at 9:00 P.M.—and with the terrible December wind punishing him for the ungodly hour, he knew why Ronald "Dutch" Reagan had torn himself away and gone out to California. Iowa is where the State Supreme Court awarded a man's eight-year-old son to his maternal grandparents because the father was an artist and presumably lived a bohemian life in the West. It is where a local grand jury recently urged efforts for "the elimination of moral pollution by faculty and paid speakers" at Iowa State University, Ames.

Such a catalogue is not intended to embarrass Iowans, but to stress how very amazing it is that Harold E. Hughes—turncoat Republican, Vietnam dove, advocate of international disarmament, latter-day disciple of Senator Eugene McCarthy, ex-drunk, social do-gooder—could get himself elected to statewide office not once but five times.[1] In the words of his friend, author Vance Bourjaily of the University of Iowa, Harold Hughes is one of those men of balanced contradiction who sometimes occur in our political life. . . . It is as if the checks and balances which our civic books speak of as being fundamental to the democratic structure were embodied in a single human system."

Though a Methodist Sunday School teacher and a persistent free-style moralist, Hughes won the Iowa Governorship in 1962 largely on a platform to make legal liquor-by-the-drink. An enthusiastic hunter in a hunter's state, he champions far-reaching gun-control legislation. The Governor of a rurally oriented state, he campaigned against and defeated a constitutional amendment to reapportion in favor of rural and small-town voting blocs. He has publicly identified with young dissenters by telling their critics, "I really worry a lot more about the long faces on adults than I do about the long hair on kids." In a state where the "non-white" population is less than one per cent and little or no political profit is to be gained by supporting civil rights, Hughes has condemned his audiences as hypocrites for doing little to accept blacks, Indians, or others of the poor. "The apostles," he tells them, "say that if you say you love God and love not your neighbor you are a liar." He has supported an open-housing law for Iowa, issued an executive order forbidding discrimination in employment by state agencies, established a state Civil Rights Commission, and virtually alone raised $600,000 from private sources to establish employment programs for the poor.

In a country known more for eye-to-eye vengeance than for enlightened criminology

[1] Commissioner of Commerce in 1958; Governor in 1962, 1964, and 1966; U.S. Senate in 1968.

Hughes managed effective prison reforms, established a State Law Enforcement Academy, reshaped the Highway Patrol along more gentle lines, and abolished capital punishment. He obtained Iowa's first alcoholic treatment facility and its first public defender; he tripled state aid to education and was aggressive in conserving parks and other public recreational works. His administration got an industrial-safety law and twice increased workmen's compensation benefits, pushed through a bill to control billboard advertising along state highways, and gave the state its first consumer-protection laws of any consequence. His fiscal reforms included repeal of the property tax on household goods and reduction of taxes for the elderly poor, an increase in state income tax, and a tax withholding system greatly aiding revenue collections which had in the past been hit-or-miss.

Most of these moves delighted the state's liberals or progressives, as did Hughes' anti-Vietnam war stance, his friendship with Bobby Kennedy, and his ultimate endorsement of Senator McCarthy for President. (As U.S. Senator, Hughes' first Washington act would be to back Senator Ted Kennedy over Senator Russell Long for Assistant Majority Leader.) The wonder, however, is that numerous conservative Democrats and even many Old Guard Republicans approved of the Hughes administration.[2]

"His secret is his ability to communicate with people," says Martin Jensen, now a legislative assistant to Senator Hughes in Washington. "He's simply talked sense to them—told the truth. When he urged liquor-by-the-drink he stressed the hypocrisy of the Iowa law. Officers had been winking at our liquor laws, and citizens routinely broke them. Key clubs existed all over the state: for fifty cents to a dollar a thirsty man could become a 'member' and theoretically buy anything that New York bartenders can mix. Governor Hughes convinced people that widespread breaking of the law couldn't exist unless it represented prevailing attitudes. He argued that liquor should be legalized for two good reasons. One, so the state would benefit from liquor taxes rather than making illegal operators and bootleggers rich. And two, just because it was the *honest* thing to do. That kind of practical integrity is appreciated in Iowa."

They began to gather in Ida Grove in mid-afternoon—locals for the most part, though some came from Holstein, Danbury, Arthur, Odebolt, Rockwell City, Battle Creek, Storm Lake, and Denison. They were country folk and wore their country looks honestly, the men fidgeting in the strangleholds their midweek neckties had on them and the women's heads a little too obviously fresh from the Kurley Kue Beauty Shop on Second Street. Shy boys and girls of elementary-school age hung back while their parents urged them to go shake the Governor's hand in order to have something to tell their grandchildren; teen-agers giggled and smirked in their private conspiracies; and eyes stared weakly out of chalky old wrinkled faces with the winter of death on them.

Standing in the basement Community Room of the Ida Grove State Bank, shifting his considerable weight from foot to foot while attending his brow with one of a series of crumpled paper napkins, the big Indian-looking man in the rumpled olive-drab suit had a look on him—for all his grinning in the right moments or calling old friends by their proper names—that said he preferred to be in some less fussy and bothersome place. One remembered a similar reluctance to public exhibition in certain World War II veterans suddenly returned to the confusions of civilian life after months in the foxholes of Europe or the Pacific, but the visitors had never before seen it so obvious in a public man. When a rare lull occurred in the receiving line the visitor—mainly to test Hughes' reputation for candor—remarked that this was very hard work, fully expecting the standard disclaimer of clever old-pro pols. Harold Hughes indulged in no such falsehoods. He slapped another napkin to his sweating brow and said with feeling, "It's the hardest damn work in politics. It may be the hardest work in the world."

Harold Hughes is known for such unexpected answers. One night a couple of years ago some journalistic fraternity was doing black-tie honors to Hughes when somebody unwisely suggested how much fun His Excellency might be having. Hughes replied, "Frankly, I'd rather be at home eating a hamburger." When an American Legionnaire once told of Hughes' refusal to surrender when the Nazis broke through to reach his infantry position in Sicily, rattling on about how most of Hughes' comrades had surrendered, Hughes said, "They would have had me too, if I'd had anything white to wave." One morning last December as the Governor ate his breakfast eggs in a Sioux City restaurant he was attended by the executive of a large meat-packing company. "What do you people want when I get to Washington?" Hughes asked. The executive said, "Oh, not much—just a little statesmanship," "Yeah," Hughes said, "I guess that'll do until you *really* want something."

Little groups huddled here and there in the Community Room, sipping coffee or punchless punch, nibbling bake goods, and remembering when. "I remember when he played football," a bald-headed merchant said. "They called his older brother 'Big Pack' and called Harold 'Little Pack.' Somebody said the Hughes boys were so big they looked like pachyderms out there on the field, so that's where they got their nicknames. And they could play football!" These were people who had lived a typical rural American boyhood of the 1930s with Pack Hughes: there was an old swimming hole common to their experience, a certain Model-T Ford with no glass in the windows, skating at the roller rink on Saturday nights until they quit taking tickets at the big dance over in Denison at which time the alert might slip in free. There were hunting trips smelling of dew and dung, Amos 'n Andy on the radio, plenty to eat but not much money and no frills at all. Staid citizens may not recall it now but at Harlan—perhaps an hour's drive from Ida Grove—desperate farmers stopped milk trucks at gunpoint to pour out the milk rather than see it dumped on the market at Depression prices, and a mob of farmers threatened to lynch a judge if he held with the financial interests in attempts to foreclose on mortgaged farms. Still, for all its Depression woes, there was, in Harold Hughes' view, much to recommend life. He worked as a lifeguard at the local swimming pool and helped his parents with their commercial greenhouse, fell in love with Eva Mae Mercer (whom he would marry in 1941), won all-state honors not only in football but as a tuba player and discus thrower, and made respectable if not sensational grades. Optimists may have marked him down for a future head football coach or for a country lawyer, though his mother's secret wish was that he become a Methodist preacher.

Hughes entered the University of Iowa in 1940 on a modest football scholarship. He had to work nights as a steamfitter, and soon felt the full demands of his life as scholar, athlete, and worker. Under these pressures, and against the teachings of a Fundamentalist home, he took his first drink. Hughes immediately displayed a great and loyal sympathy for whiskey. "I didn't particularly enjoy drinking," the Senator has remembered. "I just couldn't quit drinking as long as anything remained in the bottle." After less than a year in college he dropped out never to return, and worked at a series of odd jobs. His whiskey consumption increased after his only brother and close companion, Jess, was killed in an auto crash. In December of 1942, by then a rather rootless and purposeless young man, Hughes was inducted into the U.S. Army.

In the spring of 1943 twenty-one-year-old Harold Hughes became a combat BAR rifleman; he saw action in North Africa, Sicily, and Italy. He was one of several soldiers who "threw a big drunk in Oran, almost like a riot," only to wake up behind barbed wire in a military stockade. "They marched us out one by one past a court-martial board," he remembers, "and to the frontline soldiers the judge would say, 'You're going back to active duty at two-thirds pay. You'll probably get killed anyway.'" Such was the sentence passed on Harold Hughes, and though he cheated its execution he did pick up malaria, yellow jaundice, and a case of battlefield nerves. At the end of the war he returned to Ida Grove with the notion that "if I wanted to drink myself to death I had earned that right." People in Ida Grove are careful not to discuss their Senator's hellion days, though he has publicly remembered fistfights and an arrest for driving while intoxicated.

When he was sober enough, Hughes repaired washing machines from a rude shop located in the basement of a friend's home. There wasn't enough repair work to adequately support a wife and two small daughters, however, so he got a job driving a milk truck. He graduated to the huge semi-trailers that roll across the American mid-continent, taking cattle to their terrible slaughters in Chicago. He remembers a lot of all-night diners, roadside naps, cramped muscles, stockyard odors, and rowdy beer joints. By 1953, at age thirty-one, Harold Hughes was a small-scale cattle buyer and trader and manager of a small truck line—as well as an apparently hopeless drunk. "On weekends he drank," Vance Bourjaily has written, "and the weekends started earlier and earlier. They began to start as early as Wednesday." One morning Hughes woke in Des Moines, a hundred and twenty-odd miles from home, with no notion of how he came to be there and without a cent. It was one of those times when a man touches bottom, and knows it, and must decide whether to stay down or go to the considerable trouble of getting up. That morning Harold Hughes quit booze cold turkey. "If I hadn't quit," he says, "I'd either be dead or a bum by now."

The story goes that he came to seek public office because he lost his temper over what he thought of as an injustice; if the story is true it almost immediately distinguished Harold Hughes from the average politician. Not as many men leap into the public pit in the true crusader's spirit as our living politicians or our legends would have us believe. After all, he followed a rather conventional course favored preceding his first quest for public office: he had become active in community and church affairs, he had joined civic clubs and a fraternal order or two, he had even been a delegate to two Republican state conventions. Perhaps he was doomed to the political life, whether he consciously

[2] Portions of the Hughes record naturally appealed to conservatives: he gave local governments more control over their affairs and increased their state aid, strengthened the Iowa Development Commission, and conducted "Sell Iowa" trips to the nation's financial centers and led similar missions abroad. He established fifteen regional vocational-technical schools to train workmen for light industry (then wooed light industries to the areas where schools were located, thus achieving a balance of supply and demand in local labor markets); he required colleges and universities to pay taxes on their profit-making properties; he established a toll authority to finance interstate bridges, and though spending more than doubled, he kept projects on a pay-as-you go basis and boasted of balanced budgets.

knew it or not, for there is so much in him of the preacher, the teacher, the missionary.[3]

In the mid-1950s Hughes worked as field representative for the Iowa Motor Truck Association; after a few months, dissatisfied with the organization, he quit to found a similar organization known as the Iowa Better Trucking Bureau. He decided that the three-man State Commerce Commission, which regulated trucking and railroad commerce, favored giants of the industry to the detriment of small truck lines or independent operators. Hughes tried without success to interest his fellow Republicans in demanding reforms. After an atypical Iowa election year, 1956, in which a Democrat, Herschel Loveless, won the Governorship, Harold Hughes took his complaint against the Commerce Commission to the state house. Loveless was impressed by the young man's zeal and reformer instincts. If you want to accomplish something, Governor Loveless suggested, then you should switch to the Democratic party and run for the Commerce Commission yourself. The next time they held an election—in 1958—Hughes was a Democratic candidate. He called on the help of truckers and truck drivers he had known, old friends from home, fellow Methodists, and long-suffering organizational Democrats as his campaign operatives. Campaigning Iowa vigorously he won an upset victory. He was not long in learning that a single junior member of a relatively obscure commission cannot perform many miracles; he also observed the need for reforms in others of Iowa's bureaucratic empires, concluding that only a strong Governor could adequately turn the antiquated bureaucracy around.

"Urged on only by a few friends in his native northwestern Iowa and by the voice of God," a Hughes friend wryly says, Commissioner Hughes declared for Governor in 1960. He was wiped out in the Democratic primary, losing to a candidate who would go on to lose to the Republican nominee, Norman Erbe. Governor Erbe did not start any prairie fires during the next two years—years in which Harold Hughes used every possible excuse to make speeches across Iowa. He was well equipped for calling attention to himself: a bulky six-feet-three with dark skin and midnight black hair, who spoke in a deeply muscled voice; the result was something close to a thinking man's John Wayne. He won the gubernatorial primary in 1962, then upset Governor Erbe by 42,000 votes in the general election at a time when Republicans captured all other statewide offices being contested. Organizational Democrats, possibly considering the Hughes victory something of a fluke and warning of the conservative preferences of his constituents, advised him not to try to turn Iowa into a paradise overnight. Harold Hughes gave his answer in his inaugural address before a Republican legislature: "It is sometimes said that the knack of skillful government is to hang back, do as little as possible, and make no mistakes. I hope there is another way—for between you and me, this prospect does not invite my soul." Making skillful use of press conferences, radio and TV and personal appearances, Governor Hughes forced reform bills through a reluctant legislature by appealing over their heads directly to the voters. "If the legislators expected him to plead with them, shower attention on them, or bribe them, then they were disappointed," Martin Jensen says. "Hughes is not just going to spend a hell of a lot of time wooing anybody." He wooed the public with continuing success, however; in the 1964 election, when Lyndon Johnson won landslide victories in virtually all states including Iowa, Governor Hughes was elected by a margin more than doubling the President's. In 1966, when a comeback Republican tide chased five Iowa Democrats out of Congress and gave Republicans an eleven-to-five margin in state offices (where Democrats had held a thirteen-to-three margin because of the 1964 avalanche), Hughes won a third term by a shade less than 100,000 votes.

It is axiomatic that the longer a politician stays in office the more enemies he accumulates, especially if he remains an active force. By 1968, Hughes had his share of critics: he was a big spender (Iowa's annual budget rose from $200 million to almost $500 million and taxes reached an all-time high); he had lost ground in an unsuccessful attempt to repeal the state's "right-to-work" law; he had so persistently lectured on the white man's maltreatment of blacks[4] as to make some voters suspect he loved them too much; he had angered Iowa's organizational Democrats by disavowing the Vietnam war so stubbornly defended by the Johnson Administration; he had found himself in such sympathy with most Great Society domestic schemes—and said so—that Republicans or other conservatives had grown disenchanted; he was said to be arrogant in his treatment of legislators and to have shown excess partisanship in replacing some Republicans within the state government just because they were Republicans and without regard to their records.

Governor Hughes, thinking he had led Iowa in progressive directions about as far as she would go, had privately decided late in 1967 to retire from public life. He mentioned his decision to Bobby Kennedy. Don't do it, Kennedy said: There are a number of young, concerned United States Senators who are beginning to have an impact on foreign and domestic affairs; we may hold the nation's destiny in our hands; come join us, we need you.[5] It was the perfect pitch. He would run for the Senate. He would win over a well-financed and articulate young Republican, State Senator David Stanley, but only after his hardest fight, and by a mere 7,000 votes.

Though the night was bitingly cold, more than three hundred persons paid $5 each to crowd into the testimonial banquet in a converted gymnasium adjoining the Ida Grove Fire Department. Pack Hughes had been born within two blocks of the drafty old hall, and had played basketball in it when you were judged "out of bounds" only when you crashed into the walls.

Long wall-to-wall tables were draped in white paper "tablecloths." There was neither rum nor go-go girls on this night, though the visitor did have the luck to sit directly across from the only man present in whom such spirits flowed that his poor wife affected not to know him. ("You goddam right, Pack," the happy fellow volunteered at irregular intervals during the Governor's speech. "If you ain't President by Seventy-six then I miss my guess and have wasted five dollars.") The typically dismal political "banquet" was served, American to the core, only marginally edible if one takes food seriously, with pasty mounds of mashed potatoes, sorry little green peas and—ironically, there in the heart of the beef belt—three hundred hunks of something masquerading as prime cuts of roast beef. (Immediately upon leaving the banquet, an assistant was assigned to get hamburgers from a local restaurant, which were gratefully consumed in the gubernatorial motel quarters.) Over their brick ice cream people chatted of business, crops, babies, and basketball with laments that the banquet conflicted with the Ida Grove-Storm Lake game. The evening was 100 per cent small town, from the little green peas to the prayers presuming God's undivided attention on this small corner of Iowa, down through the labored local jokes and table chatter. One who had been brought up on such innocent amusements many years and several assassinations ago, and who still had some of them in his bones, marveled on their indestructibility.

J. W. Lipton, president of the Ida Grove State Bank and obviously the town's big man (one noted how he was deferred to, the number of times he was pointed out as "the new president of the Iowa Bankers' Association," the ease with which he assumed a leader's prerogatives), as master-of-ceremonies acted as a bridge between reality and the larger-than-life recollections of old friends of Harold Hughes, Norman McIntosh, a classmate in the Class of 1940, and now a cattle auctioneer; Troy Wilkins, hardware dealer and old friend; Justice Snell of the Iowa Supreme Court, who remembered awarding Howard Hughes his high-school diploma. "I think of Hubert Humphrey, Abraham Lincoln, Lyndon Johnson, and Richard Nixon," Justice Snell cried out a curious roll call, "and I remember that like Pack Hughes they were once all poor boys. I think of Thurgood Marshall and Dr. Ralph Bunche—uncommon-men who succeeded by their individual efforts." Trop Wilkins, not to be outdone, compared the guest of honor to the New York Jets' quarterback Joe Namath. ("They are both $400,000 players in the big leagues.") The hardware dealer urged the audience to "conduct ourselves as loyal fans as we back our $400,000 player in Washington, and not expect him to score a touchdown on every play"; before he sat down he suggested, if the visitor heard him correctly, that Harold Hughes has his personal signals called by The Great Coach in the Sky.

"Years ago when I first decided to seek public office," Governor Hughes responded, "I asked a few people around town here their opinion of it. And if anyone recommended it to me, I can't remember it. . . . Now I'm a big United States Senator-elect and J. W. Lipton would like to bank my paychecks at his bank. But let me tell you a little something about that: here in Iowa I make $30,000 a year, have my own driver if I want him, a nice big house to live in free, and Eva has a maid and a cook. In Washington I'll still make $30,000 but I have to drive my own car, buy my own house, and Eva must do her own cooking and dusting. And you know, some people keep talking to me about my 'promotion' to Senator. Actually, Governors outrank Senators in matters of protocol. . . . I bought my first house here in Ida Grove with a GI loan. Had to make monthly payments of twenty-four dollars and seventy cents and I wasn't always sure I could make 'em. In the last month, I've received more notoriety for buying a house in Washington than *Howard* Hughes received for buying Las Vegas."

It was a curious, rambling opening and, though delivered in cheerful enough tones, one felt the Governor was attempting some vague defense of something. He went on, making small jokes and recalling older times, and then suddenly his voice became more measured and assured; this was the Harold

[3] Some fifteen years ago Hughes seriously considered a career in the ministry. He took enough correspondence courses in theology from Southern Methodist University to qualify as a lay minister.

[4] Like New York's Mayor Lindsay, Hughes is credited with having cooled ghetto areas by personally walking slum streets in times of tension. Even with its small number of blacks, there are dismal slums in Waterloo, Sioux City, and Des Moines—a fact that even Hughes didn't fully realize until an insurrection in Waterloo caused him to call in troops. "I was shocked by what I saw," he said of his initial ghetto experiences. "I couldn't believe the venom I found. I'd go home nights and couldn't sleep and felt like I couldn't face the world the next morning."

[5] Hughes was reportedly on the verge of endorsing Robert Kennedy for President at the time of his assassination; ultimately, he nominated Senator Eugene McCarthy at the Democratic National Convention and criticized Mayor Daley for the mess in Chicago.

Hughes one had heard of: "We have never learned the age-old message that we must live together on this planet. . . . I'm forty-six years old and I've never known a moment of peace. Little has changed, except our efficiency in destroying one another. . . . As Robert Kennedy put it, 'The great challenge of this age is to tame the savagery of man.' . . . We hear much talk of honor and death and war; of being willing to die for our country. I think it's time we did a little *living* for our country." He went at them on the racial issue, though not a single black is numbered among the 12,000 people in the several villages of Ida County. ("We had a Negro who shined shoes over at the hotel," Banker Lipton would recall, "but after six months he moved on.")

Hughes continued: "The only way you can help your county rid itself of ugly disturbances is to look into your own heart. Pluck the mote from your own eye. Unless people believe in the rights of *all* men, our laws will never work." For long moments and in eloquent simplicity ("We can no longer escape direct confrontations with our consciences. . . . Man must first find peace in his own soul. . . . We *are* our brother's keeper") he went on, and when he finished the people stood and applauded with more than routine warmth and verve, so that one thought *good, he reached them, they listened and he reached them.* And two days later, in Des Moines, a visitor asked one of the secretaries in one of the gubernatorial offices at the state capitol whether she would move to Washington to work for Harold Hughes. "No," she said. "My husband says he doesn't want to live with the niggers."

THE FLOWERS OF SPRING

Mr. BAKER. Mr. President, in spite of today's somewhat bleak tenor, there are hopeful signs that spring has "sprung." The sap is rising, the buds are swelling, and that harbinger of annual floral renaissance—the crocus—is out.

Each of us welcomes the advent of spring. But perhaps the most impatient man among us is our distinguished minority leader. As is generally known, Mr. DIRKSEN, against formidable odds, has vigorously assumed an impassioned advocacy for the marigold. Although he has yet to succeed in securing for this unique vegetable the official national status of which he finds it so clearly deserving, he has, I think, endowed it with a certain vague preeminence.

It may come as a surprise to some, and a relief to others, to learn that the minority leader has room in his heart—and in his garden—for other species. Even the humble nasturtium, remarkably enough, meets with favor.

Mr. President, lest those who champion other flowers find their special favorites the victims of unjust discrimination, I ask unanimous consent that an article by Senator DIRKSEN entitled "A Senator's Notebook" be included at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A SENATOR'S NOTEBOOK

(By EVERETT MCKINLEY DIRKSEN)

Long ago, the poet Shelley wrote, "O, Wind, If Winter comes, can Spring be far behind?"

It takes a careless spirit to write that, and today, in all the turmoil of our world, we would do well to take some moments to dream of careless things—like spring and marigolds and the other flowers that soon will come.

It is March. I look out the window and it is snowing, a wet kind of snow that clings to the branches like cotton and magnifies the appearance of winter. But I don't care, because on the desk before me is a chart of my garden and beside it are some seed catalogs—a feast for the eyes and the soul, too.

I wouldn't care at all about the bluster and cold of winter if I could only get results in my garden that would be something like the beauties painted by the seed catalog artist.

Now I begin to think about my garden to come as I turn the pages of the catalog. First, I look out to a shady spot that gets little sun. It's a place for blue ageratum and impatiens because they do so well in full shade, and what a color combination they will be.

The humble nasturtium grows almost anywhere with half a chance—not a showy creation, but as cut flowers nasturtiums are a comfort indeed.

Now to the tulips, those dark red, stately soldiers of the garden who defy the elements and come nosing out of the soil almost as soon as nature relents with the balmy breezes and the warm sun. How good it is that tulips come so early.

The daffodil and narcissus are not far behind. They can pop their gorgeous yellows before I expect it, and they are a joyous note in early spring.

Now I must leave the catalogs for a few moments to think of some other things in the garden. It's time to prune back the tea roses, cut away the dead wood and make ready for the grandeur of the roses in all their colors. Is there anything more beautiful than the rose?

Where do we put the snapdragons that will stand like gorgeous sentinels against the roughest of weather and the bugs? The garden closest to the roadway is best, where every passerby can enjoy them. And snapdragons are exquisite as cut flowers for all occasions.

The zinnias must have full sun. Somehow, more than any other flower, the zinnias seem to drink in the bright sunlight and the heat and then are transformed into deep, majestic colors—peach, salmon, deep red, yellow, ivory—with huge, many-petaled heads. But the zinnias should have some edging. The petunia is just the dish—singles and doubles, plain blue, white, crimson, peppermint-stick, candy-stripe in vast variety. How hardy they are and how determined not to be outdone.

Now a momentary detour to look at the climbing roses. They wintered well, but they must be tied up. What a rare diversion that will be after a day that has tried the soul and tired the mind.

Now here are the clematis, both regular and hybrid. How dead they seem. But wait a little while and suddenly they'll be there in the warming days in their red, white and blue. All this and much more with the resurrection of spring.

Could the Resurrection have come in any season but spring? It makes me think of the question that Job in all his misery propounded to his friends: "If a man die, shall he live again?" He will, surely, for the earth becomes vital all over again with spring.

Most important of all, I must not forget the marigold. For 10 years I have sought to persuade the Congress to adopt the marigold as our national floral emblem. Some prefer the rose (a shrub) or the carnation or the petunia, violet, daffodil or some other bloom. But the marigold is native to this hemisphere and grows in every one of the 50 states, evidence of a robustness against the elements and insects that is unequaled in performance by any other flower.

Let kings and emperors, Presidents and senators suffer highly important matters to furrow their brows. There must be a little time to draw back and think just about the noblest creations from the hand of a generous Creator—the endless variety of flowers.

Was it not the Galilean who said, "Consider the lilies of the field, how they grow; they toil not, neither do they spin: And yet I say unto you, that even Solomon in all his glory was not arrayed like one of these"?

And the flowers are there—for every man, woman and child—for the asking.

BYELORUSSIAN INDEPENDENCE DAY

Mr. PROXMIRE. Mr. President, in every nation there is a certain spirit of nationalism, something difficult to put into words, but nevertheless something you can feel in its cities, towns, and wilderness areas. It is a unifying and inspiring idiom for a certain group of people, having the potential to fill them with a fierce pride in and commitment to their country. To a new or struggling state, the quintessence of this nationalism has usually been the lifeblood of its preservation, without which it could never exist. On the other hand, to a nation that has been denied the opportunity for self-determination, nationalism is a conglomeration of all the frustrations and aspirations, a true battle cry for independence. Such is the case with Byelorussia, whose eight million people are today secretly celebrating their Independence Day.

After World War II, the collapse of imperial power permitted many new nations to emerge throughout the world. Similarly did the fall of several nations of the pre-1914 Europe allow many small nations to assert their independence from foreign domination. The Byelorussian Democratic Republic was one such country. On March 25, 1918, the Congress of Byelorussia, as embodied in the Rada, "threw off the yoke of Russian tsarism," and proclaimed its independence. With this action, a century of domination and suppression by the Russian people was ended after long and bitter struggle.

But this independence was not destined to come as easily for the Byelorussians as it did for the Americans in 1776. For 2 arduous years the brave people of this small country fought tirelessly for their very existence. But the forces opposing them were formidable. Besides trying to curtail increasing friction with Poland over the west and south borders, the Byelorussians also had to cope with the aggressive Red Army of the Soviet Union. Therefore, despite tremendous resistance, the country was invaded from the east in 1921, and it became a part of the Soviet Union. Thus did the independence of Byelorussia dissolve after 2 short years, but still the light of hope burned in the hearts of its countrymen.

Mr. President, that hope is still present today. The constitution and individual culture that Russia tried to suppress with naked force are even stronger today. Thousands were killed or deported during that time. And yet today, 51 years after Byelorussia declared its independence, the fact remains that this country has always wanted to be free, a feeling that Russia could only suppress, never obliterate. Mr. President, the people of Byelorussia are forbidden to celebrate March 25, 1918 today, and we must do it for them. Therefore, I wish to add my best wishes to that country with the fer-

vent hope that their spirit and determination has not been in vain.

PROBLEMS OF THE EASTERN SHEEP FARMERS

Mr. MATHIAS. Mr. President, in a recent letter to me, a Maryland farmer has stated the case for prompt attention to the problems of east coast agriculture. His words are eloquent, concise and self-explanatory. They are supported by facts, figures, and graphs presented by the American Sheep Producers Council.

Because the letter needs no further elaboration from me, I ask unanimous consent to insert it and the supporting material in the RECORD at this point.

There being no objection, the letter and material were ordered to be printed in the RECORD, as follows:

MARCH 20, 1969.

DEAR SENATOR: Enclosed is a little pamphlet put out by the Sheep Producers Council and its contents show very plainly why every sheepman gets burned up when he takes sheep to market.

Selling market lambs at 20¢ per lb. is bad enough. But when we have to sell perfectly good mutton at 2¢ per lb., that in the face of an import of some 20,000,000 lbs. is downright ridiculous.

Not too long ago (month or so), I sent a yearling ewe over to market. She was fat and in perfect health except for a crooked hind foot. She weighed 190 lbs., and was less than a year old. I'll bet she was as good mutton as anything ever was yet she was graded as an old sheep and brought old sheep price, 2¢ per lb. I just wonder what she was sold out as? It would be interesting to know, I'm sure.

Maybe someday in the course of your duties you may have the opportunity to ask someone in the places that matter, just how come?

Maybe I'm just running off at the mouth somewhat, but it's really burning me up when I have to take an overnight lamb to market and have them grade it as old sheep and 2¢ is as high as they will go. There is no such thing as mutton with packers, it's either lamb or old sheep. . . .

Mr. and Mrs. R. D. Offord
Easton, Maryland

IMPORTANCE OF IMPORTS GROWS IN UNITED STATES

Lamb and mutton imports have been a pesky problem to the sheep industry for many years, but now they are fast becoming a very serious problem to the domestic sheep industry.

With the industry caught in a tightening ring of problems, from shrinking land resources to steadily rising costs, the imports have been taking steady chunks out of the domestic market. As the U.S. sheep population declines, more lamb and mutton are quickly put in place of the diminishing supply by those countries and processors in the importing business.

Thus, there is about the same amount of lamb and mutton available for consumption in this country during the past few years despite a drop in production in the United States (see Graph 1). [Not printed in the RECORD.]

For sometime the sheep industry has tried valiantly to stop imports, or at least slow them down, but they have been standing against the tide since imports continue to come in with some congressional sympathy for the problem but a tidal wave of consumer indifference.

The history of imports of lamb and mutton show a continuing rise of mutton imports (See Graphs 2 & 3) [Not printed in the RECORD] to compete with U.S. mutton and U.S. beef primarily, and a fluctuating supply of lamb imports, but always edging upward as the domestic supply of lamb decreases. It doesn't take much imported product to affect a key market.

As an example prices shown at New York wholesale level for the week of November 18, 1968, were as follows:

Cut	New Zealand	Australia	Domestic, New York
Carcass	0.36½	0.33–0.33½	0.56½–0.57½
Legs, trimmed	.60	.48	[1].64–.66
Loins, trimmed	.66	.48	[1].62–.72
Racks	.43	.36	[1].85–.90
Square shoulders	.33	.32	[2].43–.45
Shanks	.34	.34	

[1] Untrimmed domestic prices.
[2] Chucks (neck on).

Primal cut prices quoted for New York are untrimmed, thus we have not only price differences, but also reduction in trim of the imported products.

Retail prices in Los Angeles chains and New Zealand were:

Cut	New Zealand	Domestic (Los Angeles)
Legs	0.69	0.89
Loin chobs	1.19	1.79
Rib chops	1.19	1.69
Square shoulders	.59	.69
Round bone chops	.79	1.09
Blade chops	.79	.89
Sirloin steaks	.89	1.29
Shanks		.54

It should be kept in mind that somewhere during the past few years the exporting countries shifted from shipping lamb in carcass form to a primal cut form. This makes quite a bit of difference in the total, since considerable trimming results from cutting the carcass up into primal cuts, such as the rack, the shoulder, the leg and chops. For example, it is estimated that 16 million pounds in primal cuts would amount to about 20 million pounds on a carcass basis.

Most of the lamb comes into this country from New Zealand, with comparatively small amounts from Ireland, Greenland and Australia. Mutton, however, comes in from Australia and New Zealand, with the wool-oriented Australia providing the bulk of it.

Lamb production in million pounds for the U.S., New Zealand, and Australia, is shown in Graph 5. [Not printed in the RECORD.]

In the United States about 90 percent of the lamb and mutton kill is lamb and yearling, and the remainder is mutton which goes largely into soup stocks, sausage and other prepared meats, and baby foods.

On the political scene, lamb was left out of the meat import quota bill passed in 1967 because it was felt by some that it did not represent a significant amount of tonnage. Mutton, however, is included.

Cattlemen have been thankful for the meat import quota bill, despite its inadequacies, and are now trying to eliminate some of the loopholes that foreign countries have taken advantage of to put more cow beef into this country. Some of the meat, for example, is being given a quick cook process to take it out of the category of fresh or frozen meat.

The quota law was not put into effect this past year because of the pledge of exporters to reduce shipments even though it seemed apparent that the imports to this country were headed above the trigger level of 110 percent of quota.

Not all exporters for the balance of the year agreed to cut their shipments and Canada flatly refused to go along with the reduction on a voluntary basis.

It is now quite apparent that there is a new drive to make some changes in the quota law.

The National Wool Growers, National Lamb Feeders, and the American Cattlemen have agreed to cooperatively support any legislation needed to keep imports of meat in line with planned expansion of United States production.

These groups agreed that the following points should be included in any legislation: that the base years for establishing quotas would be 1958–62; that expansion or reduction of quotas would be based on the expansion or reduction of U.S. production of that particular commodity; that quotas would be figured for each individual item based on the items number of the Tariff Schedule of the United States and would not be based on total meat; that quotas would be figured quarterly by dividing the average year into four equal levels; that quotas will not be at the discretion of the Executive Branch but would be mandatory enforced; that all quantities of each classification purchased by the United States inside or outside the country be counted in the set quota . . . thus purchases for military outside the United States would be considered part of the quota; and that one hundred percent of quota would trigger restrictions instead of 110 percent of quota.

It seems significant that the voluntary cutback by importers to the U.S. under the present quota bill did reduce the imports of mutton in November and December of 1968 by 70 percent from the same period a year ago. However, during the same period of the previous year, lamb imports were increased by 171 percent. (See Graph 4). [Not printed in the RECORD.] This apparently was to keep balance of payments at a similar level in the exporting countries and, of course, lamb is not under the present quota bill.

There is a high degree of concern over how much imported meat will come into the U.S. in 1969. According to some reliable sources there will be import quotas from 40 to 50 million pounds above the 1968 level, and yet others contend that it will be about the same as this year.

One of the most critical points in lamb and mutton imports is the time of the year. Even a small amount of lamb coming in at the wrong time can raise havoc with the market price in heavy lamb consuming areas, while the importation of lamb would have little or no effect should there be a small supply of domestic lamb on the market. Lamb imports during the year seem to peak in March and again in June, with a noticeable drop in August and October. Mutton generally follows this same pattern. As mentioned previously, just a little imported goes a long way toward bending the domestic market price if domestic supplies are high.

Almost as effective in bearing down on prices at critical periods are the "rumor runners" who pass out information that more lamb imports are coming in, and whether they do or not this sometimes accomplishes the same purpose of depressing the domestic market price.

This year's quota of 950 million pounds put the triggering point at 1,045,000,000 pounds, and that does not include canned and certain other processed meats, nor lamb.

Under the federal meat import law, quotas cannot be imposed unless the government estimates actual imports will go 10 percent or more above the base quota. Most livestock men would like to wash out the 10 percent override and board up some of the loop holes.

For many years there have been attempts made to discuss the import problems with New Zealand and Australian producers, but to no avail. New Zealand's Finance Minister, R. D. Muldoon in October said the U.S. is "not a free-enterprise nation in the field of agricultural produce. It is a protectionist nation . . . and one of the worst," he added.

On the heels of this pronouncement came an arrangement for the sale of lamb to U.S. military commissaries abroad, and this effort may be extended to the Antarctic and U.S. bases there.

This could be the time for sheepmen in the United States to discuss some sort of an agreement.

PROPOSED REREFERRAL OF SUBMERGED LANDS BILL

Mr. JACKSON. Mr. President, on Thursday, March 20, the distinguished junior Senator from Texas (Mr. TOWER) introduced a bill to amend the Submerged Lands Act with respect to the seaward boundary of certain States. This measure was assigned the number S. 1619, and was referred to the Committee on the Judiciary.

It will be recalled that the Interior Committee was the unit of the Senate to which in 1953 was referred the measure that formed the basis of the Submerged Lands Act which S. 1619 would amend. This measure was Senate Joint Resolution 13, 83d Congress, and it was sponsored by the able senior Senator from Florida (Mr. HOLLAND), for himself and 39 Senators from both sides of the aisle. Senate Joint Resolution 13 was the latest in a long series of bills dealing with the so-called, but miscalled, "tidelands" issue.

Under the acting chairmanship of then Senator Guy Cordon, of Oregon, the Interior Committee held hearings on the Holland bill as it had on previous submerged lands bills in the 81st and 82d Congresses. Some 13 days of hearings were held, beginning on February 16, 1953, and concluding on March 4. The committee met in executive session for 4 days to work out amendments to the resolution; it was reported out with minority views, and the text of Senate Joint Resolution 13, as amended by the Interior Committee, was passed by the Senate on May 5, 1953. The House accepted the Senate amendment, and the measure was signed by President Eisenhower on May 22, 1953, to become Public Law 31 of the 83d Congress.

I cite the details of the legislative history only to establish that in at least three Congresses measures in the Senate respecting the submerged lands have been referred to the Interior Committee, and it was the text, substantially, of the Interior Committee's bill that became the law that S. 1619 of this Congress would amend.

As the Members of the Senate know, the Submerged Lands Act was and is part of a legislative package, so to speak, with the Outer Continental Shelf Lands Act. The former deals with the lands inside the sea boundaries of the States, which were clearly established for the first time by the Submerged Lands Act. The other, the Outer Continental Shelf Lands Act, deals with the lands beyond the States' sea boundaries.

Significantly, when the very able junior Senator from California (Mr. CRANSTON) introduced on February 28, 1969, his bill, S. 1219, which concerns operations under the Outer Shelf Act, this measure was, properly, referred to the Interior Committee.

Now, I am aware that the Legislative Reorganization Act of 1948 provides that proposed legislation affecting "State and Territorial boundary lines" shall be referred to the Judiciary Committee. However, Mr. President, in view of the long and clear history of referral of submerged lands legislation to the Interior Committee, I submit that the quoted provision means, or certainly has come to mean, boundary-line problems between a State or a territory and another State or territory—not between a State or territory and the Government of the United States.

Therefore, Mr. President, in view of the legislative history and the precedents, when S. 1619 is called up I shall move that it be re-referred to the Committee on Interior and Insular Affairs for consideration.

THE PRESIDENT'S DECISION ON THE ABM SYSTEM

Mr. MURPHY. Mr. President, in announcing his decision on the anti-ballistic-missile system, President Nixon once again displayed those qualities of leadership which have made the beginning of his administration such an outstanding success.

It is heartening to see the favorable response which his studied and intelligent approach to the complexities of the anti-ballistic-missile decision has brought from the people. One such example is an editorial in the March 17 National Observer and I ask unanimous consent that this article be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE VERDICT ON ABM—A SOVIET TEMPTATION?

The President's decision on missile defenses must be viewed in psychological as well as military terms. As such, the decision made good sense, and could ultimately do much to slow down the arms race.

The most vocal critics of the decision won't see it that way. They will see it simply as a triumph of the "military-industrial complex" over those who would strive for arms-limitation agreements with the Soviet Union. But any talk of conferring with the Russians about arms or anything else requires a good measure of guesswork about what the Russians really intend. So any decision on an antiballistic-missile (ABM) system—even a decision to defer a decision—would be a gamble. Mr. Nixon has made the best gamble.

First of all, Mr. Nixon's decision is less likely to provoke the Soviets than would a decision to push ahead with the Sentinel system. A decision to protect the cities, if that were truly possible, could be interpreted by the Russians as a way to blunt a Soviet retaliatory attack against the American population after a U.S. first strike.

Mr. Nixon's decision also recognizes a brutal but apparently unavoidable fact. It is now not possible to provide adequate protection for the American population against Soviet missiles. The best defense, the President has concluded, remains the nation's second-strike capability—the ability of this country to inflict unacceptable losses on the Soviet Union, or any other nation, should that nation decide to launch nuclear missiles against the United States.

The United States and Russia each have the capability to destroy each other many times over. This raises a good question: Is a defense system really necessary to protect American offensive missiles, or aren't there already enough—or soon to be enough—land-based and seaborne missiles available to survive any first strike by Russia or anybody else?

Perhaps there are. But the arms race being what it is, the Soviet Union might easily be tempted to increase its offensive arsenal even more, with the goal of developing an attack that could destroy much of the American offensive arsenal. A defense system to protect U.S. long-range missiles could discourage such a step-up in arms competition.

The Nixon decision also means that the United States will go into any arms talks with Russia having made a determination to employ a missile defense. This certainly gives this country a better bargaining position than it would have had had Mr. Nixon decided against any deployment, or decided to delay a decision on deployment. A decision to delay would leave great doubt in Soviet minds about American intentions.

Mr. Nixon's decision has left the next move in the quest for weapons control up to the Russians. His statement last week was conciliatory, and left plenty of openings for the Soviets if they truly wish to slow down or stop the arms race.

OLDER DRIVERS RANKED HIGH IN DRIVER SAFETY

Mr. WILLIAMS of New Jersey. Mr. President, last year during hearings on automobile insurance coverage, I told the Antitrust and Monopoly Subcommittee that older drivers are being penalized—because of their age—by the insurance companies. It seemed to me that preliminary data confirmed what I had long suspected: many motorists in their seventies, sixties, and even late fifties, are left without coverage because of arbitrary cancellation of their automobile insurance—in spite of consistently good driving records.

Now the point has been corroborated by the final results of a study conducted with funds from the Administration on Aging. The plain fact is that motorists over 65 may be among the safest on the road. For those who think that living past 65 automatically reduces an individual's capabilities, the study should be a revealing glimpse into the safe and steady world of the older driver.

Conducted by the University of Denver College of Law, the study examined the driving records of 30 States and the District of Columbia. It found that senior drivers averaged 37 percent fewer accidents than expected, based on their proportion of the driving population. Judge Sherman G. Finesilver, head of the study team, points out that the nationwide survey shows senior drivers to have better reords, by comparison, as their number increases in the total driving population of a given State.

Judge Finesilver supplied the following highlights of the State-by-State survey:

In Arizona, a State with a large senior population, the older driver ranks second lowest in accident involvement among the six age groups studied;

Delaware's senior drivers enjoy the lowest accident rate of any of the six age groups; namely, under 24, 25 to 34, 35 to 44, 45 to 54, 55 to 64, and 65 and over;

In the District of Columbia, senior drivers had the lowest accident record of

all age groups in both the fatal and nonfatal accident categories. Their rate was only one-third that of the rest of the licensed drivers.

In Illinois, a high-population State, not only do senior drivers enjoy the lowest accident involvement rate, but their accident propensities are less than half those of the youngest age group, and 12 percent better than that of the next best group.

Indiana's senior drivers have the lowest frequency of accidents of all age groups;

Kentucky's senior motorists boast the best accident avoidance records of all age groups, both with respect to the "all accident" category and to injury or fatality-producing collisions;

Senior drivers in Maine have proportionately fewer accidents than other age groups;

In Maryland, senior drivers excelled all other motorists as the most accident-free drivers;

Minnesota, where senior citizens represented 12.28 percent of the driving public—the highest proportion of any State surveyed—they are on record with the best accident avoidance performance of any age group in the State; also, the safety record of these senior drivers ranked third best among the 31 jurisdictions analyzed, after Washington, D.C., and New York;

Montana's senior drivers enjoy the lowest accident involvement rate among that State's motoring public;

Senior drivers lead New Jersey's safety parade both with regard to "all accidents" and injury-accidents; they average about the same as all other drivers with regard to fatal crashes;

The senior 8.8 percent of New York's drivers boast the second best accident avoidance record among the 31 jurisdictions studied;

In Ohio, another highly populated State, senior drivers outranked others in regard to accident avoidance;

Oklahoma's senior drivers ranked tops among the six age categories with regard to involvement in accidents;

Senior drivers ranked most favorably in Oregon both as to "all accidents" and injury-producing accidents;

South Carolina's senior drivers are involved in proportionately fewer accidents than any other age groups in the State.

Virginia senior motorists rank tops in accident avoidance among the State's drivers;

Washington senior motorists enjoy the finest accident avoidance record among all Washington drivers, Finesilver noted that these findings "parallel and confirm" an earlier noteworthy study, the Crancer report, on older motorists in Washington State.

Wisconsin's senior citizens also rank lowest in accident involvement among the State's six age groups.

The District of Columbia study shows that there is a direct correlation between an increase in age and a decrease of responsibility for accidents. The highest accident involvement in the District of Columbia is with the teenagers—78 out of every 1,000 are responsible for an accident. The middle-age driver ranks medium in accident involvement—50 out of every 1,000; and the senior driver enjoys the lowest accident responsibility factor—31 out of every 1,000.

These remarkable findings confirm that the older driver is certainly not the hazard some would portray him. Quite the contrary, drivers past age 65 represent a rational, responsible, and reliable segment of the motoring public. Insurance practices ought to reflect that fact.

The Washington Evening Star published a report of the University of Denver study at the time it was released. I ask unanimous consent that the article be printed in the RECORD as a vivid reminder of the excellent safety marks earned by the Nation's older drivers.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DRIVERS OVER 65 RATED AMONG SAFEST ON ROAD

DENVER.—Motorists over 65—long a scapegoat in analysis of the nation's spiraling accident rate—actually are among the safest drivers on the road, a University of Denver study showed yesterday.

The study, covering 31 states in all regions of the country, showed senior drivers averaged 37 percent fewer accidents than the proportion of accidents to numbers of drivers would indicate.

Although senior drivers represented 7.4 percent of all drivers in the states surveyed, they were involved in only 4.8 percent of the accidents.

Denver Dist. Judge Sherman G. Finesilver, head of the study team said it "will be pivotal in refuting current popular thinking about older drivers."

Senior drivers averaged the lowest of all age groups in frequency of injury-producing accidents. Older motorists averaged 40 percent below their proportionate share of the driving population.

Senior drivers also averaged slightly less fatal accidents—about 7 percent—than their proportion would dictate. Finesilver said it was possible the difference in fatal accidents was less surprising because older persons are less able to recover from injuries.

Commissioner William Mechill of the Federal Administration on Aging said he hoped the study will eliminate misconceptions about licensing and insuring senior drivers.

"I hope that it will lead to a cessation of arbitrary practices and attitudes directed to older drivers and ultimately create fairer, more enlightened practices in licensing and insuring of older drivers," Bechill said.

The study was financed by the Department of Health, Education and Welfare.

SMOG CONTROL IN CALIFORNIA

Mr. MURPHY. Mr. President, on March 17 the Oakland Tribune published an editorial urging the Department of Health, Education, and Welfare to grant to the State of California a waiver which is required under my amendment to the Air Quality Act of 1967, unless the Secretary proves that the California standards are not technologically and economically feasible.

I submitted a statement to the Department urging that the complete waiver as requested by the State of California to implement the State's pure air act of 1968 be granted.

Mr. President, because of the importance of this issue, I ask unanimous consent that this editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SMOG CONTROL STANDARDS

The Federal Government assumed primary jurisdiction for establishing and enforcing automobile smog control standards when Congress passed the Federal Air Quality Act of 1967.

Because California's scheduled standards were stricter and were aimed at a more critical smog problem than exists elsewhere, Sen. George Murphy secured passage of an amendment authorizing the granting of a waiver for this state.

The Federal Government is required to grant the waiver unless the Secretary of Health, Education and Welfare determines that California's proposed standards are not necessary and are not technologically and economically feasible.

A series of public hearings have been held on California's request for the waiver. When these formalities are concluded and when the testimony presented is fairly evaluated, we trust that California's request will be granted.

The Murphy amendment was passed because Congress acknowledged that the special conditions existing in California might require tougher state smog control standards than those incorporated in federal regulations. The State must and should have the authority to establish its own air pollution standards so long as they do not fall below the federal minimums.

THE "PUEBLO" INCIDENT—GENERAL McKEE DOES ANSWER

Mr. HANSEN. Mr. President, on March 4, 1969, I referred to views of the distinguished and able Senator from Colorado (Mr. DOMINICK) which suggested publicly raising some pertinent questions regarding the *Pueblo* incident. It was suggested that the Government respond to these questions, and there has been some response in the testimony of Lt. Gen. Seth J. McKee, U.S. Air Force Assistant Vice Chief of Staff, formerly commander of the U.S. 5th Air Force at the time of the *Pueblo* incident.

Also on March 4, 1969, the Senate gave its unanimous consent that an editorial entitled "Let the Senate Investigate" from the Cheyenne, Wyo., State Tribune of January 25, 1969, be printed in the RECORD. The editorial noted that a Long Island newspaper, Newsday, had alleged General McKee made a decision not to send Air Force fighters to assist the *Pueblo*. The Cheyenne newspaper suggested that General McKee be afforded the opportunity to testify publicly on what took place.

The House Committee on Armed Services Special Subcommittee To Inquire Into the Pueblo Incident gave General McKee that opportunity March 20, 1969.

General McKee's testimony shows he did, in fact, order Air Force fighter aircraft to assist the *Pueblo*, but that because of distance involved the aircraft were unable to reach the *Pueblo* before darkness.

Since questions were raised earlier as to whether General McKee did issue proper orders in regard to the *Pueblo* incident, I ask unanimous consent that his statement before the House subcommittee be entered here in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF LT. GEN. SETH J. MCKEE, U.S. AIR FORCE, ASSISTANT VICE CHIEF OF STAFF, U.S. AIR FORCE, WASHINGTON, D.C., FORMERLY COMMANDER U.S. 5TH AIR FORCE, FUCHU AIR STATION, JAPAN, FROM AUGUST 1, 1966 TO JULY 1, 1968, BEFORE THE HOUSE COMMITTEE ON ARMED SERVICES SPECIAL SUBCOMMITTEE TO INQUIRE INTO THE "PUEBLO" INCIDENT, MARCH 20, 1969

Mr. Chairman, Gentlemen: I am Lt. General Seth J. McKee, Assistant Vice Chief of Staff, United States Air Force. At the time of the *Pueblo* incident, I was Commander of the United States Fifth Air Force, with headquarters at Fuchu Air Station, Japan.

I welcome this opportunity to answer questions you may have concerning the Fifth Air Force role in connection with the *Pueblo* incident. Based on public media statements it appears that two of the central questions relating to the Fifth Air Force role are: (1) Why were Alert Aircraft not provided; and (2) Why were aircraft not sent to relieve the *Pueblo*? Perhaps my response to these questions will further your investigation and provide a background for additional questions you may desire to ask.

In order that my response to the first question may be fully understood, I believe it appropriate that I provide some background regarding previous Fifth Air Force association with this type mission.

Prior to the *Pueblo* mission, her sister ship (the U.S.S. *Banner*) was used for this type of mission in the waters that were in the Fifth Air Force Geographical area. Of some sixteen missions known at Fifth Air Force to have been planned or conducted by the U.S.S. *Banner*, Air Force Alert Aircraft were requested of Fifth Air Force by the Navy for three of them. On one additional occasion, a request was made that air support forces be notified of the area and time frame of the mission, and this was done; however, no request was made for alert aircraft, and no aircraft were committed to alert. Of the three missions for which we planned air support, one request for support was cancelled by the Navy due to mission cancellation, and two missions were supported by Fifth Air Force with aircraft and crews on alert.

The first mission Fifth Air Force supported was mission number nine for the Banner. Coordination between CINCPACAF, CINC PACFLT, Fifth Air Force, and COMNAVFOR Japan, established the alert requirement, the rules of engagement, and the alert posture to be maintained. Coordination with elements of the Strategic Air Command was effected to provide in-flight refueling for the fighter aircraft. Copies of the CTF-96 Operations Order which detailed the ship's operations and procedures were distributed to Air Force units, and Fifth Air Force and subordinate units issued implementing instructions. The Banner was directed by the Navy to add the Air Defense Control Center at Naha, Okinawa, as action addressee on assistance requests, and to perform a communications check with the Naha Air Defense Control Center when the ship arrived in the operating area. The Defense Control Center at Naha was directed to forward any request for assistance to my Fifth Air Force Command Center by flash precedence, with information copies to CINCPAC, CINCPACAF, CINCPAC FLT, and COMNAVFOR Japan. Direct voice communications would be used as back-up. Additional communications procedures were established to be used by the ship and the alert aircraft, and standard visual and voice identification signals were established to aid in spotting the vessel in relation to other surface craft. Fifth Air Force aircraft were then committed to the alert (in Okinawa) with the stipulation that they would be utilized only when directed and as considered appropriate by CINCPAC or higher authority. The authority to launch aircraft was subsequently delegated to me as Commander, Fifth Air Force, with the restriction that it could not be delegated lower. Aircraft were placed in incremental launch reaction time of 5 minutes, 15 minutes, 30 minutes, and one hour, with the provision that upon call from the Banner, or upon launch of any aircraft, all others would go to cockpit alert. Reaction time from first notification to the Banner operating area would have been approximately 45 minutes. This Fifth Air Force alert posture was in fact maintained from the time the ship arrived in the operating area, until seven hours after it departed that area.

Similar coordination between the various command and control agencies occurred on each of the missions for which Fifth Air Force was requested to plan or to provide air support. In the case of the Pueblo, no Fifth Air Force support was requested. Therefore no alert was provided, just as no alert was provided the Banner in those instances where none was requested.

I have gone into these details, Mr. Chairman, and Gentlemen, to underscore the fact that when aircraft are dedicated to an operation, and committed to an advanced alert, these aircraft are dedicated to the specific operation by command directive, and brought to that state of readiness only through carefully planned, coordinated, and directed actions.

With reference to the second question, as to why were aircraft not sent to relieve the Pueblo, I would like to emphasize that contrary to articles that have been published in the newspapers, no decision was made at Fifth Air Force to not send aircraft to relieve the Pueblo. In fact, I personally made the decision to send aircraft, issued appropriate orders to effect such action and Fifth Air Force fighters were launched.

We began launching fighter aircraft out of Okinawa (where my only operationally ready combat units were located) as rapidly as possible. Unfortunately, they could not get to the scene prior to darkness or prior to the time that the Pueblo entered the three mile limit. Therefore after they landed in Korea, it was too late to refuel and relaunch in support of the Pueblo.

The first notification to my headquarters of the Pueblo's predicament was by a secure phone call to a member of my staff. This was followed by two closely spaced critic messages citing the Pueblo's position and first call for help. These were received in the Message Center at 1357 and 1407 Local (0457Z and 0507Z) respectively. Following receipt of the phone call, my staff plotted the ship's position, checked the availability of aircraft, and proceeded to my office where I was receiving a previously scheduled briefing. The staff members brought with them the message that had been received at 1407. I was personally notified and promptly briefed on the Pueblo situation at 1415 Local (0515Z). I immediately proceeded to my Command Center which was a two to three minute walk from my office, and placed near simultaneous phone calls to CINCPACAF in Hawaii and to the 18th Tactical Fighter Wing in Okinawa. While waiting for CINCPACAF to get to the secure phone in his headquarters, I directed the Commander of the 18th Wing to prepare all available aircraft for launch as soon as possible. Knowing that available aircraft would be in a normal training configuration, I directed that the first six aircraft be launched armed with 20 mm cannon only in order to expedite their arrival in South Korea.

About this time CINCPACAF came on the phone. I advised him of the Pueblo and its state of stress and of actions that I was taking. I further advised him that it was my intent to strike in support of the Pueblo provided I could get aircraft to the scene prior to darkness and prior to the time the ship reached the three mile limit. CINC PACAF concurred in my actions and told me to carry on with my plans unless advised by him to the contrary. I then passed these instructions on to the Commander, 18th Fighter Wing, with the further instruction that his aircraft would stage through Osan, Korea, because the scene of action, with recovery in Korea, was beyond the range of the F-105s stationed in Okinawa.

I then directed all other Fifth Air Force units (which were all in the process of converting to a new type aircraft) to bring all possible aircraft to operational readiness and to prepare for deployment as rapidly as possible. The 18 TFW on Okinawa launched the first increment of aircraft at 1611 Local (0711Z), which was one hour and twenty-three minutes after I gave the order to launch. This involved recalling seven aircraft from training flights, diverting six from various stages of training preparation, servicing all aircraft, and briefing aircrews.

A later incoming critic message reported that the Pueblo had been boarded and had gone off the air at 1432 Local (0532Z). At 1645 Local (0745Z) CINCPAC Headquarters replotted the position of the Pueblo and reported the ship was estimated to be in the harbor at that time. It was somewhere around this time that I came to the unhappy conclusion that we would arrive too late to be of assistance to the Pueblo and so advised Headquarters PACAF. The first F-105s which were launched from Okinawa arrived at Osan at 1735 Local (0835Z). Sunset at Wonsan was 1741 Local (0841Z) and darkness at 1753 Local (0853Z). Obviously later arriving aircraft were also too late to be of assistance.

Therefore, in answer to the second question, Fifth Air Force aircraft were sent to relieve the Pueblo with orders to attack, but, regrettably, they could not get there before the ship was captured and in port.

Gentlemen, this concludes my prepared statement. I would be happy to respond to other questions that you may have at this time.

GENOCIDE: WE MUST ACT NOW—XXIX

Mr. PROXMIRE. Mr. President: take 5 quarts of water, 6 pounds of human fatty acids; add 8 ounces of caustic soda. Boil for 2 or 3 hours, then cool.

As late as 25 years ago, this formula was practiced and perfected for the manufacture of soap. The second ingredient is stated correctly—it calls for "6 pounds of human fatty acid." A civilized mind can only be disgusted by such an unappetizing recipe.

And for the victory gardens of the Third Reich, after wide research and experiment, the perfect fertilizer proved to be the ashes of human bodies.

Dachau, Treblinka, Belsen, Auschwitz—these are but a handful of the places where Nazis flirted unceasingly with the most precious commodity we know, a human life. For example, at Auschwitz alone, 17 tons of gold were extracted from the dental fillings of slaughtered men, women, and children. As a caveat for those unfortunate living dead, an infant would be torn in two by ripping apart his legs.

Mr. President, my purpose in citing these atrocities, these crimes against humanity, is not to rekindle old flames of hatred and revenge or to encourage further retribution of those guilty, but rather to make a plea to the living. We must respect the sacrifice of these mil-

lions of fellow human beings, and we must at this time make a solemn vow that we will never again, as civilized people, allow such inhumane annihilation to occur on this earth.

For the last 20 years, the Genocide Convention has been stalled in the Foreign Relations Committee of the Senate. We cannot conveniently blame our inaction on the State Department, the Executive, or the House of Representatives. This time, the Senate alone and each of us as Senators must accept individual responsibility for our collective failure to act.

The very keystone in the defense of peace is universal condemnation of genocide. Let the Senate follow the lead of almost 70 other countries and now, in 1969, ratify the United Nations convention on genocide.

AN ABM APPROACH FOR HAWKS AND DOVES

Mr. HANSEN. Mr. President, the substantially modified anti-ballistic-missile system proposal endorsed by President Nixon on March 14 has given Members of Congress a rare opportunity. Those among us who have been labeled "hawks" or "doves," either by editorialists or self-professed, have the unusual chance to shed these labels and build themselves new images.

The administration's proposal bears the mark of the statesman—the mark of compromise, often so difficult to achieve but often so essential for the welfare of the United States and the people of this planet.

At the same time, this proposal does not compromise our national security, nor does it feed the costly fires of an arms race. It is a realistic and reasonable approach. It is the best offered to date.

Mr. Saul Friedman, of the Akron, Ohio, Beacon-Journal has made some observations about the administration proposal. I ask unanimous consent that they be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NIXON'S "LITTLE ABM" HAS WINNER SIGNS

(By Saul Friedman)

WASHINGTON.—Once again, President Nixon is carrying water—or in this case anti-ballistic missiles (ABM)—on both shoulders.

But in his attempts to head down the middle of the ABM controversy, the President may have given his critics, especially Democrats, their first real reason to fight with the new administration. In short, the honeymoon may be at an end.

Yet a strong argument can be made that his plan for the deployment of the ABM, has given much more to the opponents of the missile system than to its supporters. For that reason it now has a better chance for approval in Congress.

At his Friday press conference, the President said he thought his plan would pass after a close vote. There were signs he may be correct.

Not only did Nixon withdraw the missiles from the cities, at least for the present, he also backed off even further from the original Johnson Administration deployment plan.

Here is what Nixon gave the ABM doves:

He rejected a "thick" or "thin" system to protect the cities, thus deflating critcism that it would not work, that it would be too costly, and that it would upset the strategic balance between the U.S. and the Soviet Union and begin a new round in the arms race.

He cut deployment of the ABM back from 15 sites in the Johnson Administration plan, to just two sites.

The primary purpose of Nixon's plan is to protect American Intercontinental Ballistic Missile (ICBM) sites, rather than cities. This would protect the U.S. ability to retaliate, or give a better "second strike." The Nixon plan strengthens the U.S. "deterrent," and may stabilize rather than upset the arms balance.

Finally, Nixon has reduced by nearly $1 billion the Defense Department appropriations request for work on the ABM next year. The amount requested for the Johnson proposal was $1.8 billion.

Nevertheless the hawks were more satisfied than the doves, because they too got some significant concessions.

Most important, if Nixon's plan is approved, the ABM foot will be through the door. Citing the beginning of other weapons systems which have grown like topsy, ABM critics expect that once started, the system will be unstoppable and will expand into a $100 billion giant.

AN INDEPENDENT SMALL BUSINESS ADMINISTRATION

Mr. WILLIAMS of New Jersey, Mr. President, as chairman of the Subcommittee on Urban and Rural Economic Development of the Select Committee on Small Business, I am well acquainted with the plight of the urban small businessman.

In my home State of New Jersey, which is, as Senators know, highly industrialized and urbanized, I feel that the Small Business Administration has done a splendid job in dealing with the many business problems facing the urban small businessman. SBA has several excellent programs which can be tailored to the need of either the urban or rural small businessman. That agency has in almost every case brought these programs to bear effectively in resolving small business problems in New Jersey.

I have always considered one of the great advantages of small business to be that a small shopowner or storekeeper has an opportunity to meet his customers, hear their complaints, and make sure that his business measures up to his own high standard of excellence.

This same analogy is true with regard to the SBA. It is a small, decentralized, Government agency. SBA has field offices in every State in the Nation, and it is highly responsive to the people and vastly more effective than some of the larger bureaucracies centered in Washington.

I am concerned over recent reports and rumors that the SBA will be transferred to the Department of Commerce or in some way lose its status as an independent Federal agency. I think the majority of the Members of Congress and the Nation's small business community, which consists of over 5 million small concerns, strongly feel that the American small businessman deserves a forum, free from conflicting responsibilities to the large business community, to protect and promote his interests.

In terms of the difficulties facing today's urban small businessman, I want to see the SBA remain independent; remain viable; and remain ready to translate its programs into responsive action without the lost motion engendered by cumbersome bureaucracy.

Mr. President, this matter of SBA's independence is not new to my colleagues in the Senate. Several years ago there was another effort to transfer the SBA into the Department of Commerce. The Senator from Alabama (Mr. SPARKMAN), the distinguished chairman of the Select Committee on Small Business at that time, led the fight to preserve SBA's independence, and now it appears that we must once again fight this same battle.

During the previous attempt to abolish the independency of SBA, I took the Senate floor to speak out against this proposed transfer. The remarks I made then are just as cogent today. Accordingly, I ask unanimous consent to have these remarks printed following the conclusion of my statement.

In summary, I can only urge Senators to give serious consideration to any attempt to downgrade or dilute the independent status of SBA. This is not now, nor has it ever been, a partisan battle. For over a decade and a half SBA has lived up to its mandate to aid, counsel, and assist small businessmen throughout the Nation. It seems highly illogical to tamper with this proven formula for success in these times of business uncertainties.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

THE TALK ABOUT ABOLISHING THE SMALL BUSINESS ADMINISTRATION

Mr. WILLIAMS of New Jersey. Mr. President, continuing rumors that the Small Business Administration will be done away with or lose its status as an independent agency have become a matter of great concern to New Jersey voters and to me.

For the past 15 years there has been a clear line of support, on a bipartisan basis, for a program of intelligent concern for the problems of growing and dynamic independent businesses.

This has been shown in the formation of a Select Committee on Small Business in 1950, the enactment of the Small Business Act of 1953, the Small Business Investment Act of 1958, several small business provisions to the Revenue Act of 1964, and of course, the creation of the Small Business Administration.

However, the Senator from Alabama [Mr. SPARKMAN], who has been the acknowledged leader in this field during this period, was moved recently to comment on a current rumor that the Small Business Administration would be consolidated with the Department of Commerce and thus lose its identity.

It seems to me that the 15 years of solid support for SBA and its programs has reflected recognition by the Congress and the Presidency that the self-reliance and resourcefulness of independent business were basic national values.

The founders and those who are carrying on the nearly 5 million of these firms are not relying on quantities of Government aid or creating manifold problems. They are furnishing jobs, producing useful goods and services, and providing tax support for all levels of Government; and are thus helping to resolve many problems.

From my contacts with businessmen across the State of New Jersey, I know that the Small Business Administration is looked to by these people as a source of counsel, assistance, and individual consideration of

the special capital and other needs which they face. It is an instrument responsive to their special needs in this era when large numbers and large companies seem to be absorbing an increasing share of public attention.

I would deeply regret a departure from this position by the present administration which would be inherent in relegating the SBA to the status of a minor bureau in a large department which has many other responsibilities. Such a departure could be justified least of all on the basis of economy, since this little agency finances a large share of its operating expenses from the fees and interest it charges for loans and other services.

However, an unfortunate impression has already been created by the total abridgment of the small business loan program on October 11, 1965, and by the absence of action to fill the post of Administrator, which has now been vacant since September 8, 1965.

The Senator from Rhode Island [Mr. PELL] has described, in considerable detail, the progressive tightening of credit during the last half of 1965. He pointed out that this makes the role of the Small Business Administration as lender of last resort proportionately more important. The wisdom of Senator PELL'S analysis was confirmed by the article of the Wall Street Journal of February 3, reporting that the Federal Reserve System has embarked on an overt program of rationing credit still further through its own operations, and through its considerable influence on its member banks.

As the Federal Reserve readily admits, small businesses are the first to suffer. The article, which is entitled "Federal Reserve Urges Banks To Be More Choosy in Parceling Out Loans," is explicit as to such disadvantages.

I ask unanimous consent that the article and the Small Business Committee Newsletter of January 30, be printed following my remarks, for the information of the Members of this body.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. WILLIAMS of New Jersey. Mr. President, it would certainly be curious to have an administration, which has expressed concern over quality in society, allow the impression to become more firmly established that an historically important group is not a part of this concern.

Mr. President, it is my hope that the administration will put a quick end to the rumor by taking the action necessary to restore leadership, funds, and morale to the Small Business Administration.

EXHIBIT 1

[From the Wall Street Journal, Feb. 3, 1966]

RATIONING CREDIT—FEDERAL RESERVE URGES BANKS BE MORE CHOOSY IN PARCELING OUT LOANS—IT COUNSELS CHANNELING FUNDS TO SPUR PRODUCTION GAINS, CURB SPECULATIVE ACTIVITY—IMPACT ON VARIED BORROWERS

(By Lee Silberman)

NEW YORK.—Voluntary tight money?

The Federal Reserve System is not using that name for a policy it is now urging on the Nation's banks. But it does seem to be moving toward a domestic version of the program under which, since last March, U.S. banks have been supposed to hold down voluntarily their lending abroad, to help solve the U.S. balance-of-payments problem.

In the foreign program, the increase in loans by U.S. banks is supposed to be held to a percentage figure set by the Government. No such formal limit has been set in the still unnamed domestic program. But bankers say the Fed has been warning them that it will not increase the lendable funds it supplies them with as rapidly this year as it did in 1965. Moreover, bankers say, there have been warnings that the Fed will restrict the growth of bank credit even more than it now contemplates unless bankers make sure the loans they do grant are made to further productive activity—and not to finance speculation of any kind.

Bankers thus may make heavier than expected use of a slim booklet, being mailed to them by coincidence this week by the American Bankers Association, which helpfully suggests 15 different reasons for turning down a businessman's request for a loan. Last year the Nation's commercial banks increased the total business loans on their books by a whopping $11 billion, or 19 percent and demand for such credit is expected to continue heavy this year. But assuming the present Fed policy wins their cooperation—and the Fed has potent weapons it can use to make sure that it does—the bankers in 1966 will find themselves saying "No" to many loan applications, and "we can't give you as much as you want" to many more. Interest rates on various types of loans are likely to rise at least a bit more, too.

Here's what this policy is likely to mean to various types of borrowers:

National corporations with top credit ratings probably will get smaller loans from banks where they now have lines of credit. Other banks will be reluctant to establish new lines of credit for them unless the banks are assured that the corporations will remain as customers for some time. Even then, the corporations will be urged to borrow more funds for long-term needs in the bond market rather than from banks.

Larger regional and local businesses will be able to borrow only for their most essential needs. And some will be encouraged to go after long-term financing, rather than seeking short-term loans.

Small businesses, such as "ma and pa" stores, probably will be able to borrow as much money as before. But they may have to pay interest on it at installment-loan rates, which are higher than the straight business-loan rates they have been paying.

Consumers in all likelihood will continue to get all the credit they qualify for to finance purchases of autos, appliances, and similar goods, and on personal loans.

Mortgage borrowers, however, may find loan money for both residential and commercial mortgages drying up at many banks.

Bankers see one "out" for many fund-seekers: Borrowers, they believe, will turn more heavily to factoring and commerical-finance companies, personal-loan concerns and Government lending agencies for the funds the banks will not let them have.

But the bankers expect this to bring only temporary relief to the borrowers. Many of these lenders themselves borrow from banks the funds they re-lend—so, as credit tightens at the banks, these lenders also will have to become more choosy in extending credit, bankers believe. Their interest rates are likely to rise too, bankers say, if those rates are not already bumping against legal ceilings.

The reason for this Federal Reserve advice to bankers, of course, is fear of inflationary overheating of the economy, due largely to heavy spending for the Vietnam war. The Fed took an orthodox step toward tightening credit last December by boosting the discount rate it charges on loans to commercial banks to 4.5 percent from 4 percent. This already has kicked up interest rates on many bank loans. Larger commercial banks have raised to 5 percent from 4.5 percent their prime interest rate to their biggest and most credit-worthy customers, generally national corporations: most other bank lending charges scale upward from the prime rate.

ABNORMAL CONDITIONS

Normally the Fed, if it wanted to tighten up further, would proceed to reduce gradually the amount of reserves it supplies the banking system on a day-to-day basis. It has apparently been trying to do this, but various circumstances have prevented it from moving as fast as it may have wanted to. The New York transit strike and snowstorms in many areas of the country, for instance, have dictated temporary extensions of more credit to banks—and thus, indirectly, to their hard-pressed customers—than the Fed perhaps would have made available otherwise.

Moreover, it takes time for a policy of gradual credit restraint, pursued under the Reserve System's normal tradition of silence, to become obvious and to take effect. And the Fed apparently feels it can't wait to get its message across, as inflationary trends appear to be gaining steam. One indication: The Consumer Price Index in December rose to a record 111 percent of the 1957–59 average, up 2 percent from December 1964 for the biggest calendar-year rise in 7 years.

Accordingly, bankers have begun hearing some unusual speeches, such as one delivered early this week by William F. Treiber, first vice president of the New York Federal Reserve Bank, to top commercial-bank credit policymakers at a New York conference sponsored by the American Bankers Association.

Mr. Treiber urged the bankers to be more selective in granting loan requests and went further to lay down some guidelines as to the types of loans he thought should be refused. One example: "A loan—to a company—to purchase an additional plant or company, where no overall increase of production will result."

Some bankers who heard him were well aware that, during the Korean war, Mr. Treiber helped run the New York end of a program under which district Federal Reserve banks organized committees that gave commercial banks and other leaders guidance on what kind of loans to grant. Ordinarily the committees advised refusal of loans that did not promise to help boost national production.

The week before Mr. Treiber's talk, Alfred Hayes, president of the New York Reserve bank, told a State banking group that the amount of reserves the Fed furnishes to banks this year will be determined in part "by the extent to which bankers themselves exercise good judgment and are selective in meeting credit needs."

OPEN-MOUTH POLICY

The bankers' interpretation: The Federal Reserve has embarked on an unusual "open-mouth" policy to achieve credit restraint by indirection. "In a word, the Fed wants us to get down in earnest to rationing credit," says a senior official of a leading New York bank.

At the same credit conference that Mr. Treiber addressed, Archie K. Davis, chairman of Wachovia Bank & Trust Co., Winston-Salem, N.C., and president of the American Bankers Association, warned the assembled bankers that "failure to exercise voluntary but prudent restraints now can lead to stricter regulatory controls later." He was referring not only to restraint in granting loans, but to a feeling of concern, also noted by Mr. Treiber, that some banks may be paying too high an interest rate to obtain certificates of deposit, under which corporations deposit temporarily idle funds in banks for a stated time period. Certificates of deposit have become a major instrument by which banks obtain funds to make loans.

Credit rationing of a sort had begun even before the Federal Reserve launched its "open month" campaign. Many months before they raised the prime rate last fall, big banks went through their lists of prime-rate customers and pruned out many—in effect downgrading their credit status and forcing them to borrow at higher interest.

OUTSTANDING LOANS REVIEWED

More recently, many large banks have begun scrutinizing the credit-worthiness of

their customers more closely, and have become more choosy about what loans they would grant. Some weeks ago one big New York City bank gave each of its many lending officers revised policy guidelines. These instructions call for each officer to review the loans he has made and cull out the ones made to finance less essential activities. These loans probably won't be renewed.

Most banks further have become more insistent that business borrowers maintain minimum compensatory balances, ordinarily 20 percent of the loan, in their accounts. In the past 4 years or so, during which banks were beating the bushes to find borrowers, such requirements often weren't enforced.

The banks have been reacting to a squeeze resulting from an interaction of expansionary forces in the economy and Fed policy. Major corporations have been demanding more and larger loans because their plans for expansion are increasing faster than they can generate the funds internally from depreciation reserves and retained profits. At the same time, with less idle cash in their tills, they are no longer increasing their buying of certificates of deposit from the banks. And the Federal Reserve System has not been extending credit to the banks fast enough to supply the funds to meet all the loan demand.

Despite this policy, and the clear desire of the Federal Reserve to see tighter credit rationing by the banks, bankers believe the Fed will supply enough reserves to permit at least some modest continued expansion in lending.

GOAL: A SLOWER INCREASE

William F. Butler, vice president and economist of Chase Manhattan Bank, told the American Bankers Association credit conference that, while he expected the Federal Reserve to bring about some tightening of credit and higher interest rates, he did not believe the Fed's objective was "to choke off credit by excessive tightness (or) to raise interest rates for the sake of higher rates. The objective rather is to slow down a rate of increase in credit which threatens to feed inflation."

Another New York banker puts the same thought more pithily: "This won't be the year the money runs out."

Bankers disagree on whether the Fed's tighter credit policy is likely to be accompanied by another boost in the discount rate soon. Milton F. Darr, Jr., president of LaSalle National Bank, Chicago, speaks for many in predicting that the discount and prime rates will move up again in 60 to 90 days, to check inflationary pressures.

Andrew Benedict, president of First American National Bank, Nashville, Tenn., differs, "The System is going to see to it that the economy's credit requirements are met," he says, "and so long as the banks are selective enough to see to it that the credit gets into the hands of those who are entitled to it, no further action may be needed."

POLITICAL FACTORS

This disagreement on what is likely to happen to the discount rate partly reflects differing banker assessments of the political pressures involved. Treasury Secretary Fowler and several Congressmen vigorously opposed the discount-rate boost last December, on the ground that higher interest rates would slow the growth of the economy, and President Johnson himself expressed displeasure with the boost. Last Sunday, Mr. Fowler again said he didn't see any need for a further increase in the discount rate now.

Some bankers expect these views to weigh heavily with the Federal Reserve. "This is one area where you simply can't lose sight of the political ramifications," says a Philadelphia banker.

Other bankers, however, contend that lately the views of some administration aids have begun to coincide more closely with the Federal Reserve opinion that inflation is emerging as the major threat to economic stability. "The President in his recent messages to Congress seems to be putting himself in a flexible position of condoning tighter money if that's the only way out," says a New York banker.

WEEKLY STAFF REPORT TO THE SENATE SMALL BUSINESS COMMITTEE, JANUARY 29, 1966

SBA's regular business loan program termed Budget Bureau's "whipping boy" in hearings by the Banking Committee's Subcommittee on Small Business on S. 2729 and the plight of the small business agency's depleted revolving fund.

Pointing out that for part of 8 out of 11 years, "this program was either suspended or the loan limit vastly limited," Senator PROXMIRE, subcommittee chairman, stated: "I think a strong case can be made * * * that SBA's regular business loan program has long been made the 'whipping boy' by the Budget Bureau.

"There has been no suspension or curtailment of SBA's disaster loan program. To date there has been no shortage of funds for small business investment companies and State and local development company loans. There have been restrictions on these programs by Budget, but no shutdown has been necessary as has so often been the case in the regular business loan program."

Senator Sparkman, referring to hearings held on the same subject by the Senate Small Business Committee on December 15, said: "I do not know of anything that has distressed me more than the beating that the small business program has taken over the last 6, 7, or 8 months. I find it almost impossible to explain to small businessmen from my State what is happening to small business. I think it is a terrible situation and one that surely ought to be corrected."

Commenting on current rumors that an effort may be made to tamper with SBA's status as an independent agency, Senator Sparkman asserted: "I think it would be very bad to merge (SBA) with the Department of Commerce, and I certainly hope that these rumors we hear may prove to be baseless."

S. 2729, introduced last year by Senator Proxmire and Senator McIntyre, would replace SBA's present single revolving fund, in which funds for all of the agency's lending activities are commingled, by three separate funds: for regular business loans and title IV loans under the Economic Opportunity Act of 1964; for disaster loans; and for loans under the Small Business Investment Act of 1958.

Committee's Subcommittee on Government Procurement held hearing to take testimony from top defense purchasing officials on the effectiveness of their small business programs.

Senator Montoya, presiding, said in his opening statement: "We expect to hear today that overall the small business program in the military departments reached an all time high during 1965. The complacency that this achievement could conceivably engender, coupled with problems of accelerated purchasing under the present international emergency, could bring on new problems for the small business procurement program during the current year."

John M. Malloy, Deputy Assistant Secretary of Defense for Procurement, told the subcommittee that: "In fiscal year 1965, small business received 20.3 percent of the total awards to all U.S. business firms compared with 18 percent for fiscal 1964. During this period, there was a decided decline in awards for missiles and space systems, and increases in commercial type items, small purchases and construction. These changes in product mix have been favorable to small business firms."

The Defense Department's overall goal for small firms' share of defense purchases in fiscal 1966 has been set at 18.3 percent.

A DEDICATED CAREER OF SERVICE

Mr. BYRD of West Virginia. Mr. President, an article entitled "Friend of the Handicapped" in the March 23 Sunday Gazette Mail of Charleston, W. Va., provides an excellent insight into the work that is being done in my State for the physically and mentally handicapped.

In the little over 20 years that a real statewide program has been in effect to assist the mentally retarded, the deaf, the blind, and other handicapped persons, thousands of West Virginians have been given the means to help themselves toward a better and more productive life.

One man is due much of the credit for the very real progress that has been made. He is F. Ray Power, the former director of the State division of vocational rehabilitation, who is now retired.

Mr. Power is the principal subject of the article to which I allude, and the credit which is given him, in my judgment, is well deserved.

Under his guidance, the program which aided 60 persons in 1944 grew to the point that approximately 4,000 persons were rehabilitated in 1966. He expanded the State rehabilitation effort from a $20,000 budget and a staff of six to a budget of more than $6 million and a staff of nearly 600.

As he himself points out, all that should be done for the handicapped is not yet being done. But an effective and humanitarian program to achieve this end is under way in West Virginia, thanks in large measure to his farsighted dedication.

I believe others who are interested in rehabilitation will find the Gazette-Mail article by Edward Peeks of interest, and I ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FRIEND OF THE HANDICAPPED

(By Edward Peeks)

The physically and mentally handicapped have a lot of friends nowadays, but none quite like F. Ray Power, former director of the State Division of Vocational Rehabilitation.

Power says an estimated 251,000 handicapped West Virginians need more friends, especially those who understand the difference between token help and community-supported programs for the mentally retarded, the deaf, the blind and other handicapped persons.

A substantial program, he says, "is the kind of thing that is hard to promote on an adequate basis. You get some token help, talk about it and put it in the newspaper. But that doesn't mean that the handicapped is being helped.

"The service in this area has been an evolving sort of thing and it has come pretty slow," he adds, looking back to 1941 when the Neely Administration appropriated $25,000 for "special education" to give West Virginia its first real start on a program for the handicapped.

That sum is a mere pittance by contrast with state funds today for educational and medical services for the handicapped, to say nothing of federal aid which usually amounts to $3 for every $1 spent by the state.

More money through the years has helped

to attract more friends for the handicapped. Some are fairweather friends who go for token help, but most are well-meaning and together they get results.

Although he retired in 1966 at the age of 68 as state rehabilitation chief, Power has continued his interest in various programs for the handicapped.

He hastens to add, "I don't interfere with the programs of the State Division of Vocational Rehabilitation. I don't want to get in anybody's way or create any problems for others." He smiles. "Those in charge have enough problems without my creating any for them."

Power continues his service on various advisory boards for the handicapped. As a private citizen, he makes it a point to attend public meetings and to talk with public officials about the needs and problems of the handicapped.

It is almost as though he prepared for the role of "roving ambassador for the handicapped" after he retired as state rehabilitation director.

For then he became director of a two-year statewide study of vocational rehabilitation needs. The project was funded by an $89,000 grant from the U.S. Department of Health, Education and Welfare.

The result was a comprehensive state plan turned over to Gov. Hulett C. Smith. The report contained recommendations to make vocational rehabilitation services available to all eligible West Virginians by 1975.

The study found that 71,832 persons were in need of rehabilitation or sheltered workshop services.

It was a fresh store of information for Power to add to a wealth of experience to be used in his continuing efforts for the handicapped.

A major concern is for better state mental hospital facilities which he believes are now run-down and completely inadequate to offer services that the mentally ill require.

He has written and talked to legislators about the problem. He wants the state to have a bond program for capital improvements to make mental hospitals safe and adequate for patients.

"We need a capital outlay program for state institutions," Power says. "In my judgment, it is something that has been neglected. There are liberal programs for campus buildings. In addition, they went around to the backdoor to do the same thing by authorizing the use of tuition fees for building.

"There has been very little capital improvement in state mental institutions which I think now are at a very dangerous point. They perhaps have a better case for using fees than colleges."

This problem, he contends, points up the difficulty of providing help for the handicapped.

"It is hard to get something for the handicapped as opposed to people who can help themselves," he says. "People who can help themselves do so by getting special appropriations and the use of fees, for example, for capital improvements."

The State Mental Health Department asked the legislature again this year to approve a bond program for capital improvements. A similar request died in committee last year.

Power says a capital outlay program is needed to help communities establish comprehensive mental health programs and sheltered workshops for the handicapped turned up by the federally sponsored study.

"A handicapped person pays 10 times more in taxes than money required to rehabilitate him," Power observes. "Token programs are good if they demonstrate how a thing can be done."

More help for the handicapped, like the question of more aid for any other group of citizens, brings up the matter of tax money.

"We overemphasize consumer taxes and they fall too heavily on poor people," Power says.

He thinks Gov. Arch Moore has the right idea to make business and industry put more in the tax till. The legislature lifted consumer sales and use tax exemptions on merchandise and equipment used by manufacturers and other industries, including wholesalers, retailers and contractors.

"One of the difficulties in helping the poor or the handicapped is that they are thought about after the tax money is divided among the people who can help themselves," Power says.

"There has been a change in public attitude about this, but it is a traditional way of thinking and doing," he continues. "It is one reason why we have gone only so far in special education for the handicapped. These children need more help because they have more problems, but the public doesn't look at it that way."

This attitude encourages specialists and counselors to work with the easy cases among the physically and mentally handicapped rather than the difficult cases.

"Federal-state programs offer a lot of leeway, not specifying the number of deaf, blind or any other group to be trained," Power explains. "The tendency is to work with the more promising cases."

The matter of selection brings up the charge of questionable practices by the national prize-winning State Rehabilitation Center during Power's administration.

Some West Virginia critics accused the center of juggling figures and indulging in statistical sleight of hand to win the national award year after year for most cases of rehabilitation per capita in the nation.

A Charleston columnist made the charge and drew swift reactions from Power, who wanted the public to have the facts about the matter, as opposed to endless speculation and sour grapes.

Power says he offered the columnist the center's records and the names of federal officials with whom he might discuss the question. The columnist accepted the offer on condition that he would publish his findings.

"Later, he said he was sorry he made the mistake," Power recalled, "but he never said a damn thing about it in the newspaper."

Power believes that the 1966 Community Services Report—a study of public and private health, welfare and recreation services in Kanawha Valley—raised some reasonable and understandable questions about the performance of the State Rehabilitation Center as a community group.

He says, however, that the center is a state agency, not a Kanawha Valley community institution. Criticism of the number of persons helped and the amount of money spent should be made and regarded in the light of the fact that the center is obligated to serve the entire state.

Then, too, Power says the center uses the team approach to help difficult cases and "work in depth" on the physically and mentally handicapped.

He stressed help for difficult cases among miners with broken bodies resulting from accidents on the job. Many would have been disabled for life without treatment, therapy and training in depth to overcome handicaps.

"Many were young men with several injuries," Power says. "Some were partially paraplegic and others were completely paraplegic.

"The United Mine Workers would send cases to New York and California for treatment. We made provisions to continue treatment of such cases or take care of them entirely at home."

The agency makes intensive treatment and training available to the blind, the deaf and other handicapped persons, including the mentally retarded.

The team approach offers medical, psychological and vocational services to meet the needs of the individual client. If a retardate, for example, needs corrective surgery and eyeglasses, the agency sees to it that he gets these and sheltered workshop training as well.

The workshop was established at the center in 1965, during what Power termed "an affluent period" for the handicapped which President John F. Kennedy started in 1961.

"The word from Washington was that if you had something (idea or plan) to help people, you could get money for it," Power recalls. "That was during the period we were developing the center."

Power and his staff had ideas about other facilities for the handicapped. The state made massive federal assistance possible by appropriating a half million dollars for the agency to match money from Washington.

The West Virginia rehabilitation chief further parlayed federal aid for the handicapped with the cooperation of other state agencies, particularly the Mental Health Department.

The department, for example, furnished staff for workshop facilities built on hospital grounds. In this way, the staff provided "contributions in kind" to match federal money for facilities at each of the state's five mental hospitals.

"To our knowledge, we were the first state in the nation to get Hill-Burton funds for a crib school at St. Marys," Power says of help for mentally retarded children through the federal program for building hospitals and health facilities.

"The appropriation doubled from $400,000 to $800,000 for the residential school," he adds.

A member of the State Board of Education quipped at a meeting after Power retired as rehabilitation chief, "Maybe we can find out now how F. Ray Power got all that money to build buildings."

It is no secret or mystery. "I learned where and how funds could be gotten and how they could be used," Power explains.

His agency started pilot projects in cooperation with county school systems for training retardates. Projects were set up in Wheeling, Huntington and Bluefield. They are now ongoing programs.

"All that is being done to help the mentally ill and the mentally retarded is still inadequate," Powers says.

He has received numerous awards and citations for his work with the handicapped, which actually began in a formal way in 1933. He was then made deputy assistant to the state superintendent of schools in charge of vocational rehabilitation. He became rehabilitation director in 1944.

In 1960, Shepherd College honored the native of Hampshire County as Outstanding Alumnus of the Year. He earned a bachelor's degree at West Virginia University and a master's at Columbia. He holds a Phi Beta Kappa key.

Power formerly taught in Hampshire County and at Glenville State College. He was once principal of Woodrow Wilson Junior High School in Charleston.

He expanded the state rehabilitation program from a staff of four and a $20,000 budget to a staff of nearly 600 and a budget totaling more than $6 million.

The program rehabilitated 60 persons in 1944 as compared with about 4,000 in 1966.

In addition to other volunteer work, Power is income and employment advisor to the West Virginia Commission on Aging.

With a sparkle in his dark eyes, he says, "Of course, I'm interested in maintaining some income for myself."

He and Mrs. Power are parents of two daughters.

A GENERATION IN SEARCH OF A FUTURE

Mr. SAXBE. Mr. President, many people have recently expressed alarm about the current student unrest in our

universities and on our college campuses, but very few have addressed themselves to the source of the discontent. I have often said that we ought to stop and listen to our youth because, just maybe, they are trying to tell us something.

Recently someone did stop and listen. In a brilliant speech printed in the current issue of the New Yorker, George Wald addressed himself to the causes of student unrest. The article is timely because it relates the problem of student unrest with the proposed deployment of the anti-ballistic missile system. I have made my opposition to the deployment of the ABM known. I have expressed my doubts about its military effectiveness, enormous cost, and adverse affect on possible disarmament talks. The proposed deployment of the ABM arouses my fear of the military-industrial complex of which President Eisenhower warned.

I believe that Professor Wald's speech should be called to the attention of all my colleagues because his insights cannot be confined to student unrest, but should be applied to the current malaise confronting our country. I, therefore, commend it to my colleagues, and ask unanimous consent that it be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A GENERATION IN SEARCH OF A FUTURE

(Speech by George Wald)

On Tuesday, March 4th, in the Kresge Auditorium at the Massachusetts Institute of Technology, a group of scientists assembled, with students and others, to discuss the uses of scientific knowledge. There is nothing we might print in these columns that could be more urgent than the extemporaneous speech, made before that gathering by George Wald, professor of biology at Harvard and Nobel Prize winner, under the title "A Generation in Search of a Future." We therefore quote from it here at length:

"All of you know that in the last couple of years there has been student unrest, breaking at times into violence, in many parts of the world: in England, Germany, Italy, Spain, Mexico, Japan, and, needless to say, many parts of this country. There has been a great deal of discussion as to what it all means. Perfectly clearly, it means something different in Mexico from what it does in France, and something different in France from what it does in Tokyo, and something different in Tokyo from what it does in this country. Yet, unless we are to assume that students have gone crazy all over the world, or that they have just decided that it's the thing to do, it must have some common meaning.

"I don't need to go so far afield to look for that meaning. I am a teacher, and at Harvard I have a class of about three hundred and fifty students—men and women—most of them freshmen and sophomores. Over these past few years, I have felt increasingly that something is terribly wrong—and this year ever so much more than last. Something has gone sour, in teaching and in learning. It's almost as though there were a widespread feeling that education has become irrelevant.

"A lecture is much more of a dialogue than many of you probably realize. As you lecture, you keep watching the faces, and information keeps coming back to you all the time. I began to feel, particularly this year, that I was missing much of what was coming back. I tried asking the students, but they didn't or couldn't help me very much.

"But I think I know what's the matter. I think that this whole generation of students is beset with a profound uneasiness, and I don't think that they have yet quite defined its source. I think I understand the reasons for their uneasiness even better than they do. What is more, I share their uneasiness.

"What's bothering those students? Some of them tell you it's the Vietnam War is the most shameful episode in the whole of American history. The concept of war crimes is an American invention. We've committed many war crimes in Vietnam—but I'll tell you something interesting about that. We were committing war crimes in World War II, before the Nuremberg trials were held and the principle of war crimes was stated. The saturation bombing of German cities was a war crime. Dropping those atomic bombs on Hiroshima and Nagasaki was a war crime. If we had lost the war, it might have been *our* leaders who had to answer for such actions. I've gone through all that history lately, and I find that there's a gimmick in it. It isn't written out, but I think we established it by precedent. That gimmick is that if one can allege that one is repelling or retaliating for an aggression, after that everything goes.

"And, you see, we are living in a world in which all wars are wars of defense. All War Departments are now Defense Departments. This is all part of the doubletalk of our time. The aggressor is always on the other side. I suppose this is why our ex-Secretary of State Dean Rusk went to such pains to insist, as he still insists, that in Vietnam we are repelling an aggression. And if that's what we are doing—so runs the doctrine—everything goes. If the concept of war crimes is ever to mean anything, they will have to be defined as categories of *acts*, regardless of alleged provocation. But that isn't so now.

"I think we've lost that war, as a lot of other people think, too. The Vietnamese have a secret weapon. It's their willingness to die beyond our willingness to kill. In effect, they've been saying, You can kill us, but you'll have to kill a lot of us; you may have to kill all of us. And, thank heaven, we are not yet ready to do that.

"Yet we have come a long way toward it—far enough to sicken many Americans, far enough to sicken even our fighting men. Far enough so that our national symbols have gone sour. How many of you can sing about the rockets' red glare, the bombs bursting in air' without thinking, Those are *our* bombs and *our* rockets, bursting over South Vietnamese villages? When those words were written, we were a people struggling for freedom against oppression. Now we are supporting open or thinly disguised military dictatorships all over the world, helping them to control and repress peoples struggling for their freedom.

"But that Vietnam war, shameful and terrible as it is, seems to me only an immediate incident in a much larger and more stubborn situation.

"Part of my trouble with students is that almost all the students I teach were born after World War II. Just after World War II, a series of new and abnormal procedures came into American life. We regarded them at the time as temporary aberrations. We thought we would get back to normal American life someday.

"But those procedures have stayed with us now for more than twenty years, and those students of mine have never known anything else. They think those things are normal. They think that we've always had a Pentagon, that we have always had a big Army, and that we have always had a draft. But those are all new things in American life, and I think that they are incompatible with what America meant before.

"How many of you realize that just before World War II the entire American Army, including the Air Corps, numbered a hundred and thirty-nine thousand men? Then World War II started, but we weren't yet in it, and, seeing that there was great trouble in the world, we doubled this Army to two hundred and sixty-eight thousand men. Then, in World War II, it got to be eight million. And then World War II came to an end and we prepared to go back to a peacetime Army, somewhat as the American Army had always been before. And, indeed, in 1950—you think about 1950, our international commitments, the Cold War, the Truman Doctrine, and all the rest of it—in 1950, we got down to six hundred thousand men.

"Now we have three and a half million men under arms: about six hundred thousand in Vietnam, about three hundred thousand more in 'support areas' elsewhere in the Pacific, about two hundred and fifty thousand in Germany. And there are a lot at home. Some months ago, we were told that three hundred thousand National Guardsmen and two hundred thousand reservists—so half a million men—had been specially trained for riot duty in the cities.

"I say the Vietnam war is just an immediate incident because as long as we keep that big an Army, it will always find things to do. If the Vietnam war stopped tomorrow, the chances are that with that big a military establishment we would be in another such adventure, abroad or at home, before you knew it.

"The thing to do about the draft is not to reform it but to get rid of it.

"A peacetime draft is the most un-American thing I know. All the time I was growing up, I was told about oppressive Central European countries and Russia, where young men were forced into the Army, and I was told what they did about it. They chopped off a finger, or shot off a couple of toes, or, better still, if they could manage it, they came to this country. And we understood that, and sympathized, and were glad to welcome them.

"Now, by present estimates, from four to six thousand Americans of draft age have left this country for Canada, two or three thousand more have gone to Europe, and it looks as though many more were preparing to emigrate.

"A bill to stop the draft was recently introduced in the Senate (S. 503), sponsored by a group of senators that runs the gamut from McGovern and Hatfield to Barry Goldwater. I hope it goes through. But I think that when we get rid of the draft we must also drastically cut back the size of the armed force.

"Yet there is something ever so much bigger and more important than the draft. That bigger thing, of course, is the militarization of our country. Ex-President Eisenhower, in his farewell address, warned us of what he called the military-industrial complex. I am sad to say that we must begin to think of it now as the military-industrial-labor-union complex. What happened under the pleas of the Cold War was not alone that we built up the first big peacetime Army in our history but that we institutionalized it. We built, I suppose, the biggest government building in our history to run it, and we institutionalized it.

"I don't think we can live with the present military establishment, and its eighty-billion-dollar-a-year budget, and keep America anything like the America we have know in the past. It is corrupting the life of the whole country. It is buying up everything in sight: industries, banks, investors, scientists—and lately it seems also to have bought up the labor unions.

"The Defense Department is always broke, but some of the things it does with that eighty billion dollars a year would make Buck Rogers envious. For example, the Rocky Mountain Arsenal, on the outskirts of Den-

ver, was manufacturing a deadly nerve poison on such a scale that there was a problem of waste disposal. Nothing daunted, the people there dug a tunnel two miles deep under Denver, into which they have injected so much poisoned water that, beginning a couple of years ago, Denver has experienced a series of earth tremors of increasing severity. Now there is grave fear of a major earthquake. An interesting debate is in progress as to whether Denver will be safer if that lake of poisoned water is removed or is left in place.

"Perhaps you have read also of those six thousand sheep that suddenly died in Skull Valley, Utah, killed by another nerve poison—a strange and, I believe, still unexplained accident, since the nearest testing seems to have been thirty miles away.

"As for Vietnam, the expenditure of firepower there has been frightening. Some of you may still remember Khe Sanh, a hamlet just south of the Demilitarized Zone, where a force of United States Marines was beleaguered for a time. During that period, we dropped on the perimeter of Khe Sanh more explosives than fell on Japan throughout World War II, and more than fell on the whole of Europe during the years 1942 and 1943.

"One of the officers there was quoted as having said afterward, 'It looks like the world caught smallpox and died.'

"The only point of government is to safeguard and foster life. Our government has become preoccupied with death, with the business of killing and being killed. So-called defense now absorbs sixty per cent of the national budget, and about twelve per cent of the Gross National Product.

"A lively debate is beginning again on whether or not we should deploy antiballistic missiles, the ABM. I don't have to talk about them—everyone else here is doing that. But I should like to mention a curious circumstance. In September, 1967, or about a year and a half ago, we had a meeting of M.I.T. and Harvard people, including experts on these matters, to talk about whether anything could be done to block the Sentinel system—the deployment of ABMs. Everyone present thought them undesirable, but a few of the most knowledgeable persons took what seemed to be the practical view: 'Why fight about a dead issue? It has been decided, the funds have been appropriated. Let's go on from there.'

"Well, fortunately, it's not a dead issue.

"An ABM is a nuclear weapon. It takes a nuclear weapon to stop a nuclear weapon. And our concern must be with the whole issue of nuclear weapons.

"There is an entire semantics ready to deal with the sort of thing I am about to say. It involves such phrases as 'Those are the facts of life.' No—these are the facts of death. I don't accept them, and I advise you not to accept them. We are under repeated pressure to accept things that are presented to us as settled—decisions that have been made. Always there is the thought: Let's go on from there. But this time we don't see how to go on. We will have to stick with these issues.

"We are told that the United States and Russia, between them, by now have stockpiled nuclear weapons of approximately the explosive power of fifteen tons of TNT for every man, woman, and child on earth. And now it is suggested that we must make more. All very regrettable, of course, but 'those are the facts of life.' We really would like to disarm, but our new Secretary of Defense has made the ingenious proposal that now is the time to greatly increase our nuclear armaments, so that we can disarm from a position of strength.

"I think all of you know there is no adequate defense against massive nuclear attack. It is both easier and cheaper to circumvent any known nuclear-defense system than to provide it. It's all pretty crazy. At the very moment we talk of deploying ABMs, we are also building the MIRV, the weapon to circumvent ABMs.

"As far as I know, the most conservative estimates of the number of Americans who would be killed in a major nuclear attack, with everything working as well as can be hoped and all foreseeable precautions taken, run to about fifty million. We have become callous to gruesome statistics, and this seems at first to be only another gruesome statistic. You think, Bang!—and next morning, if you're still there, you read in the newspapers that fifty million people were killed.

"But that isn't the way it happens. When we killed close to two hundred thousand people with those first, little, old-fashioned uranimum bombs that we dropped on Hiroshima and Nagasaki, about the same number of persons were maimed, blinded, burned, poisoned, and otherwise doomed. A lot of them took a long time to die.

"That's the way it would be. Not a bang and a certain number of corpses to bury but a nation filled with millions of helpless, maimed, tortured, and doomed persons, and the surviors huddled with their families in shelters, with guns ready to fight off their neighbors trying to get some uncontaminated food and water.

"A few months ago, Senator Richard Russell, of Georgia, ended a speech in the Senate with the words 'If we have to start over again with another Adam and Eve, I want them to be Americans; and I want them on this continent and not in Europe. That was a United States senator making a patriotic speech. Well, here is a Nobel laureate who thinks that those words are criminally insane.

"How real is the threat of full-scale nuclear war? I have my own very inexpert idea, but, realizing how little I know and fearful that I may be a little paranoid on this subject, I take every opportunity to ask reputed experts. I asked that question of a distinguished professor of government at Harvard about a month ago. I asked him what sort of odds he would lay on the possibility of full-scale nuclear war within the foreseeable future. 'Oh,' he said comfortably, 'I think I can give you a pretty good answer to that question. I estimate the probability of full-scale nuclear war, provided that the situation remains about as it is now, at two per cent per year.' Anybody can do the simple calculation that shows that two per cent per year means that the chance of having that full-scale nuclear war by 1990 is about one in three, and by 2000 it is about fifty-fifty.

"I think I know what is bothering the students. I think that what we are up against is a generation that is by no means sure that it has a future.

"I am growing old, and my future, so to speak, is already behind me. But there are those students of mine, who are in my mind always; and there are my children, the youngest of them now seven and nine, whose future is infinitely more precious to me than my own. So it isn't just their generation; it's mine, too. We're all in it together.

"Are we to have a chance to live? We don't ask for prosperity, or security. Only for a reasonable chance to live, to work out our destiny in peace and decency. Not to go down in history as the apocalyptic generation.

"And it isn't only nuclear war. Another overwhelming threat is in the population explosion. That has not yet even begun to come under control. There is every indication that the world population will double before the year 2000, and there is a widespread expectation of famine on an unprecedented scale in many parts of the world. The experts tend to differ only in their estimates of when those famines will begin. Some think by 1980; others think they can be staved off until 1990; very few expect that they will not occur by the year 2000.

"That is the problem. Unless we can be surer than we now are that this generation has a future, nothing else matters. It's not good enough to give it tender, loving care, to supply it with breakfast foods, to buy it expensive educations. Those things don't mean anything unless this generation has a future. And we're not sure that it does.

"I don't think that there are problems of youth, or student problems. All the real problems I know about are grown-up problems.

"Perhaps you will think me altogether absurd, or 'academic,' or hopelessly innocent—that is, until you think of the alternatives—if I say, as I do to you now: We have to get rid of those nuclear weapons. There is nothing worth having that can be obtained by nuclear war—nothing material or ideological—no tradition that it can defend. It is utterly self-defeating. Those atomic bombs represent an unusable weapon. The only use for an atomic bomb is to keep somebody else from using one. It can give us no protection—only the doubtful satisfaction of retaliation. Nuclear weapons offer us nothing but a balance of terror, and a balance of terror is still terror.

"We have to get rid of those atomic weapons, here and everywhere. We cannot live with them.

"I think we've reached a point of great decision, not just for our nation, not only for all humanity, but for life upon the earth. I tell my students, with a feeling of pride that I hope they will share, that the carbon, nitrogen, and oxygen that make up ninety-nine per cent of our living substance were cooked in the deep interiors of earlier generations of dying stars. Gathered up from the ends of the universe, over billions of years, eventually they came to form, in part, the substance of our sun, its planets, and ourselves. Three billion years ago, life arose upon the earth. It is the only life in the solar system.

"About two million years ago, man appeared. He has become the dominant species on the earth. All other living things, animal and plant, live by his sufferance. He is the custodian of life on earth, and in the solar system. It's a big responsibility.

"The thought that we're in competition with Russians or with Chinese is all a mistake, and trivial. We are one species, with a world to win. There's life all over this universe, but the only life in the solar system is on earth, and in the whole universe we are the only men.

"Our business is with life, not death. Our challenge is to give what account we can of what becomes of life in the solar system, this corner of the universe that is our home; and, most of all, what becomes of men—all men, of all nations, colors, and creeds. This has become one world, a world for all men. It is only such a world that can now offer us life, and the chance to go on."

THE SAFEGUARD SITE IN NORTH DAKOTA

Mr. BURDICK. Mr. President, one of the two initial "Safeguard" sites is to be in North Dakota. I believe Senators would be interested in reading the March 21 editorial appearing in the Fargo Forum, Fargo, N. Dak. on the decision to proceed with deployment of the "Safeguard." Accordingly, I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CONGRESS SHOULD LOOK HARD AT ABM PLAN, EVEN FOR NORTH DAKOTA

North Dakota has witnessed a small invasion of newspaper and television reporters and cameramen in the last few days, all because the area north of the Grand Forks Air Base near the Canadian border has been selected as the site of one of this nation's two anti-ballistic missile installations.

This sudden invasion comes as a bit of a surprise, because hardly anybody expressed much concern when the former president, Lyndon B. Johnson, proposed to spot about 15 such installations around the country. Now there is a big flap in Congress and in the press about whether these defenses against enemy missiles are really necessary.

President Richard M. Nixon has decided that two installations should be completed, one in North Dakota and one in Montana. Of course the eastern press thinks that this is a deserted area, but at the same time most of them apparently believe that the citizens around here are foolish for not putting up the same kind of protests some people in the East did when anti-ballistic missile sites were spotted next to major cities.

Probably the answer is that North Dakotans and probably the folks in Montana have gotten used to having nuclear warheads spotted across the land. Two of the nation's more extensive installations for the Minuteman Intercontinental Ballistic Missile are located in North Dakota, one centered around the Grand Forks Air Base and the other around the Minot Air Base. As a result, we are used to the idea of having nuclear tipped armaments in our midst and no one has been unduly concerned.

The mere fact that the citizens are not overly concerned about the ABM project, or even the Minuteman installations, doesn't necessarily mean that we like the idea. Neither President Johnson nor President Nixon has convinced us that the ABM installations would do any good in defending this nation against either China or Russia. When the time comes that any two major nations of the world start hurling nuclear-tipped missiles at each other from thousands of miles away, there isn't going to be enough left of either nation to bother about.

It does seem peculiar, however, that members of Congress who would almost silently go along with the ABM installations near the big cities during the Johnson administration are now making the biggest howl about even the two installations that President Nixon has decided to complete. While some people in North Dakota think that the construction work necessary to complete the ABM installation will help this state's economy, they shouldn't expect any long-lasting results from it. Both Minot and Grand Forks experienced economic booms during the period when the ICBM silos were being constructed in their areas, but when the work was done, the construction workers moved out.

North Dakota gets only the smallest end of the money outlay when it becomes a site for one of these installations. The big money goes to the manufacturer of the hardware, whether it be missiles or a radar system. And none of those are built in this state.

President Nixon's decision will be closely examined in Congress, it is apparent, and it could well be that the Congress will slow down the project even more.

Congress should take a good hard look at the Nixon decision, and in the meantime we are happy that all the visiting reporters and photographers have had a good look at North Dakota in its winter blanket of snow. We look forward to reading what they all have to say about North Dakota's reaction to the ABM installation. The odds are that a lot of them will have more to say about a snow-covered countryside than they will about missiles.

UNITED STATES-CHINA RELATIONS

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the RECORD the text of the remarks I made at the First National Convocation of the National Committee on United States-China Relations, at New York, on March 20, 1969.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A HOPEFUL NEW PATH FOR UNITED STATES-CHINA RELATIONS

The giant of Asia in the 1970's and 1980's—in terms of its power potential as a modern state—will be Japan and not China; and, this basic reality, so persuasively explained by Professor Reischauer, is the proper starting point for a rethinking of the United States' China policy in the years ahead. It permits us to shed many of the fears and shibboleths which have distorted U.S. policy in Asia since 1945.

Among these are the questions of membership in the United Nations and diplomatic recognition. Neither of these issues needs to dominate U.S. policy thinking about Communist China. Peking is not actively seeking U.N. admission and has placed what seem to be deliberately unacceptable conditions on its participation in the U.N.

It is my belief that if we revise our policy along the lines which I am going to suggest, a thaw may take place in U.S.-China relations over the next five years, making both admission to the United Nations and diplomatic recognition easy and natural—following a period of psychological readjustment on both sides. The point to be stressed is that our minds should not be set against it. Much the same point needs to be made with respect to Communist China as we get the strong feeling that its leadership right now values highly—for domestic reasons of its own—a policy of enmity toward the United States.

The Nixon Administration has a great opportunity to bury the lingering shadow of McCarthyism which continues subtly to inhibit thought and debate in this country concerning China. The United States paid a very heavy price during the McCarthy period in the destruction of many of our most perceptive China experts. It was not only a period of grave human injustice to some individuals but also a period of grave damage to our national stock of intellectual resources and experience which has seriously affected the clarity and accuracy of our perception of events in Asia.

Active measures should now be taken to banish the lingering inhibitions of McCarthyism within the State Department and other agencies of government. The fact that the policy-making process continues to be affected by thought-taboos with respect to China is illustrated, in my judgment, by the nervous timidity with which the State Department has floated a few cautious trial balloons in recent years. The liberalization of travel regulations, for instance, did not evoke the wrath in Congressional and editorial circles that some of our higher officials feared. On the contrary, the Congress and the nation at large welcomed the changes, frequently with expressions of mild surprise that they were so belated and so timid. The people are well ahead of the government on this matter!

The Nixon Administration has a unique opportunity to encourage and stimulate creative, new and unorthodox thoughts about China not only within the government but also in the nation as a whole. The overriding mandate given to President Nixon in the last election was to end the Vietnam War. The complicated drama of our national disengagement from that miscalculated war could well be used as an instrument for public education with respect to realities about China and Asia in general.

There are several lessons to be learned from the Vietnam war with respect to China. The first is that, for all its verbal violence, China has demonstrated unmistakable military prudence throughout that conflict. This prudence—China's deliberate abstention from any military involvement—has exposed to serious question much of the official rationale of the Johnson administration for the Vietnam war. The argument that our involvement in Vietnam is a necessary stand against Chinese communist expansionism is not borne out by the actual record of Chinese military action with respect to Vietnam, since, though it is only fair to say this may be due to its own internal disorders.

Available evidence also indicates that China is likely to continue to exercise prudence with respect to the nuclear weapons capability it is acquiring at such great cost. At one heated point during the Vietnam debate, Secretary Rusk conjured a frightening image of "a billion Chinese on the Mainland, armed with nuclear weapons." But not long afterward former Assistant Secretary of Defense Warnke summarized the Pentagon's official assessment of Chinese policy in the following terms:

"We see no reason to conclude that the Chinese are any less cautious than the rulers of other nations that have nuclear weapons . . . Indeed the Chinese have shown a disposition to act cautiously, and to avoid any military clash with the United States that could lead to nuclear war."

In addition, the sharply rising tension along China's northern border with the Soviet Union—which has produced a number of military clashes in recent days—may induce Peking to seek a relaxation of tension in Southeast Asia and thereby facilitate a Vietnam settlement. It is also conceivable that the new focus being placed in Communist China on the territories "lost" to the USSR through the so-called unequal treaties of the nineteenth century may, at some point, lessen Peking's obsession over the "recovery" of Taiwan.

I do not wish to suggest that we are about to witness an end to China's truculence. Rather, my point is that if we focus our attention on China's actions rather than her verbiage, and upon her actual military capabilities as opposed to her revolutionary aspirations, we must conclude that China does not necessarily present a significant military threat to our security.

It is really not surprising that Communist China should project an image to the world of being a desperate and hysterical nation. No nation has ever faced such a formidable combination of problems. The challenge of organizing 800 million people into a single political and economic unit is awesome in itself. The simultaneous effort to modernize and radicalize such a mass of humanity complicates the problems of leadership immensely. The collision in this the oldest of human societies between the force of tradition and the force of revolution will continue to reverberate throughout the world for years to come. It does not make this confrontation with the world any less dangerous but it tends to explain it somewhat.

China is struggling to become an industrial society while the United States, Japan and perhaps the Soviet Union are preparing their transition into a new order—the post-industrial nations of computers and nuclear and space technology—which is a quantum leap beyond the stage which China is now so painfully and laboriously seeking to attain.

The immediate task for the United States is to formulate a policy which will facilitate China's peaceful integration into the broader

Asia scene. In this regard, I believe that it would be to our interest to encourage, rather than discourage, trade and other contacts between Communist China and its non-communist Asian neighbors. Similarly, and of course strictly for non-strategic goods, we should encourage rather than discourage our European allies to trade with Peking.

There is a danger that the smaller nations of south and southeast Asia could be overawed by China in one-to-one encounters. But there is now widespread recognition of that danger as evidenced by the impressive trend toward cooperative regional organizations in noncommunist Asia. The United States should certainly support and encourage regional organization and economic and social integration in Asia, while we resist the temptation to try to lead it.

If a relaxaion of our own zealous ideological opposition to Communist China leads to a similar lessening of the anti-communist ardor of some of our close allies in Asia—such as the Philippines and Thailand—we must take this calmly. For, the lesson of the past twenty years has been that nationalism, and nationalism alone, is an effective barrier against the extension of Chinese-style communism in Asia. This requires a shift of emphasis in our education and information efforts in Asia. The virtues of viable and progressive national integrity, rather than the dangers and evils of Chinese communism alone, should be the focus of our efforts.

A more sophisticated and discriminating perception of the Asia scene on our part will alert us to numerous strains and tensions within parts of non-communist Asia. A recognition of these tensions—some of which are of great antiquity—can save us from the reflex response which, in the past, has tended to make us view all trouble in Asia as being caused by Peking.

However, the fact is that ethnic tensions and rivalry between Malays and Chinese—which play such a crucial role in the policies of Indonesia, Malaysia and the Philippines—are historic phenomena whose roots long pre-date the emergence of a communist regime in Peking. The defeat of the coup attempted by the Chinese-dominated communist party in Indonesia in November 1967 was due more to ethnic differences than to any ideological factors as understood by the West.

It would be well for our policy-makers to bear in mind that historic differences among the Thais, the Cambodians and the Vietnamese will persist beyond the Vietnam War.

Another, most poignant, human drama is being enacted throughout the Himalayan foothills stretching from eastern India to the central highlands of Vietnam. Throughout that broad expanse, ancient aboriginal tribes which sought haven in the mountains many years ago are being pressed relentlessly by the dominant lowlanders who are acquiring the means to extend their political, cultural and economic writ into areas never really governed before by central authority. In some respects this process resembles a slow-motion reenactment of the destruction of the American Indian in this country in the nineteenth century.

Some of these doomed peoples in desperation will seek Chinese arms and Chinese support, as the Naga tribesmen of India and Burma have now begun to do. When this occurs, the United States must refrain from viewing the resultant clashes with central authorities as holy battles against Chinese communist expansionism, but recognize them for what they are—the birth pains of the development of nations—again no less necessary but to be better understood.

Asia will be the scene of turmoil and commotion for many years to come. China, as the heart of eastern Asia in demographic and geographic terms, will be a leading participant in this turmult. Much of the turbulence we can expect will be of no legitimate security concern to the United States, and most of it will be beyond our power to control in any event.

But in addition to the clamor and the conflict there will be many creative and positive developments throughout Asia in which we can play a legitimate and rewarding major role. There is no need to fear that moving away from the role of an activist military involvement in Asia will lead to a U.S. withdrawal from Asia or to an abdication from our inescapable role as a major Pacific power. We can be sure that the nations of Asia will make demands upon our attention, our energies and our resources beyond our capacity to fulfill. We won't need to go looking for work in Asia. But we must see to it that our efforts there are concentrated on productive and worthwhile enterprises and are not frittered away on mistaken military or ideological adventures.

In closing, I repeat what I said at the beginning: I do not foresee the possibility of a dramatic improvement in U.S.-Communist China bilateral relations in the near future. Rather, we must anticipate—and use creatively—a period of mutual psychological readjustment. There is no justification for the United States to adopt a posture of *mea culpa* with respect to China—as some have advocated. Moreover, even if it were justified, I do not think such a posture would evoke a positive response from Peking. In my judgment, China will be much more impressed with, and responsive to, a policy of prudence and restraint but which is also a policy of conviction and dignity.

China today probably has the rawest nerves and touchiest sensibilities of any nation in the world. We should recognize the historical reasons for this but we cannot accommodate many of her neuroses. They can be worked out only internally, within China's national consciousness. For instance, no nation likes political partition—not the Chinese, nor the Germans, nor the Koreans, nor the Irish—as we saw on St. Patrick's Day. But there are times when the international situation is such that a nation has to live with partition for a time. The maintenance of a separate political status for the Republic of China or Taiwan doubtlessly is galling to Peking. But the fact that the peoples involved are Chinese does not raise the issue to a higher, almost apocalyptic level in the eyes of the other four-fifths of humanity. Peking's compulsive insistence that nothing can be discussed until Taiwan is first "returned" is a manifestation of Chinese racial arrogance which we ought not to placate for its own sake. In my judgment, the future of Taiwan can only be settled by the will of the people of Taiwan themselves.

Hopefully, as the United States adjusts its perceptions, attitudes and policies with respect to Communist China, Communist China will also begin to adjust its perceptions, attitudes and policies toward the United States. Perhaps this process could be expedited by gestures or actions on our part which neither require nor expect a response from Communist China. We have already heard suggestions about reciprocal educational and scientific exchange, especially in medicine and agriculture; about exchanging journalists; tourism and humanitarian food sales.

I suggest that we consider whether it might be possible to make available on a private, non-reciprocal basis, some of the fruits of our technology which might be of peaceful and humanitarian help to the Chinese people. For instance, the revolutionary-type of ecological, geological, and meteorological photography which has resulted from the Apollo space program could be furnished through non-official scientific channels. The result might be improved agricultural or flood-control programs which would ease the lot of the Chinese hard-pressed peasantry.

RECOMMENDATIONS OF THE PRESIDENT'S CONSUMER ADVISORY COUNCIL

Mr. RIBICOFF. Mr. President, on March 21, 1969, the President's Consumer Advisory Council met and issued several recommendations concerning the future of consumer activities in the Federal Government. These proposals are timely and valuable, as the Subcommittee on Executive Reorganization is now considering this matter.

Mr. President, there must be no slackening in the efforts of the Federal Government on behalf of the American consumer. The laws passed to protect him must be fully enforced and they must be administered efficiently. The members of the President's Consumer Advisory Council have made some excellent suggestions which merit the attention of Congress. I ask unanimous consent that their statement be inserted at this point in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF THE PRESIDENT'S CONSUMER ADVISORY COUNCIL

The time has come to accord full recognition and justice to the American consumer.

This can be achieved by humanizing the machinery of government to overcome indifference to consumer problems, and by developing and implementing a comprehensive consumer program for the 1970's.

Recognizing that this is a field which the new Administration is carefully studying at the present time, we offer the following recommendations to improve Government organization and to give the consumer more adequate protection:

GOVERNMENT ORGANIZATION

Government can adequately protect the consumer only through the establishment of a structure that is truly responsive to his needs.

1. As a minimum, the President's Committee on Consumer Interests, the President's Consumer Advisory Council, and the Office of Special Assistant to the President for Consumer Affairs should be continued until a more permanent arrangement can be established by Congressional action.

2. An Office of Consumer and Citizen Affairs should be established by statute within the Executive Office of the President. The purpose of the office is to:

(a) assure every American better access to his Government;

(b) represent, protect and inform the American consumer;

(c) assure that the consumer interest is heard by decisionmaking agencies;

(d) coordinate consumer protection programs within Government;

(e) provide the citizen with a government official who will assist him in redressing his grievances against government action or inaction; (the American concept of the ombudsman). (See Appendix for description of duties.)

The Office of Consumer and Citizen Affairs should also include a Consumer Counsel with authority to intervene on behalf of the public in administrative and judicial proceedings and establish a *Federal Register for Consumers*.

A Consumer Advisory Council, broadly representative of consumer interests in the United States, should be established to assist the Office of Consumer and Citizen Affairs.

When a permanent Office of Consumer and Citizen Affairs is established, adequate budget and staff must be provided to the office.

OTHER NECESSARY MEASURES

(1) Special attention to consumer problems of the poor;

(2) Better enforcement of existing consumer protection laws;

(3) Improvement of regulatory power so that Government can effectively administer Congressional directives;

(4) Elimination of loopholes and modernization of antiquated laws.

AGENDA FOR CONSUMER ACTION

From the Council's point of view, an Agenda for Consumer Action must also stress the following goals for both Government and the private sector:

1. Availability of information necessary for intelligent consumer choice;

2. Assurance of safe products and wholesome foods;

3. Assurance of an adequate supply of goods and services at reasonable prices;

4. Abolition of fraudulent and abusive sales and credit practices;

5. Protection of the consumer's right to an unpolluted environment;

6. Stronger enforcement antitrust laws and removal of anti-competitive restraints;

7. Provision for adequate housing, health care, and transportation.

APPENDIX

The Office of Consumer and Citizen Affairs should have the following powers and duties:

(a) Make recommendations to the President on questions of policy relating to consumer affairs;

(b) Coordinate the consumer programs of other Federal agencies;

(c) Maintain an Office of Consumer Counsel with authority to intervene on behalf of the public in administrative and judicial proceedings;

(d) Receive consumer complaints, hold investigatory hearings and recommend corrective action;

(e) Receive complaints on the operations of Federal departments and agencies and recommend corrective action; authority to investigate disposition of consumer complaints by Federal departments and agencies (the American concept of the ombudsman);

(f) Have authority to represent consumer interests before any Federal agency;

(g) Make recommendations and provide reports to the President, the Congress, and the public to assure that consumer or citizen problems are expeditiously and properly resolved by public agencies;

(h) Cooperate with and assist state and local agencies in consumer representation and protection;

(i) Cooperate with and assist industry and business in voluntary efforts to promote consumer protection;

(j) Conduct studies of matters related to consumer interests;

(k) Act as a clearinghouse for information and programs affecting consumers;

(l) Maintain liaison with consumer associations and councils at the national, state, and local levels;

(m) Encourage and participate in development of consumer education programs;

(n) Establish a Federal Register for Consumers.

Members of the Consumer Advisory Council present at the meeting included:

Bronson C. La Follette, of Madison, Wisconsin, Chairman.

Robert J. McEwen, of Boston, Massachusetts (Associate Professor and Chairman of the Department of Economics, Boston College).

William J. Pierce, of Ann Harbor, Michigan (Professor of Law and Director of the Legislative Research Center, University of Michigan).

Corwin D. Edwards, of Eugene, Oregon (Professor of Economics, University of Oregon).

Richard H. Grant, of Portsmouth, New Hampshire (General Manager, Peas Air Force Base Federal Credit Union).

Gerald A. Lamb, of Waterbury, Connecticut (State Treasurer, State of Connecticut).

Hon. Maurine B. Neuberger, of Portland, Oregon (Former United States Senator).

Mrs. Otrie Taylor, of Los Angeles, California (Neighborhood Aid Participant for Neighborhood Aid projects in Watts, Los Angeles).

Louise Gentry, of State College, Pennsylvania (Assistant Dean for Resident Education, Pennsylvania State University).

EDUCATIONAL OPPORTUNITIES FOR THE AMERICAN INDIAN

Mr. MURPHY. Mr. President, on February 27, the Los Angeles Herald Examiner did an editorial, entitled "Help the Indians."

Early this year I was appointed to the Special Subcommittee on Indian Education, and recently testified on the importance of improving and expanding educational opportunities for the American Indian. Because of the importance of the subject of Indian education, I inserted my testimony in the RECORD on March 11.

Today, Mr. President, I would like to ask unanimous consent that the editorial be printed in full in the RECORD at this point.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HELP THE INDIANS

Sen. George Murphy says the Bureau of Indian Affairs is "stagnant, blundering and inept" in dealing with American Indians.

The California senator wants sweeping reforms to improve the conditions and provide a future for the 600,000 Indians in this country.

Murphy has recommended that Indian education, health and welfare programs be transferred from the Bureau of Indian Affairs to the Department of Health, Education, and Welfare. He also has asked that federal funds earmarked for state educational programs for Indians be restored.

Testifying before a Senate committee recently, Murphy said 50 percent of Indian youngsters drop out before completing high school. One of the largest tribes, the Navajos, has a 30 percent illiteracy rate. The average education level of all Indians is only five years. The average income of Indians—$1500 per year—is 75 percent below the national average. Indian unemployment is 40 percent—10 times the national average. Tuberculosis among Indians is seven times the national average.

Exclusion of California from Johnson-O'Malley federal funds has caused the California Indian, both educationally and economically, to fail to hold his own with his contemporaries and to fall further behind, said Murphy. The senator said Indian students from Arizona and New Mexico are attending Sherman Institute at Riverside, but California Indians are not admitted. Relocated Indians from other states, while living in California, receive federal assistance while California Indians do not.

"The federal government's performance record insofar as the American Indian is concerned should give pause to those who believe that solutions to our problems should be packaged in and dictated from Washington," Murphy said. "The federal government must help, but however good its intentions, without local cooperation, initiative and commitment, chances for success are slim."

Senator Murphy's concern is well taken and his recommendations merit strong consideration.

"LEARNING, SCIENCE, AND ART"

Mr. MONDALE. Mr. President, recent studies have shown that as much as "one-fourth of our growth in per capita income can be traced to increased schooling and as much as one-third to inventions and advances in knowledge." Everyone is aware that money spent on education is an excellent investment, both in terms of the individual and in terms of the future of our country. It is surprising to find, however, that there is almost no information on the extent to which the specific resources we allocate to education actually result in the realization of intended goals. "Toward a Social Report" calls attention to this dirth of knowledge.

"Toward a Social Report" is a working model of the social report which the President would annually submit to Congress if the Full Opportunity Act of 1969—S. 5—were enacted. The Full Opportunity Act would also establish a joint committee to help the Congress evaluate the report. A Council of Social Advisors would be established to assist the President in the preparation of the report. S. 5 also declares that full opportunity for every American is a national goal.

One of the advantages of a social report is that it points to difficult policy questions which must be decided if full opportunity for every American is to be realized. For instance, the sixth chapter of "Toward a Social Report," entitled "Learning, Science, and Art" points out that we know relatively little about what or how much American children learn as a result of specific resource allocations.

We have also learned that those groups which "suffer social and economic deprivation systematically learn less than those who have more comfortable backgrounds." The situation is even more unfortunate since even those deprived students who manage to do well are still denied equal and full opportunity. Specifically, "of those high school seniors who are in the top one-fifth, in terms of academic ability, 95 percent will ultimately go on to college if their parents are in the top socioeconomic quartile, but only half of the equally able students from the bottom socioeconomic quartile will attend college."

It is indeed pathetic that some students who manage to overcome the handicap of poverty in high school cannot go on to college not because of their ability but because of the accident of their socioeconomic background.

The report goes on to note that merely increasing the number of schools or teachers will not by itself be a sufficient answer to the problem. If we are to tap this reservoir of talent, we must work to eliminate the cause of this inequity; poverty. It is, indeed, a difficult problem, but then this Nation has never before shied away from equally difficult problems. I sincerely hope that in the future we shall see as much progress in this realm as there has been in the realm of science and technology.

I want to also call to my colleagues' attention one other unfortunate situation discussed in the sixth chapter of "Toward a Social Report." The report notes that "however vibrant the cultural

life of the Nation may be, many of the live or performing arts are in financial difficulty." Thus, it can be seen that the report helps us to identify another problem which needs to be placed on the Nation's agenda.

Mr. President, I ask unanimous consent that the sixth chapter of "Toward a Social Report," entitled "Learning, Science, and Art," be inserted in the RECORD.

There being no objection, the chapter was ordered to be printed in the RECORD, as follows:

CHAPTER VI. LEARNING, SCIENCE, AND ART

HOW MUCH ARE THEY ENRICHING SOCIETY?

Knowledge, intellectual skills and the creative capacity of scientists and artists are an important part of the Nation's wealth. Health, national defense, and the quality of the environment in future years depend on the success of research and education now. So does the future performance of the economy. Some studies have suggested that as much as one-fourth of our growth in per capita income can be traced to increased schooling and as much as one-third to inventions and "advances in knowledge." The decisive productive potential of the supply of knowledge is illustrated by the surprisingly rapid recovery of the German and Japanese economies after the devastation of World War II. However much physical capital had been destroyed, the stock of useful knowledge remained.

This chapter will first attempt to bring together available information on how much Americans are learning. It will then turn to the sources of the knowledge that there is to teach: to the stock of systematic knowledge which we call science, and to the unstructured collection of human wisdom and creativity which we call art.

LEARNING

Exposure to learning

The average American has spent far more time in school than his parents did. Today, three-fourths of the Americans just old enough to have done so have finished high school—roughly the same proportion that finished the eighth grade in 1929. Today, about 15 percent of Americans in their late twenties have graduated from college—about the same proportion that had graduated from high school at the time of World War I.

In addition there has been an increase in the proportion of each year that the student spends in school. Since 1900, 34 days have been added to the average academic year. Pupils are also absent much less often, so the actual number of days of school attendance per year by the average pupil has increased by more than half.

The difference in years of schooling received by different groups of Americans has at the same time decreased. Among Americans born in 1901 or shortly before, those in the 90th percentile had 13.5 years of schooling, and those in the 10th percentile 2.6 years of schooling, for a difference of almost 11 years. Among those born between 1932 and 1936, those in the 90th percentile had 16.4 years of schooling, and those in the 10th percentile, 8.4 years, for a difference of 8 years. This difference is projected to decline to about 5.5 years for those born between 1956 and 1960. The gap in median years of schooling between whites and Negroes has fallen from an average of 3.4 years for those born in 1901 or before to one-half year for those born between 1942 and 1946, and appears to be narrowing still further.

The amount of resources used to educate each pupil is also increasing. In 1956, there were 27 pupils for each teacher; now there are 24. Teachers have also had more formal training; 93 percent of the teachers now have college degrees, as compared with 78 percent only 13 years ago. The one-room school, commonplace in rural areas as late as World War II, has largely disappeared. Total expenditures per pupil in elementary and secondary public schools increased from $2.25 to $3.43 per day (in constant dollars) between 1954 and 1964. There have also been improvements in curricula, especially in science and mathematics.

It is generally assumed that these increases in the length of schooling and expenditures on education have brought about an increase in the amount children have learned. There is, however, almost no direct evidence on this point—unless it be the evidence that parents often have difficulty with their children's homework. The *Digest of Educational Statistics*, for example, contains over a hundred pages of educational statistics in each annual issue, yet has virtually no information on how much children have learned. The Department of Health, Education, and Welfare has recently encouraged an attempt at a "national assessment" of educational achievement in the United States. This assessment would involve administering tests measuring standard academic skills to a representative sample of Americans of various ages. Such an assessment, if repeated periodically, would yield for the first time a series of estimates of the change taking place in the intellectual skills and knowledge of the population.

Are we learning more?

In 1870, 20 percent of the white and 80 percent of the Negro population were illiterate. Now only 2.4 percent are deemed illiterate. They are mostly older people and Negroes, and are concentrated mainly in the South. The rate of illiteracy among Americans from 14 to 24 years of age is only about one-half of 1 percent. These facts mark our progress in bringing most Americans up to the rudimentary but critical point of being able to read and write.

What about higher levels of skill and knowledge? Although there is no national assessment of what students are learning, testing is widespread and some clues to changes in test performance of school-age children are available.

The Educational Testing Service recently assembled 186 instances in which comparable tests have been given to large and roughly representative national samples of students at two different times over the past two decades.

In all but 10 of the 186 paired comparisons, the later group performed better than the earlier group. On the average an additional eight percent of the students in the more recent group scored higher than the median student in the old group.[1]

The results that have been described cannot be accepted uncritically; neither can they be casually dismissed. Until better evidence is presented, the tentative judgment must be that American children in the sixties are learning more than their older brothers and sisters learned in the fifties.

This collection of achievement test data also suggests that high school students, and perhaps students in the higher grades generally, have not improved as much as students in the lower grades. Typically, the test comparisons for high schools showed a smaller gain in performance than was usual in the elementary grades. In addition, the Preliminary Scholastic Aptitude Test and the American College Test program, which are given to juniors and seniors in high school, showed no improvement on balance.[2]

One possible reason for this disparity is that the increase in the proportion of teenagers attending high school may have reduced the average level of intellectual ability and cultural background in high schools. The increase in preschool education may also have had a particularly beneficial influence on the lower grades. Television may have at the same time significantly raised the intellectual level of younger children, but seldom stretched the minds of high school students.

How much more could we be learning?

One way to answer this question is by comparing the performance of American students with those in other countries to see if we are doing as well.

One of the few sources on how well American students do as compared with foreign students is the International Study of Achievement in Mathematics. It deals with only one subject, but this is probably the one in which performance can best be compared among nations with different languages and cultures. The study considered only developed nations, and found that American students had one of the poorest levels of performance of the nations which were studied.

The fact that the United States did badly in this comparison is probably due in part to the fact that a larger proportion of young people go through the secondary education system in the United States than in most other countries. Still, American 13 year olds also did comparatively poorly, and this is an age at which none of the countries concerned have excluded many children from the educational system. Thus, if we contend that American youth have on the average as much aptitude for mathematics as children of other nations, we must conclude that we can do much better than we are doing.

In estimating the potential for improvement in American education, international comparisons are probably less relevant than measured differences in learning among different groups in the United States.

For estimating differences in learning among groups, the two best sources of information are the Armed Forces Qualification Test (with its forebear, the Army General classification Test), and the tests done for the *Survey of Educational Opportunity* (also called the "Coleman Report") carried out under the Civil Rights Act of 1964.

These tests, like others, inevitably incorporate cultural bias. Verbal performance, for example, tends to be measured in terms of the student's command of literary English or the standard conversation of the majority, not in terms of the special dialects of minorities. Mathematics tests include fractions and compound interest, but rarely deal with the probability of "making a six" in craps. Nonetheless, the tests measure skills which are needed in order to do well in contemporary American society.

The Armed Forces Qualification Test is used to evaluate the trainability of prospective servicemen for military service. Because the proportion of young men who are drafted changes from time to time, place to place, and group to group, the test does not provide entirely satisfactory information. Nonetheless it shows clearly that Negroes and Southern whites score, on the average, lower than whites from other regions, and Southern Negroes score less well than Northern Negroes.

[1] This amounts to an improvement of one-fifth, assuming a normal distribution of scores. These test results must be interpreted with extreme caution. There is the possibility students are becoming increasingly "test wise" as time goes on, and this might account for the improvement in test scores. Moreover, test results do not measure all types of intellectual achievement. There could have been retrogression along those dimensions of intellectual development that the tests did not measure.

[2] Average scores on the Medical College Admission Test and the Law School Admission Test have been increasing. But this does not show that college students are necessarily learning more, since the sort of students who apply for medical and law school admission may change over time.

These groups receive, on average, different amounts of schooling, but this difference accounts for only part of the differences in performance.

A 1964 study by the President's Task Force on Manpower Conservation revealed that a majority of young men failing the Armed Forces Qualification Test, white and black alike, were brought up in poverty. Forty percent had never gone beyond eighth grade, four out of five failed to complete high school, and half came from families with five or more children.

The *Survey of Educational Opportunity* was based on a nationwide sample of 564,000 students in grades 1, 3, 6, 9 and 12. The tests covered verbal ability nonverbal intelligence, reading comprehension mathematics, and general information in the practical arts, natural sciences, social studies and humanities. With the exception of Oriental American children, the average minority group pupil (Negro, Mexican-American, American Indian, Puerto Rican) scored distinctly lower on these tests than the average white pupil. Students in the South, both white and Negro, scored below students of their own race in the North.

The schooling which the disadvantaged groups had received had apparently done nothing to lessen the gap between them and more fortunate pupils. Their disadvantage was evident from the start of their school experience through grade 12. The relative position of the different groups was about the same for all the grades tested (except in the South, where Negroes fell to a lower relative position in the later grades). This means that in terms of absolute grade level the disadvantaged fell further behind. Negro pupils in the metropolitan Northeast, for example, were 1.6 years below the norm in grade 6 and 3.3 years below the norm in grade 12.

The Armed Forces Qualification Test and the Survey of Educational Opportunity thus show that persons from both poorer groups and poorer areas performed less well on achievement tests, and that the existing pattern of schooling does not compensate for the initial handicap entailed in being brought up in a disadvantaged group or area.

If talented individuals do not get a full education, the Nation is obviously not developing its capacities as much as it could. And as the chapter on "Social Mobility" showed, only half of those who are in the top ability quintile, but from families in the lowest socioeconomic quartile, go to college, whereas 95 percent of the equally able students from the top socioeconomic quartile go to college. Socioeconomic status also has a major effect on college attendance at other ability levels.

If high school graduates from all socioeconomic levels went to college in the same proportion as high school graduates of the same ability level in the top socioeconomic quartile, more than half a million additional students would enter college each year. This would increase the number who attended college from each high school graduating class by about one-half.

If the environmental and social handicaps of poor children could be overcome, and the elementary and secondary education they receive improved, an even larger number of high school graduates could profit from a college education.

We have seen that American students did less well in mathematics than students in a number of other countries, and that the pattern of results in the Armed Forces Qualification Test and the Survey of Educational Opportunity implied that there is an untapped reservoir of intellectual capacity in the Nation's disadvantaged groups and areas. It is also clear that those young people from poor families who do nonetheless score well on achievement tests are much less likely to enter college than those who come from a higher socioeconomic level. Thus there is no doubt that the Nation has failed to take full advantage of its children's capacity to learn.

The policy challenge

The greatest challenge to American education today is to find effective ways of helping low income children learn the basic intellectual skills so that they can be more successful in school and compete more successfully for jobs and rewarding positions in the community when they become adults.

How much a child learns depends upon his mother's diet before he was born, his own nutrition and health, his access to books, and the psychological and intellectual influences in the home. Most psychologists seem to agree that the preschool years are a period of particularly rapid development, and that attitudes acquired in these years can have enduring effects. Even after he reaches school age, a child typically spends only one-third of his working hours in school. Television programs and conversations with parents and playmates take up much of a child's time. The motivation to learn is obviously important, and there is every reason to believe it is decisively influenced by the home environment.

Some of the findings in the *Survey of Educational Opportunity* suggest the importance of the educational impact of factors outside of school. The *Survey* found that the socioeconomic status of a child's parents, and of his classmates, were major determinants of a student's academic performance. Once the impact of the socioeconomic status of parents and peers had been accounted for, such differences in quality of schooling as were observed and measured explained very little of the remaining variation in student performance.[2] The only observed school characteristic that had a significant effect was the verbal ability of its teachers, and this effect was much smaller than that of socioeconomic status of parents and classmates.

Despite the limitations of the *Survey* the conclusion that a child's socioeconomic environment is an important determinant of how much he learns is almost certainly right. This conclusion, in turn, suggests that we cannot take full advantage of the potential for learning simply by spending more on schools. Higher incomes and better jobs for parents may have more influence on their children's learning than any "compensation" which can be given to the children themselves. Better television programing and help for parents in how to talk with and stimulate their own children may also be important. Improved housing arrangements which give children from poor families the opportunity to attend schools and live in neighborhoods with children of different social and economic status may also be of crucial importance.

Nevertheless, it is clear that schools could do far more to stimulate and foster the curiosity and creativity of children—not just poor children, but all children. We must somehow find a way to do two things. First, we need to channel more resources into education especially in areas where the needs are very high in relation to the tax base and present spending. It takes money to attract sensitive, intelligent, and highly trained people into teaching and education administration, and to replace rat-infested old schools, especially in the center cities, with attractive convenient structures.

But resources alone will not solve the problems of American education. A new spirit of acceptance of change and desire for improvement is needed. Progressive industries often spend 5 to 10 percent of their funds on research and development. But expenditures on education research and development are now miniscule, perhaps a half of 1 percent of the total education budget.

Furthermore, much "research and development" in education consists of small projects having little impact on actual learning in the schools. There is a need for major departures, for developing whole new curricula and approaches to education, for trying the new approaches with real children and real schools. This kind of effort is expensive, by the present standards of education research, although not by the standards of military and industrial research and development.

But even a major effort to find more effective methods in education through research and development will not be sufficient unless the schools as a whole adopt a new attitude toward change. School systems must learn to see themselves as continuous laboratories trying new things, evaluating results, and making changes.

SCIENCE

The advance of science has an effect on the Nation's capacity to produce more goods and services, better health, and a stronger defense. Our society also values scientific truth for its own sake. And because it is clear that the state of a nation's science is related to its productivity, the health of its people, and even to national security, Americans are concerned whenever any other nation excels us in an important area of scientific capability.

Resources devoted to science

What is the state of American science and how much are we adding to the stock of systematic knowledge? Unfortunately, useful measures of scientific productivity do not exist.

A frequent measure of our scientific capital is the number of scientists and the amount of resources devoted to scientific pursuits. Between 1950 and 1965 the number of scientists and engineers nearly doubled, reaching about a million and a half in the latter year. About a million were engineers, a half a million scientists. This increase in the number of scientists and engineers was 4.5 times the rate of growth of the total labor force. The number of scientists and engineers getting doctorates has doubled in the last 10 years.

Between 1953 and 1965 the Nation's research and development expenditures increased fourfold, from 5.2 billion to 20.5 billion. This means that these expenditures increased at a compound annual rate of 12 percent per year, and that the percent of the Gross National Product used for these purposes rose from 1.4 to 3.0 percent. No other nation comes close to devoting a similar proportion of its resources to scientific research and development.

The diversity of science

Three hundred years ago all experimental sciences were grouped together in one specialty called "natural philosophy." An individual could attempt to master almost all important scientific knowledge. In 1958, the National Science Foundation counted 120 subfield groupings and 142 groupings in 1968. The number of particular specialties increased even faster: 695 specialties were listed in 1958, 1,235 in 1968.

[2] The *Survey* did not measure the quality of schools well and its conclusions are subject to varying interpretations. The conclusion that the socioeconomic status of the families of a student's classmates is an important determinant of a student's performance could be interpreted as evidence that differences in the quality of schooling are important, because high status parents usually want and can afford to live in neighborhoods with good schools. Since variations in the quality of schooling were measured only partially and crudely in the *Survey*, it is possible that the average socioeconomic status of the families of the students in a school measures the quality of that school better than the explicit measures of school quality used in the *Survey*.

This increase of specialization does not measure the pace of scientific advance. Classifications and new specialties are sometimes created for reasons unrelated to the growth of knowledge. Nonetheless, the statistics on the increasing diversity and division of labor in science reflect the rapid growth of scientific exploration and knowledge.

The advance of technology

The remarkable advances of industrial technology in recent years are too obvious to need documentation. Television, supersonic jets, computers, nuclear power and many other advances have revolutionized our lives and made possible feats, like trips around the moon, that earlier generations thought sheer fantasy. Whereas the *Mayflower* took 2 months to cross the Atlantic, in the 1890's it took 1 week, in the 1930's a day, and now about 7 hours. But advancing technology has also created problems for society—noise, congestion, pollution, and the like.

Some insight into the level of technological achievement in the United States can be obtained from what is called the "technological balance of payments." This is an accounting of payments foreigners have made to us for the use of patented techniques or technical expertise, minus our payments for their patents and technical expertise.[4] The United States enjoys a huge surplus in the technological balance of payments, and this surplus appears to be growing. Our surplus was $311 million in 1956 and $1,097 million in 1965. The ratio of our payments to our receipts was one to seven in 1956 and one to nine in 1965. If the transfers within multinational firms are left out, our surplus is still growing; it rose from $110 million in 1956 to $235 million in 1965.

These striking figures on our technological lead can easily mislead us. Science is international, and any major scientific achievement is likely to be of mixed ancestry. Moreover, many scientists have come to this country from other lands. Although the "brain drain" increases the inequality of income among nations, it is nonetheless an encouraging indicator about the state of American science.

The policy challenge

The main challenge presented by the state of American science is the need to lay the foundations for a science policy. We are confronted with burgeoning advance that offers great promise. Can we formulate policies that will nurture our invaluable scientific reources and ensure the fulfillment of prospects that lie ahead?

The competition for public resources will almost certainly be more intense, either between science and other programs, or between different scientific endeavors. The Nation will also continue to find itself at the center of controversies concerning the condition and needs of world science.

If there is almost sure to be more heat generated by issues of science policy in the future, ways must be found to generate more light. Priorities in science could be laid out more systematically, and farther in advance. Issues involving such priorities could be exposed to wider public debate. The very unpredictability of scientific breakthroughs could be made the basis for more rational development of scientific manpower, institutions, and communications with an emphasis on keeping these resources flexible.

The international character of the scientific enterprise poses a special challenge. The United States, as we have seen, spends a larger *percentage* of its income on scientific research and development than do other countries. One possible explanation for this is that some of the benefits of scientific advance are readily available to any nation in the world. For example, people of any country can take advantage of such medical advances as heart transplants. Because of its size and affluence, the United States gets a larger share of the benefit of a basic scientific advance than other countries, and therefore has an incentive to spend more of its national income on basic research. Even the biggest countries do not, however, reap all of the benefits of the basic research they finance. Thus the world as a whole probably tends to spend too little on basic science.

The benefits of basic research are international, and worldwide cooperation in science is essential. A cooperative recognition of the universality of basic science could benefit all mankind.

ART

Artistic creativity and its appreciation are an important part of our national life. There is art not only in museums, theaters, opera houses, and books but in every aspect of life—in cooking, dress and industrial design. Although this section concentrates on the conventionally most professional and "highbrow" forms of art, we must not forget that this is only a small part of the total and may not be the most important.

Access to art

Access to many forms of art is easier today than it has ever been before. Modern technologies of communication and transportation have given the entire population an access to a variety of art forms that could in an earlier age have been open only to a privileged few. Even the most fortunate in earlier periods could not possibly have heard as wide a variety of symphonies, or seen such a diversity of drama, as the connoisseur of records and motion pictures can enjoy today.

This improvement in the accessibiilty of art has continued even in recent years. Twenty-five years ago almost no one owned a television set; by 1952, 30 percent of the households owned at least one set, and this percentage rose to 67 percent in 1955, 88 percent in 1960, and 94 percent in 1967.

Notwithstanding the obvious shortcomings in television programing, the growth in the number of television sets has given more Americans an access to at least some serious attempts at artistic expression. National Educational Television's 148 stations now reach almost all metropolitan areas, and surveys have shown that the NET audience about doubled between 1961 and 1966, by which time it reached over 6 million homes and an estimated 14 million viewers weekly, apart from school programs. Of 260 hours of programing supplied last year to NET's affiliates, about half or more were in the field of art and culture.

Television is, to be sure, only one of the technologies that has made art more accessible. Even such an old technology as that involved in making books has changed with the "paperback revolution," which has made books more accessible to millions of Americans. This development, along with expanding incomes, increased education, and other factors, has brought about a 90-percent increase in the number of new books and editions between 1960 and 1967, and a 65-percent increase in books classified in the arts or humanities. These increases considerably exceed the rates of growth of population and income.

Improved methods of transportation and increased incomes have also widened the range of possible artistic experience for many Americans by facilitating foreign travel. In 1929 about half a million Americans traveled abroad, but in 1967 almost three and a half million did so.

New technologies have not only widened the access to art, but also permitted new forms of artistic expression, from films to new kinds of sculpture and music.

The performing arts

At the same time that technology and economic advance have improved the accessibility of many types of art, they have also created problems for other art forms, especially for those involving live performances. There is evidence that live performances of certain kinds are not increasing in proportion to the growth of population and the economy, and in some cases are perhaps even in an absolute decline.

The Broadway theaters are the largest single part of the American theater, and they have been keeping records in a consistent way longer than other theaters. These records reveal that Broadway attendance has not expanded in proportion to our population or economic growth. The Broadway theater reached its peak quite some time ago, probably about 1925. No new Broadway theater has been built since 1928.[5] There has been no clear trend in attendance since World War II, and there clearly has not been enough of an increase to offset rapidly rising costs. Since 1950, ticket prices have risen only half as much as costs. Though a few "hits" make great profits, the Broadway theater as a whole is in serious financial difficulty.

The off-Broadway theater grew rapidly from the late 1940's until the midsixties, but it has an attendance of about one million, compared with seven million for Broadway. More recently, the off-Broadway theater has suffered, too; the number of productions is now smaller than it was in 1961–62.

There has been little or no growth in the number of professional symphony orchestras since 1950. In 1967 there were 28 entirely professional symphony orchestras playing for seasons ranging from 22 to 52 weeks. There are about twice as many "metropolitan" orchestras, mainly professional but having smaller budgets, and a large number of partially amateur community orchestras.

Chamber music groups are generally less well organized than symphony orchestras. Receipts from ticket sales to the small halls appropriate for chamber groups are generally low, and the cost of the individual performer relatively high. Some orchestras are organizing chamber groups to achieve the advantages of a longer season for some of their members.

Opera is perhaps the most vulnerable of the arts because it is easily the most expensive, requiring large casts, an orchestra, a chorus, and a ballet company as well as expensive scenery and costumes. The only major opera companies are the Metropolitan, the New York City Opera, the Chicago Lyric Opera, and the San Francisco Opera. There are about 40 other professional and semiprofessional organizations, but they usually give no more than 25 performances in a year. Estimating total attendance at these performances requires a good deal of guesswork, but the figure has been placed at less than 2 million in 1963–64.

Ballet as a separate artistic undertaking is characterized by high costs in many of the same areas as opera. Annual attendance for dance performanes is estimated at less than 1 million, with dance tours showing a marked relative growth in popularity since 1952. At the present time, however, there is little chance to see a professional dance company perform any place except in one of the largest cities or in a college town.

Notwithstanding the paucity of information in this area, it does seem very likely that there is no "cultural boom" where direct attendance at live performances is involved. The rate of growth in such performances is probably slower than that of the economy as a whole, and expenditures on these art forms have certainly not risen at anything like the rate at which expenditures on science and education have increased.

[4] This is not an ideal measure because of problems of definition and the bias against basic science.

[5] Unless Lincoln Center is counted.

Vulnerability of the performing arts

To some extent, the relative decline in live artistic performances is probably a natural result of the development of modern communications technology. The new technologies offer a less expensive substitute for live performance.

But there is another factor at work. One explanation of the slow growth of audience participation in the performing arts is the tendency for this participation to become even relatively more expensive as the economy advances. There is little increase in productivity per worker in the performing arts: a string quartet continues to require four performers. In the economy in general productivity increases regularly, and so then do wage levels. Since this does not happen in the performing arts, someone must make sacrifices. If it is not the public or the patrons, it will be the artists themselves, who will have to choose other careers or forego higher incomes.

This systematic tendency for the relative cost of live performance to rise is made somewhat less serious by the technological improvements in ways of disseminating culture, such as by phonograph records, motion pictures, and television, providing substitutes for the audiences and additional earnings for some performers. But if there is presumably also a need to enjoy culture at first hand, these technological developments do not altogether fill the gap from the audiences' point of view. From the performers' point of view, the fact that only a relatively small number can expect careers in the media may be discouraging.

There is another cultural sector, where the problem of productivity can be considered not to exist at all. This is what we might call amateur or subsistence culture: artistic work carried on by the artist primarily for his own enjoyment. Increased incomes may allow more of this, as growth of amateur community symphonies, for example, seems to show. Sometimes amateur efforts can create or enlarge a commercial audience, as with rock music.

The probable long run tendency for a relative decline in certain types of live performances does not automatically indicate a "social" or "public" problem. Nevertheless, live performances are needed to give the typical performer (or composer or playwright) a chance to develop. The quality of records, motion pictures and television could decline if live performances fell off beyond some point, since the lack of this large testing and training opportunity could become critical.

The performing arts indirectly benefit others besides members of live audiences in other ways as well. Their quality is tied up with the capacity to educate, and probably also the capacity to communicate. The cultural inheritance of a nation is also a source of important values in a civilized society—understanding, appreciation, and respect for other people. Finally, the taste for art is in part an acquired taste: those who have a broader cultural experience tend to have the greatest concern for art. The demand for art might be greater if the opportunities to enjoy it were more numerous. These arguments suggest that the prospect of a relative decline in live performances is a matter of general public concern, and something to keep in mind in any assessment of the condition of American society.

BYELORUSSIA

Mr. GOODELL. Mr. President, today I rise to join my colleagues and all Americans in commemoration of the struggle of the Byelorussian people for their freedom and independence.

Fifty-one years ago, on March 25, 1918, the people of Byelorussia declared their independence, and established the Byelorussian Democratic Republic. Despite the hardships, battles, and sacrifices endured by her people, the young state was unable to preserve her hard-won independence against the onslaught of overwhelming Bolshevik forces—and in early 1921 the young Republic was made part of the Soviet Union.

Today the Byelorussian people do not enjoy the freedoms that we regard as our birthright, but they valiantly cling to their hopes of regaining freedom. And we salute their efforts.

DAVID K. E. BRUCE

Mr. TYDINGS. Mr. President, today marks the farewell for one of America's most accomplished diplomats. Our Ambassador to the Court of Saint James, David K. E. Bruce, is returning to private life.

With 8 distinguished years in London, Ambassador Bruce has held our Nation's most prestigious diplomatic post longer than any other man. Prior to 1960, he served in Paris and Bonn, the only individual to represent America at her three premier Embassies.

Throughout his public career David Bruce set a standard of excellence rarely equalled.

Throughout his life Ambassador Bruce has been known as a man of intellect and grace.

President Richard Nixon is said to have remarked that while he and his three predecessors in the White House disagreed on many things, they all "agreed that David Bruce was a giant."

Born in Baltimore, graduate of Princeton and the Universities of Maryland and Virginia, member of the State legislatures of both Maryland and Virginia, he has led a remarkably varied and decidedly brilliant career.

Lawyer, Foreign Service officer, businessman, Ambassador Bruce went to Britain as a Red Cross representative in the early days of the Second World War.

Shifting to intelligence work and the Office of Strategic Services, he ended the war as a colonel in charge of OSS operations in Europe.

He then began a career in public service which in time would include Assistant Secretary of Commerce, American Aid Administrator in France, and for 2 years Under Secretary of State.

I am proud to say that Ambassador Bruce is a good friend of the Tydings family and was for many years a close and trusted friend of my father.

His stepping down today is, in one sense, an occasion of sadness for the Nation is losing one of its finest diplomats and public servants. On the other hand a note of joy creeps in for Ambassador Bruce and his lovely wife, Evangeline, are now back in the States with us.

I have the feeling that their counsel and company shall be widely sought.

Our first Ambassador to Great Britain, John Adams, was noted, among other things, for his brilliance and commonsense. The same can be said, I think, of David Bruce.

The Nation owes him a vote of thanks, and I know that we all wish him well.

THE CHALLENGE OF VICTORY

Mr. HANSEN. Mr. President, it was my distinct honor and pleasure to take part last night, Tuesday, March 25, in the fourth annual Robert A. Taft Memorial Award presentation. On hand making the presentation was President George H. Williams.

The meeting, on the American University campus, presented the Taft Memorial Award to U.S. Senator JACOB K. JAVITS.

The award was presented by the American University Young Republican Club in recognition of his distinguished service to the Republican Party and the Nation.

Mr. President, I ask unanimous consent that the Senator's address on this occasion be included in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE CHALLENGE OF VICTORY: BUILDING A DURABLE REPUBLICAN MAJORITY

I am honored to receive the Robert A. Taft Award. I never served with Robert Taft in the United States Senate, for he was tragically taken from public life before I was elected to that Body in 1965. However, I worked with Senator Taft on the Taft-Ellender-Wagner Bill (which I sponsored in the House of Representatives) and on Federal Aid to Education, and had great regard for his stature and achievements.

I am also pleased to appear before the Young Republican Club of American University on this occasion, for I owe the members of that Club a debt of gratitude. Last autumn, many members journeyed to New York City to spend several days working with me in my campaign for reelection to the United States Senate. I am deeply appreciative of that help, and, as a grateful and successful Republican candidate, I really should be presenting an award to you!

The Republican Party, led by President Nixon, won a great victory last November. Mr. Nixon received support in almost every section of the country, and, to that extent, both the Republican Party and he are in an admirable position to form a stable national majority—indeed, better placed, I would argue, than the Democratic Party. However, if we are to do so, it is important to remember that the Republican Party has not yet become the majority party in this country and that President Nixon was elected by a minority of the people. His 43 per cent of the popular vote and the almost 32 million votes he received in 1968 were both lower than the comparable figures he had obtained eight years before.

It has become almost axiomatic since last November to report the end of the New Deal coalition which was formed by Franklin Roosevelt in the midst of the Depression and remained in virtually uninterrupted power for almost four decades. As former Presidential Assistant Bill Moyers, paraphrasing Mark Twain, recently pointed out, the reports of that coalition's demise continue to be "greatly exaggerated." But, unquestionably, the Democratic coalition is in disarray, and the Republican Party now has a unique opportunity to transform its Presidential victory into a stable governing majority.

Whether we do so or not depends upon the development of an affirmative Republican program aimed at a national constituency and to the emerging "youth" sectors of American society. But, let us bear in mind, that majority status for the Republican Party will not be won automatically.

Specifically, it has been argued that a new Republican majority can be formed by an appeal to the previously "solid" Democratic South—to those who supported George Wallace in 1968—and to an as yet unformed social

"backlash" which grips a large portion of alienated urban whites of the North. In my opinion, this would be a tragic error—as well as a grave disservice to the ideals upon which the Republican Party was founded—and we must renounce this course of action. An enduring national leadership cannot be built upon an appeal to short-term emotional issues or to the exploitation of racial unrest.

Similarly, a policy of "hard-line" nationalistic crusading, which "waves the bloody shirt" on the international scene, cannot be the basis for a new majority coalition. Such a program would overlook the mandate which President Nixon received in 1968 to move America into a period of peace, to end the impasse in Vietnam, and to correct the imbalance in our priorities which has made it impossible to allocate the necessary national resources to the dramatic improvement in the quality of our domestic society.

The Republican Party must be the party of the new America—the changing, emerging America; and that America is the technologically advanced and urbanized society—about three out of every four Americans now live in metropolitan areas—and there is much of that thinking in rural areas, too. New institutions—both private and public—have developed, and, in their wake, a new class, national in scope, has emerged. These men and women—most of them youth, plus those professional and managerial in orientation, plus the employees in large corporate structures—are generally found in great density in the exploding suburbs. While they seem to reserve a traditional American distaste for and impatience with extreme and violent militancy and are deeply concerned by urban decay and crime, their attitudes are often coupled with basic tolerance for different ethnic groups and with that respect for innovation which have always characterized the best in our society.

This emerging class, which is the "growth" element in almost every region of America, can be a force for urban reform and innovation. They seek leadership which—while moderate in temper—is pragmatic and imaginative in facing those issues which relate to the quality of American life in the last third of the twentieth century. They are capable, I believe, of reaching out to the poor and the dispossessed and of establishing coalitions with them, for Americans still have a determination to remove obstacles to opportunity and to assist those who must overcome hardship and discrimination. Americans everywhere still seek the objective of a truly integrated society.

The Republican Party can provide leadership for this newly powerful class, for, in the midst of our turmoil, the traditional Republican principles still have relevance. Upon those principles a new national majority can be built. It is for us to prove in the next four years that Republican values of individual freedom, local authority, the capacity of enterprise to operate in the public interest and the supremacy of the national interest can prove themselves anew in problem solving in the midst of urban convulsion.

Some contend, for example, that the plight of the urban Negro requires a vast expansion of the Federal government at the expense of private enterprise and state and local authority; that the public sector must expand its powers.

And yet, I know that it was private business opportunities that permitted generations to escape the slums in the past; I see that Negroes have greater dignity and power as constituents of local government than as clients of a distant bureaucracy. And, I see mayors and business leaders across the country addressing themselves with new courage and decisiveness to the problems of the slums, while the Federal government cuts back on poverty programs and imposes harsh new restrictions on welfare. So I remain unconvinced that the way to serve the urban poor is to decrease the influence of business and to deny the opportunity of service to local government.

As a matter of policy this means an emphasis on home ownership or integrated tenancy, rather than on economically segregated public housing projects. It means opening homes in the suburbs, not only reconstructing the slums. It means an emphasis on jobs rather than on welfare. It means a concerted effort to provide a variety of employment choice in the private sector rather than relying too much on dead-end jobs created by government as an employer of last resort. It means the development of minority group entrepreneurship and small business opportunities—not simply the establishment of subsidized corporate outposts in the central cities. And finally, it means a preference for a plan of Federal revenue sharing with the states and cities as against a proliferation of special Federal programs and prescriptions.

The program which I have outlined is a national program; it should—and I believe it will—be the Republican program. It is essentially a metropolitan program, though it is aimed at "metropolitan America," wherever it exists, rather than at any single region of the country.

The Republican Party can and must appeal to the emerging, growing groups in America—to the America which is changing and progressing, not to those who would turn inward, which would reject the present and abort the future.

We must, however, reach out to those left behind by progress and affluence or frightened by change. We must reach out to the alienated—whether they be black or white, Northern worker or Southern farmhand. Our task must be to reconcile the alienated to inevitable change and to peaceful reform. But we must lend confidence to their hopes; not counsel to their fears.

I firmly believe that, on this basis, a durable Republican majority can be built. It is this task which is the challenge and the responsibility of victory.

THE 51ST ANNIVERSARY OF BYELORUSSIAN INDEPENDENCE

Mr. WILLIAMS of New Jersey. Mr. President, March 25 marked the 51st anniversary of the proclamation of independence by the people of Byelorussia. I wish to assure the people of Byelorussia, who I am hopeful will hear these messages of encouragement, that they have not been forgotten by the people of the free world and that amidst the myriad of events which daily occupy the time of Congress, we now pause to remember and pay tribute to these courageous and valiant people.

We shall not forget the desire that the Byelorussians had to be considered a distinctive national entity. Out of Byelorussia emerged a growing interest in ethnology and language, the publication of books abroad in the Byelorussian language which were smuggled into the homeland, the founding of a teachers society for the propagation of the Byelorussian language, the establishment of separate Byelorussian journals and a Byelorussian theatre—all of which contributed to generating the deep Byelorussian interest and concern with their national culture.

We shall not forget the Byelorussian newspaper, Nasha Niva. This publication, which miraculously existed from 1906 to 1915, became a political organ which played a very important role in Byelorussia's national revival by becoming the spokesman for the Byelorussian intelligentsia, writers, and poets; in its pages appeared the first works of Bahdanovich, Yank Kupala, Yakub Kolas, Ales Harum, and many others.

We shall not forget the All-Byelorussian Congress which met in Minsk in December 1917 attended by 1,872 delegates democratically chosen and representing all Byelorussian organizations and political parties. Congress adopted a resolution by an overwhelming majority which endorsed the right of nations to self-determination and called for the establishment of a democratic government to be designated the Byelorussian National Republic. This was the first constitutional step toward complete independence from Russia.

We shall not forget that, sensing the danger to their own revolutionary interests, the Bolsheviks, who had seized power in November, surrounded the place at which the Congress was convening and with a display of armed power broke up the meeting. By this action, Byelorussia became one of the first victims of Communist aggression.

We shall not forget that on March 25, 1918, the representative body of the Republic solemnly proclaimed the independence of Byelorussia and published its official proclamation which read as follows:

> A year ago, the peoples of Byelorussia, together with all the peoples of Russia, threw off the yoke of Russian tsarism which, taking no advice from the people, had plunged our land into the blaze of war that ruined most of our cities and towns. Today we, the Rada of the Byelorussian National Republic, cast off from our country the last chains of the political servitude that has been imposed by Russian tsarism upon our free and independent land. From now on, the Byelorussian National Republic is to be a free and independent power. The peoples of Byelorussia themselves, through their own Constituent Assembly, will decide upon the future relations of Byelorussia with other states. . . .

We shall not forget the significant advances the Byelorussian Government made in the fields of education, culture, and social welfare. In addition, the Government was active internationally and received recognition from various countries. The Republic was recognized de jure by Austria, Poland, and the newly independent succession states of the former Russian Empire; namely, Georgia, Latvia, Lithuania, and the Ukraine. In addition, it was recognized de facto by Bulgaria, Denmark, France, and Yugoslavia.

We shall not forget that in November 1918 the Red army advanced into Byelorussia. The Byelorussians, having insufficient military forces with which to oppose the Bolsheviks and protect their own national territory, were thus forced to move.

We shall not forget that on December 10, 1918, the Red army seized Minsk and established a government of military revolutionary committees. Byelorussia's efforts to establish an anti-Bolshevik force failed, and with the Treaty of Riga in 1921 ending the war between Poland and Bolshevik Russia, Byelorussia was divided, Poland receiving one-third of the country with a population

of 3,500,000 while the remainder, with the exception of that part falling to independent Latvia, came under Soviet control.

Through the years, these brave people have exhibited courage and determination against all odds. Free men should pause a moment to pray for the day when Byelorussians will once again enjoy the freedom and liberty that were theirs for those few moments in 1918. We shall not forget.

THE EFFECT OF HIGH INTEREST RATES ON HOUSING

Mr. JAVITS. Mr. President, an article published recently in the New York Times has dramatically indicated the effect of recent increases in interest rates and in the cost of land and materials on meeting the goals of the Housing Act of 1968, particularly, the goals for low- and moderate-income families. That act set as a goal the construction of 26 million new units in the next decade. It has already become clear—less than 1 year after the passage of that bill—that it will be very difficult, to say the least, to meet that objective.

It is too soon to say what the exact effect of the increasing interest rates has been, but present indications are that a decline in new housing starts in the coming months is quite likely. That expected decline is partially the result of increases in the cost of land and lumber, but it should be emphasized that it is estimated that every 1-percent increase in the interest rate on mortgages decreases new housing starts by between 100,000 and 150,000. Thus, our necessary efforts to hold down inflation may, as a disastrous side effect, inhibit the realization of our commitment to provide every American with decent housing.

The interest rates continue to climb. The latest increase in the prime rate to 7½ percent will make mortgage interest at least 8½ percent—already beyond the limits of the usury laws of many States. Thus, those lending institutions which still engage in the residential mortgage market will discount mortgages. This practice will, of course, increase the cost of the money for home construction beyond the 8½-percent figure mentioned. More seriously, many financial institutions—such as major commercial banks—are no longer lending money for housing, at all.

To alleviate the undesirable effect of high-interest rates and tight credit on mortgage rates and on residential housing, I have strongly urged that the Federal Reserve System begin to buy and sell the securities of FNMA, GNMA, and the Federal home loan banks. I repeat that call today, for the situation may grow more critical in the next few weeks. In addition, it is crucial that the Congress take steps to protect the low- and moderate-income housing market from bearing a disproportionate share of the cost of combating inflation. We must take steps which will insure that a certain amount of capital will continue to flow into the construction and renovation of this housing, even as we use monetary policy to check inflation.

I am pleased to note that the Senate Banking and Currency Committee is holding hearings this week—week of March 24—on the effect of high interest rates on the economy. I am sure that that committee has looked into this matter most seriously. The findings of those hearings—particularly, as to the effect of high interest rates on new housing starts and the objectives of the 1968 Housing Act are vital to the country. I am prepared to offer and support measures to alleviate this situation and to permit us to meet our essential housing goals.

Mr. President, I ask unanimous consent that the article to which I referred be inserted in the CONGRESSIONAL RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOUSING PROGRAM, STILL IN INFANCY, ALREADY A PROSPECTIVE FAILURE

(By Gerd Wilcke)

It appears virtually impossible to build 26 million new or rehabilitated housing units in the next decade.

That is the view of a number of economists who have closely scrutinized the goals of the 1968 Housing and Urban Development Act.

There is no question about the need for such an ambitious undertaking. The things that bother the experts are whether enough funds can be made available for mortgages, whether new construction techniques can be applied to hold down costs and whether labor can increase productivity.

The question of building costs received new urgency last week when members of Congress asked for investigations of skyrocketing lumber prices.

Wright Patman, a Texas Democrat who is chairman of the House Banking and Currency Committee, announced that his staff would begin gathering facts "immediately" and that the committee itself would meet on the problem "as soon as possible." The Senate Banking and Currency Committee has scheduled similar hearings March 19 to 21.

The Housing Act, as signed by President Johnson last Aug. 1, seeks to eliminate substandard housing within the next 10 years. The total of 26 million units to accomplish this includes at least 6 million subsidized units for lower-income families. If that part of the program is to be realized, the Government will have to subsidize 10 times more units than it did in the last decade.

One expert who has made a critical analysis of the program and has concluded that "categorically, something less" than the 26 million units can be built, is Charles B. Reeder, a senior associate economist of E. I. du Pont de Nemours & Co., Inc. Du Pont is one of the many chemical companies that have a large stake in the housing market.

Dr. Reeder, at a recent press briefing here, said that in terms of housing starts alone, the goal of 26 million units in one decade represented a level of activity nearly double the annual average of 1.4 million units started during each year of the decade ended in 1968. The capital requirements to build or rehabilitate 26 million units would be more than double the dollar volume that went into housing in the last 10 years.

The ratio of new housing activity to the gross national product, Dr. Reeder found, would have to rise from 2.7 per cent in 1968 to 4.9 per cent in 1976. For the entire period ending in 1978, the ratio would have to average 4.2 per cent, compared with an average of 3.2 per cent for the 10 years ended in 1968.

To reach a ratio of 4.9 per cent for any one year is not impossible or unreasonable, Dr. Reeder held, although a ratio higher than this has been achieved only once—in 1950 when it was 5.6 per cent. "But to expect the ratio for a full 10 years to average nearly one-third above that of the previous years is not reasonable," he asserted.

LAND NEEDS ARE NOTED

Citing findings of the President's Committee on Urban Housing, Dr. Reeder said that more than 10 million acres of land were necessary to provide—at today's densities—26 million additional dwellings and ancillary facilities by 1978. That rate of consumption would be roughly double the current rate of land consumption for new housing.

Since it would be difficult to acquire that much land, the committee recommended extending the powers of the Federal Government.

Specifically, the committee proposed the following:

The Secretary of Housing and Urban Development should be granted limited powers to pre-empt local zoning codes and exclusionary state codes or local ordinances from application to Federally subsidized projects.

Legislation should be enacted to help local renewal authorities in their acquisition of land for subsequent resale or lease as sites for subsidized housing.

H.U.D. should be authorized to acquire land directly, by purchase or condemnation, for lease back to private or public developers who would be required to build subsidized housing and related community facilities on the leased sites.

Like Dr. Reeder, another expert, George A. Christie, chief economist of the McGraw-Hill Information Systems Company, has spent considerable time analyzing the housing act. He also concluded that it would be hard to reach a goal of 26 million units.

Discussing the cost problem in a recent speech and subsequent interview, Mr. Christie said that the publicly assisted part of six million units, or 600,000 units a year, would be about 20 times the annual volume of public housing in the last decade. He added:

"If we price it at $20,000 per unit, and that's how much public housing cost in 1968, the annual total comes to about $12-billion. The full total for all six million units is well over $100-billion."

Where is the money to come from in fiscal 1970? "Congress hasn't got $12-billion for housing next year, not when it's still looking for places to cut $6-billion from the year's budget," the economist said.

Mr. Christie added that perhaps the most important innovation in recent legislation was the part that no longer made it necessary for Congress to provide all the money, at least not all at once. Thus, the Federal Government's role is no longer to subsidize the construction of public housing but to subsidize the occupancy of privately built housing through rent and interest supplements.

In another development, the House voted last week to have its Banking Committee investigate recent large increases in the price of lumber.

IT MUST BE BUILT

However, he added, housing still has to be built and contractors still have to be paid.

"So, if Congress goes the rent subsidy route and spreads this cost over 30 or more years, it simply means that in the meantime the private capital markets will be putting up the $100-billion or so that it will cost to create six million low-income housing units," he declared.

As to the package of 26 million units, Mr. Christie said that allowing for higher costs and a somewhat different mixture of single-family and multi-family units, the total credits needed to support this level of building would be at least $40-billion. This would

be double the mortgage requirement for today's new residential building.

"Projections of capital flows," he said, "show that the total of investible funds will not be growing at this rate, meaning that mortgages will require a bigger share of the credit pie, perhaps as much as one-third compared with today's one-fourth.

"And if the experience of the past few years is any indication of the housing industry's ability to attract financing when money is scarce, then our 10-year housing program may well run out of credit before it runs out of carpenters."

Reviewing the labor and productivity problems, Mr. Christie said that in 1968 about 3.25 million workers were involved in the creation of $84-billion worth of residential and nonresidential construction. That averaged a little over $25,000 of construction a man. In 10 years, measured at today's prices, the $84-billion will be more than $125-billion.

Ten years ago, he continued, 2.75-million workers turned out total construction valued at $66-billion, again at 1968 prices.

This was $24,000 worth of construction a worker. Since then the rate has grown an average of only 1 per cent a year, compared with a productivity growth rate of 2.5 per cent for the economy as a whole.

If there was an improvement in construction productivity beyond the 1-per-cent-a-year rate, the industry would need 4.5 million workers to meet the demands of 1978.

This, Mr. Christie said, implied the need for a net gain of nearly 1.25 million workers, or a growth rate in the work force of 3.25 per cent a year for the next 10 years, about twice as fast as the nation's total labor force will be expanding.

Mr. Christie cautioned that productivity measures were "crude at best," since there was no separate productivity index for the housing industry. If there were, it would probably show a better result than construction as a whole.

PREFABRICATION A FACTOR

One reason for this was said to be the expanding acceptance of prefabrication in home building. Another is the growth in production of mobile homes from 100,000 a year to more than 300,000 during the last decade.

Mr. Christie said mobile homes did not enter into the calculation of output per construction worker "simply because there units are not considered construction, nor are the people who build them considered construction workers".

The economist said he was convinced that there was more improvement in productivity than was shown by statistics. If the industry could count on an annual gain of 2 per cent, it would cut down the labor force requirement to meet the housing goal from 3.25 to 2.25 per cent.

Summing up his analysis, Mr. Christie said that instead of reaching the 3.3 million annual rate of housing starts in the final years of the program, the rate would flatten out to about 2.5 million in the middle nineteen-seventies. This would mean:

The 10-year total may fall short by perhaps three million units.

Manufactured units will play a large part, particularly in meeting the six-million-unit target of low-income, publicly sponsored, multi-family housing.

Housing costs will continue to rise sharply over the next decade.

There is need for substantial modification of building codes and union work rules. These may be the most critical areas of all.

SOME CRITICISMS

Dr. Reeder had this to say about improved productivity: "The answer lies not in new materials or dramatic breakthroughs in the building process, but in applying techniques that are already" known in the industrial field.

The du Pont specialist asserted that the techniques were rarely applied because most builders operated on too small a scale to utilize prefabrication and mass production of components and subassemblies.

Many governmental regulations, such as building codes and plumbing, electrical and mechanical codes as well as zoning ordinances hamper technological progress, Dr. Reeder said.

Some labor practices prevent the introduction of cost-saving technology and union work rules often make construction manpower inefficient and costly, he added. Another criticism was:

Lenders have been reluctant on occasion to provide mortgage funds for nontraditional dwellings and material suppliers may have been suspicious of innovations that threatened to displace their materials.

Finally, he said, consumers were not always enthusiastic about new materials and designs associated with modular or industrialized housing.

THE PRESIDENT'S DECISION ON THE ABM SYSTEM

Mr. MONDALE. Mr. President, we all know that a "thin" anti-ballistic-missile system is to be deployed in Montana and North Dakota. What we do not know—and what has never been satisfactorily explained—is why.

In a very thoughtful and penetrating editorial on Sunday, March 15, the St. Paul, Minn., Pioneer Press asks some questions on this subject which should be of interest to us all.

The Press points out, for instance:

Three different sets of justifications have been put forward for Sentinel. First it was the "Chinese threat" only which was to be met. Then the Pentagon's public relations idea was to defend populous cities. After these two arguments were shot full of holes by critics, the Nixon administration came up with the new excuse that Sentinel is needed to protect the missile sites away from the cities. The whole history of ABM advocacy is marked by such deviousness.

Mr. President, in the past few weeks, in widely scattered parts of our Nation, in the shadow of incredible affluence that many take for granted, I have seen hunger and despair and degrading poverty the like of which I would not believe could have existed, had I not seen it with my own eyes.

And the ABM, as the Press points out:

Will drain off more billions of the nation's resources into military hardware at a time when vast sums are needed to solve festering domestic problems.

I ask unanimous consent that this excellent editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NIXON'S DECISION ON ABM SYSTEM IS DISAPPOINTING

In a highly disappointing action, President Nixon has plunged ahead on the Sentinel antiballistic missile system.

This will not safeguard America against devastating nuclear attacks. It will not help cool down the nuclear arms race.

It will drain off more billions of the nation's resources into military hardware at a time when vast sums are needed to solve festering domestic problems. It may bring on another tragic round of escalation of nuclear armaments by the United States and Russia. It may in that way increase the danger of eventual catastrophe through war between the two great powers.

"The safety of our country," said the President, "requires that we should proceed now with the development and construction of the new system . . ." Yet in the same statement he makes this admission: "The heaviest defense system we considered, one designed to protect our major cities, still could not prevent a catastrophic level of U.S. fatalities from a deliberate all-out Soviet attack."

He added that such a heavy system "might look to an opponent like the prelude to an offensive strategy threatening the Soviet deterrent." Arguing that the lighter Sentinel system will not have similar effects is unconvincing.

The basic factor involved is a switch from reliance on the principle of deterrence, the "balance of terror" system prevailing for the past decade. At present the United States and the Soviet know that if the other launches a nuclear attack it will be followed by an equally devastating retaliation which would leave both countries in ruins.

The importance of this principle will not be changed by deployment of Sentinel, which the President admits cannot defend the people of the United States. History indicates that each defensive preparation is followed by increased offensive developments by an opponent to overcome the defense. If Russia builds an ABM designed to protect Moscow, the United States certainly will plan missile capabilities to overcome it. And vice versa. The Maginot Line concept of defense is even less applicable to nuclear warfare than to older conditions.

As for the unlikely danger of a threat from China, the principle of deterrence still holds. China knows an attack on America would bring its own obliteration. That remains the best guarantee.

Three different sets of justifications have been put forward for Sentinel. First it was the "Chinese threat" only which was to be met. Then the Pentagon's public relations idea was to defend populous cities. After these two arguments were shot full of holes by critics, the Nixon Administration came up with the new excuse that Sentinel is needed to protect missile sites away from the cities. The whole history of ABM advocacy is marked by such deviousness.

The conflict over ABM policy now will continue in Congress. Because of President Johnson's original embarkation on this route, the Executive Department has both authority and funds to make the beginning which President Nixon has ordered. A fight against further new appropriations, however, can be carried on in the House and Senate. Public sentiment will play an important part in what happens.

One possibility which Congress should consider is the establishment of a nongovernmental commission of qualified citizen advisers to make further studies and recommendations on nuclear strategies and policies.

Another aspect of the situation is future negotiations with the Soviet on nuclear armament controls. Just one day before Nixon's Sentinel decision, the Senate ratified the nuclear nonproliferation treaty by a vote of 83 to 15. The spirit of this agreement calls for restraint by the two world powers in their own armaments programs. The theory has been advanced that the Nixon Administration might use Sentinel as a bargaining ploy—if the Soviet cuts back its nuclear plans, the United States might do the same. This is a doubtful and tenuous approach, but there is a bare possibility it might bring results. We hope so.

STANDARDS OF DECENCY ON TELEVISION PROGRAMS

Mr. PEARSON. Mr. President, on March 16, 1969, Mr. Thad M. Sandstrom, general manager of WIBW–TV, Topeka, Kans., commented upon the character

and nature of a particular TV show. The program itself does not need further attention, but Mr. Sandstrom's comments concerning the common practice of off-color and double-meaning jokes does deserve attention. He appropriately finds them below the standards of decency, morality, and good taste. Mr. President, I think this is a worthy statement and an excellent comment upon one of the very serious problems concerning the power and influence of television, and I direct the attention of my colleagues to this most excellent TV editorial and ask unanimous consent that it be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STANDARDS OF DECENCY

Last Sunday night, CBS and WIBW carried a re-run of an earlier "Smothers Brothers" broadcast. The program was scheduled to feature comedian Jackie Mason and folk singer Joan Baez, who has been widely publicized for her stand against the Vietnam war. In the unedited broadcast, Miss Baez chose an entertainment platform to plead the cause of her husband who will soon be going to prison as a draft dodger. Mason cracked some jokes that needed to go to the laundry. Smothers and his producers finished the show too late in the week for final review and editing.

CBS and its stations have insisted that every "Smothers Brothers" show be previewed in advance to try to make certain it conforms to the broadcast industry Television Code of Good Practices, and to attempt to eliminate off-color and double-meaning jokes. The broadcast wasn't ready in time for the regular preview on Friday . . . so CBS cancelled the nationwide telecast and substituted a re-run.

Now, Tommy Smothers is on his soapbox crying censorship and threatening to move his show to another network. "The Smothers Brothers Comedy Hour" is supposed to be entertainment—not news. Smothers apparently objects to conforming to basic standards of decency, morality and good taste. CBS is accused of "stiffling creativity." What they mean is . . . CBS is insisting on cutting out the filth.

This week, a Senate committee has been questioning the network presidents because the networks supposedly are not doing enough to control sex and violence on TV. At the same time, CBS is in a first-class fight with the producers of a program with vast influence over millions of young viewers. The issue between CBS, its stations and the Smothers Brothers is simple. The networks and the stations are responsible for what goes on the air. They have an obligation to do everything they can to maintain high standards. Television has been deluged in recent months with "new" comedy shows like "The Smothers Brothers," "Rowan and Martin," "Jonathan Winters" and others. One program "Turn On," was in such poor taste that ABC cancelled it after one telecast. These shows thrive on music which attracts the young and on jokes which tear at the moral fibre of America. They appeal to millions of viewers . . . mostly younger ones. One of the reasons more Americans are not upset by shows like "The Smothers Brothers" and "Rowan and Martin" is that the blue jokes are often over their heads. But most kids understand them.

Television has an obligation to keep pace with the changing mores in America. But we question whether producers of shows like the "Smothers Brothers" should have a free hand, and be allowed to broadcast whatever the minds of Hollywood can think up. Should TV be giving the decline in morals in America a push forward? We think not.

"The Smothers Brothers Show" scheduled for last Sunday will be on March 30 . . . AFTER it has been properly edited. Even then, many will be offended. Yet this week, we've had plenty of mail and phone calls at WIBW protesting the decision by CBS to postpone last Sunday's show nationwide. A minister of a United Methodist Church in Manhattan is among those who questioned what he termed "censorship" of the Smothers Brothers. Yet a few weeks ago, the Smothers Brothers raised a furor in the TV columns because the Program Practices Department of CBS insisted on deleting a line which took the name of Christ in vain.

Television goes into millions of homes. It has great influence. And TELEVISION broadcasters must exercise more caution in making certain programs do not offend. Television should not, in our opinion, aid in breaking down the morals of America.

For a long time, WIBW has been telling CBS we've had enough of the "Smothers Brothers." We applaud CBS for their courage. If Tommy Smothers and his brother don't want to live by the rules of an industry which is making them fantastically wealthy, let them go off the air and back to the night clubs.

TAX-DODGE FARMING

Mr. METCALF. Mr. President, I am sure that we are all aware that one of the finest newspapers in the country is the Wall Street Journal. But sometimes I think it well to reflect on just what it is that makes a newspaper great.

Just last week Mr. Ronald A. Buel, staff reporter of the Journal wrote perhaps the most comprehensive story that has been written to date on the subject of tax-dodge farming. I put that article into the CONGRESSIONAL RECORD on March 20, the day after it appeared in print. Mr. Buel independently probed into this whole area and gave many new and informative examples of people who are more interested in farming the Internal Revenue Code than they are the land. On January 22, I introduced S. 500, a bill designed to remove inequities between legitimate farm operators and the tax-dodge farmers who are in the business of farming mainly because of the tax advantages, which Mr. Buel so ably pointed out, that serve to put their nonfarm income in a lower tax bracket.

The day after Mr. Buel's story appeared the Journal published an editorial that reflected exactly the opposite view from that just taken by one of its own reporters. This is why I regard the Wall Street Journal as a great newspaper. Its reporters are obviously not bound by the policy of its editorial page. In all fairness, I think that the editorial that appeared in the Wall Street Journal of March 20 should also be available to other Senators.

Mr. President, I ask unanimous consent that the editorial be printed at this point in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FARMING FOR FUN AND PROFIT

Some farm organizations and several Congressmen would like to crack down on citizens who alleged farm for fun, not profit. We find it a little difficult to share their concern.

Advocates of a crackdown contend that hundreds of wealthy Americans are buying farms and deliberately losing money. Since their farm losses can be deducted from their nonfarm income, the result is that they pay a lower Federal income tax.

In an effort to close this "loophole," legislation has been proposed to set a $15,000-a-year ceiling on farm losses that can be deducted from other income. The Treasury Department estimates that such a ceiling would affect fewer than 14,000 farm operators but would bring the Government about $145 million in additional taxes.

One objection to new legislation is that existing law already bars any deduction whatsoever for losses incurred on a farm actually run as a hobby. It isn't too difficult to tell whether a farm is run primarily for pleasure or profit; if the operator hires competent help and regularly tries to market his produce, the farm is plainly something more than a hobby.

Probing deeper into a farmer's motives is, to put it mildly, extremely tricky. The critical Congressmen surely aren't suggesting that all farmers, to qualify for normal tax treatment, have to hate their work.

Either full-time or part-time farms, moreover, can wind up losing money. Yet a loss is a loss, and an additional tax penalty for poor management or bad luck with the weather seems somewhat unfair.

Finally, the proposed $15,000 ceiling on losses is clearly arbitrary and only too likely to produce perverse results. If the legislators insist on separating those who farm for fun from those who till the land for profit, the present law seems superior.

All in all, it sounds like an effort by farm interests to keep city dudes off the land. Even if the effort is understandable, it isn't a proper project for Congress.

Mr. METCALF. Mr. President, I would like to take just a few moments to comment on the editorial. First there is the comment that "some farm organizations and several Congressmen would like to crack down" on the tax-dodge farmer. I think it should be pointed out again that the principle of this legislation has the full support of all those who are sincerely interested in the working farmers of our Nation. For example, the National Farmers Union, the American Farm Bureau Federation, the National Grange, the National Farmers Organization, the National Council of Farmer Cooperatives, the National Association of Wheat Growers, the Cooperative League of the U.S.A., the National Association of Farmer Elected Committeemen, the Farmland Industries Cooperative, the Mid-Continent Farmers Association—formerly known as the Missouri Farmers Association—the AFL–CIO, the Industrial Union Department—AFL–CIO—the United Steelworkers, the South Texas Cotton and Grain Association, Inc., the Amalgamated Meat Cutters and Butcher Workmen, and the Farmers Grain Dealers Association, have all called for action to be taken now. In the Congress, a bipartisan group of members from at least 30 different State congressional delegations have specifically endorsed this legislation.

The editorial also comments:

One objection to new legislation is that existing law already bars any deduction whatsoever for losses incurred on a farm actually run as a hobby.

In answer to that here is the pertinent quote from the Treasury Department's 2-year study published on Feb

ruary 5 as a joint print by the House Ways and Means and Senate Finance Committees:

The existing "hobby loss" provision of the Internal Revenue Code is ineffectual in dealing with this problem. While that provision disallows deductions for continuing heavy losses in a trade or business over a period of at least 5 consecutive years, the fact of a loss and its extent are measured by comparing the expenses of the business with the total income from the business including the full amount of capital gain income although only one-half of that income is subject to tax. Thus, to escape the hobby loss provision, it is merely necessary that the taxpayer realize capital gain farm income at least once every 5 years. If the capital gain income just equals the farm expenses for a year, the hobby loss provision is inapplicable for 5 years even though taxpayer will show a tax loss for that year equal to one-half of his farm expenses.

Next comes the criticism that "an additional tax penalty for poor management or bad luck with the weather seems somewhat unfair." Such a penalty would be unfair and this legislation was drafted with that danger in mind. That is why the bill in no event prevents the deduction of farm losses to the extent they relate to taxes, interest, the abandonment or theft of farm property, or losses of farm property arising from fire, storm, or other casualty, losses and expenses directly attributable to drought, and recognized losses from sales, exchanges, and involuntary conversions of farm property.

An exception is made for these deductions since they are in general deductions which would be allowed to anyone holding property without regard to whether it was being used in farming or because they represent deductions which are clearly beyond the control of the farmer; such as, losses from casualty and drought. Under the bill, if the total of these deductions is higher than $15,000 then the higher figure may be used without any reduction because of nonfarm income above $15,000. In other words, the $15,000 limitation is directed solely at the type of deductions that are artificially created through the abuse of the special accounting rules designed for farmers.

It is not the purpose of this legislation to prevent outside capital from entering into farming. The problem is that high-bracket taxpayers, individuals as well as corporations, whose primary economic activity is other than farming, have entered into farming because by doing so they can then come under exceptions intended only for farmers. The tax-dodge farmer than elects the special farm accounting rules that enable him to deduct farm losses that are not true economic losses from his other high-bracket income. The result is large tax savings. As a matter of fact the savings can be so large that this form of investment is dangled in front of prospective clients of such management firms as Oppenheimer Industries, as an enticement to jump on the bandwagon.

Finally there is the criticism in the editorial that "the proposed $15,000 ceiling on losses is clearly arbitrary and only too likely to produce perverse results." The $15,000 ceiling is based on an analysis of available statistics of income which revealed an interesting phenomenon, that the average size of farm losses rise as nonfarm income increases. Does this mean that a given taxpayer's farming efficiency drops off as a sheer coincidence of his increased ability to earn other income?

Here is what Treasury's 2-year study had to say about the $15,000 limitation:

If a taxpayer has more than $15,000 of nonfarm income, his primary source of livelihood is not likely to be his farming efforts, and thus, he is not the type of farmer for whom the special accounting rules were devised.

In discussing the effect of the present situation on the farm economy Treasury points out:

When a taxpayer purchases and operates a farm for its tax benefits, the transaction leads to a distortion of the farm economy.

Yet the editorial alleges that any attempt to remedy the current situation "is not a proper subject for Congress."

This makes me wonder aloud: Where is your farm, Mr. Editor?

HERB KLEIN MAKES GOOD ON PLEDGE

Mr. SCOTT. Mr. President, on March 21, the Wall Street Journal published an article acquainting readers with the functions and success of Herbert G. Klein as communications director of the executive branch. The headline stated that, "Herb Klein Makes Good on Pledge, Opens Doors for Capital Newsmen," and in the body of the article a reporter was quoted as saying that—

Everybody knows you can appeal to Herb Klein on freedom of information.

At a time when public trust in Government is sorely needed, and when public dialog needs be reopened in all branches and at all levels of government, the fact that Herb Klein is succeeding in his mission of "getting more information out," is indeed heartening.

I ask unanimous consent to include in the RECORD the article from the Wall Street Journal.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NIXON'S MOUTHPIECE: HERB KLEIN MAKES GOOD ON PLEDGE, OPENS DOORS FOR CAPITAL NEWSMEN BUT HE SOMETIMES VERGES ON MANAGEMENT OF NEWS—WHAT IS LEFT FOR ZIEGLER? NO MORE PLEAS FOR "GOODIES"

(By John Pierson)

WASHINGTON.—Herb Klein has clout.

Not long ago, the Nixon Administration's Communications Director got a call from a reporter working on a story about "voluntarism"—President Nixon's program to enlist the help of private groups in solving social problems. The reporter hadn't been able to get in to see the man who's heading the effort, Secretary George Romney of the Department of Housing and Urban Development. Could Mr. Klein help him obtain an interview?

Mr. Klein said he would try. A couple of days later, the reporter got to see Mr. Romney.

The story, with variations, has been repeated dozens of times during the first two months of the Nixon Administration. Mr. Klein has been getting newsmen in to interview otherwise-unavailable Cabinet members. He has encouraged high officials to meet the press and to appear on TV, and claims more than 100 such encounters have taken place so far. He has needled agencies to release facts they have become accustomed to sitting on; at his prodding, the Office of Education made public a letter sent to a New Jersey school district requiring submission of a desegregation plan.

Naturally, it hasn't escaped the skeptics' notice that if Mr. Klein has clout enough to make a department head see a reporter or an agency release information, then he has clout enough to prevent press contacts and suppress facts, should he or the President ever choose to do so.

So far, however, the soft-spoken Mr. Klein seems to have been using his newly created $42,500-a-year position more to combat secrecy. While it's too soon to judge whether "truth will become the hallmark of the Nixon Administration," as he promised, he is making good on his more modest pledge "to get more information out."

Mr. Klein's ability to coax or squeeze more facts out of a reluctant bureaucracy stems in part from a long and close association with Mr. Nixon, dating back to 1946, which gives a Klein request some of the weight of a Presidential command. But this tie will count only so long as Mr. Nixon makes it clear that he, too, wants the "open Administration" Mr. Klein speaks of. According to Mr. Klein, the President is doing just that. "It's all because of the President's orders and not because of me," he says modestly.

Doubters maintain, however, that Mr. Nixon is encouraging candor not so much because he believes in it as because he wants to capitalize on public dissatisfaction with former President Johnson's secretive ways.

ROOM WITH A VIEW

An important asset in Mr. Klein's efforts is the able staff of 11 he quickly assembled. He directs it from a high-ceilinged, gold-carpeted room in the Executive Office Building just west of the White House. Over his shoulder and out the window is a picture-postcard view of the White House's north portico. A battered typewriter and a cluttered desk recall Mr. Klein's long career as a working newspaperman, culminating in the editorship of the San Diego Union. But a vase of daffodils and baby's breath bespeaks the presence of a prerequisite few reporters can boast—a secretary.

In fact, Mr. Klein has three secretaries in all. And off the reception room where they sit, strung out in five more offices, are four senior assistants, one junior assistant, one researcher and two other secretaries.

Each of the senior assistants stay in touch with several Government departments. Paul Costello, a former Boston newspaper reporter and public relations man, keeps an eye on the State, Defense, Post Office and Transportation Departments. Mrs. Virginia (Ginger) Savell, a long-time Republican aide from California, deals with the Department of Health, Education and Welfare and the Department of Housing and Urban Development as well as the Congressional leadership. Mrs. Margita White, a former aid to the GOP National Committee, handles the Treasury and Justice Departments and the Budget Bureau. Herbert Thompson, a former Associated Press reporter who was on the staff of Vice President Agnew when he was governor of Maryland, handles Mr. Agnew's press relations and stays in touch with the Commerce, Interior, Agricultural and Labor Departments.

A FULL DRESS BRIEFING

Every day, an information man in each department tells the appropriate Klein assistant about the news releases he expects to issue that day and in the days ahead. Recently, Joseph Loftus, special assistant to the Secretary of Labor for communications,

told Mr. Thompson that Secretary George Shultz was about ready to announce plans for reorganizing manpower programs. Mr. Klein raised the subject at a White House staff meeting and it was agreed that the manpower move warranted a Presidential statement and a full-dress briefing by Mr. Shultz at the White House.

In President Johnson's time, the White House didn't keep such close track of coming news releases. But it did require advance notice of all good news, no matter how trivial, in case LBJ himself wanted to put it out first. Now the departments are supposed to handle their own releases, and a man at the Department of Housing and Urban Development comments with satisfaction that Mr. Klein's office "isn't pestering us for the goodies."

Mr. Klein keeps up with things by attending meetings of the Cabinet and Urban Affairs Council. He is also on hand when Mr. Nixon meets with Republican Congressional leaders. He's regularly in touch with all the top White House staffers and sees the President "two or three times a day and then maybe not for two or three days," supplementing these meetings with phone calls and memos.

While conceding that Presidential Press Secreary Ronald Ziegler may know more about Mr. Nixon's "personal" doings, Mr. Klein says, without boastfulness, that he knows "more about what's going on in the departments than anyone else in the Executive branch." With this knowledge, he's in position to help pull together the information that goes into the big briefing book Mr. Nixon uses to prepare himself for press conferences. And Mr. Klein is in a good spot to "coordinate," as he puts it, the Administration's information activities.

Thus, when the Post Office and the Pentagon were about to announce that troops were being dispatched to unload mail from strikebound ships, he discovered that neither department had checked with the Labor Department, which was trying to settle the longshoremen's walkout. If an agreement were imminent, Mr. Klein feared, the troop announcement might upset it. A check revealed that a settlement was several days off. So the Post Office and Defense Departments went ahead with their news release.

Among other things, Mr. Klein acts as a public relations consultant to the departments. For example, he has been directing the campaign to win public and Congressional acceptance of Mr. Nixon's plan to take the politics out of postmaster appointments. He advised Postmaster General Winton Blount on the timing and substance of his press conference announcing the plan, talked to important Congressmen he knows, mailed out copies of Mr. Nixon's statement and transcripts of Mr. Blount's press conference to some 400 editorial writers, helped draft a statement for the Postmaster General to read to key postal personnel throughout the country over a special phone hookup and booked Mr. Blount on two TV news shows. More recently Mr. Klein sent editors a packet of Administration statements on the decision to build a modified antiballistic missile system.

TIPS FOR TV PERFORMERS

Mr. Klein has encouraged all Cabinet members and several other high Administration officials to go on TV, which he feels is "the best way to reach mass audiences." Those with little TV experience, such as Treasury Secretary David Kennedy, have been booked first on local shows to help them "get the feel of it." Before a Cabinet man goes on the air, Mr. Klein and Mrs. Savell brief him about political and Administration-wide matters. The nervous are encouraged to relax and laugh a bit.

Mr. Klein has also attended press conferences and steered greener Cabinet men through trouble areas. He brought a halt to a session of Mr. Blount's when one reporter asked about a touchy subject: An investigation of contract awards. But at another Blount appearance, Mr. Klein did everyone a service when he handed the Postmaster General a note suggesting clarification of a muddled response about postmaster appointments.

While some of this activity may verge on "news management" designed to make this Administration look good, there are plenty of instances where Mr. Klein has helped to get information out.

He and Presidential Counselor Arthur F. Burns persuaded other White House officials to release summaries of Mr. Nixon's first 94 directives to the departments and agencies, unheard of in the previous Administration. And Mr. Klein pushed some reluctant Cabinet men into giving the press copies of the remarks they planned to make behind closed doors at the national governors' conference.

AN ERRONEOUS "LEAK"

His office is also in a position to give a reporter a good steer. When a prominent figure "leaked" to a newsman that he expected to be named Commissioner of Internal Revenue, Mrs. White warned against using the tips. As it turned out, her information was better than the would-be appointee's; another man, Atlanta attorney Randolph W. Thrower, was appointed to the post this week.

Mr. Klien has also been acting as a sort of one-man complaint bureau for reporters—"an 'ombudsman,' if I could pronounce the word," he says. When an information officer at the Interior Department wasn't returning a reporter's calls, the reporter complained to Mr. Klein; now the official returns his calls. The Oil Import Administration refused to make public certain import-quota allocations until, at the request of a trade journal, Mr. Klein intervened.

"Everybody knows you can appeal to Herb Klein on freedom of information," says one newsman.

Part of Mr. Klein's leverage with the departments stems from the fact that the information chiefs at the Agriculture, Interior, Commerce and Health, Education and Welfare Departments have all worked for him or are friends of his. He helped recruit others. In additon to constant phone talks with the men in the departments, Mr. Klein meets with all of them every two weeks. At the first such session, he had Bruce Ladd, a former Congressman aide, speak on the Freedom of Information Act.

The relationship that still seems unclear is that of Mr. Klein and Mr. Ziegler, who holds the title of White House Press Secretary. Washington is wondering who really is the White House Press Secretary. The 29-year-old Mr. Ziegler, a former Los Angeles ad executive? Or the 50-year-old Mr. Klein, veteran journalist and confident of the President?

Mr. Ziegler has the title and an office in the White House, only a few steps from Mr. Nixon's, where he conducts twice-a-day briefings for the press. "I have the President and the White House," he says in a voice as crisp as his starched white shirt: "Herb makes information available throughout the Executive branch, which obviously relates to the White House."

But Mr. Klein has been performing some functions that traditionally belonged to the Press Secretary. He has been setting up some of the interviews and handling some of the press briefings given by Counselor Burns, urban affairs adviser Daniel P. Moynihan, economic adviser Paul McCracken and other White House staffers. He and his assistants have helped write many White House press releases. One visitor to Mr. Klein's office reports that their conversation was interrupted again and again by calls from Mr. Ziegler asking advice.

On the other hand, one newsman, noting that Mr. Klein inhabits an office outside the White House, contends that the Director of Communications is "only on the fringes of things." This reporter adds: "You're nobody in the press area unless you're the Press Secretary. Only he has the visibility, the ear of the President and the authority in Government."

This raises the question of whether Mr. Klein will, in the long run, be able to maintain his effectiveness—his clout—and thus keep the Nixon Administration as open as it seems to be now.

As time goes by, the departments' information staffs are sure to shape up, and Cabinet men may be calling less on Mr. Klein for help. Furthermore, his appointees in the departments are bound to develop their own relationships with their bosses and new departmental loyalties that could conflict with Mr. Klein's Administration-wide view.

The most crucial question, however, is not how long Mr. Klein can keep Government information flowing out freely but how long Mr. Nixon will. It may be easier to be candid with press and public now than during the rougher times that surely lie ahead.

"They're all great for telling it like it is, as long as it makes them look good," says one reporter. "But the first leak that hurts them . . . that's the end of the open Administration."

THE GOLDEN SPIKE CENTENNIAL CELEBRATION

Mr. JACKSON. Mr. President, the Golden Spike Centennial Celebration is only 7 weeks away. On May 10, at Promontory, in the State of Utah, the Nation will commemorate the one hundredth anniversary of the linking of the United States from sea to sea by transcontinental railroad.

I am hopeful that many Members of this body will be able to attend this important historical event. It offers us an opportunity not only to commemorate the leadership and vision which produced the railroad and the endurance of the men who laid the rails, but gives us a time and a place also to pay tribute to the modern railroad industry, and to the men and women who are a part of it.

The ceremonies at Promontory Point will be filled with drama and pageantry. The events of May 10, 1869, will be faithfully reenacted. Replicas of the Central Pacific's Jupiter and the Union Pacific's No. 119 will clank their snouts together, as they did 100 years ago, and the original golden spike will again be driven into a laurel railroad tie. At precisely 1:47 p.m., a telegraph key, hopefully the original one, will click out three dots, representing the hammer blows, and the message "done" will be sent over the wire as it was to President Grant and a waiting nation 100 years ago.

During the course of the ceremonies, the National Park Service will dedicate the visitor's center museum at the Golden Spike National Historical Site, and a number of other commemorative events will take place.

I think it appropriate to point out that the breadth and scope of the planning for the Golden Spike Centennial, and much of the success I am sure the day will have, is due to legislation introduced by the distinguished Senator from Utah (Mr. Moss) and enacted by Congress.

The bill which established the expanded Golden Spike Historical Site (S. 26) was introduced by Senator Moss in the first session of the 89th Congress, reported favorably by the Committee on Interior and Insular Affairs, and became public law on July 12, 1965. This has made possible the development of the site by the National Park Service.

The joint resolution which established the Golden Spike Centennial Celebration Commission, Senate Joint Resolution 10, which has planned the celebration in cooperation with the Utah Centennial Commission, with the railroad industry and with other groups throughout the country, was introduced by Senator Moss in the first session of the 90th Congress, and became public law on August 7, 1967. He has served as the Commission's vice chairman.

And finally, the bill which provided for the striking of the Golden Spike Centennial Medal (S. 1909), the sale of which is financing the celebration to a large extent, was introduced by Senator Moss in the 90th Congress and became public law in May of 1968. Therefore, much of the credit for what is happening should and must go to Senator Moss.

Mr. President, the driving of the golden spike 100 years ago was not only an event of national importance, but it was a turning point in our history. It marked the end of one era and the beginning of another one. It should be roundly and brilliantly celebrated in this, its centennial year, and I am confident it will be.

THE SAFEGUARD ABM SYSTEM

Mr. BAKER. Mr. President, I have spoken out many times in favor of the concept of a limited antimissile defense. I am, of course, extremely pleased and encouraged by the President's decision to deploy the phased Safeguard system.

The editorial reaction of the Nation's press has, by and large, been favorable to the modified system. I myself am confident that a large majority of the American people favor the President's decision. I ask unanimous consent that an editorial from the Memphis Commercial Appeal appearing on March 23, 1969, be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHO IS RIGHT ON ABM?

Now that the debate over the antiballistic missile proposal has been aired before both the Armed Services Committee and the Foreign Relations Committee of the Senate, Congress must decide what is the best course for the nation.

What Congress must decide really is who is right.

What if Defense Secretary Melvin Laird is wrong in his assessment of the potential of the threat posed by the Soviet Union's missile capability or the possibility of Communist China acquiring some potential in this field and using it irresponsibly? Then United States taxpayers are being asked to spend a tremendous amount of money without real security or perhaps wastefully.

The concern that he might be wrong was heightened by the hypothesis posed by Senator Albert Gore (D-Tenn.). He wants to know why the ABM interceptors are necessary if to use them the United States must have a detection system that will inform the military that a nuclear missile is headed toward this country. He suggests that if an incoming missile can be detected, our own retaliatory attack can be fired before it is destroyed.

But what if Laird is right? Tensions between the United States and the Soviet Union have been reduced recently. But past experience teaches that there is no assurance that reasonableness is a constant thing in the Kremlin. There is still a strong belief that the militarists in Moscow are striving for a harder policy and that there might even be a return to a sort of Stalinism there. If such a regime should move into power and holds a substantial first-strike capability, would it be tempted to use it against the United States? Relations with Communist China are even more uncertain than those with the Soviet Union and the instability of the Peking government is even greater than that of the Kremlin.

And what of the other side of the Gore argument? What does it gain us if we fail to intercept an enemy missile and fire our retaliatory missiles before they are destroyed? Is mutual obliteration the objective? Or, worse still, what if the enemy missiles wipe out a large part of the United States and the retaliatory missiles fail to accomplish the same purpose on the enemy because it has an effective ABM system?

It would appear the wisest course is one of prudence.

The proposal at present is for a limited ABM system to protect certain of our nation's retaliatory missile sites from destruction.

If that is the honest intention of the administration, then it would seem reasonable as a sort of insurance policy for national defense. It would be no guarantee against severe damage by an irresponsible foreign power intent upon inflicting such damage. It would, however, serve as a deterrent to even an irresponsible government on the ground that it would increase the likelihood that the aggressor would also suffer severe damage.

Whether that sort of knowledge would be sufficient to eliminate the threat it is impossible for anyone to say at this time.

Under the circumstances, prudence would seem to dictate a policy of limited action which will be kept under constant review for adjustment upward or downward as later knowledge and events dictate. Such a limited defensive measure would have the added advantage, as Secretary Laird has already noted, of giving the United States some bargaining power when it begins discussions with the Soviet Union on disarment. Such disarmament remains the true ultimate objective of this nation.

WASTE IN DEFENSE SPENDING

Mr. HART. Mr. President, I invite attention to an article written by the able Knight newspaper correspondent, Saul Friedman, regarding waste in defense spending.

We are all well aware that military spending does not receive the same scrutiny that is lavished on domestic spending.

There seems to be, in fact, an entirely different set of rules regarding defense spending as opposed to HEW or HUD, for example—with the latter two budgets provoking serious cost questions.

Is it illogical that we should study more closely waste in a department which annually spends 41 percent of our national budget?

Mr. Friedman's article paints a vivid picture.

He points out, for example, that $9 billion was spent on 66 projects before they were scrapped as unnecessary.

What kind of scrutiny went into congressional consideration of these proposals?

He cites the millions poured into development of two atomic airplanes—one Air Force and one Navy—which were abandoned last year.

How carefully did we look at these proposals?

And more millions spent on missile systems, likewise down the drain as obsolete.

Far less costly mismanagement practices by any other agency would immediately bring a cry of outrage from this body.

Why then are we silent over Pentagon waste of over $10 billion.

It seems to me that it is high time we stop okaying these kinds of gigantic military expenditures without first giving Pentagon proposals more than a passing glance.

I ask unanimous consent that Mr. Friedman's article, published in the Miami, Fla., Herald, be printed in the RECORD.

I have no doubt, given the subject matter, that great effort was involved on Mr. Friedman's part. The country is fortunate to have his report.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SPENT ON MILITARY "WHITE ELEPHANTS"—HOW PENTAGON WASTED OVER $10 BILLION

(By Saul Friedman)

WASHINGTON.—Like a herd of white elephants, military projects which cost more than $10.5 billion during the last 15 years are now acknowledged by the Pentagon to be worthless.

And there is considerable doubt among some arms experts about the necessity of other weapons systems now in use, which cost billions more.

Pentagon supporters have always argued that waste and built-in obsolescence are inevitable in the arms field. It's the price the nation must pay to remain secure against threat.

But for the first time since the Pentagon became almost untouchable, this assertion is being widely challenged. It has become central to the debate over the anti-ballistic missile (ABM).

Sen. William Proxmire (D., Wis.) said in a Senate speech, recently: "The President and the Congress and, indeed, the country have lost control over military spending . . . we are paying far too much for the military hardware we buy . . . We often do not get the weapons and products we pay the excessive prices for . . . Weapons systems routinely do not meet the contract standards and specifications . . .

"After World War II . . . nothing was too good for the military. We have followed a policy of 'gold plating' . . . The military has had a blank check . . . The result is a system not unlike the medieval knight who was so encased in armor that he was unable to move . . . the day of the blank check for military spending must end."

SYMINGTON HITS WASTE

The Pentagon could have expected criticism from Proxmire. He is one of its old antagonists.

But a few days earlier, one of the defense department's best supporters, Sen. Stuart Symington (D., Mo.), a former Air Force

secretary, told the Senate: "Many billions of dollars have been expended on major missile systems that were never even placed into production; that is, were abandoned as obsolete or unworkable before the development work on them had been completed."

What's more, Symington said, "Over $15 billion of taxpayers' money has been invested in missile systems once produced and deployed but now abandoned, in many cases because in due course it was found they did not work."

Last Nov. 1, Sen. Richard B. Russell (D., Ga.), the most powerful friend the military has in Congress, made a rather significant admission during a speech on the ABM.

"One of the most serious mistakes I ever made (as a member of the defense appropriations subcommittee) was in allotting vast sums to the Navy for missile frigates before we knew we had a missile that would work on them," Russell said.

None of three missiles the Navy tried—the Tartar, the Talos and the Terrier—worked well.

"I made a mistake," Russell added. "It was an honest mistake . . . it probably cost the taxpayers $1 billion."

FEW PROTESTS

If someone in the Senate found a $100,000 mistake in the poverty program, it would probably have raised a cry for someone's head.

But there wasn't a peep of protest about the billion dollar mistake because in this age of rapidly advancing technology and hot competition for military contracts, such mistakes have become common at the Pentagon.

Indeed, despite assurances from the Pentagon, and three costly attempts to fix them, Talos, Terrier and Tartar still do not measure up to specifications, a source said.

There are two breeds of white elephants which have come thundering out of the Pentagon since its military budgets became huge during the Korean War.

The first are those projects, which after being highly touted by the military, its friends in Congress and industry, were cancelled at some stage in their development because they were unnecessary or did not work as they should.

The second are those weapons systems which go on and on, continuing to cost millions, although they have outlived their usefulness.

After several requests, the Pentagon has made available a list of "major projects terminated during the past 15 years." The list is not generally circulated and is typed on plain white paper without the usual Pentagon letterhead.

SEVEN NOW WORTHLESS

According to the list, more than $9 billion was spent on 66 projects before they were abandoned as unnecessary, unworkable, or useless. Among them were 19 different aircraft projects and 28 different missile systems.

In 1965, then secretary of Defense Robert S. McNamara made a similar list available to a closed hearing of the Senate Appropriations Committee. It included 59 projects which had cost about $6.8 billion. This means that, by Pentagon figures, seven projects costing more than $2 billion have been deemed worthless in the past three years or so.

The Pentagon figures, however, are not complete. The cost of several projects was apparently underestimated. For example, the amount spent on Dyna-Soar (an airplane reentry vehicle) was given as $405 million. McNamara has testified Dyna-Soar cost more than $800 million before it was dropped.

Nor does the list include about $500 million spent by the Atomic Energy Commission for nuclear materials on the ill-fated atomic airplane, or more than $600 million for the Navy version of the TFX—the F–111B, which was abandoned last year.

Therefore, not including considerable, but secret AEC costs for nuclear warheads on missile projects which were cancelled, a conservative estimate of the programs abandoned during the last 15 years is $10,533,700,000.

EXOTIC NAMES, EXOTIC PRICES

The missile systems were named after gods, birds, a mythical animal out of Alice in Wonderland, and a Greek philosopher who prized love and beauty. The prices for these mistakes were equally exotic.

Among the ten Air Force missile projects cancelled were: Navaho, which cost $670 million; Snark, $677.4 million; Rascal, $448 million; the land based Talos, $118 million; and the mobile Minuteman, $108.4 million. None cost less than $65 million.

The dozen cancelled Navy missiles, which ranged in cost from $12.5 million to $225 million, included: Sparrow I and Sparrow II, Regulus II, Petrel, Corvus, Eagle, Meteor, Rigel, Dove, Triton, Oriole, and Typhon.

The Army, which for years has been battling the Air Force and Navy for missiles it can call its own, had six of its project cancelled after nearly $400 million was spent. The missiles were called Hermes, Dart, Loki, Terrier, Mauler, and Plato.

The Pentagon list also included tanks, trucks, an atomic mortar, and several electronics systems. It did not include cancellations and mistakes on small arms, ammunition, and bases.

Conversations with arms experts and sources on armed services committee staffs disclose other projects which have been quietly cancelled or allowed to become dormant.

BOMBER BLOOPER COST $3 BILLION

The Air Force, for example, spent about $300 million on a communications satellite called ADVENT before the project was given to the National Aeronautics and Space Administration and a public corporation.

Scores of millions were also spent on atomic artillery, from bazookas and recoilless rifles to cannons. Originally deployed in Europe, sources say, they are now considered too vulnerable and have been pulled away from lines of defense.

The most expensive white elephant on the Pentagon list was the B–70 bomber, cancelled in 1967 over objections in Congress and among the Joint Chiefs of Staff. The Defense Department says $1.5 billion was spent on the project, but a member of the House Armed Services Committee says $3 billion would be more accurate.

For that price two prototype bombers were built. One crashed while posing for publicity pictures aimed at keeping the project going. The other one has been taken to an air museum in Ohio, where it will become an artifact more expensive than the Great Pyramid.

The other breed of white elephants—weapons systems which persist beyond their need—is more difficult to find. They are covered by a background overgrowth of technology, Pentagon claims, industry propaganda, cold war fears, and secrecy.

A major example is the nation's anti-aircraft defense system, which over the years has cost upwards of $30 billion. And each year costs more than $2 billion to operate and maintain. Congressional Quarterly and a former Pentagon official have suggested this annual expense could be dispensed with.

ICBM REPLACED BOMBER DEFENSE

The bomber defense system consists of a complex radar detection system called Semi-automatic Ground Environment (SAGE), and two types of missiles—Bomarc, and Nike-Hercules. SAGE has already cost $18 billion, and each year about $1 billion more is spent paying for improving and extending it. The missiles have cost at least $12 billion, not counting the price of the war heads (about $500,000 each). Each year more than $850 million is spent to maintain and improve the missiles.

The nation began deploying its bomber defense system shortly after the Second World War to counter a Soviet bomber threat. But beginning in 1957, when the Soviets launched their first Sputnik, American intelligence and arms experts informed Congress and the Pentagon that the intercontinental ballistic missile (ICBM) was the threat for the future.

The U.S. began building ICBMs, but because the Soviets still had a big bomber fleet, deployment of anti-aircraft missiles continued. American intelligence has apparently proved correct, and as the Soviet ICBM force has grown, the bomber threat has declined.

By 1961, a former staff member of the House Armed Services Committee said, it had become evident that a Soviet attack would probably come with missiles, not bombers. Like McNamara and his "which kids," the Russians had learned that bombers were too slow, too vulnerable, and unnecessary for the destruction of an enemy.

Nevertheless, beginning that year the Army armed its anti-aircraft missiles with expensive nuclear warheads. Since then, aside from the closing of 25 Nike-Hercules sites last year, the anti-aircraft system has continued to grow to almost the same degree that the bomber threat has declined. Several experts, including former White House science advisor Jerome Wiesner, question whether it would have worked.

PRESTIGE RIVALRY AMONG SERVICES

Once a weapons system is entrenched, said Rep. Lucian Nedzi, a member of the House Armed Services Committee, it can be dislodged only by the President or his secretary of defense, and then usually only in exchange for newer, more exotic systems. Congress, overwhelmed by political pressure and Pentagon jargons, is helpless, he said.

Inter-service rivalry for prestige, congressmen and senators with installations and defense manufacturers in their districts, local chambers of commerce, and a new breed of traveling drummers called "strategic systems salesmen" (they are called the "SSS" by the Pentagon wags) all combine to put pressure on the Pentagon and Congress to keep old weapons systems and buy new ones.

There is, of course, one other pressure—the fear of the Soviet Union and international communism. This enables Pentagon supporters to argue, as does Chairman L. Mendel Rivers (D., S.C.), of the House Armed Services Committee: "I think the American people will always be willing to pay the price for having too much defense, rather than risk the inestimable cost of having too little."

With these pressures built into the weapons buying system, industry's salesmen and lobbyists (often former officers), and their scientists bring their ideas to the Pentagon, Dr. Foster once testified backed by rationales supplied for a price by consultants.

"We see threats on the horizon, possible threats, usually not something the enemy has done, but something we have thought ourselves he might do," Foster said, explaining how weapons are conceived.

Roback and other experts on military procurement acknowledge that many weapons become obsolete soon after, or even before, they are deployed.

BUILD BECAUSE OF THE THREAT

But Roback maintains this is inherent in the burgeoning technology of arms.

"Everything you build is going to be obsolete sooner or later, but you build it because of a threat or a possible threat," Roback said.

Against this argument, critical observers of the Pentagon like physicist Ralph Lapp, a worker on the first atom bomb project and former assistant director of the Argonne National Laboratory, said it is not necessary

to overreact to every Soviet threat, real or imagined, or every technological gimmick.

"Quick, major breakthroughs which would give one side or the other a major advantage are no longer possible," Lapp said. "Therefore we should continue research and development, and spend even more on it. But we don't need to take the candy store approach to buying and deploying weapons—'Gimme some of these and some of those.'"

Unless the new offensive being mounted against the Pentagon forces a change in defense procurement policies, the Brookings Institution forecasts a new round of multi-billion dollar weapons systems.

The Minuteman ICBMs are to be modernized and replaced by newer versions at an estimated cost of $4.6 billion; Polaris submarines are to be converted to carry Poseidon missiles at a cost of $2.5 billion; four nuclear powered aircraft carriers are to be built for at least $2.16 billion; and further in the future Pentagon planners see new manned bombers able to hurl missiles at an enemy, a manned orbiting laboratory, and more multi-warhead missiles.

Not even their strongest proponents can say with certainty that some or all of them won't be the white elephants of the future.

BYELORUSSIAN INDEPENDENCE DAY

Mr. JAVITS. Mr. President, today marks the 51st anniversary of Byelorussian independence—an anniversary of great importance for American citizens of Byelorussian descent. They are a loyal group who have been doing everything they can to protest Soviet oppression, and to regain freedom in Byelorussia.

On March 25, 1918, the freedom-loving Byelorussian people proclaimed their sovereignty and established the Byelorussian Democratic Republic with its capital in the historic city of Minsk. However, this freedom was enjoyed for a short time only, for despite all of the sacrifices made by its people the young Byelorussian state was unable to preserve its independence against the onslaught of Soviet Communist forces which overran the country early in 1921.

Since that brutal takeover many millions of Byelorussians have been forced to live under the oppressive Soviet totalitarian regime. But the flame of freedom continues to burn brightly in the hearts of these captive people, in spite of harsh restrictions, deportations, imprisonment, and other repressive measures, and because their hope for independence is still strong, it is extremely important that the United States keep alive this hope of freedom. My respect for the self-determination of the Byelorussian people is well known, and I take this opportunity to reaffirm my support of efforts on their behalf and on behalf of the freedom of all the peoples of the captive nations.

SCHOOL DESEGREGATION: WE MUST RESTORE MOMENTUM AND CREDIBILITY

Mr. WILLIAMS of New Jersey. Mr. President, if we are stop the terrible drift toward separate white and black societies, chronicled in the Kerner Commission report, we have no more effective instrument than our public schools. If we can start there to teach youngsters of different races to live and work together, then we have a chance of avoiding a national catastrophe. The schools are crucial to any solution of our domestic crisis. Those of us who make the laws must make it absolutely clear that the elimination of dual school systems in both the North and South is essential to any effort to bring us together into one harmonious society.

That is the intention of Congress, and the courts have upheld that intention. It is tragic that the administration has not yet told us, unequivocally, that it, too, wants to end racially segregated schools. As of this moment many of the statements coming from the Department of Health, Education, and Welfare have been ambiguous, to say the least. We now face new threats to the enforcement of the Civil Rights Act of 1964, particularly title VI, in which we authorized the Department to cut off Federal funds to any school district that refuses to desegregate.

Scarcely a day passes that we do not get fresh evidence of this vacillation. Others have already inserted much of the earlier evidence in the RECORD. The Washington Post for March 23, in the latest story of this kind, reports that there is presently a memorandum before HEW Secretary Robert H. Finch from his future General Counsel suggesting that the school desegregation guidelines should not be rewritten—they should, instead, be "quietly bent."

I hope Secretary Finch will announce publicly that he has no intention of taking this advice. He has already stated in a reply he made to the late Ralph McGill that he will "not turn back the clock" on desegregation. Last week he gave similar assurances to leaders of the leadership conference on civil rights, the coalition of national civil rights, labor, religious, and civic groups who have coordinated so many national campaigns in support of major civil rights and social welfare legislation.

He told the officials of this group that he intends to enforce the law and that the guidelines will not be rewritten. He told them, too, that the fall of 1969 is still the target deadline for the submittal of school desegregation plans. But that is not enough. He must tell all of us. He and the President must tell the Nation that they are committed to an unbending enforcement of the law as enacted by Congress and upheld by the Supreme Court. Silence allows doubt to grow among those of us who want to see this country fulfill its promise of full equality in an integrated society. Silence allows hope to grow in the hearts of those who cling to the injustices of the past.

I wish Secretary Finch would heed the advice of a former HEW official who had much to do with developing the desegregation guidelines and trying to get them observed—Peter Libassi, who formerly directed HEW's Office of Civil Rights and is now a vice president of the Urban Coalition. In a speech he gave to the 21st annual conference of the National Civil Liberties Clearing House on Friday, March 21, he made these observations:

The system of enforcement must be fair and built solidly on the law. The rights of school officials must be protected. Once HEW policy is based on what the law is, there must be no retreat. That policy is quite simple: "If a school district violates the Constitution it should not get Federal funds."

Once you build an internal system of enforcement that works, "leave it alone." Let it operate. Once the staff is trained and the quasi-judicial system of examiners and review boards set up, let it do its work. Do not pull cases up for special consideration. If you do that, you break the momentum of enforcement and hurt your credibility. And the whole object of your enforcement effort is to increase the momentum of desegregation and to establish your credibility with the district officials.

You must mean what you say. You must not threaten or bully. You can speak softly, but you must explain the consequences of violation and you must follow through. He said:

It is difficult to build up momentum and credibility but easy to destroy them.

While it is tragically true that more Negro children go to segregated schools than attended them at the time of the Supreme Court decision of 1954, that is a result of population growth. At present, half a million black children are in integrated schools. Twenty-five percent of the black children in the South have escaped the dual school system.

Mr. President, we see that momentum failing today and the credibility of HEW undermined through hesitation and lack of clarity. School districts that were ready to comply with the law are now drawing back. In South Carolina, for instance, 11 out of 33 districts that had submitted acceptable plans for desegregation have now notified HEW that they either want to withdraw those plans or implement them over a longer period of time than they originally agreed to.

Secretary Finch and those who now assume the obligation of enforcement must recognize the crisis they are helping to create. They must speak out now or we shall see an even greater loss of momentum—a loss of credibility that strikes despair into the hearts of parents who want to see an end to segregation. We will be one society and one people, or we shall fail as a society. Secretary Finch must acknowledge this in what he says and in what he does. I do not question his honesty nor the sincerity of his intentions. But I am sure he does not want to carry on his conscience the awful burden of entering history as the man who destroyed the effort to integrate our schools. He owes it to the Nation to say he will enforce the law and to ask our help in carrying out his task.

ELECTORAL COLLEGE—A CLEAR AND PRESENT DANGER

Mr. BAYH. Mr. President, I ask unanimous consent to have printed at the conclusion of my remarks a series of outstanding articles and editorials published by the McClatchy newspapers of California. The series deals with our archaic electoral college system and is aptly entitled "The Counterfeit Ballot," because, in truth, the American people do not elect the President. Furthermore, it is possible under the electoral college system that a popular vote winner can, through the mysterious arithmetic of

the electoral vote, be transformed into an electoral loser. As Reporter Martin Smith so vividly pointed out, "The Counterfeit Ballot could result in the selection of a brand X candidate."

Mr. President, I ask unanimous consent to also have printed at the appropriate place in my remarks a column on the dilemma of electoral reform by the distinguished Washington Post writer, Merlo Pusey. Mr. Pusey asks the pointed question: "Is the old wreck worth patching up?" I was pleased to see this outstanding constitutional scholar conclude that it would be "better to work a little harder a little longer for a new model that is sound in every particular before resigning ourselves to costly repairs to an obsolete mechanism that would never be satisfactory." In short, Mr. Pusey believes that we should elect our Presidents as we do all of our other public officials—by direct popular vote.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

THE COUNTERFEIT BALLOT

"NOTHING BUT THE BEST" IS NEEDED IN REFORMING ELECTORAL COLLEGE

US Sen. Birch Bayh, D-Ind., chairman of the Senate constitutional amendments subcommittee, made one of the best remarks about proposals to junk the antiquated Electoral College and replace it with a method more responsive to the public wishes. At the opening of hearings on the subject in Washington, DC, he told his subcommittee:

"Nothing short of the best method will suffice. What is at stake here is the vitality of our political institutions and their responsiveness to the needs of the American people. I strongly believe that direct popular election is the best electoral system with no ifs, ands or buts."

The movement toward reform of the Eelectoral College system began many years ago. Attempts at improvement often were beaten before they were sponsored by an intransigent leadership in Congress which was leery about giving the general public a more say-so in the selection of the president and vice president.

The ground swell favoring change has bubbled up with more force than ever and, therefore, this session of Congress may finally produce results. Vox populi vox Dei (the voice of the people is the voice of God.)

The series of articles in The Bee entitled "The Counterfeit Ballot," written by Martin Smith, Bee state Capitol staff writer, demonstrates the voice of the public is demanding action. This may be the year it will be heard. It should be, for it is a work postponed for too many generations.

The series zeroed in on the situation which almost developed in the 1968 election, which was viewed with horror by millions of television watchers. During the counting of the ballot, the outcome was indecisive and there were all sorts of speculations about the possible consequences. There were fears there would be no majority vote winner and the selection of the president would go to the House of Representatives. It was suspected the House would become deadlocked and subjected to the blackmail tactics of the George Wallace-types.

"The United States," Smith reported, "had teetered briefly on the brink of disastrous governmental instability, then veered back safely for another four years."

This happens every four years because American voters do not elect their presidents. The voters only choose members of the Electoral College who, in turn, choose the presidents and vice presidents according to their will.

If, regardless of how many popular votes a candidate might have, neither he nor any other has an Electoral College majority, the choice of the president is left up to the House of Representatives—where the politicking would be intense.

In the House the individual members do not not cast direct ballots either—each state has one vote regardless of population.

This ridiculous situation has been tolerated too long.

It should be changed before the next general election.

President Richard M. Nixon, perhaps more than any other man, holds the key to reform. US Sen. James O. Eastland, D-Miss., chairman of the Senate Judiciary Committee, said if the President pushes electoral reform, reform will be forthcoming. In Nixon be it said: "Yours is the leadership."

PUBLIC WANTS POPULAR PRESIDENTIAL VOTE, NOT WINDOW DRESSING "REFORM"

The process of reform of such magnitude as the proposed abolishment of the Electoral College is time consuming and arduous. It requires persistent public pressure to make sure it does not become bogged down in the semantics of special interest pleadings.

That the public wants its representatives in Congress to act is clear. Almost every major survey of citizen sentiment shows the choice is for a popular election of the president and vice president without any in-betweens. The voters do not want their senators and representatives to dream up some fancy window-dressing replacement for the Electoral College in the false name of "reform." They want to have their votes cast directly for those they prefer to lead the country. They want each vote to count equally.

The recent series of articles in The Bee, entitled "The Counterfeit Ballot" and prepared by Martin Smith, Bee Capitol staff writer, pointed out national polls in 1948 and again in 1960 showed the public—by a healthy 2–1 margin—wanted the Electoral College eliminated.

And instead of dwindling, the percentage climbed dramatically higher by 1968. A Harris Survey last November showed an overwhelming 79 per cent of those polled favored direct election of presidents and vice presidents and only 11 per cent opposed elimination of the Electoral College.

So great is this expression of the public's will the Congress should be quick to respond. After all, the Congress acts for the people and if the people want the government to be brought closer to home, to the grass roots as it were, then the congressmen should be most anxious to fulfill the people's request.

Perhaps one of the reasons the Congress has not acted before this is the public apathy which developed between presidential elections. But this time the public is more aroused than ever before. The anxious hours of election night last November which were shared by millions of viewers of television made more people aware of the dangers inherent in the present system.

The politicians no longer can ignore the public on this issue.

In this dangerous age of instant conflict which can embroil the nation in situations of frightful consequences, the nation cannot afford a moment without positive leadership. The possibility of having an "acting president" or one who has been previously rejected by a majority of the popular vote is too perilous to be tolerated.

Before a national popular presidential election can be established, both houses of Congress would have to approve by a two-thirds vote a constitutional amendment which would then have to be ratified by three-fourths of the 50 states. This task is so great the machinery should be placed in motion as soon as possible.

The Congress should start the wheels moving and the public should make sure they keep on turning so the presidential election of 1972 will be in truth a reflection of the will of the public.

NIXON IS THE ONE TO LEAD VOTE REFORM

A new administration, even one elected by a narrow margin, has advantages not enjoyed by the old in its first months in office. It can ride the buoyant winds of change, progress and reform with equanimity, assured of the chance of success where failure ruled before. The direction of change depends upon the head of the new regime. He sets the course; he establishes the leadership; he determines the emphasis.

President Richard M. Nixon almost exclusively holds the key to the problem of meeting the public demand for its rightful desire to have a direct voice in electing presidents and vice presidents. He and his advisers must be aware of the people's wish for a direct popular national vote. Nixon should convert that wish into reality by urging that Congress also hear the public's outcry.

Millions of people go to the polls every four years thinking they are casting their votes for the candidates of their choice. But this "sacred franchise" is not so divine after all because the voters, in fact, do not choose the winners among the various party nominees. Their votes go to "electors" who meet later to pick the president and vice president. No law binds the electors of the Electoral College to vote for the persons who were picked by the majority of the voters. They can vote for any person they want based on their own personal wishes. Over the years, several have done this, thwarting the will of the public.

Several years ago the American Bar Association, through a special commission on Electoral College reform, declared while there may be no "perfect way" to elect a president, the direct, nationwide vote is the best of all possible alternatives. The bar commission termed the present system "archaic, undemocratic, complex, ambiguous, indirect and dangerous."

There is no need to perpetuate this ludicrous situation.

The people have spoken—they want a national popular primary with a national popular runoff election. Many responsible organizations, including the bar association, the United States Chamber of Commerce and organized labor, want the Electoral College junked.

Countless measures have been introduced in Congress session after session seeking reform. The McClatchy newspapers for decades have advocated the simplest, most representative way to give every voter the fullest voice in his government is to give him the direct ballot. Anything short of the direct ballot is a fraud. The recent series of articles published by the McClatchy newspapers documented the shortcomings of the present method in "The Counterfeit Ballot."

All this leads to the present. Congress, knowing the people's wants, and the new administration, having the opportunity to enunciate, finally could institute elimination of the Electoral College and establishment of the direct popular vote.

There certainly is no need to wait any longer. There is no reason to provide a "substitute" for the Electoral College, or a modification which would act to continue this "iron curtain" which divides the people from the presidency.

ACTING PRESIDENT WAS CHANCE UNDER ARCHAIC VOTING SYSTEM

(By Martin Smith)

It all sounded so strange that election night. The voting trend was indecisive, and the choice of the president might be left to the House of Representatives under the archaic constitutional procedures established nearly two centuries ago.

A deadlock in the House appeared to be a real possibility. The television pundits were talking of the chance an acting president might be necessary to take over the reins of

government if the House could not reach a decision by Jan. 20.

An acting president? It sounded as if they were talking about a Central American banana republic, not about the United States.

But they were.

VOTERS DECIDED

It did not turn out that way, of course. Hubert H. Humphrey ran more strongly than expected, but George Wallace ran weaker and Richard M. Nixon won a majority of the Electoral College votes.

Once more, in the view of those who for decades have been warning that the nation's presidential election system is in need of basic revisions, the United States had teetered briefly on the brink of disastrous governmental instability, then veered back safely for another four years.

It is a drama occurring in one form or another every four years because—and this needs repeating—American voters do not elect their presidents. The voters only choose members of the Electoral College, who, in turn, choose the presidents and vice presidents.

TROUBLE ARISES

It is a system which only worked, more or less, the way it was supposed to in the first two elections in which it was employed. The third time around, in 1796, the system began to cause trouble.

Individual electors are expected to vote for the candidate on whose slate they ran, but they do not have to do so. Dr. Lloyd W. Bailey of North Carolina proved that again last month.

He was one of the 538 individuals—members of the Electoral College—who decided who should be the president of the United States for the term starting tomorrow. Bailey is a John Bircher, which is his privilege, and although he supposedly was elected by North Carolinians to vote for Richard M. Nixon for president, he instead cast his vote in the Electoral College for George Wallace. As events turned out, that was Bailey's privilege, too.

SECOND, THIRD CHOICE

The system, coupled with an undemocratic, boss-controlled method of selecting party candidates, makes possible the election of a president who actually may be the second—or third—choice of most American voters.

United States Sen. Birch Bayh, D-Indiana, called this year's election another "brush with catastrophe."

The potential horrors of the present system long have been known. Sometimes the horrors have come to pass.

Three times in the 19th century—in 1824, in 1876 and in 1888—a candidate has captured fewer popular votes than an opponent but still has gone on to become president.

CLOSE CALLS

So far this has not occurred in the present century, but there have been three close calls—in 1948, in 1960 and again last year.

If, regardless of how many popular votes a candidate might have, neither he nor any opponent has an Electoral College majority, the choice of a president is left up to the House of Representatives, where the politicking for support would be intense.

A deadlock in the House always would be a possibility. Congressmen, when called on to elect a president, do not vote as individuals. Instead, each state is accorded one vote—no matter what its population is.

ONE VERSUS THIRTY-EIGHT

Nevada's single congressman would decide how his state's one vote for president would be cast, while California's 38 congressmen would decide whom their state's one vote would support.

In the opinion of many political scientists and also many hardheaded practical politicians, the worst possibility is that a cloud would hang over the head of some future president who won the office under what were regarded as dubious circumstances.

Stanford University political science Prof. Ray Wolfinger has warned that, under these circumstances, considerable numbers of the population "might feel freer to disobey the law."

OMINOUS TALK

It is ominous talk. But it is based upon real dangers.

An acting president? A president regarded by most Americans as a usurper?

It could happen because of the Electoral College.

ELECTORAL COLLEGE SYSTEM FALTERED IN 3RD ELECTION

(By Martin Smith)

The founding fathers offered an attractive rationale for the Electoral College system of selecting presidents.

Although the system simply was the result of a political compromise, the framers of the Constitution argued it offered a positive good. The system, as they saw it, would permit the very best men in the nation to sit down every four years and calmly, without rancor and partisan considerations, decide who would make the best president.

This vision quickly proved to be a mirage.

The founding fathers themselves promoted the development of political partisanship. The presidential electors were regarded as faceless individuals. They were unnecessary and sometimes troublesome middlemen in the process by which presidents were selected.

UNEXPECTED VOTE

In 1796 one of the Pennsylvania electors voted for Thomas Jefferson for president when everyone thought he had been committed to vote for John Adams. An angry Federalist politician wrote:

"What, do I chuse Samuel Miles to determine for me whether John Adams or Thomas Jefferson shall be president? No! I chuse him to act, not to think."

Other individual electors occasionally have broken their faith by thinking.

The most recent was Dr. Lloyd W. Bailey of Rocky Mount, N.C., who, although he was elected as part of Richard M. Nixon's slate of electors, chose instead to cast his vote for George Wallace for president

One elector broke loose from Harry S. Truman's Tennessee slate of electors in 1948. Adlai Stevenson lost one of his Alabama electors in 1956.

AMBITIOUS SCHEME

The most ambitious renegade was an Oklahoman who had been elected in 1960 to cast his Electoral College ballot for Nixon. Instead, the elector promoted an unsuccessful project to persuade other electors to desert Nixon and John F. Kennedy and support instead, a strong conservative for the presidency.

His scheme simply was a variation of attempts by Southern conservatives since World War II to force the election into the House of Representatives where Alabama's voice would count every bit as much as New York's.

Strom Thurmond ran for president in 1948 in the hope the election would go to the house where a major party candidate then might have to bow to dictates from Dixie on race questions.

Thurmond failed, as did George Wallace who ran last year with more or less the same idea.

But Wallace's movement remains as a threat to the two-party system which most political scientists think has been a mainstay of political stability in an increasingly troubled nation.

Soon after Wallace announced his presidential candidacy last year, a Democratic congressman called for modifications of the Electoral College system to provide for a runoff election if no one candidate received a majority of the electors.

But it was a Republican, U.S. Rep. Clark MacGregor of Minnesota who called for abolishing the Electoral College and replacing it with a popular vote.

"The Wallace candidacy is a cynical attempt to capitalize upon the vagaries of our presidential election system to get a stranglehold on national policy," warned MacGregor.

"The American people would not wish us to stand by idly while a minority presidential candidate attempts to blackjack either major party candidate into such an unholy alliance."

WALLACE ASSESSMENT

Robert H. Finch, the incoming secretary of health, education and welfare, who was until recently California's lieutenant governor, assessed the Wallace candidacy in 1972 and observed that the former Alabama governor has "a pretty good piece of political machinery going for himself."

Finch acknowledges the process by which the United States Constitution is amended is an exceedingly slow-moving one, but he sees the Wallace threat as providing "a greater catalyst for change now than ever before."

CAMPAIGNING NIXON MOVED CLOSER TO POPULAR VOTE IDEA

(By Martin Smith)

U.S. Sen. James O. Eastland, the conservative Mississippi Democrat who, as chairman of the Senate Judiciary Committee, will have a lot to say about any changes in the system of electing presidents, has predicted the system will be revised—if the new president wants revision.

"If the next president pushes electoral reform, we'll get it," said Eastland. "If he doesn't, I don't assume so."

The new president is Richard M. Nixon who indicated during the campaign he favors changes in the system. He said once he was not proposing abolition of the Electoral College, but he also said he thinks the man with the most popular votes should become president.

NO DETAILS OFFERED

Nixon has not offered any detailed recommendations for revising the system but in his most extensive statement on the issue, he said on Sept. 3 in Cleveland, Ohio:

"I am not suggesting we go so far as the direct election of the president. But I do believe that in a particular state the fact that one man may win the state by a few thousand votes and then get all the electoral votes of that state—I think that, in effect, disenfranchises a lot of other people who may have voted on the other side. I would rather have proportional representation in the Electoral College."

MOVES CLOSER

But later in the campaign, Nixon seemed to be moving closer to the idea of deciding the presidential election by popular vote.

On Oct. 15: "I think that if the man who wins the popular vote is denied the presidency, the man who gets the presidency would have very great difficulty in governing."

On Oct. 21: "Whoever wins the popular vote should be the next president of the United States."

On Oct. 30, while challenging Democratic rival Hubert Humphrey to accept the decision of the popular vote: "I say again, the candidate who gets the most votes should be the next president. I stand ready to accept the decision of the electorate."

FINCH PREDICTIONS

Former California Lt. Gov. Robert H. Finch, a close friend and adviser of Nixon's and chosen by the president to be secretary of health, education and welfare, predicted in a Sacra-

mento interview that Nixon will offer specific proposals for changing the presidential election system.

Finch said he does not know yet what forms these proposals will take. Speaking just for himself, however, Finch said he likes the idea of retaining the Electoral College but having most of the electors chosen by individual congressional districts. This would result in the electoral votes of most states being split among leading candidates.

Finch said this proposal "has great appeal to me because it would tend to develop a viable two-party system in the South. There would be an enormous incentive to try to develop strong congressional candidates in those Southern states."

FOUR PLANS

The congressional district plan is only one of four basic proposals expected to go before Congress at the 1969 session for changing the method by which American presidents are selected.

The other three basic plans:

—Retaining the Electoral College but simply apportioning each state's electoral votes on a percentage basis to reflect the popular vote in the state. The present winner-take-all system would be eliminated.

—Retaining the Electoral College system and also its winner-take-all provision so that a state's entire slate of electors still would go to the winner of the popular vote, but eliminating the office of elector. An automatic state unit electoral vote system would be substituted for the individual electors.

—Simply abolishing the Electoral College and deciding the presidential elections by a nationwide popular vote.

This last proposal has been given new support as the result of a special study by an American Bar Association commission which strongly recommended that a popular vote decide presidential elections.

INDIANA SENATOR SEES ONLY ONE WAY: JUNK ELECTOR COLLEGE

(By Martin Smith)

U.S. Sen. Birch Bayh, D-Indiana, has been calling for reforms in the Electoral College system since he first was elected to the Senate in 1962.

But for a long time he opposed any plan to eliminate the college entirely and substitute in its place a direct popular vote for president.

Bayh changed his mind in 1967.

He called for going all the way and eliminating the Electoral College entirely in favor of a popular vote.

NEW ENGINE NEEDED

"Mere procedural changes in the present system would be like shifting around the parts of a creaky and dangerous automobile engine, making it no less creaky and no less dangerous," he warned.

"What we may need is a new engine, because we are in a new age."

What caused Bayh to shift his view is a report issued by a special American Bar Association commission which after a detailed study concluded:

"The Electoral College method of electing a president of the United States is archaic, undemocratic, complex, ambiguous, indirect and dangerous. . . .

"While there may be no perfect method of electing a president we believe that direct nationwide popular method is the best of all possible methods."

The commission, headed by Robert G. Storey, president of the Southwestern Legal Foundation and dean emeritus of the Southern Methodist University Law School in Dallas, offered detailed recommendations on how presidential elections might be decided by popular vote.

It recommended that a party's presidential and vice presidential candidates continue to run as a team. The presidential candidate and his running mate who captured the most popular votes would win—provided they had at least 40 per cent of the popular vote.

If no ticket won 40 per cent of the popular vote, then a runoff election would be held between the two tickets with the highest number of votes.

DATE SETTING PROCEDURE

Congress would have the power to set the dates for regular and runoff elections, but individual state legislatures would have the power to provide for places and manner of the elections. Congress, however, would retain reserve powers to overrule the state legislatures.

Persons qualified under state law to vote for members of Congress would vote in presidential elections except that a state would be empowered to make even fewer restrictive requirements for presidential voters.

Congress also would be given a reserve power to provide for uniform age and residence requirements.

Among those on the 15-member commission were leading legal scholars and attorneys, including Paul Freund, a constitutional law professor at Harvard Law School; four former ABA presidents; two state governors, and Herman Phleger, a San Francisco attorney and former adviser to the U.S. State Department.

They returned an eight-count indictment against the Electoral College system, charging it:

—"Allows a person to become president with fewer popular votes than his major opponent.

—"Grants all of a state's electoral votes to the winner of the most popular votes in the state, thereby cancelling all minority votes cast in the state.

—"Makes it possible for presidential electors to vote against the national candidates of the party.

—"Awards all of a state's electoral votes to the popular winner in the state, regardless of the turnout in the state.

"Assigns to each state at least three electoral votes regardless of its size.

"Fails to take into account population changes in a state between censuses.

"Employs an unrepresentative system of voting for president in the House of Representatives.

"Allows for the possibility of a president and vice president from differing political parties."

THE 12TH AMENDMENT CITED

The 12th amendment to the Constitution in 1804 was intended to eliminate this last possibility but the amendment did not shut the door completely on such a turn of events.

For example, if the 1968 presidential election had been thrown into the House of Representatives Republican Richard M. Nixon might well have been the ultimate choice. But the choice of the vice president would have been left to the United States Senate. Many observers think it likely that the senators would have chosen one of their colleagues, U.S. Sen. Edmund Muskie, the Democratic vice presidential nominee, for vice president instead of Spiro T. Agnew, the Republican nominee.

The ABA report has been made at a possible turning point in history—when the defects in the present system for electing presidents are becoming increasingly apparent to the public.

ELECTORAL COLLEGE DRAWS GOVERNORS' DISSATISFACTION

(By Martin Smith)

The Electoral College has existed for more than 180 years, although Americans have been dissatisfied with it for much of that time.

Few persons think it will be easy to replace it with a direct popular vote in the selection of presidents and vice presidents. But public unhappiness with the antiquated Electoral College is greater than ever, and many political leaders agree now is the time to eliminate it.

In 1948 and again in 1960 national polls indicated the public, by a 2–1 margin, wanted the Electoral College eliminated. The percentage of those opposed to it has climbed dramatically. Last November a Harris Survey showed that an overwhelming 79 per cent of those polled favored direct election of presidents and vice presidents. Only 11 per cent opposed elimination of the Electoral College.

Dissatisfaction with the system is widespread and increasing, but there is dissent, too.

While some Southern white conservatives are reluctant to eliminate the Electoral College completely, preferring instead to tinker with and retain the present system, an important minority group also shows a cautious if different, attitude on the issue.

Clarence Mitchell, secretary of the National Association for the Advancement of Colored People, has told a U.S. Senate subcommittee his organization flatly opposes any move to divide a state's electors according to popular vote percentages within that state. This is one of the reform-but-retain proposals being heard in the debate over the Electoral College.

MINORITY FACTORS

Minority groups see an advantage for themselves in the winner-take-all system by which a candidate captures a state's entire slate of electors by winning that state's popular vote, no matter by how small a margin. Nominees now regard major groups of minority voters as possibly deciding factors in swinging some states. Minorities justify this possible advantage as necessary to offset the bloc of Southern white segregationist states.

Mitchell, however, also has told U.S. Sen. Birch Bayh, D-Indiana, the American Bar Association proposal to eliminate the Electoral College completely in favor of a direct popular vote is an excellent one.

But Mitchell added the NAACP would support the recommendations for a direct popular vote "only if there are absolute and foolproof safeguards against discrimination in registering and voting."

If there can be guarantees that minority groups will not be prevented from participating in a direct popular vote for president, the NAACP will support the ABA recommendations. But if the present system is to be retained, the proposal to divide a state's electors will only make existing inequities even worse, in the NAACP view.

REWRITING IS SLOW

Rewriting the Constitution is a slow-moving process. The usual way is for an amendment to be approved by a two-thirds vote of each house of Congress, and then be ratified by three-fourths of the legislatures of the 50 states.

The McClatchy newspapers sent inquiries to governors of all 50 states, seeking their views on the present system of electing presidents and vice presidents. Not all replied. Some of those who did said they had not reached a decision yet on proposed changes. Some thought the Electoral College might be retained if basically overhauled.

But not one of the governors said he likes the system the way it is. There was significant voices from both major parties calling for its outright abolition in favor of direct popular votes.

One of the most outspoken was Pennsylvania Republican Gov. Raymond P. Shafer. He noted that one of his state's delegates to the 1787 Constitutional Convention, James Wilson, thought even then that American presidents should be chosen by direct election.

"It is time that we add our strength to the lone voice of that great Pennsylvanian," said Shafer. "I will recommend that our General Assembly, when it next convenes, lead the nation in a call to Congress for a constitutional amendment to abolish the Electoral College."

REPLIES FROM OTHERS

Other governors who replied or otherwise expressed themselves in favor of outright abolition of the Electoral College included Democrats Warren E. Hearnes of Missouri and William L. Guy of North Dakota and Republicans Richard B. Ogilvie of Illinois, John A. Love of Colorado, Russell W. Peterson of Delaware and Tom McCall of Oregon.

One who replied when he still was a governor of Maryland but since has assumed another office is Vice President Spiro T. Agnew.

"There is no question in my mind that basic reform of this outdated process is necessary," said Agnew. "Maryland is one of the few states with a statute binding electors to cast their votes for the winner of the state's presidential election but even the constitutionality of this law is dubious."

UNRUH TAKES STAND

The strongest voice in California in favor of eliminating the Electoral College is Assemblyman Jess Unruh. He is asking the state legislature to urge Congress to begin the process by which the Constitution can be amended to provide for a direct popular vote for president and vice president.

"Today it is clear, as it has been for more than a century, that the Electoral College envisioned by the framers (of the Constitution) bears no relation to their intent, if indeed it ever did," Unruh has commented.

ELECTORATE IS COMPETENT

". . . No modern politician who values his profession dares to argue that the American electorate is incompetent to elect the president of the United States. If this is so, all rational argument against popular presidential elections disappears. The Electoral College is a useless and dangerous appendage to our body politic. It must be removed."

No matter how low the Electoral College ranks in the public esteem, the surgery proposed by Unruh and other prominent Democratic and Republican leaders will not be easy to accomplish.

Nearly everyone agrees that some surgery is necessary. So far, there is insufficient agreement as to its extent, and this could renew the Electoral College's lease on life.

DISASTER COULD OCCUR

Then, the disaster that most observers fear may occur: The Electoral College once again could award the presidency to a man who was the only runnerup in the popular vote.

The Counterfeit Ballot could result in the selection of a Brand X president.

IS THE OLD WRECK WORTH PATCHING UP?

(By Merlo J. Pusey)

The dilemma of Congress as it surveys the weaknesses of our electoral system is not dissimilar to that of a motorist as he contemplates the 1958 wreck in his driveway. Shall he have it repaired at substantial cost and disregard the fact that it would still be a risky means of transportation? Or shall he recognize that it is obsolete as well as badly worn and fork out the price for a new model?

Some eminent witnesses before the House Judiciary Committee are contending that only mechanical repairs to the electoral system are essential. The extravagance of ordering a new model might offend the folks back home and cause the whole thing to be rejected. This was essentially the argument of Attorney General Mitchell the other day.

There will be little if any quarrel with the repairs that Mr. Mitchell and President Nixon wish to make. First, they want to do away with individual electors. Last November George Wallace took the country much closer than it wanted to be to the possibility of third-party electors actually selecting the President of the United States. There can be no doubt about it. The dummies who under the present system, stand between the President and the people must go.

The second repair for which Mr. Mitchell spoke is that the Presidency go to the top man if he receives 40 per cent of the vote—instead of the electoral-vote majority required at present. Third, the Administration plan calls for a run-off in case no candidate receives as much as 40 per cent.

Then there are a number of repairs designed to reduce uncertainties under the present system. If a presidential candidate who had received a clear electoral-vote plurality should die before the votes were counted, the successful vice presidential candidate would become President. If the winning vice presidential candidate should die before the votes were counted, the incoming President could fill the vacancy under the terms of the Twenty-fifth Amendment.

If both the winning presidential and vice presidential candidates should die before the electoral votes were counted, Congress would be authorized to order a new election. Congress would also be given power to provide for the possible death or withdrawal of a presidential or vice presidential candidate prior to the election.

Undoubtedly these would be useful repairs. But the question remains as to whether our ancient tottering electoral system is worth the time and effort that would be necessary to patch it up in this fashion. For with all the "mechanical" changes outlined by the Attorney General, it would retain critical weaknesses.

The foremost of these is the possibility that the so-called proportional system, which both the President and Mr. Mitchell regard as a satisfactory alternative to direct popular election of the President, might hand defeat to the candidate winning the highest popular vote.

There are some who believe that the danger of elevating the popular vote loser to the White House would be increased under the proportional system. With all its defects, the electoral college system, as it is currently employed, gives an advantage to the large states as well as to the small states. The small-state advantage is readily apparent. Alaska and Delaware, for example, have three electors each (one for each Senator and Representative) although a distribution of electors on the basis of population would give them only one apiece, or less. They would keep this advantage under the proportional system, and all electoral votes would be divided among the candidates in accord with their standing in the popular vote.

Under the present system this favoritism of the small states is offset in some measure by the general-ticket arrangement which gives the winning candidate in each state all the electoral votes of that state. A candidate may, for example, win only a slight plurality in New York and California, but the result is to give him all the 83 electoral votes of those states. Candidates from the big states thus have an inside track, and the presidential campaigns tend to center in the large states favorable to them.

Under the proposed proportional system, this big-state advantage would be largely gone, for electoral votes would be divided to reflect each candidate's popular strength. The small-state advantage would remain. So it would be possible for a candidate with special standing in the small states to obtain a winning electoral percentage without a popular majority.

Several studies indicate that Richard Nixon would have won in 1960 over John F. Kennedy if the proportional system had been in effect. In 1968 the proportional system would have given Mr. Nixon a fairly substantial edge, in part because most of the small states were in the Nixon column. It is interesting to note that a gain of 1.6 per cent in the votes for Vice President Humphrey would have made him the popular vote winner, but it would have taken a 2.74 per cent gain in his electoral vote under the proportional system to make him a winner.

This point calls for more detailed analysis. To what extent would the elimination of the big state advantage through the general ticket system magnify the effects of the little-state advantage? If the splitting of electoral votes would indeed increase the likelihood of electing a President who is not the choice of the people, the proposed amendment would to that extent, be moving away from electoral reform, not toward it.

This critical defect in the proportional system, even though the risk has not been precisely measured and may not be susceptible to precise measurement, has turned most of the reformers to the proposal for direct popular election of the President. It might be better to work a little harder a little longer for a new model that is sound in every particular before resigning ourselves to costly repairs to an obsolete mechanism that would never be satisfactory.

CONCLUSION OF MORNING BUSINESS

The ACTING PRESIDENT pro tempore. Is there further morning business? If not, morning business is concluded.

INCREASING THE PUBLIC DEBT LIMIT

Mr. KENNEDY. Mr. President, I move that the Senate proceed to the consideration of Calendar No. 113, H.R. 8508.

The ACTING PRESIDENT pro tempore. The bill will be stated by title.

The LEGISLATIVE CLERK. Calendar No. 113, H.R. 8508, to increase the public debt limit set forth in section 21 of the Second Liberty Bond Act.

The ACTING PRESIDENT pro tempore. The question is on agreeing to the motion of the Senator from Massachusetts.

The motion was agreed to, and the Senate proceeded to consider the bill.

Mr. LONG. Mr. President, at the outset of the consideration of the pending bill, let me say that some of us have plans for later in the day. For that reason I propose to insist on the germaneness rule. I ask the Chair whether that rule provides that during the first 3 hours of consideration of the bill the rule of germaneness is in effect.

The ACTING PRESIDENT pro tempore. Under the rule of germaneness, for the first 3 hours that rule applies.

Mr. LONG. I direct the attention of the staffs of the majority and minority to the fact that, as manager of the bill, I shall insist on the germaneness rule. If a Senator enters the Chamber, it would be well to have that Senator informed, rather than to embarrass him by my insisting on the germaneness rule. If a Senator is so advised it will make it easier for both of us. It is our purpose

to proceed to action on the bill, so that Senators who have other plans can be about their business. Senators who have extraneous speeches can make them after action on the bill.

Mr. SCOTT. Mr. President, if the Senator will yield, I wish to join in the expression of the distinguished Senator that we confine ourselves to our consideration of the bill.

Mr. LONG. I thank the Senator. I am hopeful that, at least on this bill, we make the germaneness rule mean what it was hoped to mean. I say that because members of the committee felt this matter should be voted on some time in the immediate future. Therefore, the committee made it clear that we would vote the bill out of committee as it passed the House; and with regard to amendments on the overall problem that might be suggested later, we would reserve them for some later date. Various members of the committee had suggestions, but were not insisting on amendments, including even some that passed both the House and the Senate last year.

Mr. President, the bill before us today, H.R. 8508, is a bill to increase the public debt limit.

Probably the very first question a person is likely to ask in the case of a bill of this type is, Why is any debt limit increase needed at all when we are operating under a balanced budget? The budget for the fiscal year 1969, for example, in the last budget document shows a budget surplus of $2.4 billion. The same budget document shows a surplus of $3.4 billion for the fiscal year 1970.

While it is perfectly true that the unified budget—which is the budget which everyone refers to—is expected to be balanced for the fiscal years 1969 and 1970, what we used to call the administrative budget, or what the budget document now calls the Federal funds, is not in balance for these 2 fiscal years.

As is indicated in the committee report, the administrative budget, or Federal funds budget, according to the official budget estimates, shows a deficit of $7 billion for the fiscal year 1969 and a deficit of $6.8 billion for the fiscal year 1970.

With these administrative budget deficits, the only reason why the unified budget shows surpluses for these years is that the unified budget takes into account the surpluses in the various trust funds, primarily the social security trust funds. The surpluses for 1969 and 1970 in the trust funds amount to $9.4 billion in the fiscal year 1969 and to $10.3 billion in the fiscal year 1970. These surpluses in the trust funds more than offset the deficits in the administrative budget. Because of this there are small surpluses in the unified budget, with which concept all of us are familiar.

From the standpoint of the public debt limitation, however, it is the administrative budget, or Federal funds, which are important, and not the unified budget. This is true because the present debt limitation, with the exception of certain agency debt, reflects the total debt of the Federal Government, including both that held by the public and also that held by the trust funds.

Briefly, the bill before us provides a permanent debt limitation of $365 billion, but also provides a temporary additional limitation of $12 billion that will expire on June 30, 1970. In other words, under the bill, the total debt limitation will be $377 billion until June 30, 1970, at which time the limitation will drop to $365 billion.

Let me also give the debt limitation under present law so that one can compare the two sets of figures. Under present law, except for 1 day a year—namely, June 30 of each year—the debt limitation is $365 billion. On that 1 day of each year—June 30—the debt limitation, under present law, is $358 billion. In other words, the permanent limitation under the bill as reported by your committee is the same as the present applicable limitation for 364 days of the year.

In arriving at the public debt limit requirement provided in this bill, we used the traditional methods in making this determination. We asked the Treasury to prepare for us a table showing the debt limitation requirements on the 15th and last day of each month on the basis of their best current estimate of receipts and expenditures. In this it was assumed that the minimum operating cash balance would be $4 billion—even though the average cash balance we maintained this last year was $5.1 billion—and assuming a leeway of only $3 billion for contingencies.

At least a $3 billion contingency allowance has traditionally been provided, because receipts and expenditures, even with the best intentions in making estimates, can vary appreciably from the budget figures. This may occur because a given receipt item is difficult to forecast or because expenditures turn out in some particular category to be larger than expected, or occur earlier during the year than anticipated.

In addition, there is always the prospect that Congress may not exactly follow the recommendations of the past administration. There are at least $1.6 billion of items of this type which are taken into account in the figures I have given. For example, it is assumed in these figures that the $500 million postal rate increase referred to in the budget is enacted. On the receipt side of the budget, there are included $400 million of user charges which, if not enacted, will result in lower receipts by this amount.

All of these items taken together indicate the $3 billion contingency allowance is quite conservative. The last time we allowed $12 billion for contingencies, and this time the Secretary of Treasury, when he appeared before the House, requested $8 billion for contingencies. The bill reduces this $8 billion to $3 billion.

Table 2 in the committee report shows the required debt limitation computed on the basis I have indicated. If one will examine it, he will see that the figure for June 30, 1970, with the $3 billion contingency allowance, amounts to $364.4 billion—or is within less than a billion dollars of the permanent debt limitation which the bill before the Senate makes applicable after the close of business on that date.

Another way of arriving at this figure for the permanent debt limitation is by adding to the expected June 30, 1969, debt the deficit I referred to earlier in the administrative budget for the fiscal year 1970. This amounts to $6.8 billion, and when added to the anticipated debt on June 30, 1969, of $354.6 billion, gives exactly $364.4 billion, the debt for June 30, 1970, which I have already referred to.

Let me turn now to why we need a supplementary allowance of $12 billion up to the end of the fiscal year 1970. Federal expenditures during a year are spread relatively evenly throughout the entire year. Receipts, on the other hand, flow into the Treasury with periodic peaks, depending upon the various tax collection dates.

Although withheld taxes flow into the Treasury on a relatively even basis throughout the year, corporate income tax collections, which are paid on a quarterly basis, and declarations of individuals, which are also paid on a quarterly basis, result in the periodic peaks throughout the year that I have referred to. The two biggest peaks in collections, of course, occur shortly after the due date for the corporate and individual income tax returns on March 15 and April 15 of each year.

All of this means that in practically every year we run a higher deficit—or smaller surplus—throughout the first part of the year than in the last part of the fiscal year. As a result, debt requirements build up in each year until about March 15, or April 15, and then fall off again. This explains why we need the additional $12 billion leeway during the fiscal year 1970, as well as before April 15 of the current year.

If Senators will again turn to table 2 in the committee report, they will see that on March 15, 1970, it is estimated that the debt, subject to limitation on that date, will amount to $377 billion, taking a $3 billion contingency allowance into account. This is exactly what the supplementary allowance would provide for the fiscal year 1970. The peak debt requirement on April 15 is only slightly less—$376.7 billion.

This is certainly a tight limitation, and I do not see how, given the present budget, we can get by on anything less. In fact, it is entirely possible that we may have to be here before the end of the fiscal year 1970 should budget prospects not turn out as favorably as now hoped.

It is important that we act upon this bill promptly, because the debt is likely to be very close to the ceiling—too close in fact—during the mid-April period.

The situation then is likely to be even worse than our experience in mid-March. On the 14th of March, the Secretary of the Treasury informed the committee we had a debt subject to limitation of $364,717 million. In other words, we were within $283 million of the statutory ceiling, not much more

than a third of 1 day's expenditures, and even to do this the cash balance had to be reduced to a level of $2.4 billion.

On April 15 the Secretary of the Treasury informed the committee that we can stay under the existing $365 billion ceiling only by drawing our cash balances down to a level of about $1.8 billion, a figure which is much too low for contingencies which might occur and which is much too low for good debt management practice. It is for this reason that I urge the Senate to act promptly on this bill and also not to amend it. Although there were some items the committee would have liked to have added to the bill, we refrained from doing so because of our desire to speed this bill on its way to the President without the necessity of a time-consuming conference. We wanted to be sure that adequate funds will be available to manage our debt in the period immediately ahead.

Before concluding, I would like to say that while I know it is popular to bemoan every increase in the debt limit—and surely none of us enjoys increasing the debt limit—nevertheless it seems to me that we should keep this matter in perspective. For that reason, I would like to include in the record at this point two tables prepared for me by the Treasury Department, Office of Debt Analysis. I ask unanimous consent that the two tables be inserted at this point.

There being no objection, the tables were ordered to be printed in the RECORD, as follows:

TABLE I.—ESTIMATED TOTAL GOVERNMENT AND PRIVATE DEBT, BY MAJOR CATEGORIES

[Dollar amounts in billions]

Dec. 31	Private			State and local	Federal			Total	Percent Federal of total
	Individual	Corporate [1]	Total		Public	Agency	Total

[1] Implied level end of year, calculated as the average of the 4th and 1st calendar quarters at seasonally adjusted annual rates for the years 1939 through present. Prior to 1939, averages of 2 calendar year figures as the best approximations of Dec. 31 levels.

[2] Not available.

Mr. LONG. Mr. President, these tables show the estimated total Government and private debt by major categories from 1929 to as near the present as figures are available. The first table shows private, State, local, and Federal debt in terms of actual dollar amounts. This table shows that the total private and Government debt by the end of 1968 amounted to $1.7 trillion. Only 21 percent of this, however, represented Federal debt, and if one will examine the table I have inserted in the RECORD, he will note that the Federal debt as a percent of total debt has been declining steadily from the high of 62 percent of total debt reached in 1945 shortly after the end of the war to the 21 percent in 1968—relatively speaking, only one-third of what it was, as a percentage of the debt, in 1968.

Already the Federal debt in terms of percentages is back to the 1937 level.

The second table I have inserted also shows the Government and private debt from 1929 up to as near the present as figures are fully available, namely, 1967, but in this case these debt figures are shown as percentages of the gross national product for the same years. This table shows that as a percent of gross national product, the Federal debt has been decreasing almost year by year since 1944. This is probably the best measure of the burden of the debt since it shows the debt as percentage of everything we produce in this country. In 1967, the Federal debt was slightly over 44 percent of the gross national product. On this basis the debt in 1945 again expressed in terms of relationship to the gross national product was about 3½ times the size of the debt in 1967, which of course is a very fine improvement, and, in perspective, makes our situation look much brighter than some might think.

I am not trying to say that our debt is not larger than I would like to have it today. I would prefer to be able to say we have no debt at all, but I do think it is important to keep some perspective on this point. This Nation is in a very strong position, and, while we have a substantial debt, we are in a position to carry it.

Therefore, Mr. President, I urge the passage of this bill.

Mr. President, I have stated that I would insist on germaneness during the 3 hours it may be in effect; and I hope Senators who did not know of that will be apprised of it, so that we can stay with the bill until action is completed.

Mr. DIRKSEN. Mr. President, I ask for recognition.

The ACTING PRESIDENT pro tempore. The Senator from Illinois is recognized.

Mr. DIRKSEN. Mr. President, ever since the late distinguished Senator from Virginia, Harry Byrd, Sr., as chairman of the Committee on Finance, invited me, if I so desired, if it was agreeable with the committee on committees on my side, and if I enjoyed that much seniority, to come and be an active member of that committee—I do not know how long ago that was; I hesitate to think that far back—but, Mr. President, ever since I can remember, the debt ceiling has been a matter of some controversy in that committee and on the Senate floor. Year after year, we go through this exercise, which sometimes strikes me as a bit of futility, for a very simple reason: when the Treasury officials calculate about what they need by way of a contingent cash reserve at all times, inasmuch as the daily expenditure is about $750 million, they can project and see how close they get to the ceiling that is imposed by statute, and then, if it gets altogether too close, in the interests of our fiscal integrity and our monetary safety, the debt limit must be raised; and that, of course, is the function of Congress.

Sometimes we have raised it more and sometimes we have raised it less. But regardless of what the fiscal legerdemain might have been, I think the equation is rather simple: When you get perilously close to that debt ceiling, and there is some uncertainty, at certain seasons of the year, about your income tax collections, then the wise and prudent thing to do is to lift the debt ceiling.

We have hit upon a rather fancy attitude on this matter. We concluded, at some time way back, that perhaps it would be a good thing to do to have a temporary ceiling and a permanent ceiling, and, in due course, after we get over that difficult peak, to revert to the permanent debt ceiling. That is involved here, as it has been for a good long time; so we raise the debt ceiling today simply because we must do so, in the interests of our fiscal integrity.

There is no mystery about it: we continue to spend for a thousand and one diverse purposes, and in due time the spending catches up, and then the debt ceiling must be raised.

It has rather interesting to go back a number of years to those halcyon days when the debt limit was only about $40 billion. But progressively it has gone up. When we got into the complex business of carrying on a world war, and then the Korean war, the debt finally skyrocketed, by billions and billions of dollars. It goes up and up and up, even as spending goes up, and I have often wondered whether we would ever see the time when there would be an actual reduction in our permanent public debt.

Back in 1945 and 1946, when we had a Joint Committee on the Reorganization of Congress, we provided, among other things, for a legislative budget. There was to be a committee consisting of the members of the House Ways and Means Committee and Appropriations, and the Senate Finance Committee and Appropriations.

I remember the first meeting. We thought it was a novelty, and 107 Members of the House of Representatives and the Senate appeared in one of the committee rooms. We promptly designated Senator Taft of Ohio as the chairman.

Of course, it was evident that the committee was entirely too big and unwieldy; so we soon agreed upon a smaller committee, consisting of 20 or 25 members.

We labored for a time with this legislative budget; but what intrigued me was that when we were supposed to be all through, and would have reported a legislative budget, if we went beyond the Presidential budget, we also had to report a tax bill, and if the legislative budget was under, then there had to be an agreement that what we might have saved would be applied to the public debt.

That was 23 years ago. Nothing ever happened, and nothing has been applied to the public debt. So, in the war terminology of today, that debt escalates and escalates; and I apprehend that if we continue to spend in proportion as we have done over a long period of years, the debt will continue to go up, and obviously, it has got to be reflected in the form of Treasury notes, bills, and bonds, which have to be sold to the public or to fiduciaries, banks, or insurance companies.

That means that, for practical purposes, the Treasury has to finance in the same market where business and industry must peddle their bonds; and when all is said and done, if you have got enough takers for money, and there is not quite enough to go around, the inevitable result is going to be an increase in the interest rate.

Only 10 days ago, the banks in New York indicated that the prime rate would go from 7 to 7½ percent. That means to their best customers, who always pay off their notes: they are going to have to pay 7½ percent for borrowing money.

The prime rate in Great Britain today is 8 percent. And I apprehend that probably we will see an 8 percent rate before too long at the rate we are going and in view of the intensity of the inflation fever and the inflation psychology that is gripping the country.

This is a difficult matter, but we cannot have our cake and eat it too. If this Congress is going to spend the money, then there ought not to be a single vote against an increase in the debt limit. We are the reason for it. We are the cause. We have set in motion the facts out of which that debt goes up and up, and the ceiling has to go up and up in the interest of our fiscal solidarity and our safety.

I do not know whether there will be a rollcall vote on the bill or not. I heard mentioned in the Finance Committee that there might be a Senator who probably would not vote for the debt increase. I thought he might be around to make a little speech on the subject and then ask for a rollcall vote. And, in the absence of a show of sufficient hands, he could ask for a quorum and then renew his request.

I will stick up my hand for a rollcall vote if that is the way it is, because I have no hesitation in going on record in this matter. The problem is very simple. The need is very great. And I for one am ready to meet it headon. So, if there is going to be a rollcall vote, I want to be present.

Mr. LONG. Mr. President, will the Senator yield?

Mr. DIRKSEN. I yield.

Mr. LONG. Mr. President, there have been requests for a rollcall vote. When we get to a vote, I will ask for the yeas and nays.

In light of the changes made in the measure in the House of Representatives I do not see for the life of me why anyone on either side of the aisle would vote

against this increase in the debt limit. If one looks at the matter from the point of view of the Democrats, the budget spending that has occurred and has required a debt limit increase occurred under the previous administration. And the budget was prepared under a previous administration.

If one looks at it from the point of view of a Republican, no matter how much he might bemoan the necessity of doing this, it was not his administration that brought it about. But I would think he would want to give his own administration enough fiscal elbow room to see what they can do.

In either event, I think one would vote to increase the debt limit.

Mr. DIRKSEN. Precisely so. And the day for lamentation is long past.

I trust the quorum bells will be rung. I find it necessary to be off the floor for a while, but I would like to manifest my interest by holding up my hand.

Mr. WILLIAMS of Delaware. Mr. President, today the Senate is dealing with the question of raising the debt ceiling by $12 billion, and in addition the administration has just sent to the Congress a request that the 10 percent surcharge be extended for another year. I am disturbed, however, that no greater emphasis is being placed upon the need to hold down spending.

I recognize that the President's message promises some cut in the 1970 budget; and I appreciate this step, but I wish the amount were specified.

I regret very much, however, to see perpetuated the same claims of a budget surplus based on the premise that trust fund receipts can be treated as normal revenue. These trust funds do not belong to the Federal Government, and under the law they cannot be utilized to defray the normal operating expenses of the Government.

This method of claiming a surplus when in reality we are operating at a huge deficit was highly criticized when practiced by the Johnson administration, and it is subject to the same criticism today; namely, that it serves only to mislead the American taxpayers as to the true cost of operating the many programs of this Government.

War, crime, and inflation, are the three major problems confronting our country today, and while we would all place the need for a solution to the Vietnam war as of primary importance, nevertheless the question of inflation is the No. 1 domestic problem.

In fact, any decisions made either escalating or deescalating the war in Vietnam or any solutions proposed to solve the problem of crime must all be weighed as to their impact on our economy and the effect they would have on our efforts to check the spiral of inflation.

Today, I shall present my views on this latter problem of inflation; first, as to some of the causes and second, as to the steps which must be taken to cope effectively with this problem.

One of the major contributing factors to inflation has been the high spending policies of governments, both at the Federal and at the State levels and the high level of spending by consumers and private industry, much of which is financed by expanded debt.

Failure on the part of the Federal Government to tell the American people the truth about the extent of its own deficit spending policies has been one of the major faults. For the past 5 years the American taxpayers have been deluded into a false sense of security by an administration which by juggling its accounting practices was reporting surpluses when in reality it was creating staggering deficits. These are the causes; but what is the solution?

When we approach the solution to any problem, it is necessary to recognize that the problem exists, determine its causes, and then decide what steps need to be taken for correction.

No one needs to be told that the problem of inflation exists today.

Inflation today is not just a threat but a reality as is evidenced by the ever-rising costs of living. Interest rates are at the highest level in the past 100 years, and our Federal Government is still operating at a deficit averaging over $500 million per month—expenditures other than trust funds.

On January 29, 1969, as appearing in the CONGRESSIONAL RECORD on pages 2188 to 2194. I outlined the budget situation and pointed out that instead of a $2.4 billion surplus for fiscal year 1969 and a $3.4 billion for fiscal year 1970 our Government under the budget submitted by President Johnson will actually be operating with a deficit of $6.9 billion in 1969 and $10.7 billion in 1970. Instead of a $5.8 billion surplus as claimed in the next 18 months we are actually confronted with a deficit of over $17.5 billion.

To arrive at its boasted surplus the previous administration manipulated the accounts for the Commodity Credit Corporation and then claimed for accounting purposes that all trust fund receipts could be treated as normal revenue of the U.S. Government. That is wrong. The Government acts only as the trustee, and under the law these receipts cannot be commingled with the regular income of the Government.

Even that $17.5 billion deficit figure does not take into consideration other major discrepancies in the 1970 budget; for example, in this budget as submitted on January 15, 1969, the revenue from the Government's royalties in offshore oil, is overestimated by at least $350 million. The cost of the existing Veterans' Administration programs now mandatory under law are underestimated by around $250 million. The interest on the national debt is underestimated by at least $500 million. The cost of the salary increases which have already been approved or which are now pending are underestimated by at least $1 billion. New revenue of $519 million is claimed as the result of raising postage rates from 6 to 7 cents, and $400 million extra revenue is claimed from new user charges, both of which measures have yet to be enacted. Taking these factors, totaling around $3 billion, into consideration it means that we are actually confronted with a deficit in the next 18 months of around $20 billion.

Mr. CURTIS. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. CURTIS. Mr. President, word was given to the country that there was going to be a surplus on June 30, 1969, and a predicted surplus on June 30, 1970.

If we remove all the iffy items—and I refer to such things as a prospective raise in postal rates that has not been enacted into law, and other items that are entirely speculative, all of which items were segregated in trust funds and not intermingled with the general funds—what is the Senator's best estimate of the true situation at the end of the fiscal year on June 30, 1969, with regard to whether there will be a surplus or deficit?

Mr. WILLIAMS of Delaware. At the end of this fiscal year the deficit would be around $7 billion. In the next fiscal year if the gimmicks were eliminated the deficit would be around $10.7 billion.

For the Federal Government to include these trust funds for accounting purposes as though they were normal revenue would be just as erroneous as it would be for a private corporation, in making its annual report to the stockholders, to include in its report the accumulations in the corporation's pension trust funds. The corporation would have no right to use the pension fund accumulations to defray the operating costs of the corporation. Neither does the Federal Government have any right, under the law, to use the proceeds of pension funds to defray the normal operating costs of the Government.

To include these for accounting purposes serves only one purpose: That is, to mislead the taxpayers as to the true financial picture.

The reason why trust funds are accumulating reserves at this time is that a large percentage of the country's labor force is comprised of younger people, young men and women who are paying into the social security trust fund or the railroad retirement fund. They are being taxed today for the purpose of building up an equity when they reach the age of 65. Since the larger percentage of the labor force are younger people, that means that the funds are being built up today to take care of the cost of paying pensions to those people when they reach retirement age.

For the Federal Government to assume that it can count those funds as though they were normal revenue and to spend that revenue today would mean that the Government was deliberately planning to bankrupt the funds. Certainly no one would stand for that.

Mr. CURTIS. Mr. President, I am sure that the Senator from Delaware will agree with me that it is all right to give consideration to social security taxes and other taxes that go into the trust funds for the purpose of measuring the entire amount of money that the Federal Government is taking from the people, but the trust funds certainly should not be included among the funds which are available for general spending and should not, therefore, be included in determining the amount of the debt limit.

Mr. WILLIAMS of Delaware. The Senator is correct. Our committee has always had to take such factors into consideration. It has always had to consider how much the Government as a whole is taking in at the moment as related to how much it is putting back into the economy. To that extent I support the principle of a unified budget, so as to get that picture before us. The Committee on Finance has always done that when it considered the subject of taxes.

We also have to take into consideration in evaluating the Federal tax rate the amount that State and local governments are taking from the same taxpayers in the various income brackets. All those factors must be taken into consideration. But that does not mean that we use that total figure and report it as though it were revenue available to the Government to pay the operating costs of the Government.

Mr. CURTIS. No; it should not be used to show a false position, to show that the Government is living within its income, when in reality the debt is being increased, and when, at the very time the calculation was made, it was said that there would be a surplus at June 30, 1969, and a surplus at June 30, 1970.

In the fine print, so to speak, the Treasury was being contradictory by asking for the very bill before us today, to wit, the raising of the debt limit. Is that not correct?

Mr. WILLIAMS of Delaware. The Senator is correct. It is rather significant that the original request of the Treasury Department as to the amount needed to carry it through the next 18-month period was for a $17 billion increase in the debt limit, which would be about the amount of the projected deficit, assuming it is not possible to roll back any of the spending. That was just about the same amount as the projected deficit of the Johnson budget that was submitted on January 15. That shows that the Treasury itself recognized that there was a bona fide deficit. The House, feeling that at least a $5 billion reduction in projected spending plans could be attained, reduced this request to $12 billion.

Certainly it would not be necesary to go to the bank and ask for an extended line of credit to borrow money to finance a surplus. It is utterly ridiculous for any official of the Government in Washington to come before us and say, "We actually expect to have a surplus of $1, $2, or $3 billion a year, but at the same time we have to borrow money to extend our line of credit by $12 billion, so we have to borrow $12 billion to finance the surplus."

That is utterly ridiculous. Any sixth-grade student who made such a suggestion would get a mark of zero in mathematics. I am surprised that anyone would try to offer that line of reasoning to the American people.

Mr. CURTIS. Coming back to the assumption that if we leave out the "iffy" items in the budget, there is likely to be a $10 billion deficit next year, is that assumption based upon a continuation of the surtax?

Mr. WILLIAMS of Delaware. Yes; all estimates are based on a continuation of the surtax at 10 percent and also upon the assumption that the cost of financing all the programs recommended in the budget will be continued without any change whatever. I certainly hope that later assumptions will not prove to be true. Those expenditures must be reduced.

Mr. CURTIS. I am thoroughly convinced that in the past administration and in the present administration, some well-intentioned persons have been drawn into the support of the so-called unified budget and have expressed a desire to fix the debt ceiling on that basis. They were well intentioned. They meant to recommend sound financing to the American people. However, I believe they have overlooked some very real problems.

First, to invest social security funds in Government bonds creates many problems under the very best of management, because it is the individual who is obligated to pay the benefit who is borrowing the money. It is the guardian who is borrowing his ward's money.

So even if the fund is managed with the greatest of skill, many questions and many problems are raised. The alternatives are not clear. Certainly we would not want the trustee of the social security fund to invest those funds in stocks, because in a short while the Government would control many of the country's major corporations. There are good reasons why the law has required that such funds be invested in Government bonds. But I believe that if the officials take the position that excludes bonds held by the social security fund as a part of the debt coming within the limit, there will be some unexpected political repercussions.

I think it will cause an uneasiness on the part of current beneficiaries of social security, it will cause an uneasiness on the part of those who someday will be applying for benefits, and I am convinced it will cause an uneasiness on the part of millions of Americans who are paying into the fund month after month.

Is it not true that social security taxes have reached a rather high rate?

Mr. WILLIAMS of Delaware. There is no question about that fact. They have reached a rate higher than many of the most ardent supporters of that program had said could be sustained, and yet the question arises: Are we going to keep raising those trust fund taxes higher than necessary in order to build up an imaginary surplus for the Government?

Mr. CURTIS. Is it not true that there are millions and millions of Americans paying more money in social security taxes than all other Federal taxes?

Mr. WILLIAMS of Delaware. The Senator is correct.

Mr. CURTIS. So, in addition to this well-intentioned proposal submitted by honest people in both administrations, I think it carries a political danger that the beneficiaries and future beneficiaries are going to be uneasy; and it well could start a revolt among social security taxpayers and a demand for a lessening of the tax. Is that correct?

Mr. WILLIAMS of Delaware. That is right.

Mr. CURTIS. I thank the distinguished Senator for yielding. I wish to commend the Senator for his clear understanding and courageous presentation of the true budget picture, not only today but also throughout the past month. I think the Senator has rendered a service not only to the country but also to people who disagree with him.

Mr. WILLIAMS of Delaware. I appreciate the comments of the Senator from Nebraska.

Mr. President, I ask unanimous consent to have printed in the RECORD at this point excerpts from the testimony given before our committee under date of March 24 of this year, at which time I was engaged in a colloquy with both the Senator from Massachusetts (Mr. KENNEDY) and the Director of the Budget, Mr. Mayo, concerning the actual deficit.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

Senator WILLIAMS. And based upon the accounting principles that we operated under prior to the last 3 or 4 years, you actually are confronted with a prospective deficit in 1969 and 1970 of around $7 billion instead of a surplus, isn't that a fact?

Secretary KENNEDY. Well, I don't know what definition you are using of——

Senator WILLIAMS. I am using the same definition we have used for 175 years before this Great Society came in and before your definition, your confirmation of it.

Secretary KENNEDY. You have had three kinds of budget surpluses and deficits before, and now with a unified budget we use the one that has the impact on the economy, as you well know. If you want to relate it to the figures you are quoting that are in the budget message, Mr. Mayo has them.

Senator WILLIAMS. And they are a prospective $17 billion?

Mr. MAYO. They show a current deficit $6,962,000,000 and for the year beginning July 1, $6,848,000,000. Together that would be a total of $13.8 billion.

Senator WILLIAMS. That is correct, and then when you take the manipulation of Commodity Credit it brings it up to $17 billion. It is a fact that is where you got your $17 billion request raising the debt ceiling, was really in recognition of the fact that you do have and are confronted with a $17 billion deficit—that is assuming we don't cut back or change anything.

Mr. WILLIAMS of Delaware. Mr. President, in this colloquy it will be noted that the Director of the Budget confirmed the fact that the deficit for the 2 fiscal years 1969 and 1970 will be $13.8 billions; however, when we take into consideration the nearly $3 billion in manipulations of the Commodity Credit Corporation accounts it brings the actual projected deficit for the 2 years to $17 billion. These estimates are based on the assumption that we accept the budget as it was submitted on January 15.

Further evidence of this inflation is shown in the most recent report wherein it is indicated that private industry in 1969 is planning for a 14-percent increase in capital investment for new plants.

This 14-percent expansion in plant capacity will result in a tremendously increased demand for new capital investment, and this accelerated demand for new money will have a tendency to push our interest rates even higher than the

7½ percent prime rate recently established.

A shortage of capital with the resulting high interest is already having a serious effect on new home construction, and the operation of many small businesses are being jeopardized. State and local governments are being severely handicapped in borrowing for their needs.

Many States are now having to increase their statutory ceiling on interest rates both for private lending and for the sale of their revenue bonds. Just last week the State of Michigan passed a bill to raise the mortgage-rate ceiling to 9 percent. The cost of living is at an all-time high and climbing higher each month.

This accelerated spiral of inflation can no longer be ignored, and the hour is already late for starting the corrections. No longer can this situation be tolerated. Action must be taken now, or it will be too late.

It was in recognition of this delicate financial situation that I strongly protested earlier congressional action in raising the salaries of Members of Congress and other top officials of Government from 40 to 70 percent, and I still think this was a serious mistake.

How can either Congress or the executive branch appeal to organized labor or private industry, asking them to hold the line on both wages and prices in order to help combat this inflation when they have just raised their own salaries by 40 percent?

The Government is the largest employer in America, and its officials have a responsibility to set the example and demonstrate that they are willing to practice what they preach.

It should be noted that when these salary increases become fully effective for both the military and civilian personnel of the Government the additional cost will approximate $4.5 billion, or in other words they will absorb about one-half of the revenue that can be derived from the extension of the 10-percent surcharge.

If the additional $9 or $10 billion in revenue to be derived from the surcharge extension is to be used only to finance increased salaries and to expand some of the spending programs then its effect as a brake on inflation will be zero.

The question now is, what steps can we take to cope with this threat of inflation? I shall list six steps which in my opinion represent the minimum action we must take:

First. Either by Executive order or by congressional action declare a moratorium on new public works projects and public construction accompanied by a reappraisal of all existing projects to determine to what extent they can be slowed down or postponed.

Second. Repeal the 7-percent investment credit. It just does not make sense to subsidize and encourage accelerated expansion of new plant capacity when both materials and money are in such short supply and when our existing plant capacity is only being 84-percent utilized.

Third. Initiate a new savings bond program for the small investors of America, paying them 6-percent interest—maximum purchases could be limited to either $1,200 or $2,400 per year. This would siphon millions from the current consumer spending and direct the money into private savings.

Fourth. Extend the surcharge rate for the fiscal year 1970 at 7 percent instead of the recommended 10 percent. With a 10-percent rate in effect for the first half of the year and a 7-percent rate for the latter half it would in effect still be an 8½-percent rate for the full year or 1 percent higher than last year's rate for individuals.

Fifth. Extend a mandatory ceiling on expenditures for fiscal 1970 providing for a reduction of at least $5.3 below the $195.3 billion projected spending rates in the 1970 Johnson budget message. The ceiling on Federal employment enacted last year which was permanent law must remain in effect, and some of last year's exemptions should be repealed.

Sixth. Repeal the 4¼-percent ceiling on long-term Government bonds.

I shall now discuss each of these points in greater detail.

First. A moratorium on all new public works programs and new public construction.

This moratorium would affect all projects unless certification is made by the appropriate board that such project is essential to the war effort or to our national economy. Unless so certified all new construction projects would be held in abeyance pending the end of the Vietnam war or until such time as our financial situation is brought under control.

At the same time all existing public works projects should be reappraised to determine to what extent the work can be slowed down or held in abeyance without jeopardizing our national security or resulting in an uneconomical loss of money.

There is a precedent for such action. Under an executive order in World War II and again during the Korean war such a moratorium on public works was in effect, and such action should have been taken immediately upon the outbreak of the war in Vietnam. Why should we not tighten our belts on the home front? We just cannot afford to finance a full-scale war and have business as usual.

This moratorium could reduce the expenditures of government by at least one billion; and what is equally important, it would reduce some of the inflationary pressure.

Second. Repeal the 7-percent investment credit.

This 7-percent tax credit is back-door financing for the purpose of providing an indirect subsidy to encourage the expansion of the plant capacity of private industry at a time when this additional capacity is not needed and at a time when we do not have adequate investment capital with which to finance it.

The repeal of the investment credit would have dual benefits. First, it would reduce the pressure on an overheated economy; and second, it would provide approximately $3.3 billion additional revenue to the Federal Government of which $2.8 billion will come from corporations and $500 million from individuals. However, all of this $3.3 billion will not materialize in the first fiscal year.

Mr. LONG. Mr. President, will the Senator from Delaware yield at that point?

Mr. WILLIAMS of Delaware. I yield to the Senator from Louisiana.

Mr. LONG. I wish to compliment the Senator for the suggestion he is making. As between simply extending the 10-percent surcharge and the particular suggestion the Senator is making to suspend the investment credit, I think his approach would be better. It would do more to restrict inflation and I think, on balance, would do greater tax equity and justice to the taxpayers. I believe that, so far as the rank and file of Americans are concerned, they would applaud that approach rather than the other.

Now I may have some additional suggestions to make myself, following the same general line of departure, but I do think that the investment tax credit is doing more than any single thing to overheat the economy in times of inflation. In other words, it is really pouring gasoline on the fire. That expression, by the way, is not original with me. At the time that President Johnson suggested the investment credit be suspended, I believe he used that expression in discussing the matter with some Members of the Senate—if not publicly, at least that was the expression he used about the investment credit under this kind of condition.

I believe that it is, undoubtedly, doing more to drive credit into the hands of those able to get it and making it available only at tremendously high interest charges to those who need it badly to build homes and provide for their essential personal needs.

Mr. WILLIAMS of Delaware. I thank the Senator from Louisiana, and he is right. I am not debating the merits or demerits of the principle of the investment credit; there may be times when we need it. The point is, we do not need this added incentive today. Private investment for new plant expansion or modernization has expanded about 24 percent in the past 15 to 18 months. Certainly at this time that is creating an excessive demand not only on the materials necessary to build plants, which is inflationary, but also for capital to finance plant expansion at a time when money is scarce and when the interest rate is already being pushed through the roof.

The way to control inflation is to remove some of the pressures. By reducing some of the demand for money we could then look for lower interest rates, but we must slacken the demand at this time. We have an overheated economy.

As I mentioned to the chairman, I am not offering this package as part of the pending bill, but it will be before our committee later. I think these additional measures must be considered in the context when we are extending the debt ceiling, to extend the debt ceiling is only taking care of an immediate situation.

It does not cure the problem which is excessive spending. Expenditures must be reduced if we are to reduce the cause of

inflation. We have no choice. First we should consider the causes of inflation—what is creating the problem so that we can deal with it. That is the reason I am discussing a series of recommended steps for later action.

Mr. LONG. If the Senator from Delaware will permit me to trespass for a moment further on his time——

Mr. WILLIAMS of Delaware. Surely.

Mr. LONG. Here we are, in an inflationary economy, with a war on our hands, facing a tax credit to provide an almost compelling incentive, from the profit point of view, to greatly expand plant and equipment, when to do so means that we are making credit so difficult for homeowners and small businessmen and others to provide for their essential needs, so that the interest rates are almost usurious.

Here people are, being required to borrow at such a high interest rate that they will pay almost twice as much for interest as they pay for the house by the time they get through paying it with a long-term mortgage. Under these conditions when we look at the tax credit, we find that it is heating up the economy at a time when the economy can not stand the heat. Every argument that can be made that we should stimulate the economy, to stimulate employment, and the building of new plants, and new investments, falls right on its face when we look at the inflationary pressures which exist in the economy of this country today.

I agree with the Senator that this would be a better answer to the problem to suspend the investment tax credit than it would be to continue the 10-percent surtax.

Mr. WILLIAMS of Delaware. I certainly concur.

Mr. President, the third step I recommend is to initiate a new savings bond program paying at least 6 percent to the small investors.

The present trend toward increasing wages in all segments of the labor force means additional consumer spending. As a step toward siphoning off some of this consumer buying power, the Government should initiate a new bond sales program for the small investor allowing him to benefit from today's high-interest rates. With today's 4¼-percent ceiling, he is just not buying series E bonds. These new savings bonds should bear interest at an annual rate of not less than 6 percent and should be fully guaranteed as to principal should the holder need to redeem them prior to maturity.

To limit this attractive feature to the small investor these bonds could be nontransferable and could be limited to $1,200 or $2,400 per year.

This higher rate on savings bonds is only fair. Our Government is already paying more than 6 percent on its borrowings today; and why should not the workingman be paid a comparable rate of interest? In addition, as an instrument toward siphoning off excess purchasing power, it would have a definite impact on inflation. At the same time, some adjustment must be made on the outstanding series E bonds.

Mr. DIRKSEN. Mr. President, will the Senator from Delaware yield?

Mr. WILLIAMS of Delaware. I yield to the Senator from Illinois.

Mr. DIRKSEN. With reference to the savings bonds, some of those at the lower interest rate of 2¾ percent were issued many years ago—some of them for 1972 maturity. It could be that they go beyond that time. I think we can gather from that that older people are holding those lower interest savings bonds today, and getting such a small return compared with what the rate is today.

My understanding is that there are a total of about $8 billion worth of these bonds. About one-half of them have been put through the trust funds and the other half is in the hands of the public.

What kind of relief does the Senator propose for those who are holding those bonds today? They are the real victims of this inflation.

Mr. WILLIAMS of Delaware. In the face of today's inflation all owners of Government bonds or industrial bonds are victimized. But I was referring to the owners of series E bonds. These are limited to small investors. The public does hold some of the outstanding low coupon bonds which mature from 1972 to as far as 1990. There are some a little longer than that.

However, a survey I conducted about a year or so ago showed that the overwhelming percentage of this type of bonds was held by institutional investors or by banks. I do not think the Senator will find that the small investors own to any large extent that type of bond. At the time those bonds were issued they were sold at par, at 2.5 and 2.75 percent interest, and at that time the small investor could invest up to $10,000 in series E bonds, which paid around 2⅞ or 3 percent. He would get more interest plus a guarantee on principal on the E bonds. Therefore it was the small investors who were buying E bonds. To be frank, I do not see how we could deal with that situation except to stop this inflation with its erosion, not of their interest, but of their capital. But the administration has had a policy of limiting the purchase of series E bonds to the small investor and trying to keep the interest rates somewhat in line with the prevailing rates.

Mr. DIRKSEN. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. DIRKSEN. Perhaps the question the Senator from Delaware addressed to the Secretary of the Treasury this week should be pursued and we ought to ascertain where these small bonds with the small interest rates are, and see whether or not some assistance should be rendered to those people. If they cannot get it from that source, obviously they will have to become participants in welfare programs. So the matter is as broad as it is long. We do it either way. I would rather do it by the interest route, because then they receive that income with dignity.

Mr. WILLIAMS of Delaware. As I have said so many times, spiraling inflation—of which higher interest rates are only one of the barometers or indicators—has gradually been pauperizing the aged or retired people of this country, whether they live on interest from Government bonds, pension accounts, or social security payments. This gradual erosion of their income is the No. 1 problem of our country. I think our committee should put it on its agenda as the No. 1 problem to be studied.

My suggestion made here today for a more realistic savings bond program would have the additional salutary effect of siphoning out of the spending stream some of the money going into consumer spending, and to that extent it would reduce inflationary pressures, which I think is equally important at this particular time.

I was encouraged earlier this week when the Secretary of the Treasury indicated sympathy for a new approach to that problem.

Mr. COOK. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. COOK. With reference to the remarks of the Senator from Delaware on the series E bonds, is not the Senator saying in effect that the fact is that the people buying those bonds are really being shortchanged relative to the institutional investor and the large investor, and what we will see is a decrease in the income of the individual buying bonds monthly unless the interest competes with the interest being made available to the individual or institution buying bonds in larger amounts?

Mr. WILLIAMS of Delaware. That is right, especially when we bear in mind that the purchase of series E bonds has dropped below the redemption of them. I understand a bond sales program is being conducted among the boys serving in Vietnam urging them to invest their money in those bonds. Why should not they be paid the same rate of interest that every other man in America can receive if he has a minimum amount of $1,000 to invest at one time?

It is interesting to note that bonds being sold by some of our agencies—bonds which carry the guarantee of the Government of the United States, bear a rate of interest which amounts to 6½ or 6¾ percent and oftimes are sold in denominations of $5,000. I think it is unfair.

Mr. COOK. Will the Senator yield for another question?

Mr. WILLIAMS of Delaware. I yield.

Mr. COOK. Would the Senator agree that, even with the proposed increase in the debt limit of $12 billion, and the Government issuing notes paying 6½ or 6¾ percent, the average individual will not be able to buy them?

Mr. WILLIAMS of Delaware. That is right. The buyer of a regular Government bond has to put up $1,000 at one time. If he has only $900 he has to invest it in bonds paying 4¼ percent interest.

Mr. COOK. I thank the Senator.

Mr. WILLIAMS of Delaware. My fourth point is to extend the surcharge at 7 percent.

When we take into consideration the $3.3 billion additional revenue from the the repeal of the 7 percent investment credit and the savings that will result from a moratorium on public works the surcharge would then need only to be extended at 7 percent for fiscal 1970 instead of at the proposed 10 percent. This still means a rate of 8½ percent for calendar year 1969.

That is due to the fact that the rate would be 10 percent for the first half of the year, and with 7 percent for the last half this would make an overall 8.5 percent.

Fifth, I have suggested the inactment of a mandatory ceiling of $190 billion on Government spending for fiscal 1970.

The repeal of the investment credit and the extension of the surcharge should be accompanied by an additional section which again places a ceiling on Government expenditures for fiscal 1970. There should be a limit of not over $190 billion as compared to the $195.3 billion presented in the unified budget. This would mean a mandatory reduction of a least $5.3 billion in the projected expenditures as outlined in the budget of the last administration.

While the $3.3 billion additional revenue derived from the repeal of the investment credit along with the extension of the surcharge at the rate of 8½ percent for the calendar year 1969 is about equal to the revenue effects of the extension of the full 10 percent surcharge alone, the overall impact on the economy in controlling inflation will be much greater as a result of this combination, particularly when it is accompanied by a moratorium on all new public construction and public works projects and a mandatory ceiling on expenditures of $5.3 billion below the projected levels.

The sixth suggestion is to repeal the 4¼ percent interest rate ceiling on long-term Government bonds.

The repeal of the 4¼ percent ceiling on long-term bonds will have no effect on the above-referred-to package, but the ceiling is a farce and should have been eliminated long ago. Moreover, while this ceiling has had the effect of monetizing the debt it has had no effect on holding down interest rates.

These six steps outline the minimum action which in my opinion should be taken immediately. Money is a commodity, and interest rates are the prices of that commodity in the market places; and the only way to reduce the price—or interest rate—is to reduce the demand.

I am not proposing this package as a cure-all for our financial problems. It is only the first step, and it would need to be backed up by the proper fiscal restraint as Congress considers the appropriation bills later this year. However, I am firmly convinced that congressional approval of the above-outlined package would go far toward acting as a check on this inflationary spiral. Such fiscal restraint would mean a reduction in the demand for new money, leading toward a reduction of interest rates and a leveling off of consumer prices.

It has been estimated that each 1-percent increase in the annual rate of inflation adds an additional $1 billion to the cost of operating the Government; therefore, by each 1 percent that we reduce this inflationary spiral we automatically lower the cost of Government proportionately, thereby moving toward the day when we cannot only talk of a balanced budget, but also talk of reduced taxes while at the same time, what is even more important, maintaining the purchasing power of the dollar.

Legislation dealing with tax reform to equalize more nearly our burden of taxation is long overdue, but it not being included as a part of this recommendation since it is understood that a special bill dealing with this subject will be coming over from the House of Representatives at an early date.

Mr. President, I am having drafted a proposed bill which will embrace the recommendations outlined in these six points. This bill will be introduced at a later date for referral to our committee and will be available for consideration together with the proposed extension of the 10-percent excise taxes.

Mr. President, I ask unanimous consent to have printed in the RECORD the following articles:

An article entitled "Outlay Boom Holds Danger," written by J. A. Livingston and published in the Washington Sunday Star of March 23, 1969.

An article entitled "Business Loans Won't Slow Down," published in Business Week of March 22, 1969.

An article entitled "Investment Tax Credit," written by Paul A. Samuelson and published in this week's issue of Newsweek, wherein he concurs that the investment tax credit should be suspended.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Sunday Star, Mar. 23, 1969]

OUTLAY BOOM HOLDS DANGER

(By J. A. Livingston)

The persistent rise in business expectations—the ever-increasing commitment of corporate executives to expansion—disconcerts President Nixon's economic advisers. The slowdown they hope for isn't materializing.

The recent Commerce Department-Securities and Exchange Commission data on expenditures for plant and equipment indicate a capital goods boom is in the making. Therein lurks danger.

The 15 prcent jump in planned outlays—from the fourth quarter of 1968 to the third quarter this year—can be interpreted in two ways:

1. Businessmen have now become permanently committed to inflation. They doubt that President Nixon will be willing or able to check it. At the first rise in unemployment, he'll repeat President Johnson's performance in 1966: React too soon.

Credit will be made easier. Spending will increase. Renewed expansion will reinstill faith in permanent inflation.

2. Businessmen are responding to immediate pressures. They can't produce and distribute goods fast enough to meet the needs of customers. They can't get skilled help. Therefore, they enlarge facilities and introduce labor-saving machinery.

TWO SETS OF FIGURES

But plant utilization isn't rising. According to Federal Reserve Board data, manufacturing companies are operating at 84 percent of capacity, down from nearly 91 percent in early 1966. The inference is drawn that new installations will only add to overcapacity.

Data compiled by the University of Pennsylvania's Wharton School don't corroborate this entirely. They show that the decline in utilization from the 1966 high has been moderate—less than two points. Their inference is that some industries are surely pushing against an output ceiling. Therefore, expansion plans aren't an inflation hedge—a race to beat advances in cost.

Here are the two sets of figures on percentage utilization of capacity:

[In percent]

Year and quarter	FRB	Wharton School
1966:		
2d	90.8	96.3
3d	90.6	96.0
4th	90.0	95.5
1967:		
1st	87.1	94.0
2d	84.9	93.0
3d	84.1	92.6
4th	84.8	93.4
1968:		
1st	84.9	94.1
2d	84.8	93.3
3d	84.0	93.8
4th	84.2	94.4

In relation to projected plant outlays, retail sales lag. For eight months dollar volume has increased very slowly. And because of price increases, merchandise actually handled may have declined.

IT HAPPENED BEFORE

So we have these divergencies: Plant and equipment outlays are up sharply, plants operating below capacity and retail sales are traveling in a straight line.

The inference here is either retail sales must rise or industry will have more plant than it can profitably use. In that event a fall in contract awards for construction and equipment will follow. And fast. This happened in 1937–38 and in 1929. And rising interest rates—tighter credit—had an impact both times.

In 1929, the stock market got out of hand. Interest rates were forced up to check speculation.

In 1937, banks had large excess reserves. The Federal Reserve Board reduced them by raising reserve requirements. The reaction was excessive. Banks had ample excess reserves and lending capacity, but the financial and business community was in a worrisome mood.

NIXON VERSUS ROOSEVELT

That man in the White House—Franklin D. Roosevelt—wasn't regarded as friendly. The stock market collapsed. Retrenchment set in. Steel operations, for example, plummeted 56 percent from 1937 to 1938.

The mood today is quite the opposite. Businessmen are sure that President Nixon won't countenance a rise in unemployment. And investors "know" that inflation is here to stay. Bonds are bad to buy, stocks are protection.

Warnings from Washington are ignored. Tight Federal Reserve policy is looked upon as a temporary restraint which will be promptly removed when it begins to work as intended.

This worries the President's advisers. Their efforts to check a boom—to head it off from rollicking into a bust—are not taken seriously.

Will the bust they're trying to prevent be the only convincer?

[From Business Week, Mar. 22, 1969]

BUSINESS LOANS WON'T SLOW DOWN—SPENDING SPREE GOES ON

Despite high-priced money and admonitions from Washington, companies are still raising capital investment plans. Competition and new technology are among the driving forces.

Despite soaring interest rates, business borrowing shows little letup. But the Federal Reserve Board still has cards to play in effort to slow economy.

Classic monetary theory holds that when money gets expensive enough, people will stop borrowing, and, in turn, reduce spending.

This week, with money more costly by far

than ever before, that bit of theory was undergoing its most severe test.

If today's super-high interest rates do knife into borrowing, then the Federal Reserve probably will win its fight to slow the economy, and the rate of inflation, without triggering a recession.

If business and consumers keep on borrowing as they have been, still more restraint—monetary and perhaps fiscal as well—will be needed. Then the financial markets could wind up in trouble, with the economy pushed into a tailspin.

At midweek, it still wasn't at all clear how things ultimately will go. So far, though it is hard to find much concrete evidence that record-high interest rates—or anything else the Fed has tried—are working out the way they are supposed to.

GOING UP

Interest rates haven't simply been moving up, they have been zooming:

Commercial banks last Monday raised their prime rate from 7% to 7½%, the fourth increase since last Dec. 2. Morgan Guaranty Trust Co. of New York led the way this time.

Bond market rates have climbed by around ¾ of 1% over the past three months, with the cost of selling a municipal bond up by more than ¼ of 1% in just two weeks.

Only Treasury bill rates have been moving down lately. But Treasury bills are a traditional haven for short-term funds when other markets turn scary—and both the stock and bond markets have looked scary lately.

LITTLE EFFECT

The Fed's tight money policy shows up in other areas as well.

The nation's money supply—demand deposits and currency—is up by 6% over a year ago. But it has risen at only a 3.5% annual rate over three months ago. A number of economists insist that changes in the money supply, not in interest rates, really determine what happens to the economy. Fed policy would seem to be restrictive by anyone's standards.

But, as a Business Week spotcheck of corporate executives shows even this degree of restraint doesn't seem to be swaying very many people.

Some borrowers have turned away from the bond markets recently. Corporations have put off at least $100-million of issues that were due to come to market in March. In the municipal bond markets, where the absence of bank buying has thrown dealers into a fret, more than $250-million worth of issues have been postponed this month.

HIGH DEMAND

Yet, the demand for bond market money continues strong; corporations still plan to sell around $800-million in bonds this month against $766-million in March, 1968. Bond dealers, moreover, figure that many of the called-off issues have merely been postponed until market conditions stabilize.

The demand for bank money continues strong—bank lending to business customers is growing at an 18% annual rate these days.

Even the mortgage market—typically the first victim of tight money—is looking perkier than most observers had expected. Housing starts still are running at a fast 1.7-million-unit annual rate. The flow of new money into savings and loan associations and mutual savings banks has slowed but not stopped as it did in 1966.

MATTER OF TIME

The situation could change, of course—and in a hurry.

The new 7½% prime rate, for instance, is largely just a reflection of the growing shortage of money at the banks. Most money market rates are higher than the banks can pay; the banking system has lost $5-billion in certificate of deposit money since early December. Banks have been borrowing heavily in the Eurodollar market. But Eurodollars are costly—around 8%—and increasingly hard to get.

Banks are trying new money-raising techniques. Morgan Guaranty, for one, has started selling participations in its loan portfolio. But the pinch is still hurting.

"Homebuilding," says a New York City bank economist, "is going to be hit. It's just a matter of time."

Already, the municipal bond market is a shambles—with rates far higher now than a great many municipalities are allowed to pay. This has developed, as one bond dealer points out, "without any significant selling of municipal bonds by the banks."

TWO WAYS OUT

Yet the Fed is far from being off the hook. Eventually the present degree of restraint probably will work through the economy, with some borrowers priced out of the marketplace and others turned away for lack of funds. But that will take time—how much time not even Fed policymakers can say.

The Fed does have a couple of avenues open to it. It has a good excuse now for again raising its discount rate—last raised on Dec. 18 from 5¼% to 5½%. As it is, the discount window is now a cheap source of money for banks; a higher discount rate would simply bring this rate in line with other short-term rates. At the same time, the Fed might raise its Regulation Q ceiling on what banks can pay for money—thus giving banks some room to compete for time deposits. A higher discount rate, without a higher Q ceiling, would really hurt the banks—forcing them to start dumping their holdings of municipal bonds in earnest.

Or the Fed could freeze hundreds of millions of dollars in bank money by raising the level of reserves banks must keep against deposits.

Scarce money, high interest rates, and government admonition apparently are not deterring business from pushing ahead with massive capital spending plans for 1969.

This is the almost unanimous conclusion drawn from talks Business Week reporters had with top executives following Monday's hike in the prime rate. And business determination to press on with big spending plans sets the stage for the great economic drama of 1969.

The quarterly capital spending survey of the Commerce Dept. and the Securities & Exchange Commission indicates that businessmen plan to boost their expenditures by 14%—and the government wants to bring that down. Mainly through tight money (page 33), the government hopes to reduce the figure to what it sees as a less inflationary and more sustainable growth—perhaps 7%.

GNP PICTURE

In contrast, executives see high capital spending as a way to fight inflation. It gives them the new technology needed to cut costs. And they feel they will have the financing no matter what is done to further tighten credit. The outcome of this war over capital spending has enormous implications for the business outlook.

Washington's expectation of a 1969 gross national product of $920-billion is based on a capital spending increase about half as big as the 14% figure now on the books. If this GNP figure proves out, profits would be about level, unemployment would rise slightly, and the rate of price increase would probably taper from its present 4½% to about 3½% by yearend.

A capital spending increase of around 14% would radically alter this picture. Total GNP would probably be close to $930-million for the year—profits would increase but unemployment would stay at its present level, and price increases wouldn't taper off at all. By the end of the year, the U.S. economy would still be in a roaring boom. The 14% capital spending increase implies a fourth-quarter GNP of about $955-billion, a full $20-billion above the fourth-quarter rate implied by the government's projections.

Plans can and do change, but judging by what companies are now saying about the firmness of their decisions, the government will have a hard time changing them.

MOTIVES

The principal motives leading companies to these decisions seem to be three: the lure of expected long-term growth, the need to economize on labor costs, and the opportunities presented by new products.

Says Harold M. Williams, chairman of the finance committee of Norton Simon, Inc.: "Historically, the capital outlays we defer turn out to be our most expensive ones. There's little to indicate the benefits of waiting."

Robert Wingerter, president of Libby-Owens-Ford Co., objects to Federal Reserve Board suggestions that high capital spending is inflationary when some capacity is idle, and says: "These figures [showing that some 17% of manufacturing capacity is now idle] are just to support the current line of propaganda. Most of the idle capacity is just not efficient. Much of the higher capital spending being forecast by manufacturers is caused by a desire to reduce costs by improving inefficient manufacturing facilities."

Says Henry G. Parks, president of H. G. Parks, Inc., "After all, there is such a thing as competition. And we're planning on a growth that will double in three years."

"Businessmen take a two-to-five year look at family formations and can't help getting pretty optimistic when they look beyond the current crop of short-range problems," says Paul Harmon, manager of economic research for Armco Steel Corp.

Scott Paper Co. plans a 10% increase in capital outlays this year, mainly to economize on labor costs. "Our plans include some labor saving equipment that might be considered marginal under slower wage increases, say about 4%," says G. L. Chamberlin, vice-president and controller. But his company is committed to a two-year labor contract that calls for 6% annual wage hikes. This helps push the decision in favor of some new projects "like automatic packing equipment which will eliminate handlers."

NEW TOOLS

For other companies, new technology, whether to cut costs or to introduce new products, is the dominant motive for spending. At Libbey-Owens-Ford, President Wingerter talks of the cost savings involved in shifting over to float processing plants for glass manufacturing "which eliminates costly grinding and polishing operations."

James F. Bere, president of Borg-Warner Corp., is scheduling a 33% increase in capital spending this year in part to update tape-controlled machine tools. The same kind of technological pressure influences Morris J. Vollmer, vice-president of finance for A. O. Smith Corp. His company plans a 30% to 40% increase in outlays this year, and most of this, says Vollmer, "is not for expansion but merely to keep abreast of advanced technology."

VITAL POINT

But whatever their motive for capital spending, big companies are agreeing on one vital point: The financing needed to carry out plans is already in the bag.

At Bucyrus-Erie Co., capital appropriations will be about one-third higher than in 1968. "Our plan is to use cash flow," says Norris K Ekstrom, vice-president of finance. "We look for sufficient payback so that cash flow will pay for capital improvement. If we do increase our debt in the process, it will be a very temporary increase." Eastman-Kodak Co. is planning a 24.8% increase for 1969. "We pay as we go," says Robert Miller, vice-president of finance at Kodak.

Minnesota Mining & Mfg. Co. expects to be

able to finance its spending plans out of cash flow for years to come. These plans call for a 10% hike this year and "probably 15% to 20% in 1970," says Irwin R. Hansen, vice-president of finance.

Big companies that won't be able to make it out of cash flow alone say that the outside financing they need is already lined up. O. W. Armstrong, treasurer of Phillips Petroleum Co., where capital expenditures will run "15% to 20% above last year" talks of "a revolving line of bank credit utilized off and on since 1966. We are just now getting to where we'll eventually use it all up, but it will take us into 1970."

ONE PROBLEM

With financing already in place, companies see only one serious threat to their high capital spending plans: getting caught with excess capacity in the event of a business downturn.

This is exactly the danger that is stressed by such government officials as Council of Economic Advisers Chairman Paul W. McCracken, when talking of the need for realism in business planning for a new economic environment. But companies also know that the Administration has coupled its pledge to get inflation under control with a promise that price stability won't be purchased at the expense of high unemployment.

Companies tend to think less about the short-term slowdown (needed to get inflation under control) than about the long-term high employment pledge. "Nixon is going to tighten up some, but not enough to halt inflation," says George C. Sells, president of General Shale Products Corp. "It's here to stay forever if politicians want to be re-elected."

For these reasons, a policy designed to bring inflation under control gradually tends to focus almost wholly on the capital spending plans of business.

It's just this kind of attitude that the new Administration is trying to change. When it first came to Washington two months ago, its new policy team proclaimed that fiscal restraint coupled with tight money meant that economic policy—in McCracken's words—was "on the right track." Their forecast, moreover, was for a gradual cooling of the economy.

What has happened in the two months that followed, has shaken business confidence in this outlook. Instead of slowing down from the fourth quarter, the U.S. economy has probably accelerated in the past two months. Government officials now estimate the final sales component of GNP—the best measure of total demand in the economy—will be up $20-million or more this quarter, compared to a subdued $13.3-billion rise in the final quarter of 1968.

The upgrading of capital spending plans, from a 10% rise in December to the 14% rise now reported, is the natural response to unexpectedly good business.

Clearly, companies are upgrading plans because they still have more confidence in the forces propelling the economy up than in the measures designed to rein it in.

[From Newsweek magazine]

PAUL A. SAMUELSON ON INVESTMENT TAX CREDIT

Inflation watchers were rocked last week by news from the SEC and Commerce Department that businessmen intend to increase their plant and equipment investments by almost 14 per cent.

The new outlook for excessive investment spending should, in my opinion, cause President Nixon to suspend the 7 per cent investment credit temporarily. Here's why:

1. The economy is still on an inflationary binge. To bring the rate of price increase down from 4 per cent toward a more moderate figure of, say, 3 per cent, some actions are going to be needed. Every weapon counts.

2. Already the Federal Reserve is being called upon to take Draconian measures to fight inflation. This will mean not only painfully higher interest rates; it will also bring in most of the discomfort associated with the money crunch of 1966—uneven rationing of credit between new and old business, growing and stagnant business, small and large business.

3. Experience demonstrates that tight money takes for its principal casualty the housing industry. When there is a scramble for more resources than the total resources available, it is right that housing should share in the restraint. But it is not, in my judgment, good national policy to have housing starts cut by 40 or 50 per cent as happened in 1966. In the 1970s, with their bumper crop of young marrieds, we shall pay in higher rents and zooming residential costs for any serious diminution of home construction in the waning years of the Vietnam war.

4. Admittedly, inflation could be fought by adding onto the present surcharge another 5 or 10 per cent tax. But I see no evidence that this would be politically popular or feasible. Nor is it clear that consumer spending is the prime villain in the present inflationary scenario.

5. Admittedly, inflation could be fought by still further tightening of the Federal Reserve money screw. And the impact of such tightness on the housing industry could be alleviated by special financial subsidies to home construction through the Federal housing agencies, through the U.S. Treasury, or through the Federal Reserve. Since all such measures will add to the nominal public debt, I don't expect that anything but tokenism would, in fact, be politically feasible in this area.

Even if it were possible to cushion the impact of tight money on residential housing, to get the same restriction of aggregate demand from enforced reductions on plant and equipment spending would, I suspect, require very high interest rates. These will cause difficulties for our partners abroad. And they may hang on to plague us in the years to come when the winds may be blowing up deflation rather than inflation.

6. In September of 1966, to alleviate the money crunch and moderate what looked like an excessive fixed investment boom, the Johnson Administration did suspend the 7 per cent investment tax credit. Almost at once relief was felt in the money markets of the country. On the whole (despite the protests of the Treasury, which naturally found it a headache), the operation seems to have been a successful one in accomplishing its purpose—namely, ensuring against an overexuberant fixed investment boom.

So historical experience, as well as the common-sense view that firms will invest less when their returns from doing so are reduced, justifies suspending the tax credit.

What are the possible arguments against suspension of the tax credit?

1. The Nixon Administration might be regarded as a pro-business Administration. Why should it take from business this accustomed source of profit?

2. Perhaps the inflationary danger is being exaggerated. Perhaps it will involve overkill if suspension of the investment tax credit reduces investment severely.

3. Vigorous growth requires as much capital formation as we can get. Adjusting to inflation by reducing investment will reduce our future capacity to produce an enlarged total of real national product.

4. It is a bad thing to use variations in the investment tax credit as a deliberate weapon of stabilization. Why? Because it is plain immoral. Because it involves discretion by government, which is wicked. Because it disturbs business planning.

5. Suspension creates administrative problems for the Treasury.

In economics, every decision involves pros and cons. Judgment is necessary. My advice to Mr. Nixon: suspend the investment tax credit.

Mr. HARTKE. Mr. President, we are called upon today to once again raise the legal ceiling on the national debt. The measure before us provides for a permanent ceiling of $365 billion, as well as additional temporary borrowing authority of $12 billion. Such temporary authority would have the effect of making the limit $377 billion for fiscal 1970. The permanent limit at present stands at $358 billion, while the temporary ceiling permitted within each fiscal year is $365 billion.

During my tenure in the Senate, I have always believed that the ever-increasing obligations of this country should be comported with apparent fiscal responsibility. As long as we operate our Federal Government under the national debt concept I think it wise that we conform, whenever possible, to ceiling limits. However, it is not my belief that the need for fiscal responsibility can, or should, supercede the need for social and economic responsibility. And that I believe to be the issue here today. I have no desire to see this country put in a position where it cannot meet its just monetary obligations. But neither do I wish to see this Government renege on its patently more important obligation to the daily wage earner who today is beset on all sides by debilitating inflation.

I cannot endorse a measure which would have the effect of allowing the Federal Government to meet its obligations with procedural ease while ignoring the very real economic problems that are today faced by the vast majority of our citizens. What solace can be found in this bill for the low- and middle-income Americans who are plagued by rising prices on essentials and soaring interest rates? What encouragement can be discovered for the small businessman who finds himself increasingly belabored by the effects of inflation? Where in this measure lies hope for our elderly who must oftentimes make do on fixed incomes which are now being eaten into by cancerous inflation? The simple answer is that this bill does not afford relief to those who are most seriously in need of it. Rather it allows our Government to routinely meet what is viewed as its fiscal obligation while effectively ignoring the all too obvious economic ills which afflict most of our citizens. There can, in fact, be very little doubt that this measure, providing as it does the prerequisite to an increase in governmental spending, will contribute directly to an acceleration in the inflationary trend. Not only will an absolute increase in Federal spending contribute significantly to the problem but now the Federal Government itself is forced by the Federal Reserve Board to pay higher interest rates for the money that it must borrow in order to fund an increase in governmental operations. Thus, a cause and effect relationship is established; for the Government, in order to meet the demands of an inflationary society, is forced to borrow money as a prelude to increased

spending. These funds can be obtained however, only at exorbitant interest rates which have resulted from the institution of improvident Federal monetary policy. Needless to say, this increase in interest rates, while it might very well deter a middle-aged couple from buying their first home because mortgage rates are too high, will not prevent the Government from obtaining additional funds regardless of the cost.

I would, Mr. President, be inclined to cast my vote for this measure, albeit reluctantly, if there were some definite assurance from the administration that it would soon take constructive steps to remedy the obvious inequities in our tax structure. It has been conservatively estimated that $6 billion is lost each year through the use of legal, but inequitable, tax avoidance devices. Yet in the hearings before the Committee on Finance I asked this very question, and they specifically indicated that whatever tax reforms are to be proposed, if any, certainly cannot hope to be acted upon this year.

Certainly the additional revenue that would be brought in upon an implementation of reform measures would go far to slow the inflationary trend. It is too much, then, that a quid pro quo be asked of the Executive? If it is true that one reason the national debt is so high is because billions of dollars in potential tax revenue are lost through tax loopholes each year, it would appear most reasonable that these loopholes be eliminated now.

As well, there is no doubt in my mind that very considerable reductions could be made in the budget for fiscal 1970. It is undeniable that execessive governmental spending is in large part responsible for the inflation that we labor under today. Last year, when the budget for fiscal 1969 was under our consideration, I proposed reductions in spending which amounted to more than $7 billion. I expect that like reductions could be made in the budget for fiscal 1970 without compromising either our defense posture of necessary domestic programs. Military expenditures in particular should come under close scrutiny. The current debate over the proposed ABM system is, I think, indicative of an inquisitive mood that has influenced the thinking of many of us in the Senate. Previously sacrosanct areas in the budget are sure to be more carefully considered in this session of Congress. It is to be expected that reductions in governmental spending, especially in the defense area, would have the salutary effect of stemming inflation. This would be true even if the funds so saved were in part, diverted into nonmilitary domestic programs.

What I have said so far necessarily presupposes that certain monetary and fiscal policies first instituted by the Johnson administration, and since confirmed and made more rigorous by the present administration, are not having their intended effect. And that I believe to be the case. I have seen no concrete evidence that these economic controls have begun to take hold, the feeble protestations of the administration's spokesmen, notwithstanding. President Nixon announced yesterday that he will request an extension of the 10-percent surcharge. Yet there is no significant indication that the surcharge device has been effective in curbing consumer spending.

In fact, all indications are to the contrary. At the same time President Nixon was announcing his intention to ask for a surtax extension, the Labor Department was releasing its consumer price index figures for February. The index for February indicates that consumer prices continued rising last month at the fastest rate in 17 years, rising fourtenths of 1 percent. Mr. Arnold Chase, Assistant Commissioner of the Bureau of Labor Statistics, in commenting on this increase made what must surely be a classic understatement when he said:

> The effects of the fiscal restraints have been delayed longer than most people expected.

Mr. Chase commented further that it was the homeowner who was hardest hit by this increase for he now pays more for everything from mortgage payments to babysitter fees.

The Federal Reserve Board but recently once again raised the prime interest rate to an historic high, but where is the indication that its tight money policy is slowing down the economy? It is abundantly clear that capital investment by business is a major cause of worsening inflation, but where is there any indication that the rate of industrial expansion is being restricted?

In short, it is my belief that the current fiscal and monetary policies of this administration are both unwise and unworkable. They have affected most seriously those elements in our society that are least able to shoulder the additional economic burden imposed by these policies, while leaving the Federal Government and big business relatively unrestricted.

Mr. President, this measure, and the action to be taken thereupon, presents us with a most crucial question And that is, What are our national priorities to be? Must we favor fiscal responsibility at the expense of social and economic responsibility? Will we furnish the key for an increase in governmental spending that will in time further exacerbate our problems of inflation with the result that the economic position of the low- and middle-income wage earner is further compromised? Or will we demand that the National Government impose appropriate spending restraints upon itself before we consent to increasing the debt limit? As well, should we not require that the President indicate his intention to more efficiently restrict industrial expansion, before we endorse a measure that will surely contribute to an increase in the rate of industrial development?

In the absence of such assurances, I am unable to give my support to this measure. I want to make it perfectly clear that there are two points before us today. They are the surtax and the debt limit.

I opposed the imposition of the surtax and said then that I thought it would not work. It has not worked. It has been one of the chief fuels that have inflated our economy.

There is absolutely no evidence to indicate that the surtax has made the slightest contribution toward reducing inflation.

When the proposal was first brought up it was said that the measure was necessary to bring down the cost of living.

The cost of living is now at an all-time high, and the 10-percent surtax has actually added to our problem.

It was said at the time the measure was before Congress that it would hold down interest rates. Yet, interest rates are now at an historic high.

It was said then that if we were to pass the surtax, it would not be necessary to come back to Congress during the period of the imposition of the surtax and ask for an additional increase in the debt limit. Yet, here we are doing exactly that. And the chairman of the Finance Committee is arguing on behalf of the Republican administration that we should give them this advantage.

The ranking member of the Committee on Finance, the distinguished senior Senator from Delaware (Mr. WILLIAMS), is really saying that the present administration has not done all of the things that he recommended last year, and for which he criticized the Johnson administration.

I think we should bypass the entire matter. I do not think we would have to forfeit on our obligations.

It would be a tight squeeze. However, we are on a monetary merry-go-round. Someone will have to get us off that merry-go-round.

The Government will get its money at whatever price it has to pay.

Big business will get its money, and it will pay whatever it has to pay.

Of course, the interest payment is deductible. That means that, to that extent, the money they would have to pay the Federal Government would be reduced. Therefore, the Government itself will pay the cost of the interest paid by big business.

That is of no benefit to us. But what about the little man? What about the small wage earner? What about those people that the Senator from Nebraska (Mr. CURTIS) was talking about? What about the people on social security? What about the person who finds out that he has a lower standard of living than he had a year ago in spite of the fact that his wages have been increased? That man finds that he has a significantly lower income even with the increase in wages. There has been an increase in taxes, an increase in social security tax, and an increase in the cost of living. That man has less left now than when he started out last year.

As far as services are concerned, hospital costs are increasing. Any claim that we can reduce the cost and the demand for hospital services by continuing the surtax is fallacious. Those costs are not based upon the law of demand and supply. We cannot keep people from going in the hospitals when they are sick.

The question which must be determined and which we must face is whether we are going to close hospitals in New York City, for example, because cities can no longer raise the money to pay the

bills. Are we going to close schools, as they did in Youngstown, Ohio, because they could no longer pay for the schools? Are they going to refuse to build any additional schools, to pay teachers' salaries, and to pay for garbage collection and all of the other expenses borne by local governments?

That is the issue, plus the overriding fact that we are spending between $3.5 and $4 million an hour to pay for a war in Vietnam which this country has been promised would be brought to an end. I would like to follow the leadership of my chairman and vote to extend the debt limit. I am certain that the debt limit will be extended by the $12 billion. However, I think it is a mistake.

We should have some guidelines as to where the country is going. People want to know where the country is going. They should be told. They should be told before we act, for we cannot turn the clock back.

Mr. President, I am going to do my best to make my voice heard by voting against an increase of the debt limit.

(The following colloquy, which occurred during the address by the Senator from Delaware (Mr. WILLIAMS) is printed, by unanimous consent, at this point in the RECORD.)

Mr. GRIFFIN. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. GRIFFIN. I commend the Senator from Delaware for the great service he has performed in analyzing the budget left by the Johnson administration and also in presenting what I consider to be a sensible program for controlling inflation. Today, as on many other occasions, the distinguished Senator from Delaware has pointed out the importance of keeping some sensible control on the number of Federal employees.

Not too long after I first came to the Congress, in 1956, I had occasion, while I was a member of the other body, and when it was considering an agricultural appropriation bill, to offer an amendment that at no time should the number of employees in the Department of Agriculture be allowed to exceed the number of farmers in America.

Since that amendment was offered, we have kept track of what has happened to the number of employees in the Department of Agriculture and what has happened to the number of farmers in America. One of my constituents, who does an excellent job of research, provided me with the latest figures. I think they would be interesting figures to insert in the RECORD.

In 1956 there were 7,869,000 farmers in America, and there were 89,398 employees in the Department of Agriculture.

In 1969, the number of farmers had gone down from 7,869,000 to 4,638,000—a 41-percent decrease in the number of farmers in America. But the number of employees in the Department of Agriculture has increased. There are now 212,113 employees in the Department of Agriculture, or an increase of 137 percent.

He has put it in other terms. In 1956 there were 88 farmers for every employee in the Department of Agriculture, and today there are only 22 farmers for every employee in the Department of Agriculture.

Perhaps at the time the amendment was offered, it may not have seemed important, but we are gradually approaching the time when that amendment may be needed.

Mr. WILLIAMS of Delaware. I appreciate the remarks of the Senator from Michigan. I am wondering whether some groups are not finding it more profitable to cultivate the Federal Treasury than to cultivate the farm. Perhaps we had better examine the situation to see if their services are needed as badly as they say. Last year we incorporated a provision in the Expenditure Control Act which would provide some rollback in the number of Federal employees. I think it is high time that we take some action to bring the costs of this Government under control so we can live within the income, not of the Government's but of the taxpayers' who have to pay the bill. We are certainly living beyond what they can afford at the present time.

(This marks the end of the colloquy which occurred during the address by the Senator from Delaware (Mr. WILLIAMS), and which was ordered to be printed in the RECORD at this point.)

Mr. BYRD of Virginia. Mr. President, it seems to me that the debt limitation is a tool—one of several tools—which can be useful in attempting to bring under control our uncontrolled Government spending. Let us look back for a moment to see how the national debt has been increased and by what amounts in recent years.

During the 8 years of the Truman administration—8 years minus 3 months—the national debt increased by $33 billion. During the 8 years of the Eisenhower administration, the national debt increased by $23 billion.

That brings us to the 8 years of the Kennedy-Johnson administrations. During that period of time, the national debt increased by $70 billion.

It was in June 1967, when Congress approved an increase of $22 billion in the debt ceiling. On the floor of the Senate, in 1 day, the Senate approved what the House had previously approved—an increase of $22 billion in the debt ceiling. I suggested on the floor of the Senate that day that that was taking the lid off Government spending; that that was saying, in effect, to the departments of Government, to the President, and to Congress, "The lid is off, boys. Hold your hats. Here we go again."

I say that that action by the Senate, and previously by the House of Representatives, in June 1967, did a great deal toward bringing about a $25 billion deficit for the last fiscal year of our Government. I say that that action by the Senate and House of Representatives, advocated by the President, added billions of dollars to the cost of Government and took billions of dollars or lifted billions of dollars out of the pockets of the taxpayers.

That brings us to the pending proposed legislation.

I do not contend that all our problems can be solved by a tight debt ceiling. I do believe, however, that the debt ceiling is a tool—one of several useful tools—that must be used if we are to control the uncontrollable Government spending. In the latter part of February, the President and the Secretary of the Treasury made two requests of Congress: first, that the money which the Government borrows from trust funds be eliminated from the national debt limitation; second, that the debt ceiling be increased by $17 billion. I opposed both of those recommendations before the House Committee on Ways and Means.

Were Congress to approve the administration's request for changing the computation of the debt, the Government would be permitted to spend $40 billion more than it takes in during the next 4 years, without the additional deficit being subject to debt limitation. Think of that, Mr. President. Were the original proposal approved, the proposal submitted by Secretary of the Treasury Kennedy, the Government during the next 4 years could spend $40 billion more than it takes in, and that amount would not be subject to the debt limitation.

Fortunately, the Committee on Ways and Means, next the House of Representatives, and yesterday the Senate Committee on Finance refused to remove trust-fund borrowing from the debt limitation. I applaud this action. I am also pleased that the House itself and the Senate Committee on Finance have reduced the proposed ceiling increase by $5 billion.

I recognize that a good case can be made for some increase in the ceiling. I recognize that; although the Secretary of the Treasury himself testified that by using the $4 billion cash operating balance he could get by without any increase in the debt ceiling during the next few months. But I could support a reasonable increase. I do not, however, approve raising the ceiling by $12 billion.

Estimates prepared by the Treasury Department itself indicate and make clear—I assume their estimates are correct—that it would be March 15, 1970—next year—before the public debt would reach $374 billion, which is $3 billion below what the new ceiling contemplates.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD the projected figures contained in the committee report on page 3.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE 2.—ESTIMATED PUBLIC DEBT SUBJECT TO PRESENT LIMITATION (BASED ON CONSTANT MINIMUM OPERATING CASH BALANCE OF $4,000,000,000) FISCAL YEARS 1969 AND 1970

(With and without a $3,000,000,000 contingency allowance)

[In billions]

	Operating cash balance (excluding free gold)	Public debt subject to limitation	Public debt subject to limitation with $3,000,000,000 contingency allowance
Fiscal year 1969:			
Mar. 31	$4.0	$362.1	$365.1
Apr. 15	4.0	367.2	370.2
Apr. 30	4.0	356.9	359.9
May 15	4.0	361.1	364.1
May 31	4.0	361.9	364.9
June 15	4.0	362.7	365.7
June 30	4.0	354.6	357.6

TABLE 2.—ESTIMATED PUBLIC DEBT SUBJECT TO PRESENT LIMITATION (BASED ON CONSTANT MINIMUM OPERATING CASH BALANCE OF $4,000,000,000) FISCAL YEARS 1969 AND 1970—Continued

(With and without a $3,000,000,000 contingency allowance)

[In billions]

	Operating cash balance (excluding free gold)	Public debt subject to limitation	Public debt subject to limitation with $3,000,000,000 contingency allowance
Fiscal year 1970:			
July 15	$4.0	$359.4	$362.4
July 31	4.0	358.3	361.3
Aug. 15	4.0	362.8	365.8
Aug. 31	4.0	363.3	366.3

May 31	4.0	369.2	372.2
June 15	4.0	368.3	371.3
June 30	4.0	361.4	364.4

Source: Treasury Department.

Mr. BYRD of Virginia. Mr. President, I do not deal with the contingency fund for two reasons. First, the Government holds $4 billion as a cash operating balance. Second, what is a contingency? If there should be a contingency, if emergencies should occur, the administration can then come to Congress and seek whatever change is necessary as a result of the emergencies or the contingencies.

But if we take the administration's own figures, it will be a year from now—March 1970—before the national debt will reach $374 billion. Yet today the proposal is to put the ceiling at $377 billion.

Mr. President, I am convinced that if significant economy efforts are made, and these economy efforts have been promised, there is no need for a $12 billion increase in the debt limitation.

While many people may scoff at the debt ceiling, it serves several useful purposes. As I mentioned before, it is a tool, one of several tools, to help keep Government spending under control and to help keep the pressure on Congress, the President, the executive branch, and department heads to hold down the swollen Government spending.

The debt ceiling serves another good purpose. It focuses public attention every time the President has to come to Congress and ask for an increase in the debt ceiling. It focuses public attention on the fact that the Government is not living within its income. It focuses public attention on the need to set our financial house in order. I think the debt ceiling serves a good purpose.

Mr. President, somehow we must get Government spending under control. The people who are being hurt most by this inflationary spiral are those people in the low-income brackets and in the middle-income brackets because the majority of the personal income taxes paid into our Government are paid by those who earn $15,000 or less.

It has not been many days—only 2 weeks ago—since the prime interest rate went to 7.5 percent, the highest interest rate in over 100 years. I contend that a major reason for that increase is all of the Government borrowing, the competition of Government to borrow more and more funds, and individuals and businesses must compete with the Government in this regard. Unless firm steps are taken to curb inflation, the housewife's dollar will buy less and less. I do believe that those housewives who will go to the market every Thursday, or Friday, or Saturday, and try to make purchases, realize without having a lot of statistics thrown at them, just what has happened to the purchasing power of the dollar.

However, to use the statistics, for every $20 bill that an individual had a year ago, that $20 bill is now worth $19; or to state it another way, that $20 bill will buy goods to the tune of $19.

Now, the more we raise the debt limit the more leeway we give all branches of Government to spend in tax funds. To me, a very significant figure in the budget is the interest on the national debt. That interest which is under consideration by Congress, is $16 billion. The Director of the Budget testified that during fiscal 1970 that figure will be increased by a half-billion dollars, or, to put it another way, $500 million.

In the upcoming budget beginning July 1, the interest on the national debt—just the interest—will be $16.5 billion. To put that figure in perspective, the interest on the national debt for fiscal year 1968 was $13.7 billion. So between 1968 and the fiscal year 1970 there has been an increase in interest alone of almost $3 billion. There has been an increase in interest alone of 20 percent.

I suggest, Mr. President, that our country is in a very difficult financial situation. I think the President and Congress must jointly face up to this problem. I say it is a joint responsibility. Congress cannot say to the President, "You hold down expenses." The President cannot say to Congress, "You hold down expenses." We have to do it together; we have to work together; we have to cooperate if we are going to get our financial problems under control.

I am discouraged and disappointed that the President would ask or that Congress would grant an increase at one time of $12 billion in the debt ceiling. I say again that I could support a reasonable increase but I do not think the $12 billion is a reasonable increase. I do not think it is justified and I think it tends to take the lid off of Government spending.

For those reasons, Mr. President, I shall vote in the negative when the proposal comes before the Senate to increase the debt limit by $12 billion.

HIGH UINTA WILDERNESS AREA

Mr. MOSS. Mr. President, several weeks ago, I introduced a bill to establish the High Uinta Wilderness Area in Utah, recommended for such designation by the U.S. Forest Service under the provisions of the Wilderness Act passed in 1965.

However, I deleted from the proposal the Forest Service has sent to the Congress one area—area D, totaling 102,000 acres—because planning has not been completed for the Ute Indian unit of the central Utah project, and it may be found necessary to build some of the project works in the area proposed for wilderness designation, or some of the water from one of the reservoirs may back up into the proposed area. I have indicated that if and when it is determined that structures of reservoirs in area D are not essential to Utah's water resource development, I have no objection to adding it to the High Uinta Wilderness Area.

The Deseret News, distinguished Salt Lake City daily, supports my efforts, and recently published an editorial which makes my case very well for me. I ask unanimous consent that the editorial, which appeared on March 11, be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HOW LARGE SHOULD UINTA WILDERNESS BE?

There's no question that Congress ought to designate the High Uinta Mountains, a region of supreme beauty and great natural value, as a Wilderness Area.

Here is a region that contains what is not only the highest mountain range in Utah but also the most prominent east-west range in the nation. Some 650,000 people live within 100 airplane miles of the proposed Wilderness Area, which contains more than 1,000 species of plants, some of which are found only there. More than 500 lakes are scattered throughout the area. At the same time, the timber is so hard to get at it would be difficult to harvest, and geologists report little or no prospects for commercial mining development.

Unless this area is granted wilderness status by 1974, it will revert from a primitive area back to ordinary forest land, and no one wants that to happen. (Primitive areas are being dropped as a designation in favor of the increased protection and more permanent status that goes with being designated by Congress as a wilderness area.)

The only question, then, is how big the proposed High Uintas Wilderness Area should be.

If the Forest Service had its way, nearly 323,000 acres in Ashley and Wasatch national forests would be set aside as wilderness. That's the recommendation the service made on the basis of field studies with the Department of Agriculture and following public hearings.

But the eastern 102,000 acres, referred to as Unit D, includes water needed for the Central Utah Project. That's why Sen. Frank Moss recently introduced a bill that would designate the High Uintas Wilderness Area but omit Unit D until the needs of the Central Utah Project can be pinned down.

The Forest Service takes exception to this approach on the grounds that the law already permits the President to authorize construction of reservoirs or water conservation facilities within a Wilderness Area if the public interest requires it.

But Utahns still remember how an executive order promised that extension of Dinosaur National Monument would in no way inhibit construction of Echo Park Dam, but the dam was still blocked by conservationists.

In resolving the dispute, Utahns need to know how many reservoirs are really needed in the area, how big they would have to be, and how much road-building and other excavation would have to be done that would gouge the landscape.

For more than two years now, the U.S. Bureau of Reclamation has been making a study that will help answer those very questions. At the latest, the study is due to be completed by the end of the year, but this week the bureau indicated the findings might be available as soon as early autumn.

Since we've all waited this long on the High Uinta Wilderness Area, a few more months shouldn't matter. With all the facts available, it may very well be possible to harmonize water and wilderness in Unit D instead of having them compete for preference.

Meanwhile, the Bureau of Reclamation should expedite its study so that the wilderness proposal, in one form or another, can go forward as soon as possible.

S. 1689—INTRODUCTION OF A BILL ENTITLED "TOY SAFETY ACT OF 1969"

Mr. MOSS. Mr. President, I introduce, for appropriate reference, the Toy Safety Act of 1969. This bill will amend the Federal Hazardous Substances Act so that the Secretary of Health, Education, and Welfare will have the authority to preclude dangerously designed toys or other articles intended for children's use from the marketplace.

Recent hearings before the National Commission on Product Safety brought to light certain inadequacies in existing law. Certain dangerous toys are now on the market only because the Secretary of Health, Education, and Welfare lacks the authority under current statutes to block their sale. The hearings before the Commission revealed the seriousness of this problem; an alarming number of seemingly harmless toys were found to gravely endanger the health and safety of unsuspecting children.

For example, examination showed that when a "roly poly doll" was dropped it broke apart, revealing a series of frighteningly menacing horizontal spikes which could impale an unwary child. Another dangerous toy is a children's stove which, according to information given to the Commission, reaches temperatures higher than those achieved by stoves in the kitchens of our homes; a child who escaped serious electric shock while plugging the stove into a 120-volt wall socket would continue to be unknowingly subject to a threat of severe burns.

Mr. Morris Kaplan of Consumers Union told the Product Safety Commission about the Zulu gun:

> The Zulu Gun's dart can't be inhaled if the child puts the mouthpiece to his mouth. But it is easy to confuse the mouthpiece and muzzle ends . . . If the child put the muzzle end to his lips and took a breath, inhaling the dart would be difficult to avoid.

Mr. Kaplan went on to point out that there were 13 Zulu gun injuries reported in the Philadelphia area alone; in 11 of these cases darts had to be removed from the lungs of victims.

Mr. President, we cannot afford to ignore the health and safety of our children; rather, it is our responsibility to protect them to the fullest possible extent from injury. Education constitutes a valuable form of protection, but education alone is an inadequate response to the severity of the problem before us. Small children cannot read warning labels, and they cannot be constantly supervised by parents. Furthermore, parents themselves are not always aware of the dangers presented by poorly designed or manufactured toys.

Safety in design is an absolute essential element of consumer protection, particularly when the consumer is a child. The necessary safety in design must cover both the intended use and the foreseeable use, and, as all parents know, foreseeable use as applied to children's toys covers a very broad and imaginative spectrum.

Experience has shown that safety in toy design cannot be effectively achieved through a system of voluntary standards. According to testimony received by the Product Safety Commission, present voluntary standards do not address themselves to electrical, mechanical, or thermal hazards; furthermore, in those areas where there is activity, progress has been painfully slow. The record indicates that safety in toy design will not be achieved unless the Secretary of Health, Education, and Welfare is given authority to review the electrical, mechanical, and thermal hazards of toys or articles intended for use by children. The Toy Safety Act of 1969 is intended to achieve that objective.

The Toy Safety Act would amend the Federal Hazardous Substances Act by adding to the Secretary's list of criteria for the banning of toys or other items intended for children's use the criteria of electrical, mechanical, and thermal hazards. These additional criteria will permit the Secretary to evaluate the all-important design characteristics of toys and other items intended for use by children. I am confident that this procedure will result in more adequate protection of the health and safety of our children.

Mr. President, I ask unanimous consent that the full text of the bill be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, the bill will be received and appropriately referred; and, without objection, will be printed in the RECORD at the conclusion of the Senator's remarks.

Mr. MOSS. Mr. President, I ask unanimous consent to have printed in the RECORD three articles on this subject.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Boston Herald Traveler, Dec. 19, 1968]

STIFF TOY LAWS URGED

(By Bill McCaffrey)

A call for strict federal regulation of the toy industry was made yesterday by a Boston attorney who demonstrated the potential dangers of a group of toys now on the market before the National Committee on Product Safety at the John F. Kennedy Federal Building.

Atty. Edward M. Swartz, author of the "truth in lending" law and an authority on consumer protection, exhibited a cloth tunnel that was flammable, stoves that attained 660 degrees that a child cooks and bakes on, a jet with sharp edges, electric irons and mixers as examples of a host of toys hazardous to children.

Atty. Swartz, hired by the Commission on Product Safety to prepare a report on unsafe toys, said there must be some centralized authority which can supervise and check toys prior to the time they are marketed.

The Commission on Products Safety is holding three days of hearings on hazardous household items.

Atty. Swartz told the commissioners that the toy industry has been unable to eliminate dangerous toys from the market. He described "real life" electric toys as potentially deadly because they use household current.

"It is doubtful that electric toys for children should ever use electric current rather than safer forms of current," Atty. Swartz said.

He also charged that advertising copy for toys is "at times misleading, inadequate and unsafe—it has led some to conclude that the minds of our young are being raped."

Swartz recommended that the Commission launch a study and investigation of the toy industry, both domestic and foreign.

Atty. Aaron Locker, legal counsel for the Toy Manufacturers of America, took issue with Swartz' position, saying the industry preferred to develop safety standards without the mandate of legislation.

He said, "When somebody sits back and takes pot shots at the industry with a few toys he is doing the industry an injustice."

He told the Commission that the two and a half billion dollar industry "has taken the lead in developing safety standards."

Earlier, William G. Cole of Shelbourne Falls told the Commission that his nine-year-old son Ronald was part blinded in one eye last July by an exploding cap device advertised as harmless.

Dr. Carl C. Clark, chief of the Commission's task force for industrial self regulation, showed slow motion pictures of the device that injured the Cole boy traveling at a speed of 54 miles an hour when exploded by the cap.

Morris Kaplan, technical director of Consumer's Union, demonstrated the dangers of a toy "Zulu" blow gun now being sold.

Kaplan said some children armed the plastic pellet with needles, making the toy a "dangerous weapon." He said young children were endangered by the toy because they sometimes put the wrong end of the toy into their mouths and inhaled the pellet.

Federal laws on hazardous substances do not cover electric shock, burns, or cuts and punctures, Kaplan said.

"Toys with such hazards may be found in the marketplace." He called for stricter regulations.

The hearing continues today on the dangers of refrigerators in the home.

[From the Washington Post, Dec. 18, 1968]

UNSAFE CRIBS HARM BABIES, GROUP TOLD

(By Morton Mintz)

BOSTON, MASS., December 17.—Federal safety investigators heard testimony today that baby cribs of unsafe design are sold throughout the Nation even though an estimated 200 infants a year strangle in their cribs.

One of the day's witnesses, the Rev. John R. Dryer, pastor of Covenant Presbyterian Church in Wellsville, Ohio, is the father of a victim.

He told the National Commission on Product Safety how, at the age of 1 year and 17 days, his first child Johnny, strangled in a crib.

The actual crib in which his son perished—placed on a table in a hearing room—was used by the Rev. Mr. Dryer to demonstrate how he believed the infant's throat had become locked between the lid and the side. As he described the tragedy, the cause was a long metal hinge so constructed that the more his infant son tried to pull away, the tighter it clamped the lid and side on his throat.

The manufacturer, one of the largest in the field, is Trimble Products, Inc., of Southern Pines, N.C. It has showrooms in Chicago, Los Angeles, New York City, San Francisco and Seattle. The slogan on its catalogue, the Commission was told, is "Since 1912. Your baby's health, safety and comfort . . . our only business."

The president of the firm, W. J. Donovan, rejected written and phoned invitations to appear. He wrote the Commission last Tuesday, "We will not able to testify . . ." The makers of an almost identical crib, the Jackson Furniture Co., of Jackson, Tenn., also was urged to appear, but made no response.

The Commission is holding three days of hearings under a directive from Congress to develop effective means to protect consumers from unreasonable hazards in products used in around the household.

The seven-member agency, created 13 months ago, is particularly concerned about hazards to infants and children, because accidents are the chief cause of death among them. In the age 15-and-under group alone, accidents take more than 15,000 lives a year.

Testifying at the new John F. Kennedy Government Center, the Ohio minister urged adoption of Federal safety standards for baby furniture. He told Commission Chairman Arnold B. Elkind that when he pleaded with Trimble Products either to make the "Kiddie Koop" safe or stop selling it, the firm responded only with "sympathy." He then sued, finally settling out of court for $15,000.

Two other witnesses testified that Johnny Dryer's death was not a freak one.

Dr. Brian B. Blackbourne of Miami, Fla., assistant medical examiner of Dade County, said in November 1965—only 3½ weeks before Johnny died in the New Orleans suburbs of Metarie—the 9-month-old son of a Coral Gables policeman died in identical fashion.

The primary sales feature of the Trimble and Jackson cribs is that they protect the occupant from mosquitoes and other insects with the web and a fine cloth mesh on the sides. But Schott emphasized that other makes offered the same advantage without hazards. He showed a picture of one which uses a zipper to secure a mesh top and has no hinges.

[From the Christian Science Monitor, Dec. 26, 1968]

TAKE A CLOSE SECOND LOOK AT THOSE GIFT TOYS

(By Yvonne Horton)

Take a careful look at the toys your child received for Christmas. Even baby dolls may not be completely safe, according to Edward M. Swartz, a Boston attorney reporting to the President's National Commission on Product Safety. The commission held public hearings in Boston just before Christmas.

Mr. Swartz displayed a cuddle doll packaged in a box with a clear plastic window on top. The purchaser of such a doll might be unaware of how its dainty hair ribbon is attached. The one Mr. Swartz displayed had a huge straight pin thrust directly into the doll's head. He pointed out that, when the hair ribbon was pulled off, the attached pin would be dangerous to a small child.

A similar inch-long pin "with a handle that made it easily removable" had been previously called to the attention of the commission by a mother in Downey, Calif.

Another hazard to small "pretend mamas" was brought to the Boston hearing by Morris Kaplan, technical director of Consumers' Union. He displayed a tiny doll with flexible arms and legs. Protective plastic covering heavy wires inside the doll's anatomy had broken with the result that a sharp wire protruded from its hand.

The commission had previously received a complaint from a mother in Lexington, Mass., who gave her 16-month-old son a new doll. In a few moments, she reported, he had removed the legs exposing "three-inch spikes." After investigation by the National Commission on Product Safety, the doll was voluntarily removed from the market by its distributor.

The representative of Consumers' Union was not optimistic about the disposition of manufacturers to remove hazardous toys from the market. Mr. Kaplan said that many dangerous toys are identified in Consumer Reports magazine; but "as a rule, most products are not modified or taken off the market."

One toy Mr. Kaplan brought to the hearing was a small blow gun, or Zulu gun. He pointed out that one hazard of such a toy is that the muzzle and the mouthpiece are easily confused. A child who puts the muzzle in his mouth by mistake can inhale an inch-long plastic dart. The situation is further complicated if a child thrusts a pin through the soft plastic to create a spear from the dart.

Mr. Kaplan estimated that four to six million such blow guns have been distributed in the United States. Commenting about the one displayed at the hearing, he said, "I bought this two weeks ago. The cost is 10 cents."

Also displayed by Mr. Swartz and Mr. Kaplan were various plug-in housekeeping toys—miniature electric ovens, irons, and corn poppers—described as potential shock or burn hazards, especially when used unsupervised and by younger children.

The price of miniature ovens was said to vary from about $8 to in excess of $20. Mr. Swartz commented, "These are not low-priced toys."

In its effort to protect the American consumer from unnecessary injury from hazardous products used in the home, the commission wishes to be informed about potentially dangerous toys, identifying the toy and manufacturer by name. It urges: "Anyone aware of incidents involving unsafe products used in and around the home should write to the National Commission on Product Safety, Washington, D.C. 20036."

The bill (S. 1689) to amend the Federal Hazardous Substances Act to protect children from toys and other articles intended for use by children which are hazardous due to the presence of electrical, mechanical, or thermal hazards, and for other purposes, introduced by Mr. Moss (for himself and other Senators), was received, read twice by its title, referred to the Committee on Commerce, and ordered to be printed in the RECORD, as follows:

S. 1689

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Toy Safety Act of 1969."

SEC. 2 (a) Section 2(f)(1) of the Federal Hazardous Substances Act (15 U.S.C. 1261 (f)(1) is amended by adding at the end thereof the following new clause:

"(D) Any toy or other article intended for use by children which the Secretary finds pursuant to the provisions of section 2(q)(1) of this Act meets the requirements of subparagraph (A) (iii) or (iv) of such section."

(b) The matter preceding the semicolon in clause (A) of section 2(q)(1) of the Federal Hazardous Substances Act (15 U.S.C. 1151 (2) (q) (1) (A)) is amended to read as follows: "(A) any toy, or other article intended for use by children, which, pursuant to a determination made by the Secretary (i) is a hazardous substance, or (ii) bears or contains a hazardous substance in such manner as to be susceptible of access by a child to whom such toy or other article is entrusted, or (iii) is otherwise hazardous because of the presence of electrical, mechanical, or thermal hazards, or (iv) may cause substantial personal injury or substantial illness by, during, or as a result of foreseeable use of the toy or article, even if unintended by the manufacturer, where such injury or illness is attributable to electrical, mechanical, or thermal aspects of the design, processing, or assembly of that toy or article.

(c) Section 2 of such Act is amended by adding at the end thereof the following:

"(r) The term 'electrical' means of or pertaining to the flow of an electrical charge or to electrons in motion; the term 'electrical hazard' means a condition or circumstance such that substantial personal injury or substantial illness from electric shock or electrocution may be caused during or as a proximate result of any customary or reasonably foreseeable use.

"(s) The term 'mechanical' means of or pertaining to the design construction or structure of a substance; the term 'mechanical hazard' means a condition or circumstance such that substantial personal injury or substantial illness may be caused during or as a proximate result of any customary or reasonably foreseeable use because of sharp surfaces or protrusions, fragmentation, explosion, strangulation, suffocation, asphyxiation, or other mechanical means."

"(t) The term 'thermal' means of or pertaining to the transfer or manifestation of heat energy; the term 'thermal hazard' means a condition or circumstance such that substantial personal injury or substantial illness may be caused during or as a proximate result of any customary or reasonably foreseeable use of articles: (1) which contain heated surfaces; or (2) which if ignited burn so intensely that (A) extremely high temperatures are reached, or (B) they cannot be readily extinguished by means ordinarily at hand."

EFFECTIVE DATE

SEC. 3. The amendments made by section 2 of this Act shall become effective sixty days after the date of enactment of this Act.

INCREASE IN THE PUBLIC DEBT LIMIT

The Senate resumed the consideration of the bill (H.R. 8508) to increase the public debt limit set forth in section 21 of the Second Liberty Bond Act.

Mr. KENNEDY. Mr. President, I rise to support the request of the President of the United States that the permanent debt ceiling be increased to $365 billion, and the temporary ceiling during fiscal 1970 set at $377 billion.

And I would urge my Democratic colleagues to demonstrate the same nonpartisan attitude which they have displayed historically, to such requests from both Republican and Democratic Presidents. I think that we, on both sides of the aisle should answer the request of President Nixon by passing this measure

today. President Nixon has indicated that the temporary increase of $12 billion in the debt ceiling is "of the highest importance." Further, he has indicated that "if the present ceiling of $365 billion were not raised, we would be extremely hard pressed to meet the Government's obligations in April, and in the last quarter of this calendar year the projected resources, in the light of seasonal peaking of financial obligations, would be patently inadequate."

Mr. President, we know that all Senators, from time to time, may change their minds on any given issue. But I thought it would be interesting for the Senate to take a cursory glance at the votes of the Members of the Senate over the past 10 years on the question of the debt limit increase.

In 1958, Mr. President, there were three votes in the Senate dealing with the request of President Eisenhower to increase the public debt limit. On those three votes, an average of 78 percent of the Republican Senators supported President Eisenhower's request. The record of the Democratic Members of the Senate was nearly as good, with an average of 73 percent supporting that request.

In 1960, Mr. President, there were four votes on this same question. The average Republican support went up to 89 percent. There were no defections among the Republicans on final passage and passage of the conference report, with 100 percent supporting President Eisenhower, 4 months before election day in 1960. In that year, the Democratic support of the Republican administration was 65 percent.

Now, Mr. President, an interesting glance at what happened in 1962, when President Kennedy requested an increase in the temporary debt limit. With the same type of explanation, Mr. President, which President Nixon has made now, in support of his request, President Kennedy sought Republican votes. The record reveals, however, that the minority supported him only an average of 25 percent in votes considering that request. Some contrast, Mr. President. I would say that if President Nixon does not draw better support from the Republican Members of the Senate, today, than President Kennedy did in 1962, this measure may not pass.

In a request made by President Kennedy in May of 1963 for temporary increases in the debt limit, an average of only 27 percent of the Republican Members of the Senate supported the President on five test votes. In similar votes at different times in 1964, 1965, 1966, and 1967, Republican support of the requests of President Johnson varied from 50 percent, to 43 percent, to zero percent, to 53 percent, to 50 percent, to zero percent, to 20 percent, to 17 percent, to 23 percent, to 20 percent to 50 percent, averaging only 29 percent.

I do not want to embarrass my Republican colleagues by calling their individual voting records to the attention of the Senate, but the average percentages of support which have been given to the President of the United States when he has asked for increases in the national debt has indicated some partisan tendency.

Of course, one can understand, Mr. President, that the attitude of a Member of Congress might change somewhat, depending upon the occupant of the White House. The distinguished leader of the minority in the other body was quoted in the press recently as saying:

> Republican reaction is different because of the fact that we now have faith in the Administration concerning fiscal responsibility.

Mr. President, in my opinion, this increase is required for orderly conduct of the Government business. The Treasury is now operating too close to the current ceiling of $365 billion for sound debt management purposes. On March 14 of this year, the cash balance was only 0.3 of a billion dollars; according to the Treasury, its minimum operating cash balance should be $4 billion.

Mr. President, in my opinion, the failure of Congress to provide for an increase in the permanent and temporary debt ceilings would be a serious error and an unfortunate departure from responsibility.

Mr. LONG. Mr. President, I am not aware of requests from any other Senator for time to discuss this issue. I have indicated that I intend to insist upon the rule of germaneness during the 3-hour period. Should some Senators desire to discuss the matter further, after a call of the quorum has been determined, I shall ask unanimous consent that time be allotted to them. However, I know of no such requests. Therefore, I ask unanimous consent that after the call of the quorum has been determined, the Senate vote on the pending measure.

Mr. KENNEDY. Mr. President, reserving the right to object, is it the intention of the Senator to ask for the yeas and nays?

Mr. LONG. Yes; but there is not a sufficient number of Senators in the Chamber at this moment to obtain them.

Mr. KENNEDY. After the quorum call?

Mr. LONG. Yes.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. DIRKSEN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. DIRKSEN. Mr. President, I talked with the manager of the bill earlier in the day, because I wanted to speak on a nongermane matter for about 10 minutes.

Mr. LONG. Mr. President, will the Senator yield?

Mr. DIRKSEN. I yield.

Mr. LONG. Mr. President, I ask for the yeas and nays on the pending measure.

The yeas and nays were ordered.

Mr. LONG. Mr. President, I ask unanimous consent that 10 minutes be allotted to the Senator from Illinois.

The PRESIDING OFFICER. Without objection, it is so ordered.

REPLY TO FORMER VICE PRESIDENT HUMPHREY'S STATEMENT ON NIXON ADMINISTRATION

Mr. DIRKSEN. Mr. President, I was astonished by the statement by the former Vice President, Mr. Humphrey, which implied that if not all the problems inherited by the Nixon administration are solved within the first 100 days, the Democrats then will feel free to attack. How quickly the former Vice President has reassumed his old ways—those of issuing a volley of slogans as a substitute for responsible action.

Mr. Humphrey knows better than most the complexity of the basic decisions he is calling upon President Nixon to make in little more than 3 months. He also knows that his administration failed to resolve those problems in 5 years.

I fail to see it as a point of generosity by Mr. Humphrey when he says perhaps even more than 100 days should be allowed the President to solve the war in Vietnam. To set a deadline on Vietnam would be to allow the enemy to strengthen his bargaining position with the knowledge that political pressures will seek to force a compromise on any terms upon the President.

Mr. Humphrey must realize—and I think to his chagrin—that his administration left to the new President a legacy of problems unprecedented in our national history. It is a legacy of war, crime, violence, civil disobedience, runaway inflation, and poverty; and I do not know how anybody could refute it. I could go on—and on—but these problems cannot be erased by an outburst of rhetoric by a former Vice President of that administration, nor will slogans cause them to disappear.

Would Mr. Humphrey really have us believe that he would have resolved all these problems within this time had he been elected? That attitude would be laughable—if it were not so crucially serious. Any attempt to create such an impression would be deceptive, and doubly so coming from one of the former architects of the policies that created the problems.

I have noted in the past few days an increasing pace of attack on the President regarding Vietnam. I recognize that some of those who lead the attack are locked into the old positions they had staked out before and have not yet adjusted to the fact that we are in a new negotiating situation. But to have the former Vice President joining the critics with a call for a deadline is utterly incongruous.

My friend, the distinguished majority leader, only Monday of this week made reference to the high toll being paid in American lives in recent weeks in Vietnam. No one deplores this loss of life more than I. I speak as a former soldier who was in uniform 51 years ago on the Western Front, where I saw my share of fatalities.

Certainly the President is not insensitive to the sacrifices being made. But I would caution those critics that this is a war that President Nixon inherited, the casualties being sustained are being sustained by troops who were ordered to

Vietnam by a former President. Let me put the statistics showing deaths of American servicemen resulting from action by hostile forces in proper perspective, for January of 1968 they were 1,202—for January 1969 they were 795—for February of 1968 they were 2,124—for February of 1969 they were 1,073—for March of 1968 they were 1,543—based on present figures, they will be about 1,100 for March of 1969. President Nixon is determined that the killing will end, and he is committed to obtaining a decent and honorable peace; in this purpose I am certain he will succeed. But unjustified criticism will not produce peace sooner; in fact, it could very well delay it.

In terms of 100 days, again, anyone who thinks the festering sores of crime, violence, civil disobedience, inflation, and poverty inherited by this administration can be healed overnight is just as mistaken as one who expects the Vietnam war to be brought to an end in a few short days.

I had been impressed by the statesmanship of the former Vice President during the immediate days following the election. I would hope that he will not allow divergent elements within his party to push him into this type of posture, which I am sure he would regard as unfair were he the President.

As I said in my statement to the Senate last week, this is a responsible administration. It is not throwing ill-considered legislation at the Congress—and everyone who was in Congress during the past 8 years knows exactly what I mean by that.

President Nixon has repeatedly expressed his intention of settling the war in Vietnam. A plan is now being implemented, but slogans are not being shouted from the rooftops. Rather, action is underway. It will require patience and perseverance, but a just and honorable peace will be achieved, something that the previous administration was unable to achieve.

This administration is proceeding calmly, coolly, prudently, responsibly—laying the foundation before it tries to put up the walls and roof. And I urge that all who are anxious to achieve a satisfactory termination of the war in Vietnam—including the former Vice President—approach the task of finding one in a responsible way.

INCREASE IN THE PUBLIC DEBT LIMIT

The Senate resumed the consideration of the bill (H.R. 8508) to increase the public debt limit.

Mr. CURTIS. Mr. President, the bill before us (H.R. 8508) has been described incorrectly. It is not a ceiling on the Federal debt. I wish that it were.

This bill amends the second Liberty Bond Act passed many years ago. That act authorizes the Secretary of the Treasury to borrow money and issue bonds to pay the Government's debts.

If this bill were not passed, the Secretary of the Treasury would be unable to issue and sell the bonds required to pay the Government's debts. Refusal to pass this bill would not lessen the debts owed by the Federal Government.

I shall illustrate. If there is no money in the Treasury and if the Secretary of the Treasury cannot borrow more money, the Federal Government will be unable to pay salaries to the men in our Armed Forces, the employees in Government hospitals, amounts due contractors, interest on the national debt, or other items that the Federal Government owes. The Federal debt will still be there, but instead of only owing it in bonds we will owe it to the people who have money coming from the Government and can not get it.

The debt is increased when the Congress votes to authorize programs and then votes to appropriate the money. The debt increases when the Congress votes for and the Executive spends more money than comes in in taxes. The way to stop the debt from rising is to have the Congress stop voting for so many spending programs and to have the Executive stop spending.

To defeat this bill would not lessen the debt—it would invite chaos. The way to lessen the debt is to lessen the spending.

I judge no Member on his vote on any subject. An individual cannot vote for every spending scheme under the sun and then vote against this measure and claim to be an economizer. On the other hand, there are Members who vote for economy day after day and month after month who elect to vote against measures such as this as a protest. I do not wish to pass judgment on anyone's motives for voting "No" on this bill.

As the Senator from Delaware has pointed out, we will have a deficit at the end of this fiscal year on June 30 of $7 billion. This deficit is because there has been too much spending voted for, not only last year, but over many years in the past. Even if we extend the surtax, the momentum of past spending programs—unless reduced—will cause a deficit on June 30, 1970, of $10 billion. I hope and pray that steps can be taken to prevent such a deficit.

The real remedy lies in voting against spending—not in voting to prevent payment for spending that has already taken place.

Mr. HRUSKA. Mr. President, President Nixon has been in office for a period of only 2 months and 7 days. When he took office on January 20 the Government debt subject to the present limitation was $364.2 billion—only $800 million below the statutory ceiling of $365 billion. On March 14, Government borrowings reached within $282 million of the $365 billion debt limitation, an amount which does not provide sufficient latitude for good debt management practices to be followed. Moreover, the new administration has estimated that Federal debt needs with contingency of $3 billion are expected to reach a peak of approximately $377 billion in March of 1970 and thereafter decline to $365 billion by June 30 of that year.

The President is undertaking a thorough review of the budget in a determined effort to reduce costs. However, many of the budget items are largely beyond short-run control and a review of former President Johnson's budget has indicated that a possible increase in outlays, including farm price-support payments and a wide variety of past commitments, may be required. Moreover, the Johnson budget was based on several contingencies which are as yet unresolved.

There has been much talk about a Federal surplus in fiscal 1969 and 1970. As President Nixon has rightly pointed out, however, the unified budget concept shows a surplus for fiscal 1969 and 1970 only because they reflect substantial surpluses in Government trust funds—projected at $9.4 billion in fiscal year 1969 and $10.3 billion in fiscal year 1970. On the basis of a Federal funds account, the current budget estimates for the fiscal years 1969 and 1970 show a deficit of close to $7 billion or more in each of these years.

Mr. President, I continue to be a strong supporter of economy in our Government and I would not want my vote on this measure to be misunderstood. I will continue to insist on economy and the elimination of unnecessary expenditures at the Federal level and I will continue to study closely each appropriation bill. In 1963, I warned that we would find ourselves in such a situation as exists today if the Government refused to be prudent in its fiscal matters. However, it would be unfair to hamstring the new administration in its attempt to resolve the fiscal problems that it has inherited from the previous administration and, for this reason, I will vote to increase the debt limitation as recommended by the Senate Finance Committee.

Mr. MATHIAS. Mr. President, during my 8 years in the other body it was called upon no less than 13 times to consider and vote on the question of an increase in the bonded indebtedness of the Nation—the so-called debt ceiling. On 11 of these occasions I voted against the increase, because I felt that the administration currently in power had contributed to its own financial problems and would benefit from the discipline inherent in the contemporary ceiling. But on two occasions, I voted to increase or raise the debt ceiling.

During the Berlin crisis the Kennedy administration, for example, was forced to undertake extraordinary expenditures consistent with the Berlin resolution for which I had voted. Accordingly, I felt that the administration merited help in coping with forces and circumstances beyond its control.

Today I have voted for the increase in the debt limit, not because I would allow to a Republican administration any greater fiscal latitude than I would to a Democratic administration, but because the Nixon administration, like the Kennedy administration in the Berlin crisis, is confronted with serious fiscal problems not of its own making.

The PRESIDING OFFICER. The bill is open to amendment. If there be no amendment to be proposed, the question is on the third reading of the bill.

The bill was read the third time.

The PRESIDING OFFICER. The bill having been read the third time, the question is, Shall it pass? On this question, the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. COTTON (when his name was called): Mr. President, on this vote I have a pair with the junior Senator from Colorado (Mr. DOMINICK). Were he present and voting, he would vote "nay." Were I at liberty to vote, I would vote "yea." Therefore, I withhold my vote.

The rollcall was concluded.

Mr. BYRD of West Virginia. I announce that the Senator from Michigan (Mr. HART), the Senator from Montana (Mr. MANSFIELD), the Senator from Minnesota (Mr. MCCARTHY), the Senator from Wyoming (Mr. MCGEE), the Senator from New Mexico (Mr. MONTOYA), the Senator from Rhode Island (Mr. PELL), and the Senator from Georgia (Mr. RUSSELL) are necessarily absent.

I further announce that, if present and voting, the Senator from Michigan (Mr. HART) would vote "yea."

On this vote, the Senator from Wyoming (Mr. MCGEE) is paired with the Senator from Georgia (Mr. RUSSELL).

If present and voting, the Senator from Wyoming would vote "yea" and the Senator from Georgia would vote "nay."

Mr. SCOTT. I announce that the Senator from Kentucky (Mr. COOPER), and the Senator from Colorado (Mr. DOMINICK), are absent because of illness.

The Senator from Delaware (Mr. BOGGS), the Senator from Arizona (Mr. GOLDWATER), and the Senator from Oregon (Mr. PACKWOOD) are necessarily absent.

The Senator from Massachusetts (Mr. BROOKE), and the Senator from South Carolina (Mr. THURMOND) are absent on official business.

The pair of the Senator from Colorado (Mr. DOMINICK) has been previously announced by the Senator from New Hampshire (Mr. COTTON).

If present and voting, the Senator from Delaware (Mr. BOGGS), the Senator from Kentucky (Mr. COOPER), and the Senator from Oregon (Mr. PACKWOOD), would each vote "yea."

On this vote, the Senator from Arizona (Mr. GOLDWATER), is paired with the Senator from South Carolina (Mr. THURMOND). If present and voting, the Senator from Arizona would vote "yea" and the Senator from South Carolina would vote "nay."

The result was announced—yeas 67, nays 18, as follows:

[No. 24 Leg.]

YEAS—67

Aiken	Hansen	Pastore
Allott	Harris	Pearson
Anderson	Hruska	Percy
Baker	Hughes	Prouty
Bayh	Inouye	Proxmire
Bennett	Jackson	Randolph
Bible	Javits	Ribicoff
Burdick	Jordan, Idaho	Saxbe
Byrd, W. Va.	Kennedy	Schweiker
Cannon	Long	Scott
Case	Magnuson	Smith
Cranston	Mathias	Sparkman
Curtis	McClellan	Spong
Dirksen	McGovern	Stevens
Dodd	McIntyre	Symington
Eagleton	Metcalf	Tower
Fannin	Miller	Tydings
Fong	Mondale	Williams, N.J.
Goodell	Moss	Williams, Del.
Gore	Mundt	Yarborough
Gravel	Murphy	Young, N. Dak.
Griffin	Muskie	
Gurney	Nelson	

NAYS—18

Allen	Eastland	Holland
Bellmon	Ellender	Hollings
Byrd, Va.	Ervin	Jordan, N.C.
Church	Fulbright	Stennis
Cook	Hartke	Talmadge
Dole	Hatfield	Young, Ohio

PRESENT AND ANNOUNCING A LIVE PAIR, AS PREVIOUSLY RECORDED

Cotton, for.

NOT VOTING—14

Boggs	Hart	Packwood
Brooke	Mansfield	Pell
Cooper	McCarthy	Russell
Dominick	McGee	Thurmond
Goldwater	Montoya	

So the bill (H.R. 8508) was passed.

Mr. KENNEDY. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. LONG. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

LEGISLATIVE PROGRAM

Mr. DIRKSEN. Mr. President, I would like to ask the acting majority leader whether he contemplates that there will be any rollcall votes for the balance of the day.

Mr. KENNEDY. Mr. President, when the Senate adjourns today, it will meet at noon tomorrow. It will then consider House Joint Resolution 584, the supplemental appropriations for the Commodity Credit Corporation. If we finish consideration of that measure tomorrow, the Senate will then adjourn until noon on Monday.

Mr. DIRKSEN. So there will be no business and no rollcall votes for the balance of the day.

Mr. KENNEDY. It will be up to the individual Members as to whether they request such rollcall votes. It is my understanding at the present time that probably there will be no further rollcall votes today. However, that is subject to the request of any individual Senator.

THE ABOLITION OF THE COMMISSION ON EXECUTIVE, LEGISLATIVE, AND JUDICIAL SALARIES—ADDITIONAL COSPONSOR OF S. 1538

Mr. CURTIS. Mr. President, a few days ago I introduced a bill (S. 1538) to abolish the Commission on Executive, Legislative, and Judicial Salaries.

Unless this is done, 4 years from now another commission will bring in a report on the salaries.

To let this law stand is an admission on the part of the Government that inflation is expected for the next 4 years. That is financially and psychologically bad. Furthermore, the plan is not a good plan. It sounds meritorious at first glance to have an outside group fix the salaries for Government officials. However, we usually end up with some captains of industry and some top labor leaders and others on the Commission. I cannot imagine any of them saying to the Supreme Court of the United States, every Federal judge, every Cabinet member, and every Member of the Congress: "You should not have a raise."

I cannot imagine them saying, "You should have a reduction."

In reality, it does not work out. The measure should be repealed.

Mr. President, I yield to my colleague, the Senator from Nebraska (Mr. HRUSKA).

Mr. HRUSKA. Mr. President, I ask unanimous consent that my name be added as a cosponsor of the bill (S. 1538) introduced by my colleague from Nebraska (Mr. CURTIS).

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HRUSKA. Mr. President, earlier this year every Member of Congress received a substantial increase in salary. I opposed that increase at the time and my position was so recorded during the rollcall vote on the issue.

The manner in which the vote was taken on this issue was most unusual. Normally in the Senate we have the right to modify a proposal either on the floor or in committee. On an appropriations bill, for example, the dollar figure can be raised or lowered. The option of lowering the proposed salary was not available to us, however. It was offered on a take-it-or-leave-it basis. This procedure was most unwise.

My distinguished colleague (Mr. CURTIS) has introduced a bill to reinstitute normal procedures in fixing salaries (S. 1538). I am most happy to join as a cosponsor of this legislation.

Mr. President, article I, section 1 of the Constitution provides that all legislative power of the U.S. Government is vested in the Congress.

The reason for this provision is obvious. The Founding Fathers wanted matters of setting national policy to be subject to open discussion under the scrutiny of the electorate.

The setting of salaries for Government officials is a legislative function of the highest order.

The setting of congressional salaries has been handled as normal legislation through the years. This method, of course, is awkward for the legislators, but I believe it is good for the electorate.

It has been pointed out on this floor, that over the years, the Congress has granted raise to its Members very begrudgingly. This is as it should be.

Mr. President, in 1967, the Congress devised a method by which its Members could get periodic raises without the usual hearings, debates and public expressions of indignation. This method was established by section 225 of Public Law 90–206, the Postal Revenue and Federal Salary Act of 1967.

Under section 225(a), a Commission on Executive, Legislative, and Judicial Salaries was established to study the compensation of officials and recommend adjustments.

Mr. President, I would have no particular quarrel with the Commission if its function was to assist the Members of Congress in their legislative functions, however, its functions are not so limited.

Under section 225, the Commission recommends salary adjustments to the President, who in turn transmits his recommendations to the Congress. Congress then has the choice of accepting

or rejecting the recommendations and the lack of action by the Congress is tantamount to acceptance.

Mr. President, the Commission plan is not a new concept. It has been advocated by certain Members of the House for several years. This concept has been rejected by the members of the Senate Post Office and Civil Service Committee on at least two occasions prior to 1967. This concept was again rejected by the members of the committee in 1967.

Section 225 was added to Public Law 90–206 in conference, where the House insisted upon its inclusion. This compromise was accepted by the Senate in the closing days of the first session of the 90th Congress.

Mr. President, the Commission was duly organized, conducted its studies and reported to President Johnson who in turn, made his recommendations to Congress.

The recommendations were for pay raises for certain officials ranging from 40 percent to 100 percent.

These new pay scales went into effect on February 14 as a result of a rollcall vote in the Senate, and no action at all by the House.

I joined in the effort to reject the pay increase and I regret that our efforts were unsuccessful.

Mr. President, in deferring to the Commission and the Chief Executive, Congress has abdicated one of its most precious prerogatives.

The sequence of events leading up to the recent raise will be repeated in 4 years unless Congress asserts itself.

Mr. President, the Commission created by section 225 of Public Law 90–206 should be abolished.

REPORT ENTITLED "REVIEW OF U.S. FOREIGN POLICY AND OPERATIONS" TO BE PRINTED AS A SENATE DOCUMENT

Mr. JORDAN of North Carolina. Mr. President, I ask unanimous consent that the Senate proceed to the immediate consideration of Senate Resolution 170, which has been reported from the Committee on Rules and Administration without amendment. The resolution has been cleared with the leadership on both sides of the aisle.

The PRESIDING OFFICER. The resolution will be stated by title.

The ASSISTANT LEGISLATIVE CLERK. A resolution (S. Res. 170) to print a report entitled "Review of U.S. Foreign Policy and Operations" as a Senate document.

The PRESIDING OFFICER. Is there objection to the present consideration of the resolution?

There being no objection, the resolution (S. Res. 170) was considered and agreed to, as follows:

S. RES. 170

Resolved, That a report entitled "Review of United States Foreign Policy and Operations", submitted to the Senate Committee on Appropriations on March 17, 1969, be printed as a Senate document; and that two thousand six hundred additional copies of such document be printed for the use of that Committee.

SUPPLY OF NATURAL GAS TO CALIFORNIA

Mr. BAYH. Mr. President, there has been increasing discussion throughout the country involving concerns about the effect on the consuming public of large concentrations of power and money in the business community. In other words, antitrust, monopoly, and conglomerate have become household words to many Americans.

Under some circumstances, largeness has resulted in increased efficiency and, thus, lower costs to the consuming public. Under other circumstances, largeness has meant monopoly, restraint of trade and, thus, increased costs to the consuming public

An additional chapter to this discussion was opened yesterday by Mr. William Bennett, a California attorney and former member of the California Public Utilities Commission, in a press conference held to protest action by the Department of Justice in which it allowed the dismissal of an appeal to the case of Utah versus El Paso Gas Co. Mr. Bennett's press conference remarks quoted published reports in the Monday and Tuesday "Washington Merry-Go-Round" columns, written by Drew Pearson, devoted to the same case. Both Mr. Bennett and Mr. Pearson point out that the Justice Department, by its dismissal in this case, left unprotected the gas consumers of the richest gas market in America; and in doing so, the Department lessened the impact of important new case law in dealing with the antitrust problems which now face the country.

The El Paso Natural Gas Co. case is a long and involved series of legal problems covering the past 13 years.

Mr. President, I shall not take the time of the Senate to discuss all the details of the 13-year experience in the courts, but the basic issues revolved around the question of whether or not additional competition in the transmission of natural gas is needed in the State of California and on the west coast of the United States.

The El Paso Natural Gas Co. line until recently provided the only direct link supply of gas to California from the massive reserves in Texas and Oklahoma. When consumer-minded groups sought to develop competition to the El Paso monopoly, El Paso acquired the Pacific Northwest pipeline to avoid the threat of competition. These moves were proved to be in violation of the Clayton Act, and El Paso was required by the Supreme Court to divest its holdings in Pacific Northwest Gas Co.

Pursuant to the court order El Paso divested its Pacific Northwest holdings to Colorado Interstate Gas Transmission Co., resulting in a situation very much like the first and similarly to violation of the Clayton Anti-Trust Act, completely contrary to the spirit of the opinion written by Mr. Justice Douglas in the original case. Instead of providing additional competition to El Paso, the divestiture to Colorado Interstate Gas Transmission Co. provides a safe haven for Pacific Northwest in the hands of an entity which has never sought to provide the kind of competition which growing gas markets such as California require in order to safeguard the interests of the consumer.

The stakes are high to California gas users. More than $400 million worth of natural gas is transmitted into the California market each year by the El Paso Natural Gas Co. Every penny increase in price of a thousand cubic feet of gas means nearly $10 million annually in increased costs to the consumer in California, and, although there have been a number of successful court suits waged against the El Paso monopoly, the cause of the consumer has always been lost after the cases have been decided.

In case after case, the courts have ruled conclusively that additional competition should be provided into the super-rich California gas market.

But the Justice Department decision to dismiss the El Paso suit designed to bring about a meaningful divestiture of El Paso holdings means that no viable new competition will be provided to El Paso in the California market. In dismissing its suit, the Justice Department has forsaken the cause of the consumer, after the courts have held time and again that more competition is required in this market.

But this case transcends the normal impact of a single case. The importance of the El Paso case as a benchmark in antitrust law was pointed out effectively last week by the chief of the Anti-Trust Monopoly Division of the Justice Department, Assistant Attorney General Richard McClaren. After the Justice Department's decision to dismiss the El Paso case, Mr. McClaren was quoted in an article in Newsweek magazine as suggesting that the precedent set by the El Paso case will be most useful and almost indispensable in the prosecution of Government cases to protect the public interest in cases involving large and complex corporate entities. Now the Justice Department finds itself in the position where on the one hand a division chief is suggesting that the case law made in the El Paso case is indispensable to the prosecution of his responsibilities, and, on the other hand, the Attorney General has dismissed the follow-on litigation designed to make the decision in the El Paso case meaningful.

It seems to me that this compromises the Department in its prosecution of additional antitrust cases and creates a basic inconsistency between what it has done and what it intends to do.

How can the El Paso case be used as a precedent in attacking the mergers of a conglomerate corporation if in fact the purpose of the case is not pursued in the gas industry? By its dismissal of this case, the Justice Department has weakened its own hand, at a time when it declares itself to be pursuing a new crusade in protection of the American public from large corporate monopolies.

One other factor brought to light in Mr. Bennett's statement as well as in Mr. Pearson's article deals with the disclosure that the law firm in which the

Attorney General and the President previously were partners represented El Paso Gas Co. in prior litigation. Because of this past relationship, it was unfortunate that decision to dismiss the case was made only 6 days after the new administration took office. In light of this fact, and also because the Supreme Court is presently considering this issue and will make a finding in the next few days, it would seem propitious for the Justice Department to reconsider its position in the hopes that the Supreme Court will hear the case on its merits. Or the Justice Department could take Mr. Bennett's advice and file a section 7 complaint under the Clayton Act in exactly the same manner and relying on the same Supreme Court case against the Colorado Interstate Gas acquisition.

The time has come when all in positions of public responsibility must give additional consideration to the all-too-often forgotten consumer. He has no well-paid lobbyist and can hardly afford the legal burdens necessitated by lengthy court battles. We in the legislative branch have a common purpose with officials in the executive branch to perform our duties in such a manner as to guarantee that the consumer is treated fairly.

I sincerely hope that the Justice Department will reconsider the impact its decision will have on this effort. I know that the appropriate committees of the Congress intend to relentlessly pursue this goal.

Mr. HART. Mr. President, will the Senator yield?

The PRESIDING OFFICER (Mr. GURNEY in the chair). Does the Senator yield?

Mr. BAYH. I yield.

Mr. HART. Mr. President, I rise to speak to the point so effectively made by the able Senator from Indiana.

The Supreme Court twice considered problems created by the El Paso Natural Gas Co.'s merger with Pacific Northwest Pipeline Co. since 1962. A third aspect of this complicated proceeding now is on the Supreme Court docket. But the parties, having agreed on a proposed settlement, have asked the Court to dismiss the case.

Ordinarily, Mr. President, settlement among the parties to complex litigation is to be encouraged, but because of the nature of the issues involved and the history of this litigation, settlement without final Supreme Court review would be unfortunate.

The present situation grows out of the April 6, 1964, Supreme Court decision holding that the merger violated the antimerger provisions of section 7 of the Clayton Act. Proceedings then began in the district court to fashion relief and a number of utility companies and the State of California sought to intervene to protect their interests in the final decree. Intervention was denied and the district court ordered El Paso to divest certain properties and to set up an independent company. To the private utilities and the State of California, this final remedy was unacceptable. They argued that the decree did not conform to the Supreme Court's order and would not in fact restore competition. They appealed to the Supreme Court and on February 27, 1967, the Court reversed the lower court and authorized intervention.

The Court took the unusual step of ordering that the chief judge of the circuit assign the case to a different district court judge. Accusing the Department of Justice of knuckling under to El Paso in the settlement which became the basis for the decree, the Court reaffirmed its responsibility to insure conformity with its decrees by lower courts.

The case was assigned to a new district judge and the negotiations began anew. On June 21, 1968, the district court approved the sale of the new company to the Colorado Interstate Gas Corp. Both the State of California and the State of Utah had objections to this method of settlement and prepared a second Supreme Court appeal.

Appeals were perfected but the Department of Justice decided not to join the appeal. Subsequently, California, and later Utah, withdrew their appeals.

Under the circumstances, unless the Supreme Court reviews the disposition below, there is no assurance its basic direction has been followed. While the parties to this litigation may regard their interests as having been satisfied, the public's interest in maintenance of competition and adherence to the Supreme Court's initial direction may not. On these points, Mr. President, assurance can be had only if the Supreme Court does review the whole matter. This I hope it will do, with the Department of Justice renewing its participation.

I am delighted that the Senator from Indiana has given us this opportunity to express our concern.

Mr. BAYH. Mr. President, I appreciate the thoughts and comments of the distinguished Senator from Michigan who has done more than any other Member of this body to bring his expertise to bear on those interests which desire to stifle competition and thus to penalize the consuming public. This matter is important to all of us.

The entire thrust of the issue is that divestiture, in itself, is not enough. The court has held, and we in Congress have a right to demand, that citizens on the West Coast have meaningful competition so the actual value of gas can be determined.

I appreciate the interest of the Senator from Michigan.

THE SURCHARGE AND THE NEED FOR TAX REFORM

Mr. KENNEDY. Mr. President, in a special message delivered to Congress today, the President has asked for an extension of the 10 percent Federal income tax surcharge beyond June 30 for another full fiscal year. In doing so, the President has set the stage for what will almost certainly become one of the most significant debates of the current session of the 91st Congress.

In large part, of course, the debate on the surcharge will be significant because of the current strong inflationary pressures that now exist in the economy. In addition, however, the debate on the surcharge will be important for another reason, a reason that has received far too little interest in the heated debate over the economy. For the first time in many years, Congress has the opportunity to make a major start on tax reform. These two areas—the tax surcharge and tax reform—are inseparably related to one another, and it is important that they be considered together by Congress.

Therefore, I believe that the legislation to be proposed by the administration to extend the surcharge should also be the vehicle of a major first step toward tax reform. Once the first step is taken, we shall have laid the groundwork and smoothed the way for comprehensive tax reform in the near future.

This is not the occasion for a detailed discussion of the surcharge and the need for tax reform. With respect to the surcharge, the current inflationary spiral that now grips the economy argues strongly in favor of legislation to extend the tax for another fiscal year. Given the current state of the economy, I believe that it would be fiscally and economically irresponsible to let the surcharge expire as scheduled at mid-year. In the case of other measures of fiscal policy that have recently been proposed in some quarters, such as suspension of the investment credit and substantial reductions in Federal spending in fiscal year 1970, the issues are far less clear, and we must proceed with caution. In view of the urgent need for fuller funding of almost all our major domestic social programs, I believe it would be unwise to reduce the level of expenditures for these programs below the level already submitted in the 1970 budget. This is not to say, of course, that Congress does not have a major responsibility to scrutinize the budget for wasteful or inefficient expenditures. I understand, for example, that the administration intends to achieve substantial reductions in military spending in the coming fiscal year. I would prefer, however, that the savings gained by these and other actions be applied to important underfunded domestic programs.

With respect to tax reform, the need for prompt action is heightened significantly by the proposal to extend the surcharge. Essential as the tax increase was to reduce the budget deficit last year and to ease the inflationary pressure on the economy, the impact of the surcharge has been grossly unfair. It affects only those who already pay taxes on their income. It requires no contribution from those who now pay no taxes. Obviously, it is unfair that citizens who already pay their fair share in Federal taxes should be asked to pay even more, while those who pay nothing continue to escape the burden that all should bear.

The case for tax reform may be simply stated. The goal of our Federal income tax system is that each person should be taxed in accordance with his ability to pay, and that persons who are similarly situated should pay the same tax. Our present tax laws fall far short of this goal. Today, Americans are becoming increasingly aware that the basic structure of the tax system is inequitable, and that some citizens are paying a bargain basement price. As a result, other citi-

zens, especially the poor and middle-income groups, are required to bear far more than their fair share. The loopholes in our tax laws are widespread and are known to be widespread. When even the highest officials of the administration begin to speak of the danger of a taxpayers revolt, it is time for Congress to listen.

In the weeks to come, I look forward to the hearings and the debates that will take place in these areas of vital interest to the Nation's economic well-being. At the appropriate time, I expect to speak out on each of these issues, and I welcome the message of the President as a timely step in launching this debate in Congress.

S. 1694—INTRODUCTION OF A BILL TO AMEND THE IMMIGRATION AND NATIONALITY ACT—ALIEN COMMUTER (GREEN CARD) SYSTEM

Mr. KENNEDY. Mr. President, on behalf of myself and Senators HARRIS, HART, MONDALE, MUSKIE, NELSON, PELL, TYDINGS, WILLIAMS of New Jersey, and YARBOROUGH, I introduce, for appropriate reference, a bill to amend the Immigration and Nationality Act.

A companion bill is being introduced in the other body by the chairman of its Judiciary Subcommittee on Immigration, Representative MICHAEL A. FEIGHAN, of Ohio.

Mr. President, unemployment rates exceeding 10 percent are common in many border communities from Texas to California. Earnings in border areas are lower than average earnings in the border States as a whole.

This is a deplorable situation, an indication of severe economic depression. There are many reasons for these conditions. There is, for example, no strong economic base along the border. The area is largely rural—agriculture is the major industry. Until recently, farmworkers were excluded from social legislation designed to protect most other workers in our economy.

And even now, despite such changes as the extension of the Fair Labor Standards Act to agriculture, farmworkers still receive far from equal treatment. Wages are low—and partly because new machinery and new patterns of production have been introduced in agriculture, a labor surplus situation exists. As a result, industries attracted to border communities are usually in the low-wage category. The kinds of jobs available in the border areas are not the better jobs found elsewhere in the American economy.

Moreover, border residents are often of Mexican descent—or recent immigrants from Mexico. They have suffered, and continue to suffer economic and social discrimination—a vicious and evil discrimination because of their national origin; and a more subtle discrimination, but no less evil—arising out of the fact that Mexican-Americans are so often poverty stricken, poorly educated, unable to speak English, and seldom able to compete for jobs and opportunities in a society dominated by Anglos.

But there is another reason for the poor working and living conditions along the border—a reason which this Nation largely ignores, but which it cannot deny. In a very important way, these living conditions are imposed upon our residents, by the presence of a readily available and low-paid alien work force from Mexico which undermines the standards American workers generally enjoy throughout the rest of the country.

This alien work force is a major factor contributing to the grinding poverty, high unemployment, and low wages in the border areas. The facts are in the record of hearings and in the last report of the Labor and Public Welfare Subcommittee on Migratory Labor. They are in the record of hearings conducted in California during the last Congress by Representative JOHN V. TUNNEY. They are in the record of hearings I conducted several months ago as acting chairman of the Judiciary Subcommittee on Immigration. They are in the final report of the Select Commission on Western Hemisphere Immigration, established by the Immigration Act of 1965, and in the record of hearings conducted by the Commission last year in San Diego, El Paso, and Brownsville. They are in a recent staff report issued by the U.S. Commission on Civil Rights, and in additional surveys made by the Department of Labor, various unions, and other public and private agencies.

Mr. President, rather than give a lengthy recital of these facts, I ask unanimous consent that the staff report of the Civil Rights Commission, as well as a report prepared by Mr. Stanley M. Knebel of the Department of Labor, and excerpts from a statement I made in this chamber during the last Congress, be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibits 1, 2, and 3.)

Mr. KENNEDY. Mr. President, the alien work force from Mexico comes into the country through various channels. There is first of all the movement of workers under the so-called alien commuter system administered by the Immigration and Naturalization Service. This system, a creature of administrative ingenuity without a statutory base, permits Canadian and Mexican workers who have been lawfully admitted to the United States for permanent residence, and who hold alien registration receipt cards—commonly known as "green cards"—to reside in Canada or Mexico and regularly commute across the border to places of employment in the United States.

For reasons difficult to understand, until little more than a year ago—and only at the request of myself and others—no effect was made to routinely identify commuters in the operating reports of the Immigration and Naturalization Service. A census of the commuter movement was taken, however, during November and December 1967.

This census identified some 40,176 commuters, including 16,713 farm workers, employed mainly in California.

Mr. President, I ask unanimous consent that a breakthrough of the commuter census be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 4).

Mr. KENNEDY. Mr. President, the census figure undoubtedly represents a substantial segment of the commuter traffic, especially on a daily or weekly basis. But it does not include an undetermined number of individuals who remain in this country for many weeks or months, usually employed in areas far north of the border.

For this reason, former Secretary of Labor W. Willard Wirtz has estimated the number of commuters at some 100,000. The United Farm Workers Organizing Committee puts it closer to 150,000.

But whatever their numbers, there is no doubt that the commuter movement adversely affects the wages and working conditions of our own residents in the border cities and towns of Arizona, California, New Mexico, and Texas. Something must be done in the interest of these workers and the well-being of their families.

A second source of low-wage labor is found among Mexican nationals who enter the United States as bona fide visitors, usually on 72-hour passes—commonly known as "white cards." Statistics compiled by the Immigration and Naturalization Service are not adequate to gage the full extent of employment among these visitors. Nevertheless, it is estimated that some 1,250,000 white cards are currently in use, and that more than 200,000 new cards are issued annually.

Because the cards are undated and no record of entry is made at the border, Mexican nationals find them an extremely convenient vehicle to enter the United States—and with impunity acquire employment, remaining for extended periods of time in violation of their limited status as 3-day visitors. Moreover, there are no effective statutory or administrative regulations to deter employers from knowingly hiring the alien visitors. In fact, as it now stands, the Immigration and Nationality Act expressly facilitates their employment.

Section 274 of the act, which prohibits the harboring and concealing of aliens, contains this proviso:

> For the purposes of this section, employment, including the usual and normal practices incident to employment, shall not be deemed to constitute harboring.

During fiscal year 1968, Immigration and Naturalization Service officers located nearly 26,000 deportable aliens, nearly all for illegal employment, among white card holders in the United States.

I share the view of many, however, that this figure is probably an unfair representation of the number of white carders actually employed. But, again, regardless of their number, the 26,000 figure clearly underscores a problem in the illegal use of white cards by Mexican nationals. And the number of those apprehended is rising annually. The Immigration and Naturalization Service recognizes this disgraceful situation. But I fail to under-

stand why stronger remedial action is not being taken. The long-term progress of our border communities, and the immediate well-being of American workers and their families, demands it.

Finally, the reservoir of low-paid Mexican labor is substantially augmented by an undetermined number of illegal entrants—the so-called "wetbacks." There is agreement in nearly all quarters that this has once again become a serious problem. An indication is seen in the growing number of illegal entrants located by the Immigration and Naturalization Service. In fiscal year 1963, the number stood at 20,797. In the last fiscal year it reached 117,184. And tens of thousands have been added to this figure since last July 1.

In this connection, the smuggling of alien workers from Mexico has become a lucrative business. Aliens are paying up to $200 to be smuggled into the country, and brought to jobs as far north as Chicago. In the last calendar year, in the southwest region alone, some 7,833 aliens were located who allegedly were smuggled or assisted in entering illegally, or were subsequently transported within the United States in furtherance of an illegal entry. The border patrol reports that 714 principals were apprehended as violating the criminal statutes relating to the smuggling of aliens.

This traffic in human cargo which has resulted in the cruel death of several must end. A greater effort is needed to enforce the law—not only in stopping the smuggling of aliens, but also in deterring the entry of any illegal worker, whatever his means for crossing the border.

The influx of an alien work force from Mexico, to compete for the limited number of jobs available in border areas, is compounding an already serious situation, and, understandably, producing bitter resentment among the severely disadvantaged American workers.

In these days of increased agitation by those who find they have no redress of grievances, the alien worker issue could well become explosive, with grave local and international consequences. I believe the situation demands the very urgent and active concern of the administration and the Congress. It demands an orderly pursuit of justice and fair play. Some measure of relief is needed promptly. The bill we introduce today is a modest attempt to begin this effort.

Section 1 of the bill pertains to the commuter system. A major thrust of our immigration laws has always been to protect the working conditions and job opportunities of American workers. As it currently operates, the 40-year-old commuter system, not provided for in these laws, but directly related to them, does not carry out this objective. It is true that potential commuters among many of the current applicants for an immigrant visa are covered by the Labor Clearance Provisions of the Immigration Act of 1965.

But once an applicant is given permanent resident status as a bona fide immigrant—once he receives his green card—for all practical purposes he holds in his hand a permanent work permit for employment in the United States. I do not believe aliens should be given the unique privilege of being considered bona fide immigrants for purposes of employment in this country when they choose to reside across the border and fail to become immigrants in the sense contemplated by law and, more importantly, when their employment is so clearly detrimental to the economic conditions, the job opportunities, and the organizing and collective bargaining efforts of American workers.

The proposed amendment to section 212 of the Immigration and Nationality Act does not end the commuter system, but it does refine its current operations. The amendment simply says that each commuter alien must be regularly certified every 6 months by the Department of Labor, that his presence in the United States to seek or continue employment does not adversely affect the wages and working conditions of American workers similarly employed. The amendment provides for the revocation of a commuter alien's labor clearance, if he violates administrative regulations, such as a ban on strikebreaking—and this regulation needs strengthening—prescribed by the Department of Labor and the Immigration and Naturalization Service to carry out the purpose of this amendment.

Section 2 of the bill removes the provision in section 274(a)(4) of the Immigration and Nationality Act, which exempts from criminal sanctions individuals who willfully and knowingly employ aliens who are in the country illegally. The proviso was placed in the basic immigration statute many years ago, to protect the use of the so-called "wetbacks" by American employers. The time is long overdue to strike it from the statute books.

I believe that the enactment of this bill, if coupled with a strengthening and a more effective implementation of administrative regulations, will contribute a great deal to a reasonable and humane remedy of the chronic problems posed by the influx of workers from Mexico.

I fully appreciate that the commuter system, and the flow of nationals from neighboring countries into the United States, evolved from a recognition of the special relations which we have had with these countries over the years. And I believe the parties concerned can continue to enjoy the mutual benefits of these relations, while at the same time curbing the adverse effects of commuter aliens, including the exploitation of the aliens themselves. In fact, a solution to these festering problems can only help to insure that the spirit of cordiality at the border will continue without difficulty in the years ahead.

I am hopeful that Congress will act on this bill promptly.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 1694) entitled "Immigration Act Amendments of 1969," introduced by Mr. KENNEDY (for himself and other Senators), was received, read twice by its title, and referred to the Committee on the Judiciary.

EXHIBIT 1

"THE COMMUTER ON THE UNITED STATES-MEXICO BORDER," A STAFF REPORT FROM THE COMMISSION ON CIVIL RIGHTS

INTRODUCTION

One of the most commonly voiced concerns of the Mexican American community in the border area is with the commuter, the Mexican alien who resides in Mexico and commutes to work across the border in the United States,[1] forcing domestic workers to compete for wages with workers living in a much lower cost economy. Commuters represent a supply of workers in excess of the demand who depress the wage rate, displace the domestic worker, and lower his living standard. The commuter poses an even greater threat to the economic well being of the domestic worker when he serves as a strike-breaker, as he has done in Starr County, Texas and Delano, California, thus stifling the organizing and collective bargaining efforts of the American laborer.[2]

As viewed in the 1968 Report of the Senate Migratory Labor Subcommittee, *The Migratory Farm Labor Problem in the United States*, "(t)he problems created by the commuter are manifest":

"The Mexican aliens, as a group, are a readily available, low-wage work force which undermines the standards American workers generally enjoy throughout the rest of the country. More importantly, the normal play of free enterprise principles is subverted and prevented from operating to develop standards along the border commensurate with the American standard. So long as Mexican aliens are allowed indiscriminately to work in the American economy, and take their wages back to the low-cost Mexican economy, the growth of the American standards will continue to be stultified."[3]

WHAT IS A COMMUTER?

The term "commuter" is taken by most residents of the border area to refer to all persons who travel to their work on the American side of the border from their place of actual residence in Mexico, whether they commute daily or on a less frequent basis. Several classes of persons commute to work across the border, including American citizens living in Mexico and Mexican citizens with temporary visas (commonly referred to as "white carders"). The latter group acquires employment here in violation of their limited status. In its strict legal sense (and as it will be used here) the term "commuter" is limited to immigrants lawfully admitted for permanent residence and gainfully employed here, but who retain actual residence in Mexico (sometimes referred to as "green carders", although, in fact, all immigrants, whether or not "commuters" are issued "green cards").

There is wide disagreement about the actual extent of the commuter traffic. The Immigration and Naturalization Service conducted a survey on January 11 and 17, 1966, finding a total of 43,687 commuters. The United Farm Workers Organizing Committee, AFL–CIO, on the other hand, has estimated the number to be closer to 150,000. While the former estimate includes only daily commuters working along the border, the latter including aliens remaining here for periods of weeks or months, usually working in areas farther North.

The commuter should not be confused with the non-immigrant Mexican contract laborer previously brought in for seasonal employment under Public Law 78 (known as the "bracero" program) and recently brought in under section 101(a)(15)(H) of the Immigration and Nationality Act of 1952. The bracero program was originally established during World War II to augment the American labor shortage. Thereafter, Congress con-

Footnotes at end of article.

tinually extended it (even when there was domestic unemployment) under pressure from an agri-business which had to come to assume a vested interest in this cheap labor supply.

In 1964, after the national conscience took stock of the rising rate of agricultural unemployment, the increasing of discrepancy between farm labor wage rates and those for comparable work, and the worsening conditions in migrant labor camps, Public Law 78 was terminated.[4] The effect of this termination was softened by the admission of a decreasing number of contract laborers under the above mentioned provisions of the Immigration and Nationality Act. During the last year of the bracero program 177,736 Mexican laborers were admitted; in 1965, under the new procedure, the number was reduced to 20,286. In 1966 the number decreased to 8,647 and in 1967 to 7,703. The year 1968 was the first year in which there was no admission of contract laborers and marks the final phasing-out of the contract labor program.

Like all persons immigrating to the United States, the commuter must apply for and obtain the status of a permanent resident alien and receive an alien registration card (Form 1–151, commonly referred to as a "green card") as evidence of his lawful admission. Under section 212(a)(14) of the Act, in order to qualify for employment in the United States, the applicant must secure certification from the Secretary of Labor to the effect that: "there are not sufficient workers in the United States who are able, willing, qualified and available at the time of application for a visa and admission to the United States and at the place to which the alien is destined to perform such skilled or unskilled labor, and the employment of such aliens will not adversely affect the wages and working conditions of the workers in the United States similarly employed.[5]

Under the present Immigration and Naturalization Service (hereinafter "Service") interpretation and enforcement of this section, compliance with this provision need only be made at the time of the commuter's original entry. Once his status is secured he may enter and leave the country at will, working wherever he pleases, regardless of the effect he might have on domestic working conditions.[6]

A 1967 amendment to the regulations[7] bars the employment of green card holders (commuters and residents) at locations where a labor dispute has been certified by the Secretary of Labor. On July 10 and 27, 1967, some 16 work stoppages were certified in Rio Grande Valley of Texas, El Paso, Texas and in Southern California, with the effect of preventing commuters from accepting employment at the struck concerns. Even commuters who have secured their immigrant status are covered by the section. A major exception exists, however, with regard to workers already employed at the struck concern at the time of certification. This exception renders the regulation somewhat ineffective in preventing commuters from working as strikebreakers since an employer usually has ample time after a labor dispute occurs to hire needed alien employees before the dispute is certified. This problem could be met if the regulation were modified so as to exclude all green carders not employed at the time that the dispute began.

Once admitted, a commuter is entitled to most of the rights and privileges of an ordinary citizen except the right to vote and hold public office. Unlike most of the more than 650,000 Mexican aliens currently possessing green cards, commuters are not seeking eventual citizenship. Instead they look upon their green cards as nothing more than work permits. In fact, by law commuters cannot claim naturalization benefits; it has been held that actual domicile here is a prerequisite to naturalized citizenship.[8]

LEGAL BACKGROUND OF AND LEGAL CHALLENGES TO THE COMMUTER SYSTEM

The commuter system has deep roots. People have commuted to work across the United States-Mexico border since the border's inception. Up until the 1920s this traffic was unrestricted. In 1924 a quota system was established which, while not restricting Mexicans directly, required Mexican immigrants to present immigrant visas for entry.[9] An exception to the Act's definition of the term "immigrant" ("any alien departing from any place outside the United States destined for the United States"[10]) was made for "an alien visiting the United States temporarily as a tourist or temporarily for business or pleasure".[11] At first commuters were considered as being here "temporarily for business" and deemed not to be immigrants and, hence, were allowed to continue their employment pattern unrestricted. In 1927 immigration authorities reversed this position and classified commuters as immigrants.[12]

Two commuters contested this new classification and the Supreme Court, finding that one of the "great purposes" of immigration legislation "was to protect American labor against the influx of foreign labor", held unanimously that the term "business" was not meant to include everyday employment. The commuter was not to be exempt from the immigrant status.[13]

The Immigration authorities, however, saw their duty as the protection of diplomatic relations between the United States and Mexico rather than the protection of American labor. In a paper by the Immigration and Naturalization Service prepared for the Select Commission on Western Hemisphere Immigration, the Service stated:

"In studying the problem (status of the commuter) at that time, the immigration authorities concluded that Congress had not intended to interfere with the established pattern of regular border crossings by workers from Mexico or Canada who commuted to jobs in the United States. While such aliens could obtain immigrant visas without difficulty, they would be faced with an impossible task if they were required to obtain a new visa for each daily reentry. Consequently, the immigration authorities devised a border crossing identification card which could be used by aliens who frequently cross the international boundary. The issuance and use of such border crossing cards received express sanction by the Congress in the Alien Registration Act of 1940.

"Thus a commuter was able to procure an immigrant visa and subsequent lawful admission as an immigrant. Thereafter he would obtain a border crossing identification card, and with that card he could enter each day to go to his job as returning to his immigrant status in the United States. This arrangement was in harmony with the established good-neighbor policy with Mexico and Canada, facilitated travel across the Mexican and Canadian borders, and avoided serious dislocations in the border areas."[14]

Actually, the commuter system is without express statutory basis. In fact, the term "commuter" is not to be found in the Act. Its special character has been described by the Board of Immigration Appeals in the following way:

"The commuter situation manifestly does not fit into any precise category found in the immigration statutes. The status is an artificial one, predicated upon good international relations maintained and cherished between friendly neighbors."[15]

In Gordon & Rosenfield, *Immigration Law and Procedure,* (1959) this description is found:

"Where this employment (of Canadians and Mexicans) is permanent in character administrative ingenuity has devised a 'commuter' status, which enables the Canadian or Mexican to obtain lawful admission for permanent residence in order that he may be able to pursue his employment here, and his right to enter each day is attested by his alien registration receipt card. *Of course, this device is an amiable fiction. . . .*"[16] (Emphasis added.)

Due to the absence of statutory foundation, immigration authorities have attempted to justify the commuter program's existence by its long-standing history, the fact that the program has long been well known to Congress and the fact that it was discussed and impliedly endorsed by the Senate Judiciary Committee study preceding the passage of the Act of 1952. "Nothing in the Immigration and Nationality Act or its legislative antecedents indicated that the Congress was dissatisfied with the commuter program or desired to change it in any way".[17] The continuation of the commuter program after the 1952 Act was endorsed by the Board of Immigration Appeals in the *Matter of H. O.,* 5 I. & N., Dec. 716, 1954.

It also has been argued that the structure of the statutory and regulatory provisions facilitating re-entry supports the commuter program. Section 211(b) of the Act provides that ". . . under such conditions as may be by regulations prescribed, returning resident immigrants, defined in section 101(a)(27)-(B) . . . may be readmitted to the United States by the Attorney General in his discretion without being required to obtain a passport, immigration visa, reentry permit or other documents."

A "returning resident immigrant" is defined by the statutory definition alluded to as "an immigrant, lawfully admitted for permanent residence, who is returning from a temporary visit abroad." In turn, section 101(a)(20) defines the term "lawfully admitted for permanent residence" as ". . . the status of having been lawfully accorded the privilege of residing permanently in the United States as an immigrant in accordance with the immigration laws, such status not having changed". As pointed out by L. Paul Winings, past General Counsel for the Immigration and Naturalization Service, in defining the term "lawfully admitted for permanent residence", the Act ". . . does not say one who has been admitted for permanent residence and has established such residence in the United States. What it says is that it is the status of having been accorded the privilege of permanent residence. In other words, I have paid my way into the ballpark; if I want to go out temporarily, I can come back in."[18]

The regulation promulgated pursuant to section 211(b), however, does not provide for the re-entry of persons "lawfully admitted for permanent residence" as that term is defined by the Act. Instead it says:

"In lieu of an immigrant visa, an immigrant alien *returning to an unrelinquished lawful permanent residence* in the United States after a temporary absence abroad not exceeding 1 year may present Form I–151, Alien Registration Receipt Card, duly issued to him . . ."[19] (Emphasis added.)

Although the immigration authorities take the position that this section was not meant to be exclusive, a strong argument can be made that by its wording it in fact excludes commuters. As one commentator has noted, a commuter "is not returning to an unrelinquished, lawful, permanent residence after a temporary absence not exceeding one year because his residence is not in the United States and as a rule he ha[s] maintained . . . residence in a foreign country for a period exceeding one year."[20]

In *Amalgamated Meat Cutters* v. *Rogers,*[21] a case involving the Service's interpretation and enforcement of aforementioned section 212(a)(14) of the Act (precluding admission of aliens for skilled or unskilled labor when

Footnotes at end of article.

the Secretary of Labor certifies that such admission would adversely affect American labor), doubt was cast upon the Service's position. That case involved a strike situation where a certification had been made. In response, the Service instructed the authorities at the relevant points of entry that during the effectiveness of the certification no aliens applying for admission and destined for employment at the struck operation, "except returning lawfully domiciled resident aliens", should be admitted.

The Service took the position that commuters are "aliens lawfully admitted for permanent residence". The Court disagreed—"It is clear that Mexican commuters do not reside in the United States, and that it therefore is not possible for them to be aliens lawfully admitted for permanent residence." Any other construction, the Court felt, would ". . . make shambles of a provision which . . ." was designed to ". . . assure strong safeguards for American labor" [22] The suit had become moot by the time that final judgment was entered, and hence was not appealed by the Service. "However, the administrative authorities do not believe (the decision) is correct and do not follow it." [23]

The rationale in the *Amalgamated Meat Cutters* decision is equally relevant to the validity of the whole commuter system and, logically, should compel a conclusion contrary to that taken by the Service. The Court by way of *obiter dictum*, however, expressly limited its holding in this respect:

"This should not mean, however, that Mexicans or Canadians cannot commute to work in the United States. The defendants can utilize the documentary requirements and administrative procedures they think best under the applicable law for aliens who work in this country and live in Mexico or Canada. If the defendants are satisfied that an alien can enter the United States to work here, they could then permit the alien to commute. But when the Secretary of Labor has issued a certification under § 212(a) (14) pertaining to particular employment, such as an alien would be excludable. It is not sufficient to resort to an 'amiable fiction' to justify a wholesale evasion of the Secretary's certification—Mexican commuters destined for the employment covered by the certification must be excluded just as any other Mexican non-resident alien." [24]

The commuter program was squarely attacked in a 1964 case, *Texas State AFL–CIO v. Kennedy*,[25] where workers from the Texas border area, alleging economic detriment, sued the immigration authorities for injunctive relief against continuation of the commuter system. The Court avoided reaching the merits by dismissing the action on the grounds that the plaintiffs lacked standing to sue. Since 1964 the law of standing has changed radically,[26] and a similar suit has recently been brought by California Rural Legal Assistance in behalf of California farm workers displaced by commuters taking temporary employment in California and freely returning to Mexico for a period of weeks or months.[27] The complaint seeks an order requiring immigration officials to deny admission to "returning resident immigrants" who fail to demonstrate a bona fide permanent residence in the United States (e.g., commuters). "In determining the question of bona fide permanent residence . . .", the plaintiffs suggest the following indicia might be considered:

1. Possession of a U.S. Selective Service classification card in the alien's name, reflecting a United States address.

2. Possession of state and federal income tax returns in the alien's name, showing residence in the United States.

3. A driver's license in the alien's name issued by a State of the United States, reflecting a United States residence.

4. A vehicle registration in the alien's name reflecting a United States residence.

5. If the alien is married, the fact that both wife and children reside in the United States.

6. Evidence that his children attend school in the United States, or that a child was born in the United States.

7. Evidence of active membership in clubs, associations or unions organized or incorporated in the United States.

8. Convincing evidence of permanent employment in the United States.

9. Rent receipts, other than from a labor camp, hotel or motel, tending to evidence permanent residence in the United States.

10. Place of employment, occupation and length of employment.[28]

Although the Service deems the commuter status to be consistent with the letter and intent of the Immigration and Nationality Act of 1952, it has been held that a commuter cannot even become a citizen (the assumed purposes for immigration under the Act) because, by definition, his assimilated status does not conform to the standard of residency (actual domicile in the United States) required by the Act for naturalization.[29]

Similarly, although a commuter must notify his Selective Service board of his current address,[30] he is not actually subject to be drafted since he is not a resident of the United States under current Selective Service regulations [31] because he did not reside in the United States for the required three month period.

Commuters also are treated differently from other "immigrants" with regard to Federal income tax status. An alien who has established residence in the United States is liable for Federal income tax on his entire income, from sources both within and without the United States. Whether an alien is a resident depends on the facts and circumstances of each case. The type of visa issued is only one of the elements considered. In response to an inquiry on this matter from the House Judiciary Committee, the Internal Revenue Service had this to say about commuters:

"It appears from the information submitted that the aliens about whom you are inquiring have never established a residence in the United States, but have obtained permanent visas merely to facilitate their entry into and departure from this country. Under such circumstances, the status of these individuals is that of nonresident aliens." [32]

Hence commuters, unlike other green card holders, are not subject to Federal income tax on income from sources outside this country.

THE IMPACT OF COMMUTER TRAFFIC

Much of the border area has relatively large labor surpluses, partly because of the large number of low skilled U.S. citizens and resident aliens residing in the area.[33] Commuters, however, make up a significant part of the work force in many of the border communities. Although accurate statistics are not kept by the Immigration and Naturalization authorities, sample counts of the number of commuters crossing the border are taken from time to time. One such count, taken on January 11, 1966, showed that 42,641 commuters, of which 17,653 were employed in agriculture, entered the United States. The impact of these commuters on the labor market has been enormous. It has been estimated that over 17% of the labor market in El Paso, Texas, are commuters. Further estimates have shown that 5% of the San Diego, California, labor market and 23% of the Brownsville, Texas, labor market are commuters. Their presence can be directly related to high unemployment rates in these areas.[34]

Many people have commented on the impact of the commuter traffic in the border area. Senator Edward Kennedy of Massachusetts, speaking on a proposed amendment to Section 212 of Immigration and Nationality Act, said:

"In El Paso, where unemployment is currently some 35 percent greater than the State average, the estimated number of commuters in 1966 was more than double the number of unemployed. In El Centro, California, where the unemployment rate is currently 13.1 percent, the estimated number of commuters in 1966 was nearly double the number of unemployed." [35]

A report by the Social Action Commission of the Catholic Diocese of El Paso indicated that one of the reasons for the low wages in El Paso is because ". . . the Mexican-American must compete with some 25,000 workers from Mexico . . . legal alien commuters, U.S. citizens, and illegal entrants . . . who daily cross the bridge from Juarez to work in El Paso. Generally speaking, the workers from Mexico find no inconvenience in working for the barest of wages in El Paso." [36]

The employment of commuters in areas of high unemployment is a characteristic of the communities along the border area. Data published by the Texas Employment Commission in 1966, shows that the unemployment rate in the border towns on that date was substantially greater than in the interior cities. (See Table I) Laredo had the highest rate—9.6%. The average rate for the four border areas (Brownsville-Harlingen-San Benito; El Paso; Laredo; and McAllen-Pharr-Edinburg) was 6.6%, compared with the 3.4 percent rate for the other 18 interior areas for which data was given.[37]

In a special survey held in Laredo by the Department of Labor during the summer of 1961, when the unemployment rate was 11.3%, the Department reported that a large number of unemployed American workers had the same occupational skills as the employed alien commuters.

TABLE I.—UNEMPLOYMENT RATES IN 22 TEXAS CITIES, 1966

City	Rate	Rank
4 border cities	6.6	
Brownsville-Harlingen-San Benito	6.5	21
El Paso	4.4	17
Laredo	9.6	22
McAllen-Pharr-Edinburg	5.8	20
18 interior cities	3.4	
Abilene	3.6	11
Amarillo	2.9	4
Austin	2.6	3
Beaumont-Port Arthur-Orange	4.0	15
Corpus Christi	3.7	12
Dallas	2.5	2
Fort Worth	2.9	4
Galveston-Texas City	4.7	19
Houston	2.4	1
Longview-Kilgore-Gladewater	3.3	8
Lubbock	3.8	13
Midland-Odessa	3.4	9
San Angelo	3.4	9
San Antonio	4.3	16
Texarkana	3.8	13
Tyler	3.3	7
Waco	4.4	17
Wichita Falls	3.0	6

Source: The Texas Labor Market, Texas Employment Commission.

While two garment manufacturers employed 88 commuters as sewing machine operators, the Texas Employment Commission office had on file applications from 156 unemployed U.S. workers qualified for that position.[38] The survey showed that commuters were not limited to the garment industry, but were employed in hotels, restaurants, the retail trades and service establishments. The survey included a sample of firms employing 3,000 workers.

"(T)hese firms employed 438 Mexican aliens identifiable as commuters. In addition, the survey team suspected that other alien employees of these firms were commuters, although they had given U.S. addresses to their employers." [39]

Footnotes at end of article.

The survey also included data on 19 occupational areas:

"(T)he firms employing only domestic workers paid higher rates for 15 occupations; in one occupation the rates paid were the same; and for three occupations the firms employing alien commuters paid higher rates. There were also instances where the same firms paid its alien commuters less than it paid U.S. workers for the same work. The average of the wage rates for these 19 occupation areas paid by the firms employing only U.S. workers was 38 percent higher than the average rates paid by the firms employing alien commuters.[40] (See Table II)"

United States Commission on Civil Rights field investigations in Laredo showed similar discrepancies in the trucking industry. For instance it was reported that Brown Express Lines, which hires few commuters, pays drivers $3.39 an hour; Alamo Express Lines, employing proportionately more commuters, pays $1.85 an hour.[41]

TABLE II.—OCCUPATIONAL WAGE STRUCTURE, LAREDO TEX., JUNE 1961

Industry and occupation	Average wage rate (per week)	
	Firms employing only domestic workers	Firms employing domestic and alien commuter workers
Hotels and motels:		
Cook	$58	$34
Maid	20	17
Hallboy	25	20
Waiter	[1] 15	[1] 18
Busboy	[1] 25	13
Bartender	58	46
Bellboy	[1] 15	[1] 16
Drugstores and related firms:		
Cashier	27	12
Stock clerk	52	40
Fountain girl	16	[2] 23
Drug clerk	77	55
Grocery and related firms:		
Cashier	24	24
Stock boy	35	20
Produceman	45	35
Butcher	65	52
Warehouseman	37	31
Miscellaneous retail firms:		
Porter	53	35
Warehouseman	73	21
Stockman	53	45

[1] Plus tips.
[2] Plus $3 meal allowance.

Technical note: Data were collected in the survey concerning the different rates paid each occupation in each firm. For some occupations monthly rates were reported; these were converted to weekly rates by dividing the monthly rate by 4.33. The number of workers paid each rate was not reported in all cases, making it impossible to compute an average rate weighted by the number of workers paid each rate. The average rates shown in the table represent the average of the highest and lowest rates paid. These averages correspond quite accurately with the weighted averages computed for the few occupations where data were reported for each worker.

The pattern of commuter involvement in the Laredo labor market is found elsewhere with comparable effects. As in Laredo, a survey was conducted by the Department of Labor in El Paso, Texas, during the summer of 1961. About 1,000 commuters were employed in the 75 firms surveyed. It was noted, however, that ". . . these figures might be more because one firm indicated that it did not employ commuters but sent a bus to the border each day to pick up workers."[42] The average wage in manufacturing in El Paso is extremely low. That city ranked lowest of the eight major Texas areas for which the Texas Employment Commission supplied data. (See Table III)

In El Paso, nondurable goods employment is heavily concentrated in garment manufacturing—almost 75% of all nondurable goods workers are in this industry. The wage rate in garment manufacturing is little more than the minimum required by the Fair Labor Standards Act. Large numbers of commuters (mainly women) are employed in this occupation. Many people believe that the presence here of the garment industry, a recent phenomenon, is due to the large supply of labor and low wages—both conditions owing, in part, to the commuter program.[43] The El Paso survey concluded by showing that out of 11 construction firms 5 employed commuters; out of 4 retail dry goods firms, 3 employed commuters; out of 4 wholesale and warehouse firms, 3 employed commuters. In all these cases the firms employing commuters paid the lowest wages.[44]

The impact of the commuter is particularly acute in agriculture, where mechanization is rapidly reducing job opportunities. Due to the high concentration of farms along the border and the fact that commuters often work in the lowest skilled, lowest paid jobs, farm workers, who are already underpaid, are the first to suffer competition from the commuter. Furthermore, the use of commuters as strike breakers (see discussion on page 17, *infra*) is especially damaging to this group's organizational struggles.

The wages paid farm workers in the border area are substantially lower than in interior regions. In the Rio Grande Valley, where 37% of the alien commuters worked on farm jobs, the 1966 wage rate was $.75 per hour, 31% less than the $1.10 average in the rest of the state.[45] Similarly, California farm rates are the lowest in the border areas where the bulk of the farm labor force is composed of commuters. The commuter's impact is also reflected in the agricultural unemployment rate. For example, "commuters constitute about 85% of the farmwork force in California's Imperial Valley, where unemployment in 1966 was 10% of the labor force, twice the average for the entire state."[46]

TABLE III.—AVERAGE HOURLY EARNINGS IN MANUFACTURING INDUSTRIES, 8 MAJOR TEXAS CITIES, 1966

	Average hourly earnings		
	All manufacturing	Durable goods	Nondurable goods
Texas	$2.57	$2.62	$2.52
El Paso	1.90	2.46	1.72
Austin	1.98	1.71	2.26
Beaumont	3.35	3.03	3.48
Corpus Christi	2.96	2.57	3.26
Dallas	2.37	2.52	2.10
Fort Worth	2.81	2.97	2.39
Houston	3.00	2.87	3.16
San Antonio	1.98	1.92	2.02

EMPLOYMENT OF ILLEGAL ENTRANTS AND WHITE CARDERS

It is important to note the role of illegal entrants and white carders (see discussion on page 2, *infra*) in the employment picture in the border area. During 1967 the Border Patrol apprehended 86,845 deportable Mexicans working illegally, many in the border area. Of this number 27,830 were working in agriculture, 5,906 in trades, crafts and industry, and 53,109 in other occupations.[47]

The border crossing statistics kept are inadequate to accurately gauge the extent of white card employment. There are approximately 1,250,000 current white card holders, and about 450,000 new white cards are issued annually. In 1968 there were 25,000 white carders who were deported, most of these for illegal employment.[48] But it is felt by many residents of the border area that deportation figures do not fairly represent the number of white carders actually employed.[49]

This is because many white carded workers employed in occupations with low visibility and even with the best efforts of immigration authorities, they cannot be easily discovered. Many white card holders use their 72 hour passes to engage in menial work as domestic maids, dishwashers, hotel and motel workers, and construction workers. Others work in such semi-skilled jobs as masonry and carpentry.[50]

One reason for this wholesale employment of white carders is the lack of legislation effectively preventing employers from knowingly hiring these workers. As it now stands, the law contains provisions expressly facilitating such employment. Section 274(4) of the Act, prohibiting the harboring and concealing of aliens, contains the following proviso: ". . . for the purposes of this section, employment *including the usual and normal practices incident to employment* shall not be deemed to constitute harboring."[51] (Emphasis added.)

The need for legislation correcting this situation is manifest.

USE OF COMMUTERS AS STRIKE-BREAKERS

Organized labor has been deeply concerned with the use of commuters as "strike-breakers, when workers were engaged in the process of trying to negotiate conditions covering their wages".[52] The recent strike in Starr County, Texas, presented an example of the use of commuters during labor disputes. In a hearing held by the Senate Subcommittee on Migratory Farm Workers Organizing Committee of the AFL–CIO, had this to say about one of the farms which his organization picketed:

"Mr. PADILLA. La Casita Farms, which we are on strike with. And this is a bona fide certified strike, issued by the State of Texas, the Texas Employment Commission. I witnessed that they load the bus full of Mexican nationals, and escort them right into the fields, and now they tell us that we don't have a right to picket, to talk to them."

"Mr. YARBOROUGH. You mean that La Casita Farms took their transportation to the bridge and picked these workers up with the green cards and brought them straight up to their farms, and put them on the farms?

"Mr. PADILLA. That is correct, sir."[53]

Domingo Arrendondo, Strike Chairman, United Farm Workers Organizing Committee, AFL–CIO, said with regard to the Starr County strike:

"(T)he problem about these green carders is that they come to work from Mexico every day. They will come in the morning and they will go back at night. Now that the minimum wage came up, or a little bit right after the strike started, they raised the price on these workers from 85 cents or 80 cents to $1 an hour and to $1.50. That was just a symbol to break the strike movement, to keep these people from joining the strike for better wages, or for a contract, or a union contract. We went and talked to these people at the bridge, international bridge. We told them to cooperate with us for better wages and working conditions, but they will always say that if their friend had already signed that they would sign, that they would sign but they would probably get laid off their jobs. So, really we couldn't get no where convincing them that a union is something that a worker needs. (Sic.)"[54]

As a result of the misuse of green card workers as strike-breakers was the aforementioned 1967 amendment to the INS regulation, barring employment of green card holders at locations where a labor dispute has been certified by the Secretary of Labor.[55]

RELATIONSHIP OF COMMUTER TRAFFIC TO MIGRATION

As a result of its impact on wages, unemployment and working conditions, the commuter traffic contributes to the annual massive migration of Mexican Americans from the border area. The Social Action Department of the Texas Catholic Conference estimates that because of the lack of opportunities in South Texas, 88,700 farm workers must migrate to other areas of the country

Footnotes at end of article.

every year in order to find employment. These are people who live in the border areas and would otherwise seek employment there, but for the saturation of the labor market by the commuters. The Committee had this to say:

"Unfortunately, because of the vast supply of green carders . . . the domestic workers are unable to compete with the depressed wages that result from the availability of cheap labor to the growers. This accounts for the fact that almost one-half of the Texas migrant workers come from the four counties of the Lower Rio Grande Valley." [56]

PROPOSED SOLUTIONS TO THE COMMUTER PROBLEM

Various recommendations have been made to alleviate conditions caused by the commuter program. Henry Munoz, Jr., speaking for the Texas AFL–CIO, urged that the Department of Labor issue a regulation for a minimum wage law of $1.25 to be applicable to green-card holders and commuters.[57]

In a letter from Chairman Richard M. Scammon and Stanley H. Ruttenberg, of the Select Commission on Western Hemisphere Immigration, the following recommendations to the President regarding commuters were made:

"As of a date certain, all visas issued for immigration into the United States be firmly understood to include a clear commitment by those immigrating to establish and maintain their bona fide residence within the United States.

"A new form of border crossing authorization be established, this authorization being designed for use by non-citizens who do not intend to become immigrants in the ordinary sense of the word, but who do wish to work in the United States and continue to reside in their own "contiguous territory" country.

"Within a grace period, action should be taken to terminate the commuter status of present 'green cards' holders." [58]

On December 14, 1967 Senator Edward Kennedy, a member of the Senate Subcommittee on Migratory Labor, introduced a bill in Congress to amend Section 212 of the Immigration and Nationality Act. As the Senator explained, the amendment would not eliminate the commuter system, but refine its current operation. The bill in essence provides ". . . that each commuter alien must be regularly certified every 6 months by the Department of Labor that his presence in the United States to seek or continue employment does not adversely affect the wages and working conditions of American workers similarly employed. The bill provides for the revocation of a commuter alien's labor clearance if he violates administrative regulations, such as a ban on strike breaking, prescribed by the Department of Labor and the Immigration Service to carry out the purpose of this bill".[59]

This bill has received strong opposition from Chamber of Commerce groups, farm grower organizations, and retailers. The Laredo Chamber of Commerce has gone on record as being opposed to any change in the commuter system.[60] This opposition is based on economic reasons. Laredo, last year, had retail sales of over 90 million dollars, much of this being to commuters. Business interests feel that if anything happens to change the status of commuters their towns will become "ghost towns." Organized growers are afraid that they will be cut off from a valuable supply of labor. Willis Deines, attorney for the Texas Citrus and Vegetable Growers, indicated why his group is in opposition to the Kennedy Bill: ". . . It is axiomatic that if our growers do not have a source of labor that can be depended upon to do their farming operations, particularly in the harvest of perishables, then of course we would not have an industry." [61]

Businessmen in the Valley area have indicated a fear that any effort to terminate the commuter program will result in a retaliatory refusal by Mexico to allow its citizens to carry on their extensive trade in American border towns. The suggestion by Antonio Carrillo Flores, Foreign Secretary of Mexico, that Mexican commuters have "acquired rights," lends authority to this suspicion.[62]

The American government also has officially voiced its concern with diplomatic relations in approaching the commuter problem. In the aforementioned case of *Texas State AFL–CIO* v. *Robert Kennedy, et al.*, where the legality of the commuter program was put into issue, Secretary of State Dean Rusk, submitted an affidavit opposing interference with the commuter program on the grounds that it would ". . . do harm to good neighbor relations in the area." [63] He stated further:

"(I)f as a result of a substantial reduction in the commuter traffic across the border between Mexico and the United States, a significant number of Mexican nationals would be deprived of their earning power, the trade between the two countries along the border would be substantially reduced. We could expect that this would have an immediate depressing effect on the economy of the region on both sides of the border. Moreover, the loss of gainful employment and dollar earnings by 30,000 to 50,000 Mexican nationals, estimated at over $50 million annually, might compel the government of Mexico to consider compensating steps, which would do further damage to the economic life of the region."

The Mexican American in the border area is thus charged with the responsibility of protecting our diplomatic relations. The economic burdens involved in this charge, he may justifiably feel, should be borne by the Nation as a whole, not thrust upon a minority of its citizens.

FOOTNOTES

[1] There is also, but to a smaller extent, commuter traffic across the American-Canadian border. Canadian commuters do not depress local economic conditions, as do Mexican commuters, because they live in a substantially identical cost-of-living economy, work in highly unionized occupations and are highly unionized themselves. Being well assimilated into the labor force, they offer no undue competition to American labor.

[36] Catholic Conference Office of Immigration (Oct. 11, 1968). Organized labor also has shown concern. The following resolution was passed by the Texas AFL–CIO in Jan. 1968: " . . . (T)housands of commuter aliens who cross the border daily to work, cause the unemployment of American citizens and create unfair competition in the labor market by working for sub-standard wages and then returning to Mexico at night where their living costs are much lower."

[37] These unemployment rates, supplied by the Texas Employment Commission, are somewhat conservative since they are based upon the number of persons registered with the T.E.C. offices. Many farm workers secure employment through the crew leader and never register with the T.E.C.

[49] Interview with Mr. Henry Munoz, Jr., Texas AFL–CIO, in Austin, Texas, Sept. 10, 1968. The Service's recognition of the illegal employment of white carders was evidenced by a recent announcement of proposed regulation changes. Under current regulations white carders are issued undated cards and are expected to return within 72 hours and travel no farther than 150 miles from the border. "Government officials say the lack of dates on the present crossing cards makes it almost impossible to enforce regulations."

The proposed changes would limit the travel on undated cards to within 25 miles of the border. For those wishing to travel further a supplemental card that is dated will be issued allowing a 15 day visit. Of course these new limitations will not affect the employment pattern of white carders along the border area. *See* San Antonio Express, p. 1 (Nov. 29, 1968).

EXHIBIT 2

RESTRICTIVE ADMISSION STANDARDS: PROBABLE IMPACT ON MEXICAN ALIEN COMMUTERS

(By Stanley M. Knebel)

Every weekday morning, thousands of residents of Mexican towns near the U.S. border commute to jobs in the United States. At the border, they show their I–151 identification cards, popularly known as "green cards," which entitle them to take employment in the United States. It has generally been recognized that the unrestricted admission of green-card workers on a daily basis adversely affects the wages and working conditions of similarly employed U.S. residents. However, comprehensive data detailing the extent and significance of alien commuter employment have not been available before this year.

In November and December of 1967, the Immigration and Naturalization Service required that each holder of an I–151 identification card who was a daily border crosser complete a questionnaire which called for his occupation and place of employment. During January 1968, the Department of Labor conducted a special employment and wage survey of establishments that employed commuters in the Laredo, Texas area. Based on the data collected in these two studies, certain conclusions can be drawn in regard to the number, occupational distribution, and wages of daily commuters. It is also possible to estimate the impact on the commuter flow that would result from various restrictive wage standards. This article summarizes the two studies and discusses the probable impact of alternative restrictions.

NUMBER OF ALIEN COMMUTERS

The Immigration and Naturalization Service survey showed some 40,000 workers commuting daily across the Mexican border to work in the United States. Crossing points in Texas accounted for 49 percent of the total, while 38 percent crossed into California and 13 percent into Arizona. (See Table 1.) More than four-fifths of the commuters were concentrated at five ports of entry along the border: 29 percent at El Paso, Texas; 19 percent at each of the two major California ports, San Ysidro and Calexico; 9 percent at San Luis, Arizona; and 7 percent at Laredo, Texas. The only other crossing points with more than 500 commuters were Brownsville, Hidalgo, and Eagle Pass, Texas and Nogales, Arizona. (See Tables 2, 3, and 4.)

OCCUPATIONS OF COMMUTERS

Farmwork was the occupation reported by 16,035 border crossers, or 40 percent of the total—a far greater number than in any other occupation.[1] The proportions were 66 percent for Arizona entry points, 60 percent in California, but only 17 percent in Texas. The major entry points for the Yuma and Imperial Valley vegetable and citrus areas are San Luis, Arizona and Calexico, California, where 89 and 91 percent, respectively, of the commuters were farmworkers.

Nine percent of the commuters designated themselves simply as laborers. They probably represent a large portion of the low-skilled segment of the labor force in a wide variety of industrial, service, construction, and other enterprises in some border towns.

Maids in private households were the third most numerous single occupation, comprising 7 percent of all commuters. Most of them entered at El Paso or San Ysidro (near San Diego).

Among business occupations, sales clerks were most numerous by a considerable margin. Commuters in business occupations, as a group, comprised 8 percent of the total. Those in hotel and restaurant occupations accounted for 6 percent and those in building occupations another 6 percent. Other significant concentrations were metal workers (4 percent) and sewing-machine operators (3 percent).

[1] The survey was conducted in November and December when seasonal agricultural employment is at or near the peak of activity in border areas. The 16,035 farmworkers included 7,743 who had been doing migratory farmwork in the United States. They returned to Mexico during the survey period and began working as commuters. It is reasonable to assume that most of these workers would migrate again in the spring.

SCOPE AND METHOD OF LAREDO SURVEY

In the course of the I&NS Census, information was obtained about the place of employment and occupation for each commuter. In Laredo, Texas, data were obtained for 2,669 commuters. Of these, 20 percent were employed as farmworkers and household domestics. Excluding these workers from the totals reduces the number of commuters to 2,121. A sample of 90 establishments in which 5 or more commuters had been employed at the time of the I&NS Census was selected. In addition, a subsample of eight gasoline service stations employing less than five commuters was surveyed. Of the 98 establishments, one refused to provide data, one was out of business, and a third could not be located. The other 95 all provided data about the wage rates paid to commuters and U.S. residents employed in the same occupations. In all, wage data were obtained for 1,075 residents and 608 commuters employed in 48 broad occupational groupings.

There were 25 occupations in which five or more commuters were employed. These accounted for 84 percent of the residents and 94 percent of the commuters in the sample.

EMPLOYMENT AND WAGE FINDINGS OF THE LAREDO STUDY

The 608 commuters employed in the 95 establishments covered by the survey constituted 28 percent of the 2,121 commuters reported by I&NS who were not farm laborers or household domestics.

Although 48 separate occupations were reported for the commuters in the survey, there was a concentration of workers employed as salesclerks, laborers, general clerks, warehousemen, salesmen, and truck drivers.

Average hourly earnings for the 25 surveyed occupations in which five or more commuters were employed ranged from $.81 for busboys and $.86 for service-station attendants to $2.10 for customs appraisers. (Table 5.)

Commuters and resident workers employed in the same establishment received identical wages in each occupational classification.

A wage of $1.40 per hour was the rate most commonly paid to surveyed commuters (Table 6). This rate was the Federal minimum in effect at the time of the survey and, of the 608 workers in the sample, 48 percent were being paid precisely this amount. Moreover, 76 percent (including some workers not covered by the Federal minimum wage law) were receiving $1.40 per hour or less. This would indicate that the ready availability of alien commuters serves to keep the level of wage rates closely tied to the minimum, where applicable, and even lower for workers not protected by law.

IMPACT ON COMMUTERS OF RESTRICTIVE ADMISSION STANDARDS

Various proposals have been made to restrict the admission of the commuters. During the 90th Congress, a bill (S. 2790) was introduced in the Senate which would permit a commuter to reenter the United States ". . . only if the Secretary of Labor has determined and certified to the Attorney General within six months prior to the date of admission that the employment of such alien will not adversely affect the wages and working conditions of workers in the United States similarly employed, . . ." To implement this requirement, a test of adverse effect on wages would have to be specified.

TABLE 5.—AVERAGE HOURLY WAGE RATES AND PREVAILING WAGE RATES FOR SELECTED OCCUPATIONS IN WHICH COMMUTERS ARE EMPLOYED AND THE PROPORTIONS OF COMMUTERS PAID LESS THAN SPECIFIED AMOUNTS, LAREDO, TEX., JANUARY 1968

[1] Based on rates paid to both commuters and U.S. residents.
[2] The data were tabulated in 10-cent intervals and the average hourly earnings were computed on the basis of the midpoints of the wage intervals.
[3] The midpoint of the wage interval containing the largest number of workers, provided this interval comprised at least 30 percent of all workers in the sample employed in this occupation. If there is no such interval, then the midpoint of the interval containing the median is the prevailing wage rate.

Source: Wage survey conducted by the U.S. Department of Labor, January 1968.

For expository purposes, the following tests are considered in this paper:

1. Prevailing-rate concept—a commuter would be denied certification if he is employed in, or is seeking a job at, a wage rate less than that found to be prevailing in the occupation in the area of employment.

2. Adverse-effect wage rate concept—a commuter would be denied certification for employment at a wage rate below that specified by the Secretary of Labor, e.g., $1.40 per hour or $1.60 per hour.

In Table 5, estimates have been made of the percent and number of workers in principal occupations that would have been denied certification in January 1968 under the adverse-effect tests set forth above.

Only 14 percent of the commuters engaged in the 25 occupations shown in Table 5 would have been refused readmission if the prevailing rate in each occupation were the standard for certification. But if the wage test for certification were an adverse-effect rate of $1.40 per hour, nearly 25 percent of the commuters in the 25 selected occupations would not have been permitted to enter the United States at the wage rates they were then receiving. Approximately 80 percent of them would have been denied certification if the wage standard had been $1.60 per hour. Table 6, which takes into account a broader range of occupations, shows 28 percent of the commuters earning less than $1.40 an hour and 80 percent under $1.60.

Excluded from Table 5 and Table 6 are the farmhands and household domestic workers. Because their wages are very low, almost all of them would have been denied admission under either the $1.40 or the $1.60 adverse-effect standard.

Because the Laredo survey was conducted in January 1968, the estimated impact on the commuter flow at the $1.60 rate is probably overstated. At the time of the survey, the FLSA minimum was $1.40 per hour. A substantial number of establishments included in the survey are covered by the Federal minimum wage law. Wage rates in these establishments were increased to no less than $1.60 on February 1, 1968, and commuters in their employ, therefore, would not be denied certification because of standard wage offers.

A City of Laredo ordinance, which became effective February 1, 1968, shortly after the Labor Department survey was made, provides a minimum wage of $1.00 an hour (to be raised to $1.15 an hour after September 1, 1969). Several categories of employees are exempt, however, most notably domestic servants and employees covered by the Fair Labor Standards Act. Less than 12 percent of the commuters in the 48 occupations surveyed by the Labor Department would have been affected by the $1.00-an-hour minimum.

TABLE 6. PERCENTAGE DISTRIBUTION OF COMMUTERS[1] BY WAGE RATE, LAREDO, TEX., JANUARY 1968

Wage interval	Percent of total[2]	Cumulative percentage[2]
$0.70 and less	4.6	4.6
$0.71 to $0.80	1.1	5.7
$0.81 to $0.90	.2	5.9

APPLICABILITY TO OTHER BORDER COMMUNITIES

The 2,669 daily commuters to Laredo constituted almost 11 percent of the total labor force in that area. By way of contrast, 7,535 commuters crossed daily through the San Ysidro border station into the San Diego area, but they were only 2 percent of the work force. Table 7 compares the commuters counted by I&NS at each of the major points of entry with employment in nearby U.S. border counties for time periods as comparable as possible to the time of the survey.

The employent of green-card commuters in the Laredo area is pervasive. They work in almost all establishments of any size, although they are concentrated in the relatively low-skilled jobs. In other border areas with a labor force comparable to Laredo's, commuter employment probably followed very much the same pattern. And even in a large area where the proportion of the labor force made up by commuters is relatively smaller, it is likely that, because of their concentration in unskilled jobs, the commuters considerably influence the wages and working conditions prevailing in certain occupations.

Another consideration is that the commuters who enter at such points as Calexico, San Luis, and Hidalgo are employed for the most part in agriculture. If an adverse-effect-rate standard of $1.40 or $1.60 per hour were established, then a significant number of the workers seeking admission to California would be denied certification, as would nearly all the commuters regularly employed in agriculture in Arizona, New Mexico, and Texas.

In summary, the estimates of impact on commuter admissions which would result from establishment of restrictive standards that were derived from the Laredo wage and employment data are probably generally applicable, with variations dependent on the occupational mix, to other border areas.

EXHIBIT 3

EXCERPTS FROM STATEMENT ON SENATE FLOOR BY SENATOR EDWARD M. KENNEDY, DECEMBER 14, 1967

There is no doubt that the commuter movement adversely effects the wages and working conditions of our own citizens and residents, especially those living in the cities and towns along the Mexican border—in Arizona, California, New Mexico and Texas. The commuter movement from Mexico is a factor contributing to the grinding poverty, high unemployment, and low wages in the border areas.

Border areas consistently have higher rates of unemployment than do interior areas. In many cases, the rates are very much greater.

The rates available in 13 border areas for the first 6 months of this year are typical of annual figures available since 1957. Last June, for example, in none of these 13 areas was the unemployment rate lower than the average rate for the State. Twelve of these border areas were in Texas—the unemployment rate in seven of the Texas areas was more than double the statewide rate of 3.7 percent. In one area, Crystal City in Zavala County, the rate was much greater—11.3 percent.

In 1966, in only one of 19 border areas for which data were available, was the unemployment rate lower than the average rate for the State.

Over the last 10 years, available data permitted 138 comparisons of annual average unemployment rates in border areas with those at the State level. In 129 cases, border area rates were higher than the State average.

It is a deplorable situation—an indication of severe economic depression—that unemployment rates exceeding 10 percent are common in such Texas communities as Laredo, Eagle Pass, Zapata, Brackettville, Cotulla, Crystal City and in El Centro, California.

The influx of commuters from Mexico is contributing to the high unemployment rates in border areas.

These commuters are a significant part of the work force in many communities. In some areas their number nearly equals the number of unemployed American workers. In El Paso, where unemployment is currently some 35 percent greater than the State average, the estimated number of commuters in 1966 was more than double the number of unemployed. In El Centro, Calif., where the unemployment rate is currently 13.1 percent, the estimated number of commuters in 1966 was nearly double the number of unemployed. There is every reason to believe the situation has not changed for the better. If anything, it has been aggravated by the frequent use of commuters as strikebreakers.

Mr. President, I ask unanimous consent to include in the RECORD at the conclusion of my remarks statistical summaries of unemployment rates in border areas over the last 10 years, and an additional table on

unemployment and alien commuters in 1966 for selected border areas.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibits 3, 4, and 5.)

Mr. KENNEDY of Massachusetts. Mr. President, aside from the commuter influx contributing to high unemployment in border areas, it also contributes to depressed wage rates. Industry by industry, county by county, the pattern is the same—earnings in border areas are lower than average earnings in the State. This is true in more than 90 percent of those cases where available information has made a comparison possible.

Although the most definitive date available is based on nonfarm weekly wage rates in 1965, the Department of Labor informs me that the situation remains unchanged. The average weekly nonfarm wage in Imperial County, Calif., is $20 less than the average in the State as a whole—in Santa Cruz County, Ariz., it is $29 less—in nine of the Texas border counties it is at least $25 less, and often more.

The differential is even greater in wage rates for farmwork—especially in the lower Rio Grande Valley of Texas. A year ago, hourly wages in the valley averaged approximately 75 cents—some 22 cents less than the 97 cents average at the State level. As a result of the new farm labor coverage of the Fair Labor Standards Act, there has been a sharp increase in farm wage rates in the valley, and the gap between farm wages in this area and the State as a whole is beginning to narrow. Currently it is some 16 cents—the differential between 89 cents in the valley and $1.05 at the State level.

But this is belated progress—because for at least 10 years, not only have farm wages in the valley been low, they have also failed to show the gains recorded elsewhere in the State. In 1956 the hourly wage in the valley was 84 percent of the State average—it had dropped to 77 percent by 1966.

Today, largely as a result of the new farm labor coverage of the Fair Labor Standards Act, the ratio has climbed to some 85 percent.

Mr. President, I ask unanimous consent to include in the RECORD at the conclusion of my remarks a statistical summary of average weekly earnings of nonfarm workers in border areas during the first quarter of 1965, and a second table listing average hourly wage rates for seasonal farmworkers in Texas border areas.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibits 6 and 7.)

Mr. KENNEDY of Massachusetts. Mr. President, to illustrate further the contribution of commuters to depressed wage rates in border areas, I will refer to the results of a special survey conducted in 1961, by the Department of Labor in Laredo and El Paso. The survey concerned the jobs held by commuters, the wages received, and the availability of domestic workers for these jobs. Again, the situation has changed little from the time the survey was made, in fact, there is reason to believe it has worsened.

The survey indicates that, although commuters were employed in most occupations and industries, they were heavily concentrated in the garment industry, hotels, restaurants, and retail trade and service establishments.

In the Laredo survey, the Department of Labor contacted a sampling of firms employing some 3,000 workers—of whom 438 were easily identified as commuters.

The survey team reported that additional workers were suspected of being commuters, but could not be readily identified.

The Laredo survey revealed at least two things. First, that a large number of unemployed American workers had the same occupational skills as alien commuters—this in a community where unemployment was heavy—11.3 percent. For example, the two garment firms in the sampling employed 88 commuters as sewing machine operators. Files of the Texas Employment Commission contained applications from 156 unemployed American workers with this same occupation.

Second, the survey shows that firms employing alien commuters paid lower wages than did firms employing American workers. This was not the exception—but a very common pattern, for 19 occupations where sufficient data were available. Moreover, there were cases where a single firm employing both commuters and Americans would pay the commuters less than the Americans similarly employed.

And finally, the average wage paid by those firms employing only American workers was 38 percent higher than the average wage paid by those firms employing commuters as well.

The El Paso survey produced similar results.

I should add here some recent information compiled by the Department of Labor which greatly adds to the seriousness of the wage problem.

The common pattern of low wages in the border areas has led to a high incidence of minimum wage law violations. The Department reports that in fiscal year 1967, 20 percent of the violations in the four border States occurred in counties contiguous to the Mexican border. Yet, these counties had only 6 percent of the nonfarm work force in these four States.

Mr. President, I ask unanimous consent to include in the RECORD at the conclusion of my remarks a table listing occupational wage data obtained in the Laredo survey and a brief summary of the survey in El Paso.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibits 8 and 9.)

EXHIBIT 8

OCCUPATIONAL WAGE STRUCTURE—LAREDO, TEX., JUNE 1961 [1]

Industry and occupation	Average wage rate (per week): Firms employing only domestic workers	Average wage rate (per week): Firms employing domestic and alien commuter workers
Hotels and motels:		
Cook	$58	$34
Maid	20	17
Hallboy	25	20
Waiter	[2] 15	[2] 18
Busboy	[2] 25	13
Bartender	58	46
Bellboy	[2] 15	[2] 16
Drugstores and related firms:		
Cashier	27	12
Stock clerk	52	40
Fountain girl	16	[3] 23
Drug clerk	77	55
Grocery and related firms:		
Cashier	24	24
Stockboy	35	20
Produceman	45	35
Butcher	65	52
Warehouseman	37	31
Miscellaneous retail firms:		
Porter	53	35
Warehouseman	73	21
Stockman	53	45

[1] Data were collected in the survey concerning the different rates paid each occupation in each firm. For some occupation monthly rates were reported; these were converted to weekly rates by dividing the monthly rate by 4.33. The number of workers paid each rate was not reported in all cases, making it impossible to compute an average rate weighted by the number of workers paid each rate. The average rates shown in the table represent the average of the highest and lowest rates paid. These averages correspond quite accurately with the weighted averages computed for the few occupations where data were reported for each worker.

[2] Plus tips.

[3] Plus $3 meal allowance.

EXHIBIT 9

Following is a summary of the El Paso survey results:

Eleven construction firms. Six firms employed only U.S. residents; five employed alien commuters. Two-thirds of the firms employing only U.S. residents paid the union scale. Only 20 percent of the firms employing commuters paid the union scale. The lowest rates were paid by the non-union firms that employed commuters.

Four retail dry goods stores. Three firms employed alien commuters. They paid lower wage rates than the firms that employed only U.S. residents.

Four wholesale and warehouse firms. Three firms employed alien commuters. The firm employing only U.S. residents paid the highest wage rates.

All sample firms in the following industries employed alien commuters: garment manufacturing (11 firms); restaurants (five firms); meatpacking (three firms); and laundries (four firms). Of interest is the fact that in the one laundry where wage rate data were supplied for both alien commuters and U.S. residents, the commuters were paid less than $.50 per hour while the U.S. residents were paid about $.80 per hour.

Insufficient wage and employment data were obtained to make any comparison for seven *transportation and storage* firms; two *cotton processors;* and three *hotels and motels.*

In several industries, *refineries* (four firms); *miscellaneous manufacturing* (seven firms); and *miscellaneous* firms (five establishments), there was no difference in the rates paid by firms employing alien commuters and those employing U.S. workers. One refinery, two miscellaneous manufacturing, and two of the other miscellaneous firms employed commuters.

Six other *retail trade* firms were included in the sample, but meaningful comparison could not be made because the nature of their operations and the occupations of the workers they employed were too dissimilar.

EXHIBIT 4

COMMUTER WORKERS IDENTIFIED BY OCCUPATIONAL CLASS, NOV. 1, 1967, THROUGH DEC. 31, 1967

[1] Includes 7,743 agricultural workers who came to the border from the interior of the United States during the count and commenced working as commuters. It is anticipated these workers will return to the interior of the United States in the spring to work as migrants.

Mr. MONDALE. Mr. President, I join with Senator KENNEDY and others in the introduction of a bill to amend the Immigration and Naturalization Act to regulate the green-card commuter problem.

"Green-card commuters" are persons who have been granted permanent alien resident status as bona fide immigrants, but who, nonetheless, reside in Mexico or Canada and regularly enter the United States solely for the purposes of employment.

The problems created by the commuter immigrant are manifest, particularly along the Mexican border. Given the poor working and living conditions along the northern border of Mexico, Mexican aliens, as a group, serve as a readily available, low-wage work force which undermines the standards workers generally enjoy throughout the rest of the United States. As a result, the forces of free enterprise are prevented from operating to develop standards along the border commensurate with normal American standards.

The depressed wage rates that result are satisfactory recompense for the commuter immigrant since he can return to Mexico daily or weekly with his earnings to live in a much lower cost economy. These green-card commuters simply fail to become immigrants in the sense contemplated by the law. And their employment in this country is clearly detrimental to the economic conditions, the job opportunities, and the organizing and collective bargaining efforts of American workers, because they have little or no stake in the resolution of domestic labor disputes. Indeed, it is clear that these nonresident commuters, as well as illegal entrants, are widely used as strikebreakers.

The bill seeks to remedy this serious problem. While it may need perfecting amendments, I believe the bill provides a sound basis on which to eliminate current abuses of our immigration laws. A major goal of our immigration laws has always been the reasonable protection of working conditions and job opportunities for American workers, and this bill is consistent with that goal.

The bill's purpose is consistent with my personal conviction that our Nation must promote an open border policy—a policy that permits people and trade to flow across our borders without undue restriction. The bill seeks merely to eliminate widespread abuses of our immigration policies—abuses that run entirely contrary to our Nation's dedication to justice and fairplay—and I support it for that reason.

DELAYS IN CAB INVESTIGATION OF CONGESTION AT NATIONAL AIRPORT

Mr. SPONG. Mr. President, on June 20, 1967, the Civil Aeronautics Board ordered an investigation to determine what steps should be taken to relieve congestion at National Airport and to improve the utilization of Dulles and Friendship airports. That was 20 months ago and still there has been no formal hearing.

Now we are told there will be a further delay while the Department of Transportation assesses the situation and crystalizes its position. Testifying before the Senate District Committee Wednesday, Chairman John H. Crooker, Jr., of the CAB, put the earliest possible date for the hearing at sometime in June, although it is doubtful anything will be done before the end of the year.

Mr. President, I sympathize with the problems of the Department. But I have greater sympathy for those who must live with the noise, pollution, and inconvenience resulting from the congested conditions at National.

In the 20 months that this hearing has

been delayed, the number of passengers using National has increased by 2,275,000 or 17 percent over the preceding 20-month period. And the problem will continue to grow until positive steps are taken to limit the number of flights at National.

In the beginning, it was hoped the airlines would do this voluntarily and they were granted a delay to work out an agreement. Nothing happened. And, judging from the testimony of former FAA Administrator E. R. Quesada, himself an airline director, nothing will happen. Competitive pressures in the industry are simply too strong for there to be any realistic hope of a voluntary solution, according to General Quesada. That leaves the problem squarely in the hands of the FAA and the CAB.

In requesting the most recent delay in this proceeding, the Department of Transportation expresses hope that new regulations concerning the use of high-density traffic airports, of which National is one, might resolve the congestion problem. Frankly, I see little chance of that happening.

The new regulations make no change in the number of commercial flights now using National nor do they remove the exemption for extra sections of commuter flights. In its testimony Wednesday, the FAA make it clear that under these flight limitations, and without introducing larger aircraft into National, the number of passengers will increase by 6 million in 1980.

The high-density traffic airport regulations are scheduled to become effective on June 1, 1969, and to expire 6 months later or December 31, 1969. If the Department of Transportation waits to evaluate the results, it could be another year before CAB hearings are held.

Mr. President, I am disappointed by the failure to move ahead with this investigation. Any further lengthy delays would be unconscionable. I hope the hearings now being held by the Senate Committee on the District of Columbia will impress the Department of Transportation and the CAB with the urgency of the situation. We know the problem and we know the solution. What we need now is to act.

ORDER FOR ADJOURNMENT

Mr. KENNEDY. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in adjournment until noon tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. KENNEDY. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADJOURNMENT

Mr. KENNEDY. Mr. President, I move, in accordance with the previous order, that the Senate stand in adjournment until noon tomorrow.

The motion was agreed to; and (at 3 o'clock and 32 minutes p.m.) the Senate adjourned until tomorrow, Thursday, March 27, 1969, at 12 o'clock meridian.

NOMINATIONS

Executive nomination received by the Senate March 25, 1969, under authority of the order of March 24, 1969:

HOUSING AND URBAN DEVELOPMENT

Harold B. Finger, of Maryland, to be an Assistant Secretary of Housing and Urban Development.

Executive nominations received by the Senate March 26, 1969:

DEPARTMENT OF THE INTERIOR

Harrison Loesch, of Colorado, to be an Assistant Secretary of the Interior.

COMMODITY CREDIT CORPORATION

Kenneth E. Frick, of California, to be a member of the Board of Directors of the Commodity Credit Corporation.

CONFIRMATIONS

Executive nominations confirmed by the Senate March 26, 1969:

DEPARTMENT OF JUSTICE

Charles H. Rogovin, of Massachusetts, to be Administrator of Law Enforcement Assistance.

DEPARTMENT OF LABOR

Jerome M. Rosow, of New York, to be an Assistant Secretary of Labor.

APPALACHIAN REGIONAL COMMISSION

John B. Waters, Jr., of Tennessee, to be Federal cochairman of the Appalachian Regional Commission.

HOUSE OF REPRESENTATIVES—*Wednesday, March 26, 1969*

The House met at 12 o'clock noon.

The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

Finally, brethren, be of one mind, live in peace: and the God of love and peace shall be with you.—2 Corinthians 13: 11.

Eternal Spirit, who art ever speaking to man and always seeking to lead Thy children into the ways of peace, we pray for our country.

Strengthen our leaders that they may walk with Thee as they carry their responsibilities. Sustain our people that in true service and with humble hearts they may usher in a new day of peace by doing Thy will.

So unite us in our love for Thee and by our confidence in one another that together we may hasten the day when "Nation shall not lift up sword against nation, neither shall they learn war any more."

With this creative faith and this courageous spirit may we march forward together toward a greater nation and a better world.

In the name of the Prince of Peace we pray. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE PRESIDENT

A message in writing from the President of the United States was communicated to the House by Mr. Leonard, one of his secretaries.

COMMUNICATION FROM THE CLERK OF THE HOUSE

The SPEAKER laid before the House the following communication from the Clerk of the House of Representatives:

MARCH 25, 1969.

The Honorable the SPEAKER,
U.S. House of Representatives.

DEAR SIR: I have the honor to transmit herewith a sealed envelope addressed to the Speaker of the House of Representatives from the President of the United States, received in the Clerk's Office at 4:40 p.m., on Tuesday, March 25, 1969, and said to contain a Message from the President transmitting the report for fiscal year 1968 on the international educational and cultural exchange program.

With kind regards, I am,
Sincerely,

W. PAT JENNINGS,
Clerk, U.S. House of Representatives.

REPORT FOR FISCAL YEAR 1968 ON INTERNATIONAL EDUCATIONAL AND CULTURAL EXCHANGE PROGRAM—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES

The SPEAKER laid before the House the following message from the President of the United States; which was read and, together with the accompanying papers, referred to the Committee on Foreign Affairs:

To the Congress of the United States:

I herewith transmit the report for fiscal year 1968 on the international educational and cultural exchange program conducted under the Mutual Educational and Cultural Exchange Act of 1961 (Public Law 87–256). During fiscal year 1968, 6,777 teachers, scholars, and distinguished leaders were involved in this program in the United States and in 126

other nations and territories. This was a reduction of 10 percent from the preceding year. Since 1949, a total of 125,777 persons have participated in the exchanges.

RICHARD NIXON.
THE WHITE HOUSE, *March 25, 1969.*

EXTENDING FOR ANOTHER YEAR INCOME TAX SURCHARGE—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES (H. DOC. NO. 91–92)

The SPEAKER laid before the House the following message from the President of the United States; which was read and referred to the Committee on Ways and Means and ordered to be printed:

To the Congress of the United States:

Clearly this nation must come to grips with the problem of an inflation that has been allowed to run into its fourth year. This is far too long, and it has already caused substantial distortions in our economy.

Inflation is a form of economic aggression against the very young and the very old, the poor and the thrifty. It is these Americans who are largely defenseless against the kind of price increases for food, clothing, medicine, housing and education that have swept over the Nation in the last few years.

Government has two major instruments for dealing with this problem. One is monetary policy, which should continue its program of restraint. The other is fiscal policy—the management of the Federal budget—which must turn away from budgets which have propelled the inflation, and turn instead to one with a strong surplus that will help to curb it.

The prospect of a thin budget surplus or a return to deficits would again nudge monetary policy off course. The result, as always, would be further increases in interest rates, a dangerously overheated economic engine, and the threat of accelerating the advance of the price level. Because the problem of inflation was neglected far too long, we cannot risk even a neutral budget policy of narrow balance.

Only a combined policy of a strong budget surplus and monetary restraint can now be effective in cooling inflation, and in ultimately reducing the restrictive interest rates forced on us by past policies. This is fundamental economics, and we intend to deal with fundamentals.

We are determined to keep faith with America's wage earners, farmers and businessmen. We are committed to take every necessary action to protect every American's savings and real income from further loss to inflation.

The budget for the year beginning July 1, 1969, submitted in January, estimates the surplus at $3.4 billion. However, current examination of this budget reveals that some of its estimates of expenditures were low. For example, interest on the Federal debt will be far more than was estimated. This, along with such items as an underestimate of farm price support payments and a substantial overestimate of offshore oil lease receipts, means that a current analysis of the budget submitted in January shows a reduction in the surplus of $1.3 billion for this fiscal year and $1.7 billion for the fiscal year 1970.

Thus, half of the projected 1970 surplus has disappeared before the year begins. Similarly, more than half of this year's projected surplus of $2.4 billion will not be realized—and for the same reasons.

On the matter of cutting expenditures:

To produce a budget that will stop inflation, we must cut expenditures while maintaining revenues. This will not be easy. Dealing with fundamentals never is.

I intend to submit budget revisions which will reduce Federal spending in fiscal 1970 significantly below the amount recommended in January, even before those previous figures have been adjusted to reflect current conditions.

On the matter of maintaining revenues:

I am convinced that the path of responsibility requires that the income tax surcharge, which is expected to yield $9½ billion, be extended for another year. As I have said before, the surcharge is a temporary tax that must be ended as soon as our commitments in Southeast Asia and economic conditions permit. Because of budget and economic conditions, I reaffirm my support of the recommendation President Johnson made last January that the surcharge be extended, and I am transmitting to the Congress a request that this be done.

In addition, the scheduled reductions in the telephone and passenger car excise taxes must be postponed, and user charges equal in revenue yield to those now in the budget should be enacted. Together, these will produce close to $1 billion in revenue next year.

On the question of tax reform, this Administration remains committed to a more equitable and more efficient tax structure. In the coming month, the first specific proposals of that reform will be coming up to the Congress from the Treasury Department.

Taken together, these actions to reduce spending and maintain revenues will produce the strong budget surplus urgently needed to meet the inflationary threat.

Moreover, by proving Government's serious intent to counter the upward spiral of prices and wages, we will create conditions which will encourage the private sector to stop assuming a high rate of inflation in long-range planning.

Courageous Government action will modify the inflationary psychology which now afflicts business, labor and consumers generally. It is particularly hard on small business, and those of modest means in the management of their incomes and savings.

This ordering of our economic house—distasteful as it is in many respects—will do much to slow down the rise in the cost of living, help our seriously weakened position in international trade, and restore the sound basis for our on-going prosperity.

RICHARD NIXON.
THE WHITE HOUSE, *March 26, 1969.*

THE PRESIDENT'S MESSAGE ON SURTAX

(Mr. GERALD R. FORD asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. GERALD R. FORD. Mr. Speaker, the problem of inflation which has been with us for more than 3 years has reached a new peak of intensity and peril. President Nixon has therefore seized this moment to lay a challenge before Congress and the American people and to spell out the course of action we must follow to bring inflation under control. A majority of us in this House voted last year to approve a 10-percent surtax on individual and corporate income taxes. That took political courage, but we later found that the voters did not visit retribution upon us. Now, with the inflation battle still to be won, President Nixon has exhibited the same kind of courage and has asked us to act in the best interests of the United States and its people. I do not think this House of Representatives will flinch from that responsibility. I feel certain Congress will do what we know to be sensible and right in this time of inflationary stress and psychology. There is no question that President Nixon has made the proper recommendation in urging a 12-month extension of the surtax at the existing level. And there is no question in my mind that Congress will approve that recommendation. We know what the evil consequences of runaway inflation would be. We know that if inflation forces are not thwarted, prices in this country will double within 14 years. We know that men and women who have set aside savings to live on in retirement will see half of those savings destroyed unless inflation is curbed. What Mr. Nixon has proposed in a consumer program—a program to protect what the consumer has to spend. This is not a problem that the President alone can solve. He needs the help of Congress and he needs the help of the American people. Business, labor, and consumers—all must make a commitment to the goal that President Nixon has set, that of erasing the current inflationary psychology and halting the steady erosion of the dollar's purchasing power. If America whips inflation now, Mr. Speaker, our people can have a strong, growing economy with low unemployment in the future. Mr. Speaker, let us all have the courage to back the President in the fight against inflation, for the long-term good of the Nation and especially the poor and the pensioners.

THE PRESIDENT'S MESSAGE ON SURTAX

(Mr. VANIK asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. VANIK. Mr. Speaker, today, President Nixon submitted his message urging extension of the 10-percent tax surcharge for 1 more year.

Here we go again. When the surtax debate took place last year, we were assured that within the surtax year, the

administration would present a program of revenue-raising tax reform.

It was my expectation that these new tax reform revenues would replace the surtax in the second year. It appears from the President's proposals that this is too much for the American taxpayer to hope for.

I expect to vote against the extension of the surtax, since it has been an utter failure in controlling inflation. The American taxpayer has a right to rebel against this needless tax which sensible and proper tax reform would make unnecessary.

The taxpayer has a right to expect action on tax reform in this Congress. This is the very hour for performance. The extension of the surtax would only serve to extend the privilege of tax shelters which have eroded the integrity of our tax system and the public confidence.

The surtax has also served as a fiscal crutch. If it is taken away, revenue-raising tax reform becomes an immediate necessity. The Treasury loss of the tax surcharge could be easily replaced by suspension of the investment credit; the imposition of capital gains tax at death; the modification of the oil-depletion allowance; the imposition of a minimum tax on the super-rich; the elimination of farm loss abuses; and a limitation on tax-free bond holding.

Now is the best time for tax reform. The issue must not be delayed, detoured, or destroyed.

SPECIAL ELECTION

(Mr. ALBERT asked and was given permission to address the House for 1 minute, and to revise and extend his remarks and include extraneous matter.)

Mr. ALBERT. Mr. Speaker, I take the floor to congratulate the good people of the Eighth Congressional District of Tennessee on the election of EDWARD JONES, Democrat, to Congress yesterday. I congratulate ED JONES also and join my colleagues in welcoming him as a new Member of the House.

Mr. JONES, a farmer and former State commissioner of agriculture, carried 12 of the 14 counties in the large rural district which covers the entire western part of the State north of Memphis. Significant in the election is the fact that there were 11 candidates in the race, including a Republican, an American Independent Party candidate, and eight other candidates. ED JONES won his nomination in open convention, campaigned as an organization Democrat and pledged to his constituents to support the Democratic Party. ED JONES took the Democratic record of leadership and accomplishment to the people and won by a majority over both the endorsed Republican and the American Party candidate.

He ran his campaign by taking a stand on the issues and meeting the people to discuss with them the problems of the area. Again I congratulate ED JONES and the people of the Eighth District of Tennessee.

At this point, Mr. Speaker, I include a table showing the election results on yesterday in the Eighth Congressional District of Tennessee:

Jones	32,874
Davis	16,341
Dunavant	15,616
Lanier	2,018
Pickett	1,379
Total	68,228

CONGRESSMAN-ELECT ED JONES

(Mr. FULTON of Tennessee asked and was given permission to address the House for 1 minute, and to revise and extend his remarks.)

Mr. FULTON of Tennessee. Mr. Speaker, in the absence of the dean of the Tennessee delegation, Congressman JOE L. EVINS, who is out of Washington on official committee business, it is with a great deal of pleasure that I inform the House that Mr. ED JONES, of Yorkville, Tenn., has been chosen in a special election held yesterday to succeed our late, esteemed and beloved colleague, Congressman "Fats" Everett.

Mr. JONES, upon certification, will represent Tennessee's Eighth Congressional District.

This race had become nationally significant because it is the first special congressional election held since the presidential election last November.

As a consequence both major parties and the leading independent party made an all-out effort to capture this traditionally Democrat seat.

Former Gov. George Wallace called upon his supporters to back the American Independent Party candidate and visited the Eighth District in his support. The candidate failed to run as well as Governor Wallace had last November, but did run better than his Republican opponent.

This, despite an outpouring of Republican money, effort, and personages into the race in the GOP candidate's behalf and a visit into that district last week by our distinguished minority leader who stated:

> This is the year for the Republicans in Tennessee's Eighth Congressional District.

Mr. Speaker, ED JONES is a former commissioner of agriculture of the State of Tennessee and has been long and effectively active in civic and governmental affairs. He is a man with a great knowledge and broad understanding of the problems and aspirations of the people of his district. His election and service in Congress will provide his constituents with a worthy and able Representative and will add to this body a Member of proven ability and value.

CONGRESSMAN-ELECT ED JONES

(Mr. BLANTON asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. BLANTON. Mr. Speaker, today is a great day for Tennesseans and for this House, and it gives me a great deal of pleasure to announce to the House the election of a great Tennessean and fellow Democrat to this great body.

ED JONES won a sweeping victory, capturing 50 percent of the votes in a nine-man race, showing a 2-to-1 victory over the minority party candidate. This is truly indicative of the kind of man that ED JONES is and how the people of the Eighth District of Tennessee feel about him. We welcome him to the Tennessee delegation.

I wish to remind the distinguished minority leader and other members of the minority party who recently visited Tennessee in behalf of their candidate of the statement he made as quoted in the news media and I quote:

> Mr. Ford said, the election could establish Guidelines for the 1970 and perhaps the 1972 elections.

I wish to associate myself with that statement and concur wholeheartedly in its accuracy because I believe sincerely that this special election and Democratic victory is an indication of the outcome of the 1970 elections.

Mr. HAYS. Mr. Speaker, will the gentleman yield?

Mr. BLANTON. I am happy to yield to the gentleman from Ohio.

Mr. HAYS. Mr. Speaker, I want to congratulate the gentleman on his statement, and his association with the views of the minority leader. I would like to associate myself with his views also because I believe this election did establish a guideline. The fact of the matter is that there were about eight Democrat candidates in that race. Mr. Speaker, on a business trip to Tennessee I had the pleasure of meeting Mr. EDWARD JONES. I was sure he was going to win, because of the kind of man he is. I believe it demonstrates the fact that the Democratic Party in fact is the party that is going to be the majority party down there in Tennessee for a long time.

Mr. BLANTON. Mr. Speaker, I concur with the remarks made by the gentleman from Ohio (Mr. HAYS).

I yield back the balance of my time.

MOORHEAD ASKS FOR VIETNAM MILITARY DEESCALATION

(Mr. MOORHEAD asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. MOORHEAD. Mr. Speaker, almost exactly 1 year ago—on March 11, 1968—when there were press stories to the effect that the military was requesting an additional 206,000 troops in Vietnam, several of our colleagues joined me in cosponsoring a resolution that provided:

> *Resolved*, That it is the sense of Congress that the United States should not increase its military involvement in Vietnam.

I believe that our resolution made a contribution to the decision against further escalation of the war in Vietnam. Less than 3 weeks later the decision to restrict the bombing was announced and the initial steps were taken which led to the opening of the Paris peace talks.

The peace talks have been in progress for 10 months and Mr. Nixon has been in office for 2 months; yet the level of

the war and, more importantly the level of American participation in it continues unchanged.

Mr. Speaker, the time has again come for Congress to make its influence felt on the war in Vietnam. The time has come, Mr. Speaker, for Congress to express to the administration the desire of the American people to begin the process of deescalation of the American military effort.

Accordingly, on behalf of myself and 33 cosponsors I am today introducing another very brief resolution which provides:

Resolved, That it is the sense of Congress that the United States should begin to reduce its military involvement in Vietnam.

I invite all Members who believe that the time has come to begin the deescalation of our military involvement in Vietnam to join with me in introducing similar resolutions.

The following Members cosponsored Mr. MOORHEAD'S concurrent resolution: JONATHAN B. BINGHAM, GEORGE E. BROWN, JOHN CONYERS, JR., JOHN H. DENT, DON EDWARDS, LEONARD FARBSTEIN, JOSEPH M. GAYDOS, JACOB H. GILBERT, SEYMOUR HALPERN, AUGUSTUS F. HAWKINS, KEN HECHLER, HAROLD T. JOHNSON, ROBERT W. KASTENMEIER, EDWARD I. KOCH, ROBERT L. LEGGETT, PAUL N. MCCLOSKEY, ABNER J. MIKVA, JOSEPH G. MINISH, PATSY T. MINK, JOHN E. MOSS, BERTRAM PODELL, THOMAS M. REES, HENRY S. REUSS, PETER W. RODINO, BENJAMIN S. ROSENTHAL, EDWARD R. ROYBAL, WILLIAM F. RYAN, JAMES H. SCHEUER, FRANK THOMPSON, JR., JOSEPH P. VIGORITO, JEROME R. WALDIE, CHARLES H. WILSON, and GUY YATRON.

STATE OF MISSISSIPPI SLANDERED BY CRUDE, UNFUNNY COMEDIAN

(Mr. MONTGOMERY asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MONTGOMERY. Mr. Speaker, last Monday evening on national television, the State of Mississippi and her people were viciously slandered by a crude and very unfunny comedian.

I would suggest that the Senate subcommittee now investigating sex and violence on television might do well to turn their attention to this problem faced by Mississippians on Monday night.

No apology can erase from the viewers' minds that terrible, ugly remark about Mississippi. I think that Americans, in this instance, will consider the source of the remark and dismiss it accordingly. However, the State should be protected from any future comments of the same nature which might be made by someone standing a little taller in the public's esteem.

Mississippi has no practical recourse in this matter, and it should.

CONGRESSIONAL ACTION TO REDUCE ADVENTURISM

(Mr. BROWN of California asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BROWN of California. Mr. Speaker, recent reports indicate that American top-level strategists are seriously considering expanding military operations in Vietnam to create—in their words—"greater pressures for a political solution."

This same sort of nonsense put the United States into the current muddle in Southeast Asia. It is the same sort of logic now being used to push the ABM system. And it is the same sore of idiocy, if allowed to continue, that will entangle this country again and again.

It must not be allowed to happen again.

Congress must take a positive stance to halt any U.S. escalation in Vietnam. Today I join with many of my colleagues in cosponsoring the concurrent resolution offered by the gentleman from Pennsylvania (Mr. MOORHEAD) stating the sense of Congress that military involvement should begin to be reduced in Vietnam.

I view the Moorhead resolution as a strong first step of congressional policy to end our tragic adventurism in Vietnam.

MIAMI TEENAGE RALLY FOR DECENCY

(Mr. PEPPER asked and was given permission to address the House for 1 minute.)

Mr. PEPPER. Mr. Speaker, I mentioned yesterday, the Members will recall, a great event which occurred in Miami last Sunday afternoon, when 30,000 teenagers gathered in the Orange Bowl in a great declaration for decency on behalf of the younger people in this country.

The young man who started this rally, Mike Levesque, lives at Hialeah, Fla., where the racetrack is located, I am proud to say in my district. I am advised that he is receiving thousands of letters and telegrams from all over the country, in which other young people are asking how did he organize this rally and how could they organize a similar one.

I thought Members might be getting inquiries of that sort. If they want to, they may send the inquiries to my able colleague DANTE FASCELL, or to me, or they can get in touch with this distinguished young man, 17 years old, a senior in Miami Springs High School, who did this great thing, Mike Levesque of Hialeah, Fla.

CALL OF THE HOUSE

Mr. WYDLER. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. ALBERT. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 30]

Anderson, Ill.	Casey	Diggs
Ashbrook	Celler	Esch
Ayres	Clark	Evins, Tenn.
Bates	Colmer	Fraser
Bell, Calif.	Conyers	Gallagher
Brademas	Cowger	Giaimo
Byrnes, Wis.	Dellenback	Gibbons
Gray	Murphy, Ill.	Snyder
Gross	Murphy, N.Y.	Stafford
Hébert	O'Neal, Ga.	Stokes
Heckler, Mass.	Ottinger	Teague, Calif.
Kirwan	Pike	Teague, Tex.
Landrum	Powell	Watson
Lowenstein	Reid, N.Y.	Watts
McCloskey	Reuss	Wilson, Charles H.
Mailliard	Ronan	Wright
Mann	Rumsfeld	
Miller, Calif.	Scheuer	
Morton	Schwengel	

The SPEAKER. On this rollcall, 376 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

PERMISSION FOR COMMITTEE ON RULES TO FILE PRIVILEGED REPORTS

Mr. PEPPER. Mr. Speaker, on behalf of the Committee on Rules, I ask unanimous consent that the Committee on Rules may have until midnight tonight to file certain privileged reports.

The SPEAKER. Is there objection to the request of the gentleman from Florida?

There was no objection.

PROVIDING FOR EXPENSES OF STUDIES AND INVESTIGATIONS AUTHORIZED BY RULE XI(8), COMMITTEE ON GOVERNMENT OPERATIONS

Mr. HAYS. Mr. Speaker, by direction of the Committee on House Administration, I submit a privileged report (Rept. No. 91–131) on the resolution (H. Res. 214) providing for the expenses of conducting studies and investigations authorized by rule XI(8) incurred by the Committee on Government Operations, and ask for immediate consideration of the resolution.

The Clerk read the resolution, as follows:

H. RES. 214

Resolved, That effective January 3, 1969, the expenses of conducting the studies and investigations authorized by rule XI(8) incurred by the Committee on Government Operations, acting as a whole or by subcommittee, not to exceed $900,000, including expenditures, for employment of experts, special counsel, and clerical, stenographic and other assistants, which shall be available for expenses incurred by said committee or subcommittees within and without the continental limits of the United States, shall be paid out of the contingent fund of the House on vouchers authorized by said committee, signed by the chairman thereof, and approved by the Committee on House Administration.

SEC. 2. The official stenographers to committees may be used at all hearings held in the District of Columbia, if not otherwise officially engaged.

SEC. 3. No part of the funds authorized by this resolution shall be available for expenditures in connection with the study or investigation of any subject which is being investigated for the same purpose by any other committee of the House, and the chairman of the Committee on Government Operations shall furnish the Committee on House Administration information with respect to any study or investigation intended to be financed from such funds.

SEC. 4. Funds authorized by this resolution shall be expended pursuant to regulations established by the Committee on House Administration under existing law.

Mr. HAYS (during the reading). Mr. Speaker, I ask unanimous consent that further reading of the resolution be dispensed with and that it be printed in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

Mr. HALL. Mr. Speaker, reserving the right to object, do I correctly understand the distinguished gentleman from Ohio is going to submit an amendment to House Resolution 214?

Mr. HAYS. That is correct.

Mr. HALL. Mr. Speaker, do I correctly understand there is a series of about eight of these authorizing or expenditure committee resolutions to be submitted to the House today?

Mr. HAYS. The gentleman is correct.

The reason I have asked that further reading be dispensed with, after the amount is read, is because all of the resolutions are identical after that point.

Mr. HALL. Mr. Speaker, further reserving the right to object—and I ask these questions only in the interest of expediting the business of the House——

Mr. HAYS. I understand.

Mr. HALL. Could the general statement be made that these expenditure resolutions are in the customary form we have handled for the committees in previous years and that there is nothing more than a so-called cost-of-living increase in the various committee proposals?

Mr. HAYS. I would not go so far as to agree with that 100 percent. I would say that none is above what the committee asked for. In all cases except one, I believe, both the minority and the majority agreed on a figure. In some cases they were cut. In some cases there was a substantial raise, as high as 30 percent over what was granted a year or so ago.

The committee felt the increases were justified, by the pointing out that they were going to undertake considerably more activity than undertaken in the last Congress.

Mr. HALL. I appreciate the gentleman's statement. I have one final question.

Are these resolutions to provide expenses for the committees for the first session, or presumably for the entire Congress?

Mr. HAYS. For the first session only.

Mr. HALL. Then we may expect at the beginning of the second session further funding for these committees, with proper justification to the Committee on House Administration?

Mr. HAYS. That is correct.

Mr. HALL. Mr. Speaker, I withdraw my reservation.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

The SPEAKER. The Clerk will report the committee amendment.

The Clerk read as follows:

Committee amendment: On page 1, line 5, strike out "$900,000", and insert in lieu thereof "$850,000".

The committee amendment was agreed to.

The resolution was agreed to.

A motion to reconsider was laid on the table.

FUNDS FOR EXPENSES OF STUDIES, INVESTIGATIONS, AND INQUIRIES AUTHORIZED BY HOUSE RESOLUTION 189, COMMITTEE ON PUBLIC WORKS

Mr. HAYS. Mr. Speaker, by direction of the Committee on House Administration, I submit a privileged report (Rept. No. 91–132) on the resolution (H. Res. 259) to provide funds for the expenses of the studies, investigations, and inquiries authorized by House Resolution 189, and ask for immediate consideration of the resolution.

The Clerk read the resolution, as follows:

H. RES. 259

Resolved, That, effective January 3, 1969, the expenses of the studies and investigations to be conducted pursuant to H. Res. 189 by the Committee on Public Works, acting as a whole or by subcommittee, not to exceed $486,000, including expenditures for the employment of investigators, attorneys, and experts, and clerical, stenographic, and other assistants and all expenses necessary for travel and subsistence incurred by members and employees while engaged in the activities of the committee or any subcommittee thereof, as the chairman deems necessary, shall be paid out of the contingent fund of the House on vouchers authorized and signed by the chairman of such committee and approved by the Committee on House Administration.

SEC. 2. The chairman, with the consent of the head of the department or agency concerned, is authorized and empowered to utilize the reimbursable services, information, facilities, and personnel of any other departments or agencies of the Government.

SEC. 3. No part of the funds authorized by this resolution shall be available for expenditure in connection with the study or investigation of any subject which is being investigated for the same purpose by any other committee of the House, and the chairman of the Committee on Public Works shall furnish the Committee on House Administration information with respect to any study or investigation intended to be financed from such funds.

SEC. 4. Funds authorized by this resolution shall be expended pursuant to regulations established by the Committee on House Administration under existing law.

Mr. HAYS (during the reading). Mr. Speaker, I ask unanimous consent that further reading of the resolution be dispensed with and that it be printed in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

The resolution was agreed to.

A motion to reconsider was laid on the table.

AUTHORIZING EXPENDITURES FOR EXPENSES OF COMMITTEE ON BANKING AND CURRENCY INCURRED PURSUANT TO HOUSE RESOLUTION 152

Mr. HAYS. Mr. Speaker, by direction of the Committee on House Administration, I submit a privileged report (Rept. No. 91–133) on the resolution (H. Res. 272) authorizing the expenditure of moneys to cover expenses of the Committee on Banking and Currency incurred pursuant to House Resolution 152, and ask for immediate consideration of the resolution.

The Clerk read the resolution, as follows:

H. RES. 272

Resolved, That, effective from January 3, 1969, the expenses of conducting the studies, investigations, and inquiries authorized by H. Res. 152, Ninety-First Congress, incurred by the Committee on Banking and Currency, acting as a whole or by subcommittee, not to exceed $300,000, including expenditures for employment, travel, and subsistence of attorneys, accountants, experts, investigators, and clerical, stenographic, and other assistants, with respect to any matter or matters in the field of housing coming within the jurisdiction of such committee or subcommittee, including, but not limited to, (1) the status and adequacy of mortgage credit in the United States, (2) the terms and availability of conventional mortgage financing, (3) the flow of savings in relation to home financing needs, (4) the operation of the various Government-assisted housing programs, (5) the current rate of construction of residential dwelling units in relation to housing requirements and demands, (6) the role of housing construction in the national economy, (7) the requirement of and demand for Federal assistance in the development of community facilities, including mass transportation and other related facilities, (8) urban and suburban problems, including transportation facilities, as they affect the availability of adequate housing, (9) the operation of the slum clearance and urban renewal programs, and (10) rural housing and the adequacy of rural housing credit, shall be paid out of the contingent fund of the House on vouchers authorized by such committee or subcommittee, and approved by the Committee on House Administration.

SEC. 2. No part of the funds authorized by this resolution shall be available for expenditure in connection with the study or investigation of any subject which is being investigated for the same purpose by any other committee of the House, and the chairman of the Committee on Banking and Currency shall furnish the Committee on House Administration information with respect to any study or investigation intended to be financed from such funds.

Mr. HAYS (during the reading). Mr. Speaker, I ask unanimous consent that further reading of the resolution be dispensed with and that it be printed in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

The SPEAKER. The Clerk will report the committee amendments.

The Clerk read as follows:

Committee amendments: On page 1, line 5, strike out "$300,000", and insert in lieu thereof "$250,000".

On page 3, starting on line 1, insert the following new section:

"SEC. 3. Funds authorized by this resolution shall be expended pursuant to regulations established by the Committee on House Administration under existing law."

The committee amendments were agreed to.

The resolution was agreed to.

A motion to reconsider was laid on the table.

PROVIDING FUNDS FOR EXPENSES OF STUDIES AUTHORIZED BY HOUSE RESOLUTION 152, COMMITTEE ON BANKING AND CURRENCY

Mr. HAYS. Mr. Speaker, by direction of the Committee on House Administra-

tion, I submit a privileged report (Rept. No. 91–134) on the resolution (H. Res. 271) to provide funds for the expenses of the studies, investigations, and inquiries authorized by House Resolution 152, and ask for immediate consideration of the resolution.

The Clerk read the resolution, as follows:

H. RES. 271

Resolved, That, effective from January 3, 1969, the expenses of conducting the investigations and studies authorized by H. Res. 152, Ninety-first Congress, by the Committee on Banking and Currency, acting as a whole or by subcommittee, not to exceed $442,500 for the first session of the Ninety-first Congress, including expenditures for employment, travel, and subsistence of accountants, experts, investigators, attorneys, and clerical, stenographic and other assistants, shall be paid out of the contingent fund of the House on voucher authorized by such committee, signed by the chairman of such committee, and approved by the Committee on House Administration.

SEC. 2. No part of the funds authorized by this resolution shall be available for expenditure in connection with the study or investigation of any subject which is being investigated for the same purpose by any other committee of the House, and the chairman of the Committee on Banking and Currency shall furnish the Committee on House Administration information with respect to any study or investigation intended to be financed from such funds.

With the following committee amendment:

On page 2, immediately after line 8, insert the following new section:

"SEC. 3. Funds authorized by this resolution shall be expended pursuant to regulations established by the Committee on House Administration under existing law."

The committee amendment was agreed to.

The resolution was agreed to.

A motion to reconsider was laid on the table.

PROVIDING FOR EXPENSES INCURRED PURSUANT TO HOUSE RESOLUTION 200

Mr. HAYS. Mr. Speaker, by direction of the Committee on House Administration, I submit a privileged report (Rept. No. 91–135) on the resolution (H. Res. 273) providing for the expenses incurred pursuant to House Resolution 200, and ask for immediate consideration of the resolution.

The Clerk read the resolution, as follows:

H. RES. 273

Resolved, That, effective from January 3, 1969, the expenses of the studies and investigations to be conducted pursuant to H. Res. 200 by the Committee on Education and Labor, acting as a whole or by subcommittee, not to exceed $769,600, including expenditures for the employment of investigators, attorneys, and experts, and clerical, stenographic, and other assistants, and all expenses necessary for travel and subsistence incurred by members and employees while engaged in the activities of the committee or any subcommittee thereof, shall be paid out of the contingent fund of the House on vouchers authorized and signed by the chairman of such committee and approved by the Committee on House Administration. Of such amount $60,000 shall be available for each of six standing subcommittees of the Committee on Education and Labor, and not to exceed $409,600 shall be available to the Committee on Education and Labor.

SEC. 2. The official committee reporters may be used at all hearings held in the District of Columbia, if not otherwise officially engaged.

SEC. 3. No part of the funds authorized by this resolution shall be available for expenditure in connection with the study or investigation of any subject which is being investigated for the same purpose by any other committee of the House, and the chairman of the Committee on Education and Labor shall furnish the Committee on House Administration information with respect to any study or investigation intended to be financed from such funds.

SEC. 4. Funds authorized by this resolution shall be expended pursuant to regulations established by the Committee on House Administration under existing law.

The resolution was agreed to.

A motion to reconsider was laid on the table.

AUTHORIZING EXPENSES FOR CONDUCTING STUDIES AND INVESTIGATIONS PURSUANT TO HOUSE RESOLUTION 268

Mr. HAYS. Mr. Speaker, by direction of the Committee on House Administration, I submit a privileged report (Rept. No. 91–136) on the resolution (H. Res. 301) authorizing expenses for conducting studies and investigations pursuant to House Resolution 268, and ask for immediate consideration of the resolution.

The Clerk read the resolution, as follows:

H. RES. 301

Resolved, That, effective from January 3, 1969, the expenses of conducting the investigations and studies pursuant to H. Res. 268, by the Committee on Post Office and Civil Service, acting as a whole or by subcommittee, not to exceed $412,000, including expenditures for the employment of investigators, attorneys, and clerical, stenographic, and other assistants, shall be paid out of the contingent fund of the House on vouchers authorized by such committee, signed by the chairman of such committee, and approved by the Committee on House Administration.

SEC. 2. The official committee reporters may be used at all hearings held in the District of Columbia if not otherwise officially engaged.

SEC. 3. The chairman of the Committee on Post Office and Civil Service shall furnish the Committee on House Administration information with respect to any study or investigation intended to be financed from such funds. No part of the funds authorized by this resolution shall be available for expenditure in connection with the study or investigation of any subject which is being investigated for the same purpose by any other committee of the House.

SEC. 4. Funds authorized by this resolution shall be expended pursuant to regulations established by the Committee on House Administration under existing law.

The resolution was agreed to.

A motion to reconsider was laid on the table.

PROVIDING FUNDS FOR COMMITTEE ON HOUSE ADMINISTRATION

Mr. HAYS. Mr. Speaker, by direction of the Committee on House Administration, I submit a privileged report (Rept. No. 91–137) on the resolution (H. Res. 315) providing funds for the Committee on House Administration, and ask for immediate consideration of the resolution.

The Clerk read the resolution, as follows:

H. RES. 315

Resolved, That, effective January 3, 1969, in carrying out its duties during the Ninety-first Congress, the Committee on House Administration is authorized to incur such expenses (not in excess of $300,000) as it deems advisable. Such expenses shall be paid out of the contingent fund of the House on vouchers authorized and approved by such committee, and signed by the chairman thereof.

SEC. 2. No part of the funds authorized by this resolution shall be available for expenditure in connection with the study or investigation on any subject which is being investigated for the same purpose by any other committee of the House.

SEC. 3. Funds authorized by this resolution shall be expended pursuant to regulations established by the Committee on House Administration under existing law.

The resolution was agreed to.

A motion to reconsider was laid on the table.

PROVIDING FUNDS FOR COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE

Mr. HAYS. Mr. Speaker, by direction of the Committee on House Administration, I submit a privileged report (Rept. No. 91–138) on the resolution (H. Res. 320) providing funds for the Committee on Interstate and Foreign Commerce, and ask for immediate consideration of the resolution.

The Clerk read the resolution, as follows:

H. RES. 320

Resolved, That, effective January 3, 1969, the expenses of conducting the studies, investigations, and inquiries authorized by H. Res. 116, Ninety-first Congress, incurred by the Committee on Interstate and Foreign Commerce, acting as a whole or by subcommittee, not to exceed $595,000, including expenditures for employment of experts, clerical, stenographic, and other assistants, shall be paid out of the contingent fund of the House on vouchers authorized by such committee, signed by the chairman of such committee, and approved by the Committee on House Administration.

SEC. 2. No part of the funds authorized by this resolution shall be available for expenditures in connection with the study or investigation of any subject which is being investigated for the same purpose by any other committee of the House, and the chairman of the Committee on Interstate and Foreign Commerce shall furnish the Committee on House Administration information with respect to any study or investigation intended to be financed from such funds.

SEC. 3. Funds authorized by this resolution shall be expended pursuant to regulations established by the Committee on House Administration under existing law.

The resolution was agreed to.

A motion to reconsider was laid on the table.

MAXIMUM PER DIEM ALLOWANCE FOR GOVERNMENT EMPLOYEES

Mr. PEPPER. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 337 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

H. RES. 337

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 337) to increase the maximum rate of per diem allowance for employees of the Government traveling on official business, and for other purposes. After general debate, which shall be confined to the bill and shall continue not to exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Government Operations, the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. PEPPER. Mr. Speaker, I yield 30 minutes to the able gentleman from California (Mr. SMITH), and pending that I yield myself such time as I may consume.

Mr. Speaker, House Resolution 337 provides an open rule with 1 hour of general debate for consideration of H.R. 337 to increase existing travel expenses for Government employees. The bill would increase the maximum per diem allowance within the United States from its present rate of $16 to $22 per day. Thus, where an agency or department determines that the expenses are warranted, any amount up to the maximum may be paid.

Mr. Speaker, I know that there is a great effort being made to curb expenditures of the Federal Government, but I hope that the departments or agencies for which an employee is working will grant to that employee his actual expenses incurred up to the $22 per day so that the employee will not have to bear that additional expense. I hope the authority will not be exercised to reduce this amount because I think the Federal Government has been making it necessary for faithful and loyal employees of this Government to go heavily into their savings or salaries in order to pay their necessary traveling expenses which they incur on their part. Even the $22 a day, with the high cost of motel and hotel bills and traveling in the continental United States is really not enough for actual travel expense within the United States for Federal employees, and I certainly hope that the $22 maximum which under H.R. 337 will not be reduced by the executive agencies of the Government.

When, due to unusual circumstances, the actual expenses of a trip within the United States are greater than the maximum per diem, the employee's actual and necessary expenses may be paid up to a present maximum of $30 per day. H.R. 337 increases this maximum to $35 per day.

When traveling in foreign countries, travel expenses are paid on the basis of a per diem for that country which the State Department determines to be adequate. There are occasions, however, when the per diem may be exceeded by the expenses. Presently the law permits the payment of an additional $10 above the per diem for such cases if accompanied by unusual circumstances. The bill if adopted, would increase the $10 allowance to an additional $15 per day.

The legislation makes the same changes in payment of travel expenses for intermittent employees of the Government, such as experts and consultants, as have been made for regular employees. Thus, the maximum per diem is increased from $16 to $22 per day and maximum actual expenses within the United States from $30 to $35 per day and, outside the United States, from the $10 added to the per diem to $15 added to the per diem for the country involved.

Mr. Speaker, I think this is legislation too long delayed by our Government and I hope this rule will be adopted so that H.R. 337 may be considered and I hope adopted by the House.

The SPEAKER. The Chair recognizes the gentleman from California (Mr. SMITH).

Mr. SMITH of California. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I believe it is rather interesting to note that the number on the resolution, No. 337, and the bill which we will be considering is the same, H.R. 337.

Mr. Speaker, this resolution is to provide a rule with 1 hour of open debate for the consideration of the bill H.R. 337, having to do with the maximum per diem allowance for Government employees.

Mr. Speaker, the purpose of H.R. 337 is to amend current travel expense legislation for Government employees.

The per diem allowance is increased from $16 to $22 per day.

The maximum allowance on an actual expense basis is increased from $30 to $35 per day.

Finally, the bill increases the foreign travel allowance above the established per diem from $10 to $15 per day.

The estimated cost of the increases contained in the bill, exclusive of travel abroad, is $27,000,000. The Bureau of the Budget expects the additional cost to each agency to be absorbed.

The bill is only slightly different than a similar bill which passed the House last year but was not acted on by the Senate. The difference is an increase in the per diem from $20 to $22 to reflect the approximate cost increase since 1967 when the last Bureau of the Budget study was completed.

There are no minority views.

The administration supports the bill.

Mr. Speaker, I urge adoption of the rule.

Mr. PEPPER. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

Mr. ROSENTHAL. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 337) to increase the maximum rate of per diem allowance for employees of the Government traveling on official business, and for other purposes.

The SPEAKER. The question is on the motion offered by the gentleman from New York.

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 337, with Mr. ANNUNZIO in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the rule, the gentleman from New York (Mr. ROSENTHAL) will be recognized for 30 minutes, and the gentleman from Ohio (Mr. BROWN) will be recognized for 30 minutes.

The Chair recognizes the gentleman from New York (Mr. ROSENTHAL).

Mr. ROSENTHAL. Mr. Chairman, I yield myself 5 minutes.

Mr. Chairman, H.R. 337 would increase the maximum rate of per diem allowance for civilian employees of the Government traveling on official business. Per diem, as we all know, is a flat-rate reimbursement which covers the average cost of subsistence when Government employees must travel in carrying out their responsibilities. This flat rate covers hotels, food costs, and certain other expenses. The present rate is $16 per day set by the Congress in 1961. Last year we passed H.R. 13738, raising the per diem rate to $20, but that bill was not acted upon by the Senate.

In summary, the bill, as amended by the committee, raises the maximum per diem rate from the present $16 per day to $22 per day and raises the maximum reimbursement for actual expenses—only allowed in unusual circumstances—from $30 per day to $35.

When our Government officials are traveling in foreign countries, travel expenses are paid on the basis of a per diem for that country which the State Department sets, but there are occasions when the per diem may be exceeded by actual out-of-pocket expenses. The law now permits the payment of an additional $10 above the per diem for such cases if accompanied by unusual circumstances. H.R. 337 increases this per diem from $10 to $15 per day. The bill makes the same changes in the per diem rates and payment of actual expenses for intermittent employees of the Government, such as experts and consultants, as would be made for regular employees.

Other than the increase in the basic per diem rate to $22 and the elimination of certain features of that bill affecting judges of the U.S. Court of Military Appeals and mobile employees of the Post Office, the bill is the same as the one which passed the House last year. The House-passed bill provided for $20 per day. H.R. 337, as introduced in this Congress, called for $25 per day, but the committee agreed with the recommendations of the Bureau of the Budget that the figure be set at $22 per day. The Bureau reported that its studies showed a 10-percent increase in travel subsistence costs since our hearings of 2 years ago. The Government employee unions, however, all supported the $25

figure and submitted their own evidence of the need for that maximum.

This bill, as we present it, is a very conservative one and may still be less than adequate to meet the expense of those Federal workers who must travel at the direction of their agencies. Action must be taken, however, to remedy the obvious inequity of the present $16 per diem.

The action of the committee and our recommendation that this bill be passed by the House are based on the hard statistical facts of increased cost of travel that were presented to us during our hearings. They have been summarized in our committee report. The committee has always taken the position that Government employees should not be expected to pay out of their own pockets the cost of doing the Government's work. Travel is as necessary to conducting our Government's business as it is in private industry.

I would direct the attention of my colleagues to page 3 of the report which indicates the findings of the Bureau of the Budget and the Bureau of the Census and numerous independent accounting offices which shows that there has been an increase in the cost of travel and the cost of hotel and meals and other expenses over and above what the Bureau of the Budget reported in 1967. All other reports and investigations by outside agencies support the figures as provided in this bill.

May I also state, Mr. Chairman, that our former colleague, Chairman Ramspeck testified in support of this bill and he cited his own personal experiences in spending considerably more than $16 per day in traveling on official business.

The Bureau of the Budget has estimated that the increase in the maximum per diem rates it recommended would add approximately $27 million to the annual cost of official travel to civilian agencies. Since the provisions of the reported bill provide lesser increases than those recommended by the Bureau, the corresponding added annual cost should be somewhat lower than the above estimate. The Bureau expects the executive agencies to absorb the increased costs within available appropriations.

Payment of travel expenses such as hotel, food, and other subsistence costs to Government employees traveling on official business is authorized by the Travel Expense Act of 1949 and subsequent amendments, now codified in sections 5701 to 5708 of title 5 of the United States Code. The pertinent provisions affected by H.R. 337 are sections 5702 and 5703. The act provides maximum amounts which may be paid by departments and agencies and it was not anticipated by the Congress that the maximum would be set for all travel. Based on the expected costs of the particular travel, the agencies exercise their discretion to set rates that in many cases are lower than the maximum. Overall policies and regulations are made by the Bureau of the Budget.

Section 1 of the bill, as amended, raises the maximum per diem within the United States from the present $16 to $22 per day. Thus, where a department or agency determines that the expenses to be incurred warrant it, any amount up to the maximum may be paid.

Per diem is the customary way of paying travel expenses but the law provides that when the actual expenses of a trip within the United States are greater than the maximum per diem due to the unusual circumstances of the travel assignment, the employee's actual and necessary expenses may be paid up to a present maximum of $30 per day. Thus, when the unusual circumstances of the travel or conditions at the destination result in costs to the employee that exceed the per diem, he may be paid his specific out-of-pocket expenses up to $30 per day. The bill increases this maximum to $35 per day.

When traveling in foreign countries, travel expenses are paid on the basis of a per diem for that country which the State Department determines is adequate. But there are occasions when the per diem may be exceeded by the expenses. The law now permits the payment of an additional $10 above the per diem for such cases if accompanied by unusual circumstances. This bill increases the $10 to an additional $15 per day.

Section 2 makes the same changes in payment of travel expenses for intermittent employees of the Government such as experts and consultants as have been made for the regular employees by section 1. Thus, the maximum per diem they may be paid is increased from $16 to $22 per day. Maximum actual expenses within the United States are increased from $30 to $35 per day and, outside of the United States, from the $10 added to the per diem to $15 added to the per diem for the country involved.

Sections 3 and 4 have been deleted from the bill.

Mr. Chairman, the passage of this bill, in my judgment, is a matter of simple justice and fairness to our dedicated and hardworking Government employees. In many, many cases and perhaps in the majority of cases, these employees, while traveling on official business, have had to spend personal funds beyond the per diem allotment of $16 per day.

Mr. Chairman, I hope the bill will be overwhelmingly passed by the House today.

Mr. BETTS. Mr. Chairman, will the gentleman yield?

Mr. ROSENTHAL. I yield to the gentleman.

Mr. BETTS. I wonder if the gentleman would explain the difference between Government employees and others as is set forth in the second section and why there has to be a discrepancy in the maximum allowances?

Mr. ROSENTHAL. Yes; section 1 of the bill provides the regular per diem of Government employees and raises the per diem from $16 to $22 and from $30 to $35 under unusual circumstances. All of this was documented by actual experience by the commission.

Section 2 of the bill applies to intermittent employees such as experts and consultants. I might suggest that, while we fix a maximum of $22 per day, each agency will establish regulations for its own travel and may well fix some lower amount if appropriate.

Mr. BETTS. I was just wondering why there should be a difference so far as these travelers are concerned under section 2 and the Government employees? The only thing I can think of is that section 5712 of the code should be appropriately amended to follow this procedure.

Mr. HALL. Mr. Chairman, will the gentleman yield?

Mr. ROSENTHAL. I am happy to yield to the gentleman from Missouri.

Mr. HALL. I appreciate the gentleman yielding.

I wanted a point of information, and I want it understood crystally clear that I believe all of those who travel on official business should have a better per diem rate as we of the Congress who travel on official business on rare occasions, perhaps once a month back and forth to our homes. But pertaining to the gentleman's comments about the Bureau of the Budget estimates, is it not true that the estimate made increase above or below the $27 million because they estimated that there were 9 million man-days of travel each year by all classes of Federal employees, if I may use that term loosely, and that if we increased the maximum per diem allowance by $6, as I understand this bill provides, it would cost $54 million. However, the Bureau of the Budget estimates that only 50 percent of those who drew per diems last year spent more than the present $16 per day maximum, while the other 50 percent were spending something less than 60 percent. So that they figured that on the average the employees would qualify only for a $3 increase, or a total of $27 million. Does the gentleman have any idea about how this $27 million of additional cost in this time of approaching austerity would hold up under the sections of the bill?

Mr. ROSENTHAL. The gentleman is correct in what he has reported, and I appreciate his comment and his support. The Director of the Bureau of the Budget suggested that their budget was $27 million, and in view of the fact that we made a reduction in their proposal, it would be something less than that. They also suggested it was not possible to make an accurate and precise projection. This was their best estimate and they anticipated the agencies could absorb this increase within the existing appropriation. The Director of the Bureau of the Budget did not go beyond that.

Mr. HALL. I thank the gentleman.

The CHAIRMAN. The Chair recognizes the gentleman from Ohio.

Mr. BROWN of Ohio. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, I rise in support of H.R. 337, a bill to increase the maximum rate of per diem allowance for employees of the Government traveling on official business.

Sections 1 and 2 of the bill as amended by the committee would increase the maximum rate of per diem allowance for travel within the contiguous 48 States and the District of Columbia from $16 to $22, or a 37½-percent increase, and it would increase the maximum allowance for reimbursement on an actual expense basis for such travel from $30 to $35 per day, or 16⅔ percent.

For travel outside the contiguous 48 States and the District of Columbia, the bill would increase the maximum allowance for travel on an actual expense basis from $10 plus the established maximum per diem rate to $15 plus the established maximum per diem rate.

Sections 3 and 4, as noted, were stricken from the bill.

Section 3 was stricken because it would amend section 3581(d) of title 39, United States Code, and thus is properly within the jurisdiction of the Post Office and Civil Service Committee.

Section 4 was stricken because it would amend section 867(a)(1) of title 10, United States Code, thus coming properly within the jurisdiction of the Armed Services Committee. Moreover, the provisions of section 4 have already been enacted as a part of Public Law 90–340.

There was complete agreement in the subcommittee with the need to raise allowances to keep pace with rising travel costs, and it was felt that the allowances proposed in sections 1 and 2 of the bill were appropriate.

The percentage increase, 37½ percent, from $16 to $22, for unlisted expenses, may seem large, but it must be remembered that 8 years have elapsed since the act was last amended, and the proposed changes do no more than reflect the present costs of travel As a matter of fact, in the testimony—and this relates to the questions asked by the gentleman from Missouri (Mr HALL)—in the testimony that was presented to the committee it was noted that in the spring of 1967 a survey was conducted by the Bureau of the Budget in which they requested 18 principal Federal agencies for information on subsistence costs representing over 12,000 employee travel experiences covering almost 64,000 man-days of travel.

An analysis of these data showed 6,171 travel experiences, 51.3 percent of the total, where subsistence costs exceeded $16 per day, the average of these being $19.21. On this basis, the Bureau recommended to the Congress a national per diem of $20 in lieu of subsistence expenses last year. I presume that the $27 million estimate was based on this 51 percent of maximum as exposed by this survey, and that it was assumed 50 percent of the potential $54 million would bring it to $27 million.

Mr. HALL. Mr. Chairman, will the gentleman yield?

Mr. BROWN of Ohio. Mr. Chairman, I yield to the gentleman from Missouri.

Mr. HALL. Mr. Chairman, I believe that the gentleman's statement is correct, except for the fact that the Bureau of the Budget estimates that even if the per diem ceiling were raised $6, as proposed, only 50 percent, or perhaps less, of those employees drawing per diem would get the maximum, and that 50 percent is why they reduced it to $27 million.

Mr. BROWN of Ohio. Mr. Chairman, I think that is correct. I think there is also the possibility that because this money is going to have to be taken out of presently available funds, there may be some reduction in travel, because of the increased per diem allowance, that might otherwise have been authorized.

Mr. HALL. Mr. Chairman, as long as we have interrupted the gentleman's remarks, will the gentleman yield further?

Mr. BROWN of Ohio. I yield to the gentleman from Missouri.

Mr. HALL. Mr. Chairman, I just wonder—and as I stated in my first question to the gentleman from New York, I seek equity—I certainly do not want any of our employees paying money out of their pockets for expenses while traveling on official business.

Mr. BROWN of Ohio. That has been done on a number of occasions.

Mr. HALL. I understand that from the committee's well-written report.

Mr. Chairman, first of all, does this apply to members of the executive branch while traveling on official business?

Mr. BROWN of Ohio. It applies to all Government employees who are authorized to travel on official business in this way.

Mr. HALL. It is applicable to the judicial and legislative branches as well as the executive branch?

Mr. BROWN of Ohio. No. My understanding is that it will be probably the executive alone, but perhaps the gentleman from New York can assist me in that regard.

Mr. HALL. Mr. Chairman, that was my understanding in April last year when we passed the previous bill.

Mr. BROWN of Ohio. It also covers the quasi-legislative bodies of the executive agencies.

Mr. HALL. There was for travel an increase in the travel budget of fiscal year 1969 over 1968 a total of $2,050,000,000. Does the gentleman know what the figure is in the anticipated 1970 budget, and is it provided for?

Mr. BROWN of Ohio. I do not know the figure in the 1970 budget. The anticipation was that this legislation would have no significant effect on the budget figure in the 1970 budget, again for the reason that the agencies would be required to live within the previous request they had made in preparation of that budget, and that only on the occasion of absolutely necessary overspending, where they would be obliged to come back and ask for additional funds, would those funds be considered.

Mr. HALL. Mr. Chairman, if the gentleman will yield for a final question, what I am trying to get at is whether this is a cost of travel of cost of living or inflationary increase in order to keep up with the actual expenditures or whether there is poor travel discipline in the agencies of the executive branch, and did the gentleman's committee go into this problem?

Mr. BROWN of Ohio. The gentleman's committee did not go into this problem as to whether the travel expenditures generally had been authorized with circumspection by the various agencies.

This legislation, however, relates not to whether or not the agencies have been circumspect, but as to whether or not Federal employees traveling on per diem allowances were being compensated for the actual expenses incurred. In other words, the recommendations here relate only to the cost-of-living increase or the cost-of-travel increase, maybe I should say, in the per diem that has occurred since the last authorization by this committee.

Mr. HALL. Of course it follows, therefore, that unless some circumspection or oversight or surveillance is exercised on necessary travel, if we recompense completely for travel, there might not be the restriction on unneeded travel, which would otherwise occur.

I am still not recommending that those who travel in the executive branch on necessary business be restricted or be underpaid; but just as in communications there must be some discipline exercised to see that unnecessary messages are not sent, the same is true with respect to travel in the executive branch. If it gets to be over $2,050 million as an item in the executive budget per year, it is certainly worth oversight.

Mr. BROWN of Ohio. Since these increased individual allowances will come out of the requested budgets for 1970 rather than creating an increase in those budgets, it is assumed, at least for this first year, that any unnecessary travel will be spotlighted, because the agencies may be hard pressed to fit their travel requirements into the requested budget, in view of the fact that they made their requested budgets on the basis of $16 per day rather than $22 per day.

To continue with my statement in explanation of the various aspects of this legislation:

Finally, for travel outside the continental United States, the bill would increase the maximum allowable per day on an actual expense basis from $10 to $15 above the normal per diem rate for the locality involved. The Bureau of the Budget had recommended an increase to $18 a day above the per diem.

Rates set for travel to States and U.S. possessions outside the continental United States are established by the Secretary of Defense, and they are established by the Secretary of State for travel to foreign countries.

While the figures agreed to in committee were not everything the employee representatives asked for, they appear adequate on the basis of statistics furnished the committee. Moreover, the more modest proposals of the committee assure a greater likelihood of congressional approval and hence are more meaningful to the Government employee.

In shaping the bill to its maximum acceptability the committee resisted urgings for an amendment that would ask agencies to encourage their professional employees to travel first on airplanes. The committee was not persuaded by the argument that such a fringe benefit would be helpful in retaining the best people in Government.

The committee rather felt perhaps we should keep some people in Government who are economy minded.

The annual additional cost of official travel to civilian agencies should be somewhat less than the $27 million estimated by the Bureau of the Budget. The Bureau estimate was based on the figures which it recommended and which were somewhat higher than those agreed upon by the committee. The Bureau expects the executive agencies to absorb the increased costs within available appropriations. In some agencies it will have to

come out of substantive programs, but in some agencies it will come just out of the standard salaries and expenditures type of appropriation.

We feel that the increases are fully justified, if a bit on the conservative side. But in the face of the Nation's economy and the concern for our Federal deficits and our Federal budget this year, such conservatism appears fully justified in the interest of the taxpayers. There will still be cases in high-cost areas where Government employees may have to pay a part of their travel expenses out of their own pockets. This is to be regretted and avoided where possible.

The legislation represents, however, a reasonable compromise between equity and economy.

The CHAIRMAN. The gentleman from Ohio has consumed 12 minutes.

Mr. BROWN of Ohio. Mr. Chairman, I yield 2 minutes to the gentleman from Illinois (Mr. ERLENBORN).

Mr. ERLENBORN. Mr. Chairman, I thank the gentleman from Ohio for yielding.

I want to compliment the gentleman from New York, the sponsor of the bill; the gentleman from Minnesota, the chairman of our subcommittee; and the gentleman from Ohio, who is handling the bill for the minority; on what I consider to be a good compromise that has led to the consideration of H.R. 337.

I hope this bill passes in this form, because it will grant more equity to Federal employees required to travel on business.

Mr. Chairman, this does represent a compromise. The gentleman from New York, its sponsor, I am sure, would like to have some higher figures in here. The Bureau of the Budget did recommend some higher figures in some instances. They had $40 here as actual reimbursement, whereas the committee recommended and the bill contains $35.

I hope that the other body will act with dispatch this year, in contrast to their lack of action last year, because it is not at all fair to require Federal employees when traveling to cover any part of their expense from their own pockets. They should be reimbursed for their actual expenses.

Testimony before our subcommittee was clear and uncontroverted that increases in travel cost, in hotel rooms and meals, make the present $16 per day allowance no longer fair. We believe a maximum of $22 will constitute a fair reimbursement for the cost of per diem travel.

Mr. FINDLEY. Mr. Chairman, will the gentleman yield?

Mr. ERLENBORN. I yield to my colleague from Illinois.

Mr. FINDLEY. Mr. Chairman, as a new member of the subcommittee, I would like to express my support for this legislation and also to congratulate the leadership on both sides of the aisle on a job well done.

Mr. BROYHILL of Virginia. Mr. Chairman, I rise in support of H.R. 337, to increase the maximum rate of per diem allowance for employees of the Government traveling on official business.

Anyone who has traveled within the past few years knows that $16 per day is woefully inadequate to cover the expenses of food and lodging in most parts of this Nation. I believe an increase to $22 per day is the minimum we can do to make certain that our Federal employees, traveling on the Nation's business, are not forced to pay from their own wages a sizable part of the expenses they incur.

During the 90th Congress, Mr. Chairman, we acknowledged the fact that $16 per day was insufficient to cover expenses of travel, and we passed H.R. 13738, which would have increased the amount to $20 per day. Unfortunately, the Senate failed to act. Two years ago, in considering the legislation, we were told that the Bureau of the Budget had determined after extensive study that the actual average total daily subsistence for travelers in 1967 was $19.56. Today, 2 years of continuing inflation have again increased the figure, and I am convinced that $22 per day is at best merely adequate.

Provision also needs to be made for the unusual situation when an employee incurs out-of-pocket expenses greatly in excess of normal per diem, for reimbursement of a greater amount than the $30 per day present maximum. This amount, too, is raised in H.R. 337 to $35 per day, and again I believe this is the minimum we can do to assist employees faced with such emergencies.

All in all, Mr. Chairman, I believe this bill is long overdue, and should be acted upon favorably, not only by the members of this House but by our colleagues in the Senate as well, at the earliest practicable date, Mr. Chairman, I urge passage of this legislation.

Mr. BROWN of Ohio. Mr. Chairman, I have no further requests for time, and I yield back the balance of my time.

Mr. ROSENTHAL. Mr. Chairman, I have no further requests for time and yield back the balance of my time.

The CHAIRMAN. There being no further requests for time, the Clerk will read.

The Clerk read as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 5702 of title 5, United States Code, is amended by striking out "$16" and inserting in lieu thereof "$25", by striking out "$30" and inserting in lieu thereof "$35", and by striking out "$10" and inserting in lieu thereof "$15".

SEC. 2. Section 5703 of title 5, United States Code, is amended by striking out "$16" and inserting in lieu thereof "$20", by striking out "$30" and inserting in lieu thereof "$35", and by striking out "$10" and inserting in lieu thereof "$15".

SEC. 3. Section 3581(d) of title 39, United States Code, is amended by striking out "$9" and inserting in lieu thereof "$15".

SEC. 4. The last sentence of section 867(a)(1) of title 10, United States Code, is amended to read as follows: "Upon his certificate, each judge, while attending court, or transacting official business outside the District of Columbia, is entitled to be paid all necessary traveling expenses and allowances as provided for each Jusitce or judge of the United States under section 456 of title 28.".

With the following committee amendments:

Page 1, line 4, strike out "$25" and insert "$22".

Page 1, line 10, strike out "$20" and insert "$22".

Page 2, strike out lines 3 through 12.

The committee amendments were agreed to.

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. ANNUNZIO, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee having had under consideration the bill (H.R. 337) to increase the maximum rate of per diem allowance for employees of the Government traveling on official business, and for other purposes, pursuant to House Resolution 337, he reported the bill back to the House with sundry amendments adopted by the Committee of the Whole.

The SPEAKER. Under the rule, the previous question is ordered.

Is a separate vote demanded on any amendment? If not, the Chair will put them en gros.

The amendments were agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the bill.

The bill was passed.

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. BROWN of Ohio. Mr. Speaker, I ask unanimous consent that all Members desiring to do so may have 5 legislative days in which to extend their remarks on the bill just passed.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

CANADIAN AND MEXICAN COMMUTERS

(Mr. FEIGHAN asked and was given permission to address the House for 1 minute, to revise and extend his remarks, and to include extraneous matter.)

Mr. FEIGHAN. Mr. Speaker, today along with 24 cosponsors, I have introduced H.R. 9505, a bill which amends the Immigration and Nationality Act by adding a new subsection to section 212. The amendment is geared specifically to regulating more effectively the influx into the United States of nationals from Canada and Mexico under the so-called alien commuter system, which is administered by the Immigration and Naturalization Service.

This system—a creature of administrative ingenuity without a statutory base—permits Canadian and Mexican workers who have been lawfully admitted to the United States for permanent residence, and who hold alien registration

receipt cards, commonly known as "green cards," to reside in Canada or Mexico and regularly commute across the border to places of employment in the United States.

Sample counts of commuters crossing the border have been taken periodically. On January 11 and 17, 1966, 54,375 commuters entered the United States, 43,687 of whom entered from Mexico. This number was slightly lower during November and December 1967, when 40,176 commuters from Mexico were identified and their green cards were suitably marked to distinguish them.

Regardless of the exact number involved, however, there is no doubt that the commuter movement adversely affects the wages and working conditions of our own citizens and residents, especially those living in the cities and towns along the Mexican border in Arizona, California, New Mexico, and Texas. The commuter movement from Mexico is a factor contributing to the grinding poverty, high unemployment, and low wages in the border areas.

Much of the border area has relatively large labor surpluses, partly because of the large number of low-skill U.S. citizens and resident aliens residing in the area. The impact of these commuters on the labor market has been enormous.

A report by the social action commission of the Catholic diocese of El Paso indicated that one of the reasons for the low wages in El Paso is—

> The Mexican-American must compete with some 25,000 workers from Mexico . . . legal alien commuters, United States citizens, and illegal entrants . . . who daily cross the bridge from Juarez to work in El Paso. Generally speaking, the workers from Mexico find no inconvenience in working for the barest of wages in El Paso.

The employment of commuters in areas of high unemployment is a characteristic of the communities along the border area. Data published by the Texas Employment Commission in 1966 shows that the unemployment rate in the border towns was substantially greater than in the interior cities. Under unanimous consent I shall place a table showing unemployment rates in Texas border cities in the RECORD at the conclusion of my remarks.

The impact of the commuter is particularly acute in agriculture where mechanization is rapidly reducing job opportunities. Due to the high concentration of farms along the border and the fact that commuters often work in the lowest skilled, lowest paid jobs, farmworkers, who are already underpaid, are the first to suffer competition from the commuters.

The bill we have introduced does not end the commuter system, but it does refine its operation. The bill simply provides that each commuter alien must be regularly certified every 6 months by the Department of Labor that his presence in the United States to seek or continue employment does not adversely affect wages or working conditions of U.S. workers similarly employed. In determining whether their employment does adversely affect wages and working conditions of American workers, the standard would be the wages and working conditions of American labor similarly employed. Thus, the employer must pay his commuters wages commensurate with U.S. labor engaging in the same employment.

The bill applies to aliens having a "principal, actual dwelling place" in a foreign country. Thus, it is strictly geared to those commuters working in the immediate border areas who travel across the border regularly. This is the "commuter" in the true sense of the word.

It would be my hope that in implementing this bill, if enacted into law, there would be some period of phasing it into effect so that it would not suddenly impose a difficult burden on the aliens involved.

Section 2 removes a provision in the Immigration and Nationality Act that exempts from criminal sanctions individuals who willfully and knowingly employ aliens who have entered the United States illegally. Such an amendment is necessary since the number of immigrants illegally entering the United States from Mexico is rapidly rising. For instance, the U.S. Border Patrol apprehended 115,000 illegal aliens last year. The majority of these illegal entrants come into the United States in hope of finding agricultural and factory employment. Many employers lure them into the United States to obtain inexpensive labor. Criminal sanctions against such employers would help stop the high number of illegal entrants.

Before closing, I must emphasize in no way does section I of this bill ban the use of green cards or terminate the commuter system. What it would attempt to do is to provide that holders of green cards will not use what is a continuing privilege in such a way as to depress wages and working conditions within the United States.

The combined effect of both sections will be to substantially improve working conditions in our border areas. We feel it is necessary legislation.

H.R. 9505 is cosponsored by Mr. CELLER, Mr. ADAMS, Mr. ADDABBO, Mr. ANDERSON of California, Mr. BARRETT, Mr. BINGHAM, Mr. BROWN of California, Mr. BURTON of California, Mr. DELANEY, Mr. DENT, Mr. DONOHUE, Mr. DULSKI, Mr. EDWARDS of California, Mr. HALPERN, Mr. HAWKINS, Mr. MANN, Mr. MILLER of California, Mr. POLLOCK, Mr. REID of New York, Mr. ROYBAL, Mr. SCHEUER, Mr. THOMPSON of New Jersey, Mr. TIERNAN, and Mr. CHARLES WILSON.

The table mentioned above follows:

UNEMPLOYMENT RATES IN 22 TEXAS CITIES, 1966

City	Rate	Rank
4 border cities	6.6	
Brownsville-Harlingen-San Benito	6.5	21
El Paso	4.4	17
Laredo	9.6	22
McAllen-Pharr-Edinburg	5.8	20
18 interior cities	3.4	
Abilene	3.6	11
Amarillo	2.9	4
Austin	2.6	3
Beaumont-Port Arthur-Orange	4.0	15
Corpus Christi	3.7	12
Dallas	2.5	2
Fort Worth	2.9	4
Galveston-Texas City	4.7	19
Houston	2.4	1

UNEMPLOYMENT RATES IN 22 TEXAS CITIES, 1966—Con

City	Rate	Rank
18 interior cities—continued		
Longview-Kilgore-Gladewater	3.3	8
Lubbock	3.8	13
Midland-Odessa	3.4	9
San Angelo	3.4	9
San Antonio	4.3	16
Texarkana	3.8	13
Tyler	3.3	7
Waco	4.4	17
Wichita Falls	3.0	6

UNIVERSAL POSTSECONDARY EDUCATION

(Mr. SCHEUER asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. SCHEUER. Mr. Speaker, in the past 2 years, we have seen the development of many programs aimed at providing the disadvantaged student an opportunity to attend college but they are grossly inadequate to meet the need of all high school students demanding additional free public education.

We have seen recently black students at Rutgers University demonstrating in support of the right of all black high school students graduating this June to enter Rutgers next September.

And we have seen middle-income parents complaining that their children, although academically qualified, are threatened with the possibility of being shut out of colleges and universities because of reductions in college admissions.

And finally there are the college administrators who are caught in the middle between aspiring disadvantaged kids and middle-class kids competing for college seats that are limited because of lack of funds, facilities, and personnel.

Just today in the New York Times, the chancellor of the New York City University is quoted as saying that hundreds of parents, alarmed by the possibility that the university will be forced to reduce the size of its freshman class, are urging that special programs for slum students be reduced before regular admissions are cut.

This is an intolerable situation. It pinpoints quite clearly the urgent need for a universal postsecondary education, available to all.

During the 90th Congress, we approved an amendment to the Higher Education Act which I sponsored and which requires the President to submit to the Congress on or before December 31, 1969, proposals relative to the feasibility of making postsecondary education available to all young Americans who qualify and seek it.

In view of the immediacy and urgency of this problem, which is affecting our colleges and universities across the Nation, I urge the President and the Secretary of Health, Education, and Welfare, to come forward now with proposals on universal postsecondary education so that they can be considered by this body in the present session.

The situation is critical and the time is now, if we are to afford any relief

on this issue to our strife-ridden, anxiety-torn urban communities. Equality of opportunity in the United States today is increasingly related to equality of access of education, and we must move quickly and decisively to see to it that access is made available next fall to every young American who has the will to learn.

Mr. Speaker, because of the seriousness of this matter, I have written the following letter to HEW Secretary Robert H. Finch:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., March 26, 1969.

Hon. ROBERT H. FINCH,
Secretary, U.S. Department of Health, Education, and Welfare, Washington, D.C.

DEAR MR. SECRETARY: Over the years, and particularly in recent months, there have been periodic proposals to make universal educational opportunity at the post-secondary level a reality. The proposals range from outright grants covering all tuition and expenses—like the G.I. Bill, to various tax deductions, credit proposals, and loans of one sort or another.

Equality of opportunity in the United States today is increasingly related to equality of access to education, and yet millions of students, black and white, are being denied this opportunity because of the lack of funds to finance their education. The Carnegie Commission report on Higher Education reported that almost half of the undergraduate college students in the United States now come from the country's highest family income quartile; and only seven per cent come from the lowest income quartile. There is an urgent need to change these long odds.

In recent months, we have seen New York City beset by problems arising from the controversy over the SEEK program and the City University's proposed One Hundred Scholars program, which would admit to the City University the one hundred top graduating students in every high school. This could mean that other students who might score higher on the New York State Regents or have higher scholastic averages would be displaced.

I am enclosing an article from the March 26th edition of the New York Times which indicates the pressure—justifiable or unjustifiable—from middleclass parents "urging that admissions to the University's two special programs for slum students—the College Discovery Program and Search for Enlightenment, Elevation and Knowledge (SEEK)—be reduced before regular admissions are cut."

At the same time, disadvantaged black and Puerto Rican students in New York City are insistently demanding their rights to post-secondary education.

We have seen black students at Rutgers University demonstating in support of the right of all black high school seniors graduating this June to enter Rutgers next September, regardless of test scores, etc.

It is hard to argue against the right of educationally disadvantaged kids to post-secondary education, and it is also equally difficult to ask middle-class kids with higher education attainments to step aside and give up their places in our free, tax-supported colleges. The only answer is a massive expansion of post-secondary education opportunities sufficient to provide universal education at the college or junior college level for all who desired it and could benefit by it.

During the 90th Congress, I sponsored an amendment (Sec. 508) to the Higher Education Act which requires the President to submit to the Congress on or before December 31, 1969, proposals relative to the feasibility of making post-secondary education available to all young Americans who qualify and seek it. I am particularly interested in knowing what steps have already been initiated by your Department to carry out this Congressional assignment. I urge you also to consider making proposals along these lines to the Congress within the next few months so that they can be acted upon during the first session of the 91st Congress. Our already strife-torn and anxiety-ridden urban communities should not be called upon to face the resentment of large masses of middle-class students and underprivileged minority students competing for limited post-secondary education opportunities. The only answer is opportunity for all, and the urgency and critical need is now.

I would very much like to have the opportunity to discuss this matter with you.

With every warm best wish,

Sincerely,

JAMES H. SCHEUER,
Member of Congress.

Also illustrative of my concern, is the following article published in the March 26 edition of the New York Times:

BOWKER SCORED BY JEWISH UNIT FOR PREDICTING RACIAL TENSION

(By Leonard Buder)

The Metropolitan Council of the American Jewish Congress charged yesterday that Dr. Albert H. Bowker, chancellor of the City University, was "fomenting racial and religious tension by predicting it."

The council, in a sharply critical statement, challenged Dr. Bowker's comment on Monday that tension between Jews and Negroes in the city might "explode" if the City University were forced to reduce the size of its freshman class next fall because of budget cuts.

Dr. Bowker said that the University had received hundreds of letters and telephone calls from Jewish parents urging that admissions to the university's two special programs for slum students—the College Discovery Program and Search for Enlightenment, Elevation and Knowledge (SEEK)—be reduced before regular admissions are cut.

"The surest way of arousing hostility between racial and religious groups is to forecast that it will occur," declared Theodore J. Kolish, chairman of the Metropolitan Executive Committee of the congress.

STATEMENT CALLED DAMAGING

"Mr. Bowker's self-fulfilling prophecy does a disservice to all of those—Jews and Christians, black and white—who have joined hands in opposing cutback in funds for the City University."

Asked to comment on the council's criticism, Dr. Bowker said this his statement on Negro-Jewish tensions was his paraphrase of one made earlier this month by 10 Negro and Jewish leaders.

The 10 leaders, who had formed the Temporary Committee on Black-Jewish Relations, said that potential cuts in the budget and admissions at City University threaten a new confrontation between religious and racial groups "that could exceed the destructiveness of previous controversies."

Among those who joined in that statement were Roy Wilkins, executive director of the National Association for the Advancement of Colored People; Whitney M. Young, Jr., executive director of the National Urban League; Robert Bernhard, an investment banker and the president of the Federation of Jewish Philanthropies, and Rabbi Abraham Heschel of the Jewish Theological Seminary.

Mr. Kolish said that the congress was one of nine major Jewish organizations that had urged Governor Rockefeller and legislative leaders to provide greater funds both for regular college admission and for the College Discovery and SEEK programs.

"But our organization," he continued, "does not believe the effort to frighten Albany into restoring the cuts by raising the specter of race riot is either good tactics or accurate sociology."

FISCAL STANDING EXPLAINED

In explaining the City University's financial difficulties, Dr. Bowker had noted that the university's original budget request this year was for $270 million. That amount, the chancellor said would have accommodated 17,000 incoming regular students and 3,000 special students.

The chancellor said that cuts by the Governor's office in proposed state support reduced that figure to $225-million, which would only accommodate a total of 14,000 students.

Further cuts by the city government, the chancellor said, would bring the projected total budget down to about $180-million—enough, he said, to maintain operations but not enough to admit any new students.

AMERICAN LEGION SUPPORTS HOUSE INTERNAL SECURITY COMMITTEE

(Mr. HALEY asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. HALEY. Mr. Speaker, the members of the Frierson-Nichols Post No. 8, the American Legion, of Winter Haven, Fal., are among those many Americans who view with alarm the battle which must be fought in every Congress to protect the authority and the functions of the House Un-American Activities Committee, and now the authority and functions of the House Internal Security Committee. They are also alarmed by the increasing strength of the opponents of this important committee of the House.

I share the respect that these Legionnaires and other sound-thinking Americans have for the valuable work the House Internal Security Committee and its predecessor, the House Un-American Activities Committee, has done and is doing for our Nation.

I place in the RECORD at this time the resolution adopted by the Frierson-Nichols Post so that Chairman RICHARD ICHORD and his committee members will know of the strong support they have from these veterans of Winter Haven, Fla.

RESOLUTION ADOPTED BY FRIERSON-NICHOLS AMERICAN LEGION POST NO. 8, WINTER HAVEN, FLA., MARCH 18, 1969

Whereas, the U.S. House of Representatives on February 18, 1969, passed House Resolution 89 changing the name of the House Un-American Activities Committee (HUAC) to the House Committee on Internal Security, clarifying its mandate, and retaining its independent status as in integral Committee, and

Whereas, the record of the House debate on the Resolution discloses that a number of House Members voted against its passage in the apparent attempt to defeat its passage and pave the way to have the House Un-American Activities Committee (HUAC) abolished and its functions transferred to the House Judiciary Committee in a a sub-ordinate sub-committee status, and

Whereas, HUAC has been a constant target for communist and other subversive elements in their determined efforts to ridicule and downgrade its activities, to disrupt its proceedings, and to have it abolished, and

Whereas, in light of past and present communist and other subversive activities in the United States, in Communist Cuba, in countries of Central and South America, and elsewhere, and

Whereas, the United States is presently at War in Vietnam on the premise of democracy, self-determination, and freedom as opposed to communism, totalitarianism, and slavery, and

Whereas, the United States must have in its protective arsenal an effective, strong and dedicated House Committee on Internal Security to investigate, uncover, counter and defeat communist and other subversive forces who defy the authority of the United States government, create turmoil and strife in our cities and educational institutions, and direct their efforts to the overthrow of our form of government by force or otherwise.

Now, therefore, be it resolved that Frierson-Nichols American Legion Post No. 8, Winter Haven, Florida, go on record as strongly and determinedly opposing any Congressional action which would in any sense weaken or downgrade the House Committee on Internal Security, minimize its mandate, or abolish it and transfer its functions to another House Committee in the subordinate status of a subcommittee.

CHARLES L. MCCARTY,
Post Commander.

PROPOSED MULTILATERAL TREATY TO BAR MILITARY INSTALLATIONS FROM THE SEABED

(Mr. BINGHAM asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BINGHAM. Mr. Speaker, I am today introducing, with the support of 12 of my colleagues, a brief concurrent resolution proposing that the United States actively seek a multilateral treaty to bar all military installations from the seabed. Such a pact would be consistent with our previous stance in concluding the Antarctic and Outer Space Treaties, and would contribute greatly to strengthening and extending the rule of law as a basic foundation for world peace.

As I noted last week, the United States gave an essentially negative response to a Soviet proposal at Geneva which followed this general line. Our initial position was apparently dictated largely by the Navy's concern for the submarine-detection devices it has already implanted on the ocean. It has also been suggested that a total ban on military installations on the seabed might even prevent the transmission of military messages through undersea cables. These, however, are clearly matters for conscientious negotiation. Only through detailed discussion can we learn what mutually acceptable definitions of prohibited military installations or activities can be reached, and whether in fact we can find agreement on treaty language that would in no way impair operations such as those outlined above.

I therefore suggest, Mr. Speaker, that we must negotiate from a position of support for the principle of full demilitarization of the seabed, and not from a reflex of resistance to the principle because it might inhibit full freedom of action for our military planners. I hope that other Members will share this view, and that they will add their voices in support of the resolution which we have offered today.

The text of the resolution is as follows:

H. CON. RES. 184

Concurrent resolution proposing a multilateral treaty to bar all military installations from the seabed

Whereas the United States has previously entered into treaties providing for the demilitarization of outer space, including the moon and other celestrial bodies, and of Antarctica; and

Whereas the seabed should be kept free of military installations of all kinds so as to eliminate a source of potential conflict among the nations of the world: Now, therefore, be it

Resolved by the House of Representatives (the Senate concurring), That the United States should actively seek to conclude a multilateral treaty, along the lines of those which govern activities in outer space and in Antarctica, which would bar all types of military installations from the seabed and would make appropriate provision for inspection to insure compliance.

WISDOM FROM THE OIL INDUSTRY—OR HOW TO STRETCH TRUTH LIKE CHEWING GUM

(Mr. PODELL asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. PODELL. Mr. Speaker, today I have introduced a bill to remove entirely the 27½-percent oil and gas depletion allowance. Recently a group of gentlemen representing the oil industry came to Capitol Hill to argue for retention of tax privileges this segment of our economy now enjoys at the expense of the entire American public. I was much moved by their reasoning. Reading their comments, I panted under the effect of their eloquence. Never was a more ignoble cause defended so ably. Unfortunately, their arguments are mere sleight of mouth. They plead poverty. They plead high operating costs. I would sooner believe that a barracuda is a vegetarian. I would sooner believe in perpetual motion or squaring the circle then accept their futile testimony.

It is almost tax time, and scores of millions of citizens are beginning to grope for cash to pay Uncle Sam. Let every single one of them take a close look at the American oil industry. See it for what it really is—a fourth level of government. A prime cause of inflation. A major reason why millions pay staggering taxes.

As taxpayers painfully look at their tax writeoffs, let them note the 27½-percent tax-free allowance given the oil industry annually to cover depletion of wells they drill and operate. Let them see a statutory provision enabling oil well drillers to deduct, in 1 year, most capital costs of their drilling that are spread out over a period of years in other industries.

Let them see how oil companies are allowed to deduct from taxes, as a credit, payments of royalties to foreign governments. Such business expenses in most industries are simply deductions from income, taken before taxes are computed.

Let lower and middle income taxpayers take a searching look at tax rates paid by these companies, as they pollute our environment, raise gasoline prices at will, merge to form ever larger corporate units and fight desperately to keep cheap foreign oil out of this country because it would lower prices slightly to scores of millions of gasoline and oil consumers. Bulging with profits and swollen with privilege, they come to Capitol Hill, confident of their power and contemptuous of the vast majority of our American people.

As every man and woman in this country digs deep, deeper, deepest, for their taxes this year, I pray they will examine our American oil industry. It is a national scandal and outrage to allow this unbelievable situation to continue unchecked.

We are even now engaged in a search for tax reform. Let us be blunt, spelling out truth in the straightest terms. Oil industry privilege now rages unchecked at the expense of every citizen of this country. How long are we to tolerate this?

READIN', RITIN' AND RIOTIN'

(Mr. WAGGONNER asked and was given permission to extend his remarks at this point in the RECORD, and to include extraneous matter.)

Mr. WAGGONNER. Mr. Speaker, if the news item I am inserting here in the RECORD were not such a tragic account, it would be a satire beyond belief. Had it been written a dozen years ago, no newspaper would have printed it because the editor would have been convinced the reporter was having hallucinations. But, time marches on in the Alice in Wonderland of Higher Education and the bizarre has now become the plain and ordinary. As Shakespeare put it—

O judgment! thou art fled to brutish beasts
And men have lost their reason.

The modern-day brutish beasts have found a home, it would seem, at San Francisco State College, among other institutions which have specialized in permissiveness in the past. I am certain this article could have been written about a number of other colleges and universities because this kind of classroom conduct is permitted almost universally these days. Thank God for the few places of higher learning which continue to resist and attempt to cling to the old-fashioned concept of a school being a center of reason, logic, and learning.

The article referred to follows:

ALL IS "RACIST" TO BLACKS: HARASSMENT JARS LIBERAL

(By Rasa Gustaitis)

SAN FRANCISCO, February 24.—As Prof. John H. Bunzel faced his class for the first time in the semester at San Francisco State College, he knew he was in for trouble.

In the unusually large group before him he saw a sizable number of black militants—to whom, he knew, he symbolized the enemy.

For months now—ever since he had published an article critical of the black studies program as proposed by Associate Professor Nathan Hare—Bunzel had been a target of abuse and intimidation.

He had received anonymous threatening telephone calls at home and became accustomed to being called "pig Bunzel." His two cars were covered with the words "Fascist Scab" one night and all the tires were slashed. A homemade bomb was found one morning outside the office of the political science department, which he heads.

Nevertheless, Bunzel, 45, tall and tweedy, looked at the group before him calmly and began to explain what he had in mind for the course.

FLOOD OF HOSTILITY

His voice was drowned in a flood of hostile questions and remarks. Someone stood up and began to read aloud from "Quotations from Chairman Mao Tse-tung." Bunzel tried for ten minutes to restore order, then, stunned, he dismissed the class.

Two days later, on Wednesday, he tried again. The class now had become, for him, a testing ground of "whether those of us committed to the use of reason can still have his voice heard in an increasingly irrational environment."

He tried to respond to the hostile questions. The course, he said, was titled "community power and the politics of leadership." It would not deal with today's headlines (here a girl's hand shot up) but would follow an academic form and would prove the complexities of community, he said. Then he gestured to the girl.

"Some of the things you say we don't understand," she told him. "I'm asking you to come down to our level. And when we raise our hands, you should respond immediately. It took you about four mintues to respond."

"If it's all right, I'd prefer to finish a thought, then answer questions," Bunzel replied.
